

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Lazard Credit Opportunities

Legal entity identifier: 969500NKC6I01JG1OU63

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the companies in which the financial product invests follow good governance practices.

The **UE Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☒ ☐ ☒ No

<input type="checkbox"/> It made sustainable investments with an environmental objective :%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and <input type="checkbox"/> while it did not have as its objective a sustainable investment, it had a proportion of 52,49% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective and carried out in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective carried out in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective :%	<input checked="" type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

In implementing its investment strategy, security analysis, and ESG integration process described below, the portfolio promotes the following environmental characteristics:

Environmental policy:

- Integration by companies of environmental factors appropriate to the sector, geographic location and any other relevant material factor
- Development of an environmental management strategy and system
- Development of a climate strategy

Controlling environmental impacts:

- Limiting and adapting to global warming
- Responsible water and waste management
- Preservation of biodiversity

Managing the environmental impact of products and services:

- Ecodesign of products and services
- Environmental innovation

as well as the following social characteristics:

Respect for human rights:

- Prevention of situations of human rights violations
- Respect for the right to safety and security of persons
- Privacy and data protection

Human resources management:

- Constructive social dialogue
- Training and career management conducive to human development
- Promoting diversity
- Health, safety and well-being at work

Value chain management:

- Responsible supply chain management
- Product quality, safety and traceability

This product does not use a specific index to determine its alignment with the environmental and social characteristics it promotes.

● How did the sustainability indicators perform?

The achievement of the environmental and social characteristics promoted by this product is measured by sustainability indicators: These indicators are described below.

In terms of valuation in the internal analysis model:

The ESG analysis of directly held securities is based on a proprietary model that relies on an internal ESG grid. Based on the various data provided by our ESG partners (non-financial analysis agencies, external service providers, etc.), the annual reports of the companies and direct exchanges with them, the analysts responsible for monitoring each stock draw up an internal ESG score.

This score is based on both a quantitative (energy intensity, staff turnover rate, Board independence rate, etc.) and qualitative approach (solidity of environmental policy, employment strategy, competence of directors, etc.).

Each E, S and G pillar is rated from 1 to 5 based on a minimum of five relevant key indicators per dimension.

These internal ESG ratings are built into the valuation models through the Beta used to define the weighted average cost of capital for equity management and to the issuer selection process and the determination of issuers' weight in the portfolio for bond management.

In terms of controlling the elements of the investment strategy with an external data provider:

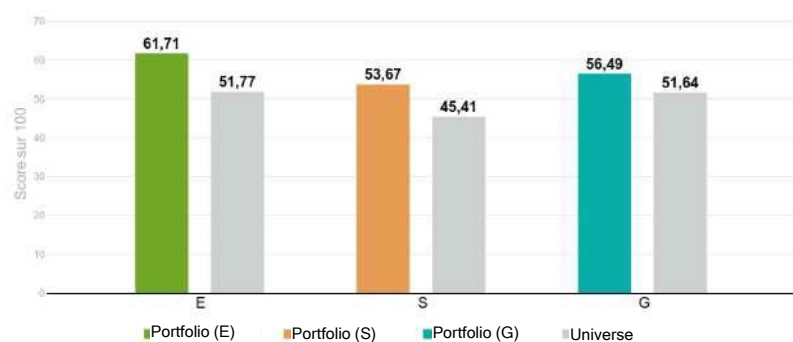

In addition, to confirm the robustness of the internal model, the analysts-managers in charge of management compare the portfolio's average ESG rating to that of its reference ESG universe.

Evolution of the ESG score

The portfolio's reference ESG universe is:

50% Eurozone universe provided by our ESG partners, equi-weighted, restricted to the following sectors: Diversified Banks, Insurance, Financial Services General, Retail and Specialized Banks; 50% ICE BofA Euro Non-Financial Fixed & Floating Rate High Yield Constrained Index Bloomberg Code: HEAE Index.

● ...and compared to previous periods?

● What were the objectives of the sustainable investments that the financial product was designed to achieve, and how did the sustainable investments made contribute to them?

