PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 4, table 2 regarding investments in companies without carbon emission reduction initiatives was considered via engagement. Robeco engages with key high emitters in our investment portfolios via the engagement themes "Acceleration to Paris" and "Net Zero Carbon Emissions".

PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaintshandling mechanism was considered.

PAI 6, table 3 regarding insufficient whistleblower protection was considered.

PAI 7, table 3 regarding incidents of discrimination was considered.

PAI 8, table 3 regarding excessive CEO pay ratio was considered via proxy voting and engagement under the engagement program "Responsible Executive Remuneration".

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

o Via the applied normative and activity-based exclusions, the following PAIs were considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.86% of the net assets, compared to 2.95% of the benchmark.

- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 1.19% of the benchmark.

- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas

Sustainability disclosures (Unaudited)

where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 1.35% of the net assets, compared to 2.73% of the benchmark.

- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 1.13% of the benchmark.

o Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 25,209 tons, compared to 38,830 tons for the benchmark.

- The carbon footprint of the portfolio (PAI 2, table 1) was 617 tons per EUR million EVIC, compared to 909 tons per EUR million EVIC for the benchmark.

- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,076 tons per EUR million revenue, compared to 1,702 tons per EUR million revenue for the benchmark.

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.86% of the net assets, compared to 2.95% of the benchmark.

- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 75.45% of the net assets, compared to 68.94% of the benchmark.

- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 14.97% of the net assets, compared to 84.82% of the benchmark.

- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.73 GWh, compared to 1.55 GWh for the benchmark.

- The share of investments in investee companies without carbon emission reduction initiatives aimed at aligning with the Paris Agreement (PAI 4, Table 2) was 56.51% of the net assets, compared to 48.32% of the benchmark.

- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 1.35% of the net assets, compared to 2.73% of the benchmark.

- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.10 tons, compared to 0.05 tons of the benchmark.

- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 1.13 tons, compared to 20.17 tons of the benchmark.

- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 18.09%, compared to 19.48% for the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via the application of the voting policy, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 25,209 tons, compared to 38,830 tons for the benchmark.

- The carbon footprint of the portfolio (PAI 2, table 1) was 617 tons per EUR million EVIC, compared to 909 tons per EUR million EVIC for the benchmark.

- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,076 tons per EUR million revenue, compared to 1,702 tons per EUR million revenue for the benchmark.

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.86% of the net assets, compared to 2.95% of the benchmark.

- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 75.45% of the net assets, compared to 68.94% of the benchmark.

- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 14.97% of the net assets, compared to 84.82% of the benchmark.

- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.73 GWh, compared to 1.55 GWh for the benchmark.

- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 1.19% of the benchmark.

- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 5.03%, compared to 1.63% for the benchmark.

- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 72.68%, compared to 74.44% for the benchmark.

- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 8.00%, compared to 9.84% for the benchmark.

- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 18.09%, compared to 19.48% for the benchmark.

- Indicators in relation to social and employee matters (PAI 5-7, Table 3).

- The average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest compensated individual) (PAI 8, Table 3) was 127, compared to 220 for the benchmark.

o Via Robeco's entity engagement program, the following PAIs were considered:

Sustainability disclosures (Unaudited)

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 25,209 tons, compared to 38,830 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 617 tons per EUR million EVIC, compared to 909 tons per EUR million EVIC for the benchmark.
- The greenhouse gas intensity of the portfolio (PAI 3, table 1) was 1,076 tons per EUR million revenue, compared to 1,702 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.86% of the net assets, compared to 2.95% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 75.45% of the net assets, compared to 68.94% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 14.97% of the net assets, compared to 84.82% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.73 GWh, compared to 1.55 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 1.35% of the net assets, compared to 2.73% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.10 tons, compared to 0.05 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 1.13 tons, compared to 20.17 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 1.19% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
Taiwan Semiconductor Manufacturing Co Lt	Semiconductors & Semiconductor Equipment	6.49%	Taiwan
Alibaba Group Holding Ltd	Multiline Retail	5.81%	China
SK Hynix Inc	Semiconductors & Semiconductor Equipment	4.78%	Korea
HCL Technologies Ltd	IT Services	4.47%	India
ICICI Bank Ltd ADR	Banks	4.34%	India
KT Corp	Diversified Telecommunication Services	3.99%	Korea
Sands China Ltd	Hotels, Restaurants & Leisure	3.89%	Hong Kong
FPT Corp	IT Services	3.88%	Viet Nam
Bank Mandiri Persero Tbk PT	Banks	3.47%	Indonesia
Kunlun Energy Co Ltd	Gas Utilities	2.90%	China
Hon Hai Precision Industry Co Ltd	Electronic Equipment, Instruments & Components	2.74%	Taiwan
Swire Pacific Ltd	Industrial Conglomerates	2.67%	Hong Kong
Huatai Securities Co Ltd	Capital Markets	2.43%	China
Axis Bank Ltd	Banks	2.42%	India
CK Hutchison Holdings Ltd	Industrial Conglomerates	2.40%	Hong Kong

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	Average exposure in % over the reporting period
Sectors deriving revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels -	
Gas Utilities	4.53%
Energy Equipment & Services	0.54%
Other sectors	
Semiconductors & Semiconductor Equipment	13.31%
Banks	12.29%
IT Services	8.35%
Industrial Conglomerates	6.77%
Multiline Retail	5.81%
Diversified Telecommunication Services	5.25%
Hotels, Restaurants & Leisure	5.01%
Household Durables	3.36%
Insurance	3.32%
Technology Hardware, Storage & Peripherals	3.27%
Pharmaceuticals	3.08%
Electronic Equipment, Instruments & Components	2.74%
Capital Markets	2.43%
Automobiles	1.96%
Real Estate Management & Development	1.68%
Entertainment	1.63%
Health Care Equipment & Supplies	1.51%
Consumer Finance	1.51%
Building Products	1.50%
Independent Power and Renewable Electricity Producers	1.06%
Diversified Consumer Services	0.92%
Food Products	0.80%
Textiles, Apparel & Luxury Goods	0.79%
Specialty Retail	0.66%
Chemicals	0.56%
Electric Utilities	0.48%
Cash and other instruments	4.88%

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?**¹

Yes

In fossil gas In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
0.0%.
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

5.1%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

55.7%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 11 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, The Sub-fund share in holdings with an elevated risk profile remained well under the limit.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Sustainable Asian Stars Equities **Legal entity identifier:** 213800C3QE3BF5TD6K08

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes No

<input type="checkbox"/> It made sustainable investments with an environmental objective: ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 71.3% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	<input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breached the international norms were excluded from the investment universe.
3. All equity holdings granted the right to vote and Robeco exerted that right by voting according to Robeco's Proxy Voting Policy, unless impediments occurred (e.g. share blocking).
4. The sub-fund's weighted carbon footprint (scope level 1, 2 and 3 upstream) was equal or better than that of the General Market Index.
5. The sub-fund's weighted average ESG score was better than that of the general market index.
6. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The sub-fund was limited to a maximum exposure of 5% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability disclosures (Unaudited)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
3. On behalf of the sub-fund votes, were cast on 493 agenda items at 70 shareholders' meetings.
4. The sub-fund's weighted carbon footprint (scope level 1, 2 and 3 upstream) was 57.69% better than that of the general market index.
5. The sub-fund's weighted average ESG score was 20.70 against 22.04 for the general market index. A lower score means a lower risk.
6. 0.00% of the holdings in portfolio had an elevated sustainability risk profile.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Number of votes casted	493	608	719
Weighted score for: - Carbon footprint (% better than the general market index)	57.69%	81.15%	79.99%
Companies in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Holdings with an elevated sustainability risk profile	0.00%	0.00%	0.00%
Weighted average ESG Score	20.70	22.67	23.00
Investments on exclusion list	0.00%	0.00%	0.00%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

Sustainability disclosures (Unaudited)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

→ How were the indicators for adverse impacts on sustainability factors taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement, proxy voting and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement, proxy voting and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN

Sustainability disclosures (Unaudited)

Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement and proxy voting. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGP), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy. PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.

PAI 13, table 1 regarding board gender diversity was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmissbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 4, table 2 regarding investments in companies without carbon emission reduction initiatives was considered via engagement. Robeco engages with key high emitters in our investment portfolios via the engagement themes "Acceleration to Paris" and "Net Zero Carbon Emissions".

PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaintshandling mechanism was considered.

PAI 6, table 3 regarding insufficient whistleblower protection was considered.

PAI 7, table 3 regarding incidents of discrimination was considered.

PAI 8, table 3 regarding excessive CEO pay ratio was considered via proxy voting and engagement under the engagement program "Responsible Executive Remuneration".

