What is this product?

Type

This product is a share in a sub-fund of the investment company with variable capital BL, an undertaking for collective investment in transferable securities (UCITS) under Luxembourg law.

Term

This sub-fund has no maturity date. However, the board of directors of the fund may decide to close the sub-fund under certain circumstances.

Objectives

The sub-fund seeks a reward and a capital gain, with moderate volatility.

The sub-fund invests a minimum of two thirds of its net assets in fixed or variable-rate debt securities (including high-yield debt securities) issued by private and quasi-sovereign issuers in developed and emerging countries. Investments are made without any geographical, sector-based, maturity-related or monetary restrictions. Investments are made in securities issued in any currency in developed and emerging countries.

A minimum of 60% of investments are made in issuers with an investment grade rating from a recognised rating agency (such as Standard & Poor's). The sub-fund's remaining assets may be invested in debt securities coupled with warrants on transferable securities, indexed debt securities, in any transferable security representing a bond issue and/or in structured products.

The underlyings of structured products may consist of debt securities, baskets of debt securities, bond-linked exchange products and currency exchange rate indices.

The sub-fund may hold up to 20% of the net assets on an ancillary basis:

- Cash deposits,
- Money market instruments,
- Investment funds investing in cash deposits and/or money market instruments.

In order to achieve its objective, the sub-fund may invest a maximum of 10% of its net assets in open-ended investment funds.

The sub-fund may also use derivatives to hedge or optimise the portfolio's exposure.

The investment manager implements sustainable investments in the portfolio through two investment buckets:

1. investment in impact bonds;
2. for investments other than those made in impact bonds, the manager pays particular attention to ESG criteria in the analysis and selection of investments, by taking into account the ESG rating of the various issuers.

Benchmark: The portfolio is actively managed on a discretionary basis without reference to a benchmark.

What are the risks and what could I get in return?

Risk indicator

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this product as 2 out of 7, which is a low risk class. This rates the potential losses from future performance at a low level, and poor market conditions are very unlikely to impact our capacity to pay you.

Be aware of currency risk. You may receive payments in a currency that differs from your reference currency, so the final return you will get depends on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.

The sub-fund is also exposed to the following materially relevant risks that are not included in the summary risk indicator: Other risk factors may exist.

This product does not include any protection from future market performance so you could lose some or all of your investment.

If we are not able to pay you what is owed, you could lose your entire investment.

What happens if BLI - Banque de Luxembourg Investments is unable to pay out?

If we are not able to pay you out what we owe you, you are not covered by any national compensation or guarantee scheme. To protect you, the assets are held with a separate company, the depositary Banque de Luxembourg. Should we default, the investments are liquidated and the proceeds are distributed to the investors. In the worst case, however, you could lose your entire investment.