The definition of sustainable investment within the meaning of SFDR is based on the selection of indicators that show a substantial contribution to one or more environmental or social objectives, it being understood that these investments must not cause significant harm to any of these objectives and that the companies in which the investments are made apply good governance practices.

The environmental indicators used are as follows:

- Carbon footprint (PAI 2)
- Carbon intensity (PAI 3)
- Implied temperature rise (ITR)
- Number of "low-carbon" patents held

The social indicators used are as follows:

- % women in executive management
- Number of hours of training for employees
- Benefits coverage
- Diversity policies by management

Substantial contribution is measured by applying indicator thresholds.

The table below presents the rules (targets) set for each indicator as well as the result obtained over the past period. The result is the average share of the portfolio invested in companies meeting these criteria, calculated on a quarterly basis. The average share is calculated according to the average positions observed over the past period, coupled with the non-financial data at the end of the period.

	Rule	Average share of the portfolio
Carbon footprint in M	Included in the lowest 20% of the sector	2,23%
GHG intensity	Included in the lowest 20% of the sector	7,92%
Implied temperature rise in 2050	≤2°C	30,01%
Number of low-carbon patents	Included in the top 20% of the universe	4,51%
% of women in executive management	Included in the top 20% of the universe	7,85%
Number of hours of training for employees	Included in the top 20% of the universe	6,86%
Benefits coverage	See sustainable investment presentation www.lazardfreresgestion.fr	9,49%
Diversity policies by management	See presentation www.lazardfreresgestion.fr	25,97%

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

The absence of significant harm is assessed on the basis of all the PAI indicators listed in Table 1 of Annex I the Regulatory Technical Standards of the SFDR Regulation. In the event of insufficient coverage of the investment universe for certain indicators, substitution criteria may exceptionally be used. Using alternative criteria is subject to the independent control of the Risks and Compliance department. Alternative indicators are also presented on the Lazard Frères Gestion website under the heading “Sustainable investment methodology”.
www.lazardfreresgestion.fr/FR/ESG-ISR/Notre-approche_147.html#section05.”

How have the indicators for adverse impacts on sustainability factors been taken into account?

Indicators of the principal adverse sustainability impacts (PAI) are considered at two levels:

- firstly, they are integrated into the internal analysis of each security monitored, carried out by our analyst-managers in the internal ESG analysis grids.
- in addition, they are used to assess the share of sustainable investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Compliance with minimum labour and human rights safeguards (OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights) and the eight fundamental conventions of the International Labour Organization is a key indicator for verifying that companies in which investments are made apply good governance practices.

We therefore check whether the company applies a labour rights due diligence policy in accordance with the eight fundamental conventions of the International Labour Organization (PAI 10) as part of our DNSH process. We also ensure that the investments made apply good governance practices, by monitoring a governance rating from a data provider and the internal rating on the Governance pillar.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The proprietary model for ESG analysis of portfolio companies takes into account all indicators related to companies' principal adverse impacts (PAI) in terms of sustainability.

These indicators are integrated into the internal grids used to establish a security's ESG rating, which is taken into account in the valuation models through the Beta used to define the weighted average cost of capital for equity management and in the process of selecting issuers and determining their portfolio weight for bond management.

In addition, as stated above, all of the PAI indicators listed in Table 1 of Annex I of the Regulatory Technical Standards of the SFDR are taken into account in the definition of sustainable investment.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: From 01/10/2023 to 30/09/2024