→ *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- o Via the applied normative and activity-based exclusions, the following PAIs were considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.14% of the net assets, compared to 2.95% of the benchmark.
 - Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 1.19% of the benchmark.
 - The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.14% of the net assets, compared to 2.73% of the benchmark.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 1.13% of the benchmark.

o Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 8,688 tons, compared to 17,179 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 522 tons per EUR million EVIC, compared to 909 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,172 tons per EUR million revenue, compared to 1,702 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.14% of the net assets, compared to 2.95% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 73.98% of the net assets, compared to 68.94% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 84.82% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.49 GWh, compared to 1.55 GWh for the benchmark.
- The share of investments in investee companies without carbon emission reduction initiatives aimed at aligning with the Paris Agreement (PAI 4, Table 2) was 59.03% of the net assets, compared to 48.32% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.14% of the net assets, compared to 2.73% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.00 tons, compared to 0.05 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 0.96 tons, compared to 20.17 tons of the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 17.23%, compared to 19.48% for the benchmark.

o Via the environmental footprint performance targets of the sub-fund, the following PAIs were considered:

- The carbon footprint of the portfolio (PAI 2, table 1) was 522 tons per EUR million EVIC, compared to 909 tons per EUR million EVIC for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.14% of the net assets, compared to 2.73% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.00 tons, compared to 0.05 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 0.96 tons, compared to 20.17 tons of the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via the application of the voting policy, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 8,688 tons, compared to 17,179 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 522 tons per EUR million EVIC, compared to 909 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,172 tons per EUR million revenue, compared to 1,702 tons per EUR million revenue for the benchmark.

Sustainability disclosures (Unaudited)

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.14% of the net assets, compared to 2.95% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 73.98% of the net assets, compared to 68.94% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 84.82% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.49 GWh, compared to 1.55 GWh for the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 1.19% of the benchmark.
- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 7.68%, compared to 1.63% for the benchmark.
- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 72.55%, compared to 74.44% for the benchmark.
- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 8.00%, compared to 9.84% for the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 17.23%, compared to 19.48% for the benchmark.
- Indicators in relation to social and employee matters (PAI 5-7, Table 3).
- The average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest compensated individual) (PAI 8, Table 3) was 113, compared to 220 for the benchmark.

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 8,688 tons, compared to 17,179 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 522 tons per EUR million EVIC, compared to 909 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,172 tons per EUR million revenue, compared to 1,702 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.14% of the net assets, compared to 2.95% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 73.98% of the net assets, compared to 68.94% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 84.82% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.49 GWh, compared to 1.55 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.14% of the net assets, compared to 2.73% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.00 tons, compared to 0.05 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 0.96 tons, compared to 20.17 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 1.19% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
Taiwan Semiconductor Manufacturing Co Lt	Semiconductors & Semiconductor Equipment	9.64%	Taiwan
Tencent Holdings Ltd	Interactive Media & Services	5.54%	China
Alibaba Group Holding Ltd	Multiline Retail	5.41%	China
HCL Technologies Ltd	IT Services	5.03%	India
SK Hynix Inc	Semiconductors & Semiconductor Equipment	4.28%	Korea
ICICI Bank Ltd ADR	Banks	3.95%	India
KT Corp	Diversified Telecommunication Services	3.05%	Korea
Bank Rakyat Indonesia Persero Tbk PT	Banks	3.02%	Indonesia
Chroma ATE Inc	Electronic Equipment, Instruments & Components	2.92%	Taiwan
Huatai Securities Co Ltd	Capital Markets	2.78%	China
MediaTek Inc	Semiconductors & Semiconductor Equipment	2.58%	Taiwan
FPT Corp	IT Services	2.58%	Viet Nam
TravelSky Technology Ltd	Hotels, Restaurants & Leisure	2.47%	China
Axis Bank Ltd	Banks	2.42%	India
Hyundai Mobis Co Ltd	Auto Components	2.34%	Korea

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Sustainability disclosures (Unaudited)

● *In which economic sectors were the investments made?*

Sector	Average exposure in % over the reporting period
Sectors deriving revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels -	
Gas Utilities	3.47%
Other sectors	
Semiconductors & Semiconductor Equipment	16.87%
Banks	11.43%
IT Services	7.60%
Diversified Telecommunication Services	6.71%
Interactive Media & Services	5.54%
Multiline Retail	5.41%
Independent Power and Renewable Electricity Producers	3.90%
Hotels, Restaurants & Leisure	3.39%
Insurance	3.33%
Household Durables	3.12%
Electronic Equipment, Instruments & Components	2.92%

Consumer Finance	2.00%
Electrical Equipment	1.96%
Health Care Equipment & Supplies	1.53%
Industrial Conglomerates	1.53%
Real Estate Management & Development	1.32%
Building Products	1.08%
Diversified Consumer Services	1.02%
Textiles, Apparel & Luxury Goods	0.84%
Personal Products	0.71%
Food Products	0.68%
Electric Utilities	0.48%
Specialty Retail	0.44%
Chemicals	0.25%
Cash and other instruments	2.52%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities are** economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

● *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹*

Yes

In fossil gas

In nuclear energy

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● What was the share of investments made in transitional and enabling activities?

0.0%.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

6.0%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

65.3%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 11 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Carbon profile of the Sub-fund in terms of and greenhouse gas emissions of the Sub-fund remained well below that of the benchmark. The Sub-fund has a carbon profile that is more than 50% better than the benchmark.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco BP US Large Cap Equities **Legal entity identifier:** 213800JQ07MWBS9GH642

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ___%

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 57.2% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: ___%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies in the portfolio that have breached one of the international guidelines during the investment period, have become part of the Enhanced Engagement program. When engagement deemed highly unlikely to succeed, the company was excluded directly.
3. All equity holdings granted the right to vote and Robeco exerted that right by voting according to Robeco's Proxy Voting Policy, unless impediments occurred (e.g. share blocking).
4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The sub-fund was limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
5. The sub-fund's weighted carbon footprint (scope level 1, 2 and 3 upstream) was equal or better than that of the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability disclosures (Unaudited)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. On behalf of the sub-fund votes, were cast on 1177 agenda items at 80 shareholders' meetings.
4. 0.00% of the holdings in portfolio had an elevated sustainability risk profile.
5. The sub-fund's weighted carbon footprint (scope level 1, 2 and 3 upstream) was 4.08% better than that of the general market index.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Number of votes casted	1177	1312	1222
Weighted score for: - Carbon footprint (% better than the general market index)	4.08%	23.51%	22.70%
Companies in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Holdings with an elevated sustainability risk profile	0.00%	0.18%	0.83%
Investments on exclusion list	0.00%	0.00%	0.00%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

Sustainability disclosures (Unaudited)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

→ How were the indicators for adverse impacts on sustainability factors taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement, proxy voting and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement, proxy voting and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN

Sustainability disclosures (Unaudited)

Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement and proxy voting. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGP), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy. PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.

PAI 13, table 1 regarding board gender diversity was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmissbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaintshandling mechanism was considered.

PAI 6, table 3 regarding insufficient whistleblower protection was considered.

PAI 7, table 3 regarding incidents of discrimination was considered.

PAI 8, table 3 regarding excessive CEO pay ratio was considered via proxy voting and engagement under the engagement program "Responsible Executive Remuneration".

— → *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

o Via the applied normative and activity-based exclusions, the following PAIs were considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 7.46% of the net assets, compared to 6.86% of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 1.11% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 8.95% of the net assets, compared to 7.68% of the benchmark.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.72% of the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via the application of the voting policy, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 1,032,811 tons, compared to 1,036,942 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 753 tons per EUR million EVIC, compared to 676 tons per EUR million EVIC for the benchmark.
- The greenhouse gas intensity of the portfolio (PAI 3, table 1) was 1,501 tons per EUR million revenue, compared to 1,699 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 7.46% of the net assets, compared to 6.86% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 67.40% of the net assets, compared to 73.46% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 72.11% of the net assets, compared to 57.51% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.48 GWh, compared to 0.98 GWh for the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 1.11% of the benchmark.
- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 0.00%, compared to 0.29% for the benchmark.
- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 61.51%, compared to 65.12% for the benchmark.
- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 17.35%, compared to 20.63% for the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 32.44%, compared to 34.08% for the benchmark.
- Indicators in relation to social and employee matters (PAI 5-7, Table 3).
- The average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest compensated individual) (PAI 8, Table 3) was 333, compared to 304 for the benchmark.

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 1,032,811 tons, compared to 1,036,942 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 753 tons per EUR million EVIC, compared to 676 tons per EUR million EVIC for the benchmark.
- The greenhouse gas intensity of the portfolio (PAI 3, table 1) was 1,501 tons per EUR million revenue, compared to 1,699 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 7.46% of the net assets, compared to 6.86% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 67.40% of the net assets, compared to 73.46% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was

Sustainability disclosures (Unaudited)

72.11% of the net assets, compared to 57.51% of the benchmark.

- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.48 GWh, compared to 0.98 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 8.95% of the net assets, compared to 7.68% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.00 tons, compared to 0.09 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 164.78 tons, compared to 31.81 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 1.11% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
JPMorgan Chase & Co	Banks	4.90%	United States
Alphabet Inc (Class A)	Interactive Media & Services	3.50%	United States
Diamondback Energy Inc	Oil, Gas & Consumable Fuels	2.84%	United States
Oracle Corp	Software	2.67%	United States
AbbVie Inc	Biotechnology	2.27%	United States
Procter & Gamble Co/The	Household Products	2.25%	United States
UnitedHealth Group Inc	Health Care Providers & Services	2.21%	United States
ConocoPhillips	Oil, Gas & Consumable Fuels	2.02%	United States
LPL Financial Holdings Inc	Capital Markets	1.94%	United States
Sysco Corp	Food & Staples Retailing	1.92%	United States
Morgan Stanley	Capital Markets	1.89%	United States
American Express Co	Consumer Finance	1.88%	United States
Cencora Inc	Health Care Providers & Services	1.84%	United States
Fidelity National Information Services I	Diversified Financial Services	1.81%	United States
Discover Financial Services	Consumer Finance	1.79%	United States

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Sustainability disclosures (Unaudited)

● *In which economic sectors were the investments made?*

Sector	Average exposure in % over the reporting period
Sectors deriving revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels -	
Oil, Gas & Consumable Fuels	5.45%
Energy Equipment & Services	1.53%
Other sectors	
Banks	8.09%
Capital Markets	6.73%
Health Care Providers & Services	6.21%
Food & Staples Retailing	4.21%
Consumer Finance	3.66%
Specialty Retail	3.52%

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
0.0%.
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

3.5%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

53.7%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 8 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Carbon profile of the Sub-fund in terms of and greenhouse gas emissions of the Sub-fund remained well below that of the benchmark. The Sub-fund has a carbon profile that is better than the benchmark.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco BP US Select Opportunities Equities

Legal entity identifier: 213800YIJJ667CDPK983

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ___%

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 42.2% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: ___%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies in the portfolio that have breached one of the international guidelines during the investment period, have become part of the Enhanced Engagement program. When engagement deemed highly unlikely to succeed, the company was excluded directly.
3. All equity holdings granted the right to vote and Robeco exerted that right by voting according to Robeco's Proxy Voting Policy, unless impediments occurred (e.g. share blocking).
4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The sub-fund was limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
5. The sub-fund's weighted carbon footprint (scope level 1, 2 and 3 upstream) was equal or better than that of the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability disclosures (Unaudited)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. On behalf of the sub-fund votes, were cast on 1831 agenda items at 145 shareholders' meetings.
4. 0.33% of the holdings in portfolio had an elevated sustainability risk profile.
5. The sub-fund's weighted carbon footprint (scope level 1, 2 and 3 upstream) was 3.77% better than that of the general market index.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Number of votes casted	1831	1964	1827
Weighted score for: - Carbon footprint (% better than the general market index)	3.77%	38.24%	41.59%
Companies in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Holdings with an elevated sustainability risk profile	0.33%	0.60%	0.67%
Investments on exclusion list	0.00%	0.56%	0.06%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

Sustainability disclosures (Unaudited)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement, proxy voting and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement, proxy voting and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN

Sustainability disclosures (Unaudited)

Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement and proxy voting. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGP), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy. PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.

PAI 13, table 1 regarding board gender diversity was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmissbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaintshandling mechanism was considered.

PAI 6, table 3 regarding insufficient whistleblower protection was considered.

PAI 7, table 3 regarding incidents of discrimination was considered.

PAI 8, table 3 regarding excessive CEO pay ratio was considered via proxy voting and engagement under the engagement program "Responsible Executive Remuneration".

— → *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- o Via the applied normative and activity-based exclusions, the following PAIs were considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 5.87% of the net assets, compared to 6.69% of the benchmark.
 - Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.56% of the benchmark.
 - The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 2.00% of the net assets, compared to 1.24% of the benchmark.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.46% of the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- o Via the application of the voting policy, the following PAIs were considered:
 - The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 636,789 tons, compared to 691,464 tons for the benchmark.
 - The carbon footprint of the portfolio (PAI 2, table 1) was 910 tons per EUR million EVIC, compared to 813 tons per EUR million EVIC for the benchmark.
 - The green house gas intensity of the portfolio (PAI 3, table 1) was 1,799 tons per EUR million revenue, compared to 1,839 tons per EUR million revenue for the benchmark.
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 5.87% of the net assets, compared to 6.69% of the benchmark.
 - The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 75.88% of the net assets, compared to 75.22% of the benchmark.
 - The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 78.83% of the net assets, compared to 67.83% of the benchmark.
 - The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.97 GWh, compared to 1.07 GWh for the benchmark.
 - Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.56% of the benchmark.
 - The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 0.00%, compared to 0.82% for the benchmark.
 - The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 77.62%, compared to 72.64% for the benchmark.
 - The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 16.00%, compared to 14.90% for the benchmark.
 - The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 32.41%, compared to 32.70% for the benchmark.
 - Indicators in relation to social and employee matters (PAI 5-7, Table 3).
 - The average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest compensated individual) (PAI 8, Table 3) was 243, compared to 232 for the benchmark.

- o Via Robeco's entity engagement program, the following PAIs were considered:
 - The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 636,789 tons, compared to 691,464 tons for the benchmark.
 - The carbon footprint of the portfolio (PAI 2, table 1) was 910 tons per EUR million EVIC, compared to 813 tons per EUR million EVIC for the benchmark.
 - The green house gas intensity of the portfolio (PAI 3, table 1) was 1,799 tons per EUR million revenue, compared to 1,839 tons per EUR million revenue for the benchmark.
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 5.87% of the net assets, compared to 6.69% of the benchmark.
 - The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 75.88% of the net assets, compared to 75.22% of the benchmark.
 - The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was

Sustainability disclosures (Unaudited)

78.83% of the net assets, compared to 67.83% of the benchmark.

- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.97 GWh, compared to 1.07 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 2.00% of the net assets, compared to 1.24% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.20 tons, compared to 0.28 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 162.44 tons, compared to 19.18 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.56% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
Ameriprise Financial Inc	Capital Markets	2.32%	United States
Howmet Aerospace Inc	Aerospace & Defense	1.92%	United States
AutoZone Inc	Specialty Retail	1.77%	United States
LPL Financial Holdings Inc	Capital Markets	1.72%	United States
Fifth Third Bancorp	Banks	1.60%	United States
Zebra Technologies Corp	Electronic Equipment, Instruments & Components	1.57%	United States
Norfolk Southern Corp	Road & Rail	1.52%	United States
Cencora Inc	Health Care Providers & Services	1.52%	United States
Check Point Software Technologies Ltd	Software	1.45%	Israel
Simon Property Group Inc	Retail REITs	1.44%	United States
Flex Ltd	Electronic Equipment, Instruments & Components	1.39%	United States
Textron Inc	Aerospace & Defense	1.35%	United States
Huntington Bancshares Inc/OH	Banks	1.31%	United States
Evercore Inc	Capital Markets	1.29%	United States
Synchrony Financial	Consumer Finance	1.24%	United States

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Sustainability disclosures (Unaudited)

● *In which economic sectors were the investments made?*

Sector	Average exposure in % over the reporting period
Sectors deriving revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels -

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
0.0%.
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

5.6%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

36.6%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 7 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Carbon profile of the Sub-fund in terms of and greenhouse gas emissions of the Sub-fund remained well below that of the benchmark. The Sub-fund has a carbon profile that is better than the benchmark.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Chinese A-share Equities **Legal entity identifier:** 213800GE9C6GVRJ3AM62

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** ___%

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 55.9% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective:** ___%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies in the portfolio that have breached one of the international guidelines during the investment period, have become part of the Enhanced Engagement program. When engagement deemed highly unlikely to succeed, the company was excluded directly.
3. All equity holdings granted the right to vote and Robeco exerted that right by voting according to Robeco's Proxy Voting Policy, unless impediments occurred (e.g. share blocking).
4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The sub-fund was limited to a maximum exposure of 25% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
5. The sub-fund's weighted carbon footprint (scope level 1, 2 and 3 upstream) was equal or better than that of the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability disclosures (Unaudited)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. On behalf of the sub-fund votes, were cast on 1264 agenda items at 135 shareholders' meetings.
4. 3.38% of the holdings in portfolio had an elevated sustainability risk profile.
5. The sub-fund's weighted carbon footprint (scope level 1, 2 and 3 upstream) was 62.63% better than that of the general market index.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Number of votes casted	1264	1220	1579
Weighted score for: - Carbon footprint (% better than the general market index)	62.63%	79.69%	68.86%
Companies in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Holdings with an elevated sustainability risk profile	3.38%	4.36%	12.57%
Investments on exclusion list	0.00%	0.00%	1.16%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

Sustainability disclosures (Unaudited)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

→ How were the indicators for adverse impacts on sustainability factors taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement, proxy voting and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement, proxy voting and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN

Sustainability disclosures (Unaudited)

Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement and proxy voting. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGP), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy. PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.

PAI 13, table 1 regarding board gender diversity was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmissbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 4, table 2 regarding investments in companies without carbon emission reduction initiatives was considered via engagement. Robeco engages with key high emitters in our investment portfolios via the engagement themes "Acceleration to Paris" and "Net Zero Carbon Emissions".

PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaintshandling mechanism was considered.

PAI 6, table 3 regarding insufficient whistleblower protection was considered.

PAI 7, table 3 regarding incidents of discrimination was considered.

PAI 8, table 3 regarding excessive CEO pay ratio was considered via proxy voting and engagement under the engagement program "Responsible Executive Remuneration".

— → *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

o Via the applied normative and activity-based exclusions, the following PAIs were considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.24% of the net assets, compared to 3.53% of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 2.57% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 1.47% of the benchmark.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.

o Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 108,507 tons, compared to 112,719 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 932 tons per EUR million EVIC, compared to 1,154 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,802 tons per EUR million revenue, compared to 2,773 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.24% of the net assets, compared to 3.53% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 71.99% of the net assets, compared to 80.35% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 79.68% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.37 GWh, compared to 1.55 GWh for the benchmark.
- The share of investments in investee companies without carbon emission reduction initiatives aimed at aligning with the Paris Agreement (PAI 4, Table 2) was 96.96% of the net assets, compared to 95.22% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 1.47% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.01 tons, compared to 0.03 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 4.07 tons, compared to 86.75 tons of the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 15.88%, compared to 15.79% for the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via the application of the voting policy, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 108,507 tons, compared to 112,719 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 932 tons per EUR million EVIC, compared to 1,154 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,802 tons per EUR million revenue, compared to 2,773 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.24% of the net assets, compared to 3.53% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 71.99% of the net assets, compared to 80.35% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 79.68% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.37 GWh, compared to 1.55 GWh for the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation

Sustainability disclosures (Unaudited)

and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 2.57% of the benchmark.

- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 16.69%, compared to 20.33% for the benchmark.
- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 96.49%, compared to 97.69% for the benchmark.
- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 0.00%, compared to 0.00% for the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 15.88%, compared to 15.79% for the benchmark.
- Indicators in relation to social and employee matters (PAI 5-7, Table 3).
- The average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest compensated individual) (PAI 8, Table 3) was 0, compared to 30 for the benchmark.

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 108,507 tons, compared to 112,719 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 932 tons per EUR million EVIC, compared to 1,154 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,802 tons per EUR million revenue, compared to 2,773 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.24% of the net assets, compared to 3.53% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 71.99% of the net assets, compared to 80.35% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 79.68% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.37 GWh, compared to 1.55 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 1.47% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.01 tons, compared to 0.03 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 4.07 tons, compared to 86.75 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 2.57% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
Contemporary Amperex Technology Co Ltd	Electrical Equipment	7.00%	China
China Yangtze Power Co Ltd	Independent Power and Renewable Electricity Producers	5.06%	China
China Construction Bank Corp	Banks	4.78%	China
China Merchants Bank Co Ltd	Banks	4.02%	China
Kweichow Moutai Co Ltd	Beverages	4.00%	China
Wuliangye Yibin Co Ltd	Beverages	3.80%	China
BYD Co Ltd	Automobiles	3.69%	China
Zhongji Innolight Co Ltd	Communications Equipment	3.51%	China
Bank of Jiangsu Co Ltd	Banks	3.21%	China
Luxshare Precision Industry Co Ltd	Electronic Equipment, Instruments & Components	3.13%	China
Sieyuan Electric Co Ltd	Electrical Equipment	2.74%	China
Foxconn Industrial Internet Co Ltd	Electronic Equipment, Instruments & Components	2.58%	China
Advanced Micro-Fabrication Equipment Inc	Semiconductors & Semiconductor Equipment	2.56%	China
Jiangsu Hengrui Pharmaceuticals Co Ltd	Pharmaceuticals	2.47%	China
SAIC Motor Corp Ltd	Automobiles	2.45%	China

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	Average exposure in % over the reporting period
Other sectors	
Electrical Equipment	14.96%
Banks	12.01%
Beverages	9.44%
Automobiles	6.14%
Electronic Equipment, Instruments & Components	5.71%
Pharmaceuticals	5.42%
Household Durables	5.27%
Independent Power and Renewable Electricity Producers	5.06%
Semiconductors & Semiconductor Equipment	4.58%
Capital Markets	3.76%
Communications Equipment	3.51%
Insurance	3.25%
Machinery	2.61%
Metals & Mining	2.36%
Chemicals	2.22%
Auto Components	1.98%
Software	1.68%
Food Products	1.61%
Personal Products	1.43%
Real Estate Management & Development	1.27%
Life Sciences Tools & Services	1.22%
Transportation Infrastructure	0.92%
Construction & Engineering	0.85%
Textiles, Apparel & Luxury Goods	0.72%
Cash and other instruments	2.01%

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?**¹

Yes

In fossil gas In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

0.0%.

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

18.3%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

37.6%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 7 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Carbon profile of the Sub-fund in terms of and greenhouse gas emissions of the Sub-fund remained well below that of the benchmark. The Sub-fund has a carbon profile that is more than 60% better than the benchmark.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Chinese A-share Active Equities **Legal entity identifier:** 2138000ARI6HPJH22T56

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes No

<input type="checkbox"/> It made sustainable investments with an environmental objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 47.4% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	<input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. All equity holdings granted the right to vote and Robeco exerted that right by voting according to Robeco’s Proxy Voting Policy, unless impediments occurred (e.g. share blocking).
2. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
3. The sub-fund's weighted carbon (scope level 1, 2 and 3 upstream), water and waste footprint was better than that of the General Market Index.
4. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies in the portfolio that have breached one of the international guidelines during the investment period, have become part of the Enhanced Engagement program. When engagement deemed highly unlikely to succeed, the company was excluded directly.
5. The sub-fund’s weighted average ESG score was better than that of the general market index.
6. The sub-fund’s weight in companies with a positive SDG score (1,2,3) was better than that of the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability disclosures (Unaudited)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. On behalf of the sub-fund votes, were cast on 6639 agenda items at 821 shareholders' meetings.
2. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
3. The sub-fund's weighted score for the carbon (scope level 1, 2 and 3 upstream), water and waste footprint were respectively 38.92%, 19.50% and 61.86% better than the general market index.
4. 0.56% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
5. The sub-fund's weighted average ESG score was 29.36 against 30.98 for the general market index. A lower score means a lower risk.
6. 47.37% of the investments held a positive SDG score (1,2,3), compared to 38.86% for the general market index.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Number of votes casted	4026	6033	6838
Holdings with a positive SDG rating	47.37%	59.53%	56.36%
Weighted score for:			
- Carbon footprint (% better than the general market index)	38.92%	42.55%	40.57%
- Water footprint (% better than the general market index)	19.50%	60.88%	63.22%
- Waste footprint (% better than the general market index)	61.86%	43.55%	71.95%
Companies in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.56%	0.00%	0.00%
Weighted average ESG Score	29.36	31.37	31.75
Investments on exclusion list	0.00%	1.21%	0.27%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

Sustainability disclosures (Unaudited)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

→ How were the indicators for adverse impacts on sustainability factors taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement, proxy voting and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement, proxy voting and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN

Sustainability disclosures (Unaudited)

Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement and proxy voting. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGP), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy. PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.

PAI 13, table 1 regarding board gender diversity was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmissbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaintshandling mechanism was considered.

PAI 6, table 3 regarding insufficient whistleblower protection was considered.

PAI 7, table 3 regarding incidents of discrimination was considered.

PAI 8, table 3 regarding excessive CEO pay ratio was considered via proxy voting and engagement under the engagement program "Responsible Executive Remuneration".

— → *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

o Via the applied normative and activity-based exclusions, the following PAIs were considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.82% of the net assets, compared to 3.53% of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.56% of the net assets, compared to 2.57% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.05% of the net assets, compared to 1.47% of the benchmark.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.

o Via the environmental footprint performance targets of the sub-fund, the following PAIs were considered:

- The carbon footprint of the portfolio (PAI 2, table 1) was 1,125 tons per EUR million EVIC, compared to 1,154 tons per EUR million EVIC for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.05% of the net assets, compared to 1.47% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.02 tons, compared to 0.03 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 140.42 tons, compared to 86.75 tons of the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via the application of the voting policy, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 131,887 tons, compared to 154,593 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 1,125 tons per EUR million EVIC, compared to 1,154 tons per EUR million EVIC for the benchmark.
- The greenhouse gas intensity of the portfolio (PAI 3, table 1) was 1,828 tons per EUR million revenue, compared to 2,773 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.82% of the net assets, compared to 3.53% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 80.79% of the net assets, compared to 80.35% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 74.83% of the net assets, compared to 79.68% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 1.50 GWh, compared to 1.55 GWh for the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.56% of the net assets, compared to 2.57% of the benchmark.
- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 18.82%, compared to 20.33% for the benchmark.
- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 96.16%, compared to 97.69% for the benchmark.
- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 0.00%, compared to 0.00% for the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 16.45%, compared to 15.79% for the benchmark.
- Indicators in relation to social and employee matters (PAI 5-7, Table 3).
- The average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest compensated individual) (PAI 8, Table 3) was 244, compared to 30 for the benchmark.

