Nordea 1 – Low Duration US High Yield Bond Fund, BP-USD Share Class

ISIN-Code: LU0602537069

The management company is Nordea Investment Funds S.A., a company of the Nordea Group.

Objectives and investment policy

The fund's objective is to provide shareholders with investment growth in the medium to long term.

In actively managing the fund's portfolio, the management team selects securities that appear to offer superior investment opportunities. PAI is taken into consideration as part of the investment process.

The fund mainly invests in US high yield corporate bonds.

Specifically, the fund invests at least two thirds of total assets in high yield debt securities that are denominated in USD or are issued by companies that are domiciled, or conduct the majority of their business, in the United States of America. The fund's modified duration is between 0 and 2 and the average effective weighted maturity of the investments is between 0 and 7 years. The maturity measurement allows for the likelihood of bonds being called or prepaid.

The fund's major part of currency exposure is hedged to the base currency, although it may also be exposed (through investments or cash) to other currencies.

The fund may use derivatives and other techniques for hedging (reducing risks), efficient portfolio management and to seek investment gains. A derivative is a financial instrument which derives its value from the value of an underlying asset. The use of derivatives is not cost or risk-free.

The fund is promoting environmental and/or social characteristics as per Article 8 of the EU Sustainable Finance Disclosure Regulation (SFDR). The fund partly invests in sustainable investments. The fund considers principal adverse impacts on sustainability factors. Further information regarding the way the fund takes environmental and/or social criteria into account is available in the fund's prospectus and accessible via nordea.lu.

The fund is subject to Nordea Asset Management's responsible investment policy.

Any investor may redeem its shares in the fund on demand, on a daily basis. This fund may not be appropriate for investors who plan to withdraw their money within a period of 5 years.

While the fund compares its performance against the ICE BofA 0-3 Month US Treasury Bill Index, it may freely select the securities that it will invest in. The risk characteristics of the fund's portfolio may bear some resemblance to those of the benchmark.

This share class is not distributing dividends. Income from investments is reinvested.

The fund is denominated in USD. Investments in this share class settle as well in USD.

Risk and reward profile

The indicator measures the risk of fluctuations of the Net Asset Value of the share class based on the last 5 years volatility and places the fund in category 3. This means that the purchase of units in the fund is connected to **medium risk** of such fluctuations.

Please note that category 1 does not mean a risk free investment.

Historical data, such as is used in calculating the synthetic indicator, may not be a reliable indication of the future risk profile of the UCITS, as the category might change in the future.

Following risks are materially relevant to the UCITS but are not adequately captured by the synthetic indicator and may cause additional loss:

- **Credit risk:** A bond or money market security, whether from a public or private issuer, could lose value if the issuer's financial health deteriorates.
- **Derivatives risk:** Small movements in the value of an underlying asset can create large changes in the value of a derivative, making derivatives highly volatile in general, and exposing the fund to potential losses significantly greater than the cost of the derivative.
- **Hedging risk:** Any attempts to reduce or eliminate certain risks may not work as intended, and to the extent that they do work, they will generally eliminate potentials for gain along with risks of loss.
- **Liquidity Risk:** Certain securities may become hard to value or to buy or sell at a desired time and price which could affect the fund's value and its ability to pay redemption proceeds or other obligations in a timely manner.
- **Prepayment and extension risk:** Any unexpected behaviour in interest rates could hurt the performance of callable debt securities (securities whose issuers have the right to pay off the security's principal before the maturity date).

For more information on risks the fund is exposed to, please refer to the section "Risk Descriptions" of the Prospectus.