	Largest investments	Sector	Percentage of assets	Country
1	LAZARD EURO SHORT TERM MONEY MARKET	UCI	1,64%	FRANCE
2	OBJECTIF MONETAIRE EURO-B	UCI	1,35%	FRANCE
3	LAZARD EURO CORP HIGH YIELD PVC EUR	UCI	1,24%	FRANCE
4	ACCOR SA 2.625% PERP	ACCOMMODATION AND FOOD SERVICE ACTIVITIES	1,03%	FRANCE
5	FRENCH BTF 0% 23-14/02/2024	PUBLIC ADMINISTRATION	1,01%	FRANCE
6	CAIXABANK 6.125% 30-05-34 EMTN	FINANCIAL AND INSURANCE ACTIVITIES	0,98%	SPAIN
7	LAZARD EURO SHORT DURATION HIGH YIELD PART EVC EUR	UCI	0,93%	FRANCE
8	OBJECTIF CAPITAL FI-I	UCI	0,91%	FRANCE
9	VERISURE HOLDING AB 9.25% 15-10-27	ADMINISTRATIVE AND SUPPORT SERVICES ACTIVITIES	0,89%	SWEDEN
10	BANCO DE BADELL 9.375% PERP	FINANCIAL AND INSURANCE ACTIVITIES	0,82%	SPAIN
11	LEASEPLAN CORPORATION NV 7.375% PERP	ADMINISTRATIVE AND SUPPORT SERVICES ACTIVITIES	0,82%	NETHERLANDS
12	BBVA 8.375% PERP	FINANCIAL AND INSURANCE ACTIVITIES	0,79%	SPAIN
13	PIRAEUS FINANCIAL 8.75% PERP	FINANCIAL AND INSURANCE ACTIVITIES	0,78%	GREECE
14	ERSTE GR BK 8.5% PERP	FINANCIAL AND INSURANCE ACTIVITIES	0,75%	UNITED STATES
15	BBVA 1.0% 16-01-30	FINANCIAL AND INSURANCE ACTIVITIES	0,74%	SPAIN

What was the proportion of sustainability-related investment?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

An investment is considered sustainable if it complies with at least one of the rules set out above. A company can therefore be considered as environmentally and socially sustainable.

● In which economic sectors were the investments made?

	#1A Sustainable investments	#1B Other investments meeting E and S criteria
■ MINING AND QUARRYING		0,18%
■ MANUFACTURING	4%	3,55%
■ ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	0,61%	0,32%
■ WATER SUPPLY; SEWERAGE, WASTE MANAGEMENT AND REMEDIATION ACTIVITIES	0,06%	
■ CONSTRUCTION	0,03%	0,01%
■ WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	0,78%	
■ TRANSPORTATION AND STORAGE	0,82%	1,74%
■ ACCOMMODATION AND FOOD SERVICE ACTIVITIES	0,04%	1,4%
■ INFORMATION AND COMMUNICATION	2,89%	2,63%
■ FINANCIAL AND INSURANCE ACTIVITIES	37,87%	22,19%
■ REAL ESTATE ACTIVITIES	1,03%	0,03%
■ PROFESSIONAL, SCIENTIFIC AND TECHNICAL ACTIVITIES	1,38%	
■ ADMINISTRATIVE AND SUPPORT SERVICE ACTIVITIES		2,22%
■ PUBLIC ADMINISTRATION	0,02%	1,9%
■ EDUCATION		
■ HUMAN HEALTH AND SOCIAL ACTION	0,01%	0,53%
■ ARTS, ENTERTAINMENT AND RECREATION		0,16%
■ OTHER SERVICE ACTIVITIES		0,02%
■ UCI	2,68%	2,23%
■ UNKNOWN SECTOR	0,28%	2,52%

Exposure to the fossil fuel sector averaged 1,90% over the period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

● Did the financial product invest in fossil gas and/or nuclear energy activities aligned with the EU Taxonomy?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