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 131,887 tons, compared to 154,593 tons for the benchmark.

Sustainability disclosures (Unaudited)

- The carbon footprint of the portfolio (PAI 2, table 1) was 1,125 tons per EUR million EVIC, compared to 1,154 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,828 tons per EUR million revenue, compared to 2,773 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.82% of the net assets, compared to 3.53% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 80.79% of the net assets, compared to 80.35% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 74.83% of the net assets, compared to 79.68% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 1.50 GWh, compared to 1.55 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.05% of the net assets, compared to 1.47% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.02 tons, compared to 0.03 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 140.42 tons, compared to 86.75 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.56% of the net assets, compared to 2.57% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
Kweichow Moutai Co Ltd	Beverages	4.13%	China
Contemporary Amperex Technology Co Ltd	Electrical Equipment	3.31%	China
China Merchants Bank Co Ltd	Banks	2.20%	China
Ping An Insurance Group Co of China Ltd	Insurance	1.83%	China
BYD Co Ltd	Automobiles	1.69%	China
Agricultural Bank of China Ltd	Banks	1.55%	China
Industrial Bank Co Ltd	Banks	1.39%	China
Industrial & Commercial Bank of China Lt	Banks	1.35%	China
China Yangtze Power Co Ltd	Independent Power and Renewable Electricity Producers	1.31%	China
Wuliangye Yibin Co Ltd	Beverages	1.23%	China
Shanghai Pudong Development Bank Co Ltd	Banks	1.15%	China
East Money Information Co Ltd	Capital Markets	1.14%	China
Foxconn Industrial Internet Co Ltd	Electronic Equipment, Instruments & Components	1.05%	China
Midea Group Co Ltd	Household Durables	1.00%	China
China Pacific Insurance Group Co Ltd	Insurance	0.96%	China

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	Average exposure in % over the reporting period
Sectors deriving revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels -	
Energy Equipment & Services	0.54%
Other sectors	
Banks	16.23%
Electronic Equipment, Instruments & Components	6.92%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas In nuclear energy

No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 100.00% of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

0.0%.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

10.9%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

36.5%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 11 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Carbon profile of the Sub-fund in terms of and greenhouse gas emissions of the Sub-fund remained well below that of the benchmark. The Sub-fund has a carbon profile that is more than 30% better than the benchmark.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Chinese A-share Conservative Equities

Legal entity identifier: 213800XWLW8UPEKC9R39

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes No

<input type="checkbox"/> It made sustainable investments with an environmental objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 47.9% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

	<input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The sub-fund's weighted carbon (scope level 1, 2 and 3 upstream), water and waste footprint was better than that of the General Market Index.
3. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies in the portfolio that have breached one of the international guidelines during the investment period, have become part of the Enhanced Engagement program. When engagement deemed highly unlikely to succeed, the company was excluded directly.
4. The sub-fund's weighted average ESG score was better than that of the general market index.
5. The sub-fund's weight in companies with a positive SDG score (1,2,3) was better than that of the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability disclosures (Unaudited)

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. The sub-fund's weighted score for the carbon (scope level 1, 2 and 3 upstream), water and waste footprint were respectively 45.71%, 80.63% and 96.67% better than the general market index.
3. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
4. The sub-fund's weighted average ESG score was 29.51 against 30.98 for the general market index. A lower score means a lower risk.
5. 47.94% of the investments held a positive SDG score (1,2,3), compared to 38.86% for the general market index.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Holdings with a positive SDG rating	47.94%	60.69%	64.36%
Weighted score for:			
- Carbon footprint (% better than the general market index)	45.71%	53.94%	37.30%
- Water footprint (% better than the general market index)	80.63%	2.36%	2.46%
- Waste footprint (% better than the general market index)	96.67%	73.77%	66.85%
Companies in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Weighted average ESG Score	29.51	31.21	31.40
Investments on exclusion list	0.00%	0.00%	0.69%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement, proxy voting and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement, proxy voting and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement and proxy voting. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGP), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy.

PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement and proxy voting. In

Sustainability disclosures (Unaudited)

2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.

PAI 13, table 1 regarding board gender diversity was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaintshandling mechanism was considered.

PAI 6, table 3 regarding insufficient whistleblower protection was considered.

PAI 7, table 3 regarding incidents of discrimination was considered.

PAI 8, table 3 regarding excessive CEO pay ratio was considered via proxy voting and engagement under the engagement program "Responsible Executive Remuneration".

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

o Via the applied normative and activity-based exclusions, the following PAIs were considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 2.65% of the net assets, compared to 3.53% of the benchmark.

- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation

Sustainability disclosures (Unaudited)

and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 2.57% of the benchmark.

- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 1.47% of the benchmark.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.

o Via the environmental footprint performance targets of the sub-fund, the following PAIs were considered:

- The carbon footprint of the portfolio (PAI 2, table 1) was 749 tons per EUR million EVIC, compared to 1,154 tons per EUR million EVIC for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 1.47% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.08 tons, compared to 0.03 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 2.89 tons, compared to 86.75 tons of the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via the application of the voting policy, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 4,413 tons, compared to 7,409 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 749 tons per EUR million EVIC, compared to 1,154 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,291 tons per EUR million revenue, compared to 2,773 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 2.65% of the net assets, compared to 3.53% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 83.61% of the net assets, compared to 80.35% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 79.68% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.83 GWh, compared to 1.55 GWh for the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 2.57% of the benchmark.
- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 29.21%, compared to 20.33% for the benchmark.
- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 99.51%, compared to 97.69% for the benchmark.
- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 0.00%, compared to 0.00% for the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 13.79%, compared to 15.79% for the benchmark.
- Indicators in relation to social and employee matters (PAI 5-7, Table 3).
- The average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest compensated individual) (PAI 8, Table 3) was 0, compared to 30 for the benchmark.

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 4,413 tons, compared to 7,409 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 749 tons per EUR million EVIC, compared to 1,154 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,291 tons per EUR million revenue, compared to 2,773 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 2.65% of the net assets, compared to 3.53% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 83.61% of the net assets, compared to 80.35% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 79.68% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.83 GWh, compared to 1.55 GWh for the benchmark.

Sustainability disclosures (Unaudited)

- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 1.47% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.08 tons, compared to 0.03 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 2.89 tons, compared to 86.75 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 2.57% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
Kweichow Moutai Co Ltd	Beverages	3.75%	China
Industrial & Commercial Bank of China Lt	Banks	3.23%	China
Bank of China Ltd	Banks	3.02%	China
Agricultural Bank of China Ltd	Banks	3.00%	China
CRRC Corp Ltd	Machinery	2.98%	China
Beijing-Shanghai High Speed Railway Co	Road & Rail	2.97%	China
BYD Co Ltd	Automobiles	2.95%	China
Contemporary Amperex Technology Co L	Electrical Equipment	2.89%	China
Bank of Communications Co Ltd	Banks	2.79%	China
China Yangtze Power Co Ltd	Independent Power and Renewable Electricity Producers	2.74%	China
Bank of Beijing Co Ltd	Banks	2.47%	China
Guotai Junan Securities Co Ltd	Capital Markets	2.09%	China
China Construction Bank Corp	Banks	1.93%	China
Yutong Bus Co Ltd	Machinery	1.91%	China
BOE Technology Group Co Ltd	Electronic Equipment, Instruments & Components	1.83%	China

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Sustainability disclosures (Unaudited)

● *In which economic sectors were the investments made?*

Sector	Average exposure in % over the reporting period
Sectors deriving revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels -	
Energy Equipment & Services	1.24%
Gas Utilities	0.35%
Other sectors	
Banks	21.57%
Independent Power and Renewable Electricity Producers	5.83%
Pharmaceuticals	5.72%
Machinery	5.70%
Electronic Equipment, Instruments & Components	5.14%
Road & Rail	5.04%
Food Products	4.98%
Beverages	4.88%
Transportation Infrastructure	4.25%
Household Durables	3.70%
Capital Markets	3.50%
Electrical Equipment	3.19%

Cash and other instruments	0.56%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas

In nuclear energy

No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● What was the share of investments made in transitional and enabling activities?

0.0%.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

14.8%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

33.1%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 5 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Carbon profile of the Sub-fund in terms of and greenhouse gas emissions of the Sub-fund remained well below that of the benchmark. The Sub-fund has a carbon profile that is more than 40% better than the benchmark.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI European Value Equities

Legal entity identifier: 213800SX488DS47PZG42

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: ___%**

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 73.4% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective: ___%**

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The sub-fund's weighted carbon (scope level 1, 2 and 3 upstream), water and waste footprint was better than that of the General Market Index.
3. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies in the portfolio that have breached one of the international guidelines during the investment period, have become part of the Enhanced Engagement program. When engagement deemed highly unlikely to succeed, the company was excluded directly.
4. The sub-fund's weighted average ESG score was better than that of the general market index.
5. The sub-fund's weight in companies with a positive SDG score (1,2,3) was better than that of the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability disclosures (Unaudited)

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. The sub-fund's weighted score for the carbon (scope level 1, 2 and 3 upstream), water and waste footprint were respectively 1.52%, 65.29% and 97.24% better than the general market index.
3. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
4. The sub-fund's weighted average ESG score was 18.73 against 18.77 for the general market index. A lower score means a lower risk.
5. 73.38% of the investments held a positive SDG score (1,2,3), compared to 72.30% for the general market index.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Holdings with a positive SDG rating	73.38%	71.11%	65.20%
Weighted score for:			
- Carbon footprint (% better than the general market index)	1.52%	6.64%	3.93%
- Water footprint (% better than the general market index)	65.29%	52.48%	58.43%
- Waste footprint (% better than the general market index)	97.24%	89.67%	25.94%
Companies in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Weighted average ESG Score	18.73	19.72	19.85
Investments on exclusion list	0.00%	0.00%	1.09%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement, proxy voting and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement, proxy voting and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement and proxy voting. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGP), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy.

PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement and proxy voting. In

Sustainability disclosures (Unaudited)

2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.

PAI 13, table 1 regarding board gender diversity was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaintshandling mechanism was considered.

PAI 6, table 3 regarding insufficient whistleblower protection was considered.

PAI 7, table 3 regarding incidents of discrimination was considered.

PAI 8, table 3 regarding excessive CEO pay ratio was considered via proxy voting and engagement under the engagement program "Responsible Executive Remuneration".

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

o Via the applied normative and activity-based exclusions, the following PAIs were considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 6.27% of the net assets, compared to 4.19% of the benchmark.

- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation

Sustainability disclosures (Unaudited)

and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.

- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 11.48% of the net assets, compared to 8.84% of the benchmark.

- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.42% of the benchmark.

o Via the environmental footprint performance targets of the sub-fund, the following PAIs were considered:

- The carbon footprint of the portfolio (PAI 2, table 1) was 1,256 tons per EUR million EVIC, compared to 1,123 tons per EUR million EVIC for the benchmark.

- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 11.48% of the net assets, compared to 8.84% of the benchmark.

- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.04 tons, compared to 0.02 tons of the benchmark.

- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 1.42 tons, compared to 51.67 tons of the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via the application of the voting policy, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 8,430 tons, compared to 7,528 tons for the benchmark.

- The carbon footprint of the portfolio (PAI 2, table 1) was 1,256 tons per EUR million EVIC, compared to 1,123 tons per EUR million EVIC for the benchmark.

- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,160 tons per EUR million revenue, compared to 1,326 tons per EUR million revenue for the benchmark.

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 6.27% of the net assets, compared to 4.19% of the benchmark.

- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 57.85% of the net assets, compared to 53.98% of the benchmark.

- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 42.79% of the net assets, compared to 41.65% of the benchmark.

- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.32 GWh, compared to 0.47 GWh for the benchmark.

- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.

- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 0.20%, compared to 0.10% for the benchmark.

- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 28.49%, compared to 26.53% for the benchmark.

- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 11.40%, compared to 13.83% for the benchmark.

- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 40.45%, compared to 41.88% for the benchmark.

- Indicators in relation to social and employee matters (PAI 5-7, Table 3).

- The average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest compensated individual) (PAI 8, Table 3) was 85, compared to 83 for the benchmark.

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 8,430 tons, compared to 7,528 tons for the benchmark.

- The carbon footprint of the portfolio (PAI 2, table 1) was 1,256 tons per EUR million EVIC, compared to 1,123 tons per EUR million EVIC for the benchmark.

- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,160 tons per EUR million revenue, compared to 1,326 tons per EUR million revenue for the benchmark.

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 6.27% of the net assets, compared to 4.19% of the benchmark.

- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 57.85% of the net assets, compared to 53.98% of the benchmark.

- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 42.79% of the net assets, compared to 41.65% of the benchmark.

- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.32 GWh, compared to 0.47 GWh for the benchmark.

Sustainability disclosures (Unaudited)

- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 11.48% of the net assets, compared to 8.84% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.04 tons, compared to 0.02 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 1.42 tons, compared to 51.67 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
Roche Holding AG	Pharmaceuticals	3.20%	Switzerland
Novartis AG	Pharmaceuticals	3.12%	Switzerland
Shell PLC	Oil, Gas & Consumable Fuels	2.91%	United Kingdom
TotalEnergies SE	Oil, Gas & Consumable Fuels	2.22%	France
Deutsche Telekom AG	Diversified Telecommunication Services	2.14%	Germany
Sanofi SA	Pharmaceuticals	2.03%	France
UBS Group AG	Capital Markets	2.01%	Switzerland
UniCredit SpA	Banks	1.71%	Italy
GSK PLC	Pharmaceuticals	1.67%	United Kingdom
Tesco PLC	Food & Staples Retailing	1.61%	United Kingdom
Telefonaktiebolaget LM Ericsson	Communications Equipment	1.59%	Sweden
Nokia Oyj	Communications Equipment	1.58%	Finland
BNP Paribas SA	Banks	1.54%	France
Koninklijke Ahold Delhaize NV	Food & Staples Retailing	1.53%	Netherlands
Telefonica SA	Diversified Telecommunication Services	1.46%	Spain

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Sustainability disclosures (Unaudited)

● *In which economic sectors were the investments made?*

Sector	Average exposure in % over the reporting period
Sectors deriving revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels -	
Oil, Gas & Consumable Fuels	7.65%
Gas Utilities	1.13%
Other sectors	
Pharmaceuticals	13.38%
Banks	13.17%
Diversified Telecommunication Services	8.71%
Capital Markets	7.31%
Food & Staples Retailing	6.16%

Office REITs	0.25%
Commercial Services & Supplies	0.24%
Cash and other instruments	0.54%

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes
 In fossil gas In nuclear energy
 No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
0.0%.
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

6.8%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

66.6%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 13 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Carbon profile of the Sub-fund in terms of and greenhouse gas emissions of the Sub-fund remained well below that of the benchmark. The Sub-fund has a carbon profile that is better than the benchmark.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex V

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI US Climate Beta Equities

Legal entity identifier: 2138002ROX4K9YH3D187

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes No

<input checked="" type="checkbox"/> It made sustainable investments with an environmental objective: 96.2%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	<input type="checkbox"/> with a social objective
<input checked="" type="checkbox"/> It made sustainable investments with a social objective: 3.5%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent was the sustainable investment objective of this financial product met?

Both at the start and at the end of the reporting period, the carbon footprint was lower than the MSCI US Climate Paris Aligned Index.

84.3% of the investments of the sub-fund had a positive SDG score, and contributed to the United Nation's Sustainable Development Goals (SDGs).

As at the end of the reporting period, the sub-fund's sustainable investments with environmental objectives were not made in economic activities that qualify as environmentally sustainable under the EU Taxonomy.

Sustainability indicators measure how the sustainable objectives of this financial product are attained

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. On behalf of the sub-fund votes, were cast on 3655 agenda items at 264 shareholders' meetings.
2. The sub-fund's weighted carbon footprint (scope level 1, 2 and 3) was 37.97% better than that of the MSCI USA EU PAB Overlay Index.
3. The sub-fund's weighted score for water and waste footprint were respectively 64.71% and 33.35% better than the general market index.
4. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application

Sustainability disclosures (Unaudited)

of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.

5. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.

6. The sub-fund's weighted average ESG score was 18.03 against 20.35 for the general market index. A lower score means a lower risk.

7. 3.96% of the investments (on average) held a high, medium or low negative SDG score (-1, -2 or -3) based on the internally developed SDG framework.

8. 84.27% of the investments held a positive SDG score (1,2,3), compared to 65.80% for the general market index.

● ...and compared to previous periods?

Sustainability indicator	2024	2023	2022
Number of votes casted	3655	0	0
Holdings with a positive SDG rating	84.27%	84.25%	84.85%
Weighted score for:			
- Water footprint (% better than general market index)	64.71%	88.03%	90.35%
- Waste footprint (% better than general market index)	33.35%	45.86%	51.93%
Holdings in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Weighted average ESG Score	18.03	19.16	19.12
Holdings with a neutral or positive SDG score	96.05%	89.80%	89.89%
Investments on exclusion list	0.00%	0.00%	0.00%
Weighted score for: - Carbon footprint (% better than the MSCI USA EU PAB Overlay Index)	0.71%	2.44%	3.34%

● How did the sustainable investments not cause significant harm to any sustainable investment objective?

—> How were the indicators for adverse impacts on sustainability factors taken into account?

All sustainable investments are constituents of MSCI USA EU PAB Overlay Index or follow the benchmark methodology.

PAI 1, table 1 was considered for scope 1, 2 and 3 Green House Gas emissions via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement, proxy voting and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

RSP0 certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement, proxy voting and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement and proxy voting. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGP), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy.

PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.

PAI 13, table 1 regarding board gender diversity was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaintshandling mechanism was considered.

PAI 6, table 3 regarding insufficient whistleblower protection was considered.

PAI 7, table 3 regarding incidents of discrimination was considered.

PAI 8, table 3 regarding excessive CEO pay ratio was considered via proxy voting and engagement under the engagement program "Responsible Executive Remuneration".

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy as well as the methodology of the benchmark provider.

Sustainability disclosures (Unaudited)

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

o Via the applied normative and activity-based exclusions, the following PAIs were considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.50% of the net assets, compared to 3.39% of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.58% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 4.34% of the net assets, compared to 6.70% of the benchmark.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.32% of the benchmark.

o Via the environmental footprint performance targets of the sub-fund, the following PAIs were considered:

- The carbon footprint of the portfolio (PAI 2, table 1) was 213 tons per EUR million EVIC, compared to 368 tons per EUR million EVIC for the Paris-Aligned Benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.02 tons, compared to 0.06 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 9.03 tons, compared to 13.55 tons of the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via the application of the voting policy, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 84,192 tons, compared to 135,734 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 213 tons per EUR million EVIC, compared to 368 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,146 tons per EUR million revenue, compared to 1,296 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.50% of the net assets, compared to 3.39% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 53.52% of the net assets, compared to 55.31% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the sub-fund was 32.07% of the net assets, compared to 58.15% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.28 GWh, compared to 0.57 GWh for the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.58% of the benchmark.
- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 0.00%, compared to 0.09% for the benchmark.
- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 63.94%, compared to 61.87% for the benchmark.
- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 18.97%, compared to 18.69% for the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 35.65%, compared to 35.01% for the benchmark.
- Indicators in relation to social and employee matters (PAI 5-7, Table 3).

Sustainability disclosures (Unaudited)

- The average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest compensated individual) (PAI 8, Table 3) was 678, compared to 1,010 for the benchmark.

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 84,192 tons, compared to 135,734 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 213 tons per EUR million EVIC, compared to 368 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,146 tons per EUR million revenue, compared to 1,296 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.50% of the net assets, compared to 3.39% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 53.52% of the net assets, compared to 55.31% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the sub-fund was 32.07% of the net assets, compared to 58.15% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.28 GWh, compared to 0.57 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 4.34% of the net assets, compared to 6.70% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.02 tons, compared to 0.06 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 9.03 tons, compared to 13.55 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.58% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 4.34% of the net assets, compared to 6.70% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
Apple Inc	Technology Hardware, Storage & Peripherals	7.59%	United States

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

96.2%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

3.5%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to attain the sustainable investment objective during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 34 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Carbon profile of the Sub-fund in terms of and greenhouse gas emissions of the Sub-fund remained well below that of the benchmark. The Sub-fund has a carbon profile that is more than 30% better than the benchmark.

How did this financial product perform compared to the reference benchmark?

● **How does the reference benchmark differ from a broad market index?**

The benchmark differs from a broad market index in that the latter does not take into account in its methodology any criteria on the carbon reduction objective and carbon footprint of companies.

● **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?**

The sub-fund's weighted carbon footprint (scope level 1, 2 and 3) was 0.71% better than that of the MSCI USA EU PAB Overlay Index.

● **How did this financial product perform compared with the reference benchmark?**

The greenhouse gas emissions (t CO₂-eq/mUSD) amounted to 84,192 for Robeco QI US Climate Beta Equities, compared to 84,789 for the MSCI USA EU PAB Overlay Index.

The Sustainability ESG risk rating for Robeco QI US Climate Beta Equities was 18.03, compared to 19.02 for the MSCI USA EU PAB Overlay Index.

● **How did this financial product perform compared with the broad market index?**

The greenhouse gas emissions (t CO₂-eq/mUSD) amounted to 84,192 for Robeco QI US Climate Beta Equities, compared to 135,734 for the general market index.

The Sustainability ESG risk rating for Robeco QI US Climate Beta Equities was 18.03, compared to 20.37 for the general market index.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI European Active Equities

Legal entity identifier: 213800SATZYOKMAPLJ87

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: ___%**

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 73.2% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective: ___%**

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The sub-fund's weighted carbon (scope level 1, 2 and 3 upstream), water and waste footprint was better than that of the General Market Index.
3. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies in the portfolio that have breached one of the international guidelines during the investment period, have become part of the Enhanced Engagement program. When engagement deemed highly unlikely to succeed, the company was excluded directly.
4. The sub-fund's weighted average ESG score was better than that of the general market index.
5. The sub-fund's weight in companies with a positive SDG score (1,2,3) was better than that of the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability disclosures (Unaudited)

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. The sub-fund's weighted score for the carbon (scope level 1, 2 and 3 upstream), water and waste footprint were respectively 4.68%, 40.50% and 60.30% better than the general market index.
3. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
4. The sub-fund's weighted average ESG score was 18.72 against 18.77 for the general market index. A lower score means a lower risk.
5. 73.21% of the investments held a positive SDG score (1,2,3), compared to 72.30% for the general market index.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Holdings with a positive SDG rating	73.21%	72.18%	68.01%
Weighted score for:			
- Carbon footprint (% better than the general market index)	4.68%	6.86%	5.95%
- Water footprint (% better than the general market index)	40.50%	58.60%	25.31%
- Waste footprint (% better than the general market index)	60.30%	64.71%	25.53%
Companies in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Weighted average ESG Score	18.72	20.14	20.14
Investments on exclusion list	0.00%	0.00%	0.00%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement, proxy voting and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement, proxy voting and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits

Sustainability disclosures (Unaudited)

the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

→ → Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

o Via the applied normative and activity-based exclusions, the following PAIs were considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 4.21% of the net assets, compared to 4.19% of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 7.78% of the net assets, compared to 8.84% of the benchmark.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.42% of the benchmark.

o Via the environmental footprint performance targets of the sub-fund, the following PAIs were considered:

- The carbon footprint of the portfolio (PAI 2, table 1) was 883 tons per EUR million EVIC, compared to 1,123 tons per EUR million EVIC for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 7.78% of the net assets, compared to 8.84% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.01 tons, compared to 0.02 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 20.51 tons, compared to 51.67 tons of the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

Sustainability disclosures (Unaudited)

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 73,525 tons, compared to 90,978 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 883 tons per EUR million EVIC, compared to 1,123 tons per EUR million EVIC for the benchmark.
- The greenhouse gas intensity of the portfolio (PAI 3, table 1) was 1,203 tons per EUR million revenue, compared to 1,326 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 4.21% of the net assets, compared to 4.19% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 53.11% of the net assets, compared to 53.98% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 39.35% of the net assets, compared to 41.65% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.38 GWh, compared to 0.47 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 7.78% of the net assets, compared to 8.84% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.01 tons, compared to 0.02 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 20.51 tons, compared to 51.67 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
SAP SE	Software	3.14%	Germany
Novo Nordisk A/S	Pharmaceuticals	2.87%	Denmark
Novartis AG	Pharmaceuticals	2.56%	Switzerland
Shell PLC	Oil, Gas & Consumable Fuels	2.49%	United Kingdom
ASML Holding NV	Semiconductors & Semiconductor Equipment	2.44%	Netherlands
Roche Holding AG	Pharmaceuticals	2.19%	Switzerland
Schneider Electric SE	Electrical Equipment	1.99%	France
UBS Group AG	Capital Markets	1.65%	Switzerland
AstraZeneca PLC	Pharmaceuticals	1.64%	United Kingdom
ABB Ltd	Electrical Equipment	1.52%	Switzerland
Iberdrola SA	Electric Utilities	1.48%	Spain
TotalEnergies SE	Oil, Gas & Consumable Fuels	1.39%	France
L'Oreal SA	Personal Products	1.39%	France
GSK PLC	Pharmaceuticals	1.32%	United Kingdom
Unilever PLC	Personal Products	1.31%	United Kingdom

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	Average exposure in % over the reporting period
Sectors deriving revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels -	
Oil, Gas & Consumable Fuels	4.03%
Energy Equipment & Services	0.14%
Other sectors	
Pharmaceuticals	11.99%
Banks	10.81%
Electrical Equipment	4.31%
Insurance	4.29%
Aerospace & Defense	4.19%
Software	3.99%
Food Products	3.62%
Chemicals	3.42%
Capital Markets	3.34%
Machinery	2.91%
Semiconductors & Semiconductor Equipment	2.83%
Personal Products	2.82%
Textiles, Apparel & Luxury Goods	2.65%
Hotels, Restaurants & Leisure	2.54%
Food & Staples Retailing	2.40%
Electric Utilities	2.35%
Specialty Retail	2.00%
Household Products	1.98%
Biotechnology	1.84%
Communications Equipment	1.64%
Health Care Equipment & Supplies	1.60%
Professional Services	1.48%
Diversified Telecommunication Services	1.45%
Real Estate Management & Development	1.16%
Industrial Conglomerates	1.16%
Multi-Utilities	1.11%
Entertainment	1.11%
Beverages	0.96%
Automobiles	0.88%
Health Care Providers & Services	0.85%
Wireless Telecommunication Services	0.84%

Sustainability disclosures (Unaudited)

Construction & Engineering	0.77%
Auto Components	0.73%
Media	0.64%
Technology Hardware, Storage & Peripherals	0.63%
Diversified Financial Services	0.57%
Metals & Mining	0.56%
Multiline Retail	0.46%
Building Products	0.45%
Construction Materials	0.43%
Diversified REITs	0.38%
Household Durables	0.22%
Commercial Services & Supplies	0.19%
Road & Rail	0.16%
Trading Companies & Distributors	0.13%
Retail REITs	0.12%

IT Services	0.08%
Marine	0.08%
Life Sciences Tools & Services	0.04%
Office REITs	0.04%
Cash and other instruments	0.51%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas

In nuclear energy

No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● What was the share of investments made in transitional and enabling activities?