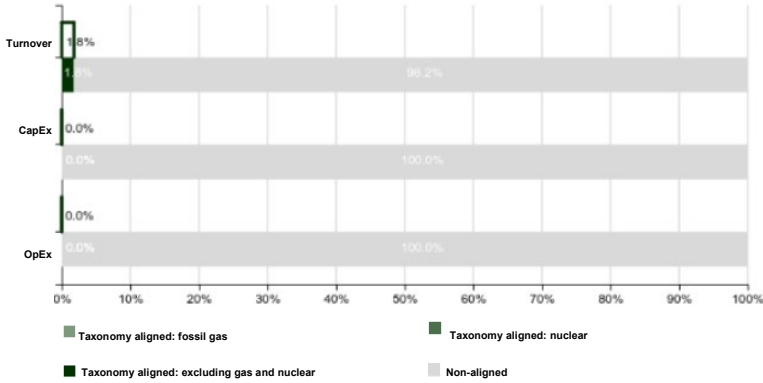

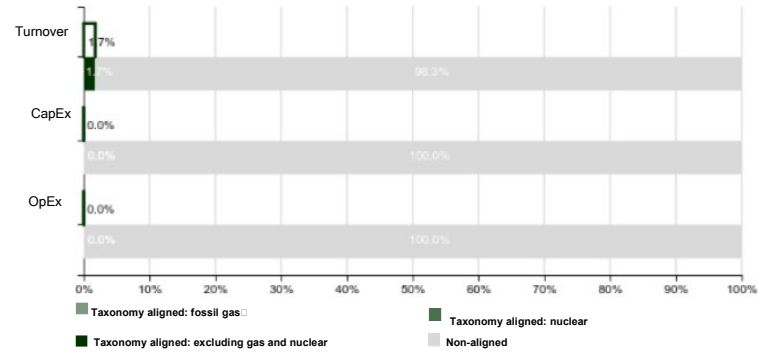

☒ No

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflects the “greenness” of the companies in which the financial product invests;

The two graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- **capital expenditure** (CapEx) showing the green investments made by the companies in which the financial product invests, e.g. for a transition to a green economy;

- **operational expenditure** (OpEx) reflecting green operational activities of the companies in which the financial product invests.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

The calculation of investment percentages aligned with the EU Taxonomy is based on estimated data.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The symbol represents sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

- **What was the share of investments made in transitional and enabling activities?**
At the date of production of this document, Lazard Frères Gestion does not have the data needed to identify the share of transitional or enabling activities.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy is 38,74%.

It corresponds to all activities not aligned with the Taxonomy but respecting the environmental objectives of sustainable investment mentioned above.

What was the share of socially sustainable investments?

The share of socially sustainable investments is 34,68%.

It corresponds to all activities not aligned with the Taxonomy but respecting the social objectives of sustainable investment mentioned above.

What investments were included under "other", and were they subject to minimum environmental or social safeguards?

The "other" category consists mainly of money market UCIs and cash. Over the past period, the "other" segment represented on average 5,87%.

What actions have been taken to achieve the environmental and/or social characteristics during the reference period?

The binding elements used in the context of the investment strategy to attain the environmental and social objectives promoted by this product cover, for directly held securities in the portfolio:

- The non-financial analysis rate

The rate of non-financial analysis of the product's investments in cash securities is, according to the product's investment categories, higher than:

- 90% for bonds issued by large caps with their headquarters in "developed" countries, debt securities and money market instruments with an investment grade credit rating, sovereign debt issued by developed countries:

- 75% for bonds issued by large caps with their headquarters in "emerging" countries, equities issued by small and mid caps, debt securities and money market instruments with a high yield credit rating and sovereign debt issued by "emerging" countries.

Over the past period, the non-financial analysis rate was 94,13% on average.

These rates are expressed as a percentage of total assets.

- The portfolio's average ESG rating

The analysts-managers ensure that the portfolio's weighted average ESG rating is higher than the average of the reference universe by using Moody's ESG Solutions non-financial rating framework

The portfolio's reference ESG universe is:

50% Eurozone universe provided by our ESG partners, equi-weighted, restricted to the following sectors: Diversified Banks, Insurance, Financial Services General, Retail and Specialized Banks; 50% ICE BofA Euro Non-Financial Fixed & Floating Rate High Yield Constrained Index Bloomberg Code: HEAE Index.

In addition, the management company makes exclusions prior to investments:

- Normative exclusions related to controversial weapons (cluster munitions, anti-personnel mines, biological and chemical weapons) and violations of the UN Global Compact.
- Sector exclusions (tobacco and thermal coal).
- Geographical exclusions (tax havens on the FATF list).

How did this financial product perform compared with the reference benchmark?

Not applicable

- How does the reference benchmark differ from a broad market index?

Not applicable

- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable

- How did this financial product perform compared with the reference benchmark?

Not applicable

- How did this financial product perform compared with the broad market index?

Not applicable

Benchmark indices are indices used to measure whether the financial product has the environmental or social characteristics it promotes.