0.0%.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

8.1%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

65.1%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 35 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Carbon profile of the Sub-fund in terms of and greenhouse gas emissions of the Sub-fund remained well below that of the benchmark. The Sub-fund has a carbon profile that is better than the benchmark.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Transition Asian Equities **Legal entity identifier:** 2138007MXBYFOD9BC187

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: ___%**

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 52.8% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective: ___%**

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. At least 50% was invested in Transition-related Investments contributing to the goals of the Paris Agreement.
2. The sub-fund was solely invested in companies that hold a positive or neutral SDG score based on the internally developed SDG Framework.
3. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
4. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breached the international norms were excluded from the investment universe.
5. All equity holdings granted the right to vote and Robeco exerted that right by voting according to Robeco's Proxy Voting Policy, unless impediments occurred (e.g. share blocking).
6. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The sub-fund was limited to a maximum exposure of 5% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability disclosures (Unaudited)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The sub-fund invested 66.43% in Transition-related Investments contributing to the goals of the Paris Agreement.
2. 66.17% of the investments in portfolio held a neutral or positive SDG score based on the internally developed SDG framework.
3. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
4. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
5. On behalf of the sub-fund votes, were cast on 98 agenda items at 12 shareholders' meetings.
6. 0.00% of the holdings in portfolio had an elevated sustainability risk profile.

● *...and compared to previous periods?*

The Sub-fund has been launched in 2024, so no comparison can be made.

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Investments in transition assets can, but do not per se need to be, sustainable investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement, proxy voting and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement, proxy voting and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement and proxy voting. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGP), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy.

PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.

Sustainability disclosures (Unaudited)

PAI 13, table 1 regarding board gender diversity was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 4, table 2 regarding investments in companies without carbon emission reduction initiatives was considered via engagement. Robeco engages with key high emitters in our investment portfolios via the engagement themes "Acceleration to Paris" and "Net Zero Carbon Emissions".

PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaintshandling mechanism was considered.

PAI 6, table 3 regarding insufficient whistleblower protection was considered.

PAI 7, table 3 regarding incidents of discrimination was considered.

PAI 8, table 3 regarding excessive CEO pay ratio was considered via proxy voting and engagement under the engagement program "Responsible Executive Remuneration".

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

o Via the applied normative and activity-based exclusions, the following PAIs were considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.14% of the net assets, compared to 2.95% of the benchmark.

- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 1.19% of the benchmark.

- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 2.66% of the net assets, compared to 2.73% of the benchmark.

Sustainability disclosures (Unaudited)

- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 1.13% of the benchmark.

o Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 1,708 tons, compared to 2,159 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 723 tons per EUR million EVIC, compared to 909 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,162 tons per EUR million revenue, compared to 1,702 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.14% of the net assets, compared to 2.95% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 66.51% of the net assets, compared to 68.94% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 38.75% of the net assets, compared to 84.82% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.37 GWh, compared to 1.55 GWh for the benchmark.
- The share of investments in investee companies without carbon emission reduction initiatives aimed at aligning with the Paris Agreement (PAI 4, Table 2) was 30.40% of the net assets, compared to 48.32% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 2.66% of the net assets, compared to 2.73% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.01 tons, compared to 0.05 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 6.08 tons, compared to 20.17 tons of the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 22.33%, compared to 19.48% for the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via the application of the voting policy, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 1,708 tons, compared to 2,159 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 723 tons per EUR million EVIC, compared to 909 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,162 tons per EUR million revenue, compared to 1,702 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.14% of the net assets, compared to 2.95% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 66.51% of the net assets, compared to 68.94% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 38.75% of the net assets, compared to 84.82% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.37 GWh, compared to 1.55 GWh for the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 1.19% of the benchmark.
- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 0.00%, compared to 1.63% for the benchmark.
- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 53.08%, compared to 74.44% for the benchmark.
- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 0.00%, compared to 9.84% for the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 22.33%, compared to 19.48% for the benchmark.
- Indicators in relation to social and employee matters (PAI 5-7, Table 3).
- The average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest compensated individual) (PAI 8, Table 3) was 184, compared to 220 for the benchmark.

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 1,708 tons, compared to 2,159 tons for the benchmark.

Sustainability disclosures (Unaudited)

- The carbon footprint of the portfolio (PAI 2, table 1) was 723 tons per EUR million EVIC, compared to 909 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,162 tons per EUR million revenue, compared to 1,702 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.14% of the net assets, compared to 2.95% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 66.51% of the net assets, compared to 68.94% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 38.75% of the net assets, compared to 84.82% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.37 GWh, compared to 1.55 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 2.66% of the net assets, compared to 2.73% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.01 tons, compared to 0.05 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 6.08 tons, compared to 20.17 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 1.19% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
Taiwan Semiconductor Manufacturing Co Lt	Semiconductors & Semiconductor Equipment	10.04%	Taiwan
iShares MSCI India UCITS ETF	Not Classified	7.95%	India
Meituan	Hotels, Restaurants & Leisure	5.74%	China
Ping An Insurance Group Co of China Ltd	Insurance	5.63%	China
Infosys Ltd ADR	IT Services	5.48%	India
CIMB Group Holdings Bhd	Banks	3.92%	Malaysia
BYD Co Ltd	Automobiles	3.68%	China
SK Hynix Inc	Semiconductors & Semiconductor Equipment	3.52%	Korea
KB Financial Group Inc	Banks	3.24%	Korea
MediaTek Inc	Semiconductors & Semiconductor Equipment	2.64%	Taiwan
Dr Reddy's Laboratories Ltd ADR	Pharmaceuticals	2.32%	India
Hon Hai Precision Industry Co Ltd	Electronic Equipment, Instruments & Components	2.23%	Taiwan
Keppel Ltd	Industrial Conglomerates	2.18%	Singapore
LG Chem Ltd	Chemicals	2.13%	Korea
Ayala Land Inc	Real Estate Management & Development	2.05%	Philippines

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	Average exposure in % over the reporting period
Other sectors	
Semiconductors & Semiconductor Equipment	17.19%
Banks	7.16%
Hotels, Restaurants & Leisure	5.74%
Insurance	5.63%
IT Services	5.48%
Industrial Conglomerates	5.02%
Pharmaceuticals	4.32%
Automobiles	3.68%
Electrical Equipment	2.86%
Electronic Equipment, Instruments & Components	2.84%
Chemicals	2.13%
Real Estate Management & Development	2.05%
Food Products	2.04%
Independent Power and Renewable Electricity Producers	1.95%
Commercial Services & Supplies	1.86%
Metals & Mining	1.85%
Household Durables	1.55%
Construction & Engineering	1.32%
Personal Products	0.58%
Not Classified	7.95%
Cash and other instruments	16.80%

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
0.0%.
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Sub-fund has been launched in 2024, so no comparison can be made.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

3.5%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

49.3%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 10 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, The Sub-fund was not invested in holdings with an elevated risk profile.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco New World Financials

Legal entity identifier: 213800WE9J70V8DOET07

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: ___%**

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 67.7% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective: ___%**

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies in the portfolio that have breached one of the international guidelines during the investment period, have become part of the Enhanced Engagement program. When engagement deemed highly unlikely to succeed, the company was excluded directly.
3. All equity holdings granted the right to vote and Robeco exerted that right by voting according to Robeco's Proxy Voting Policy, unless impediments occurred (e.g. share blocking).
4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The sub-fund was limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
5. The sub-fund's weighted carbon footprint (scope level 1, 2 and 3 upstream) was equal or better than that of the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability disclosures (Unaudited)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. On behalf of the sub-fund votes, were cast on 1157 agenda items at 92 shareholders' meetings.
4. 0.00% of the holdings in portfolio had an elevated sustainability risk profile.
5. The sub-fund's weighted carbon footprint (scope level 1, 2 and 3 upstream) was 52.85% better than that of the general market index.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Number of votes casted	1157	1100	1023
Weighted score for: - Carbon footprint (% better than the general market index)	52.85%	83.34%	77.30%
Companies in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Holdings with an elevated sustainability risk profile	0.00%	0.00%	0.00%
Investments on exclusion list	0.00%	0.00%	0.00%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

Sustainability disclosures (Unaudited)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement, proxy voting and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement, proxy voting and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN

Sustainability disclosures (Unaudited)

Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement and proxy voting. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGP), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy. PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.

PAI 13, table 1 regarding board gender diversity was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmissbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 4, table 2 regarding investments in companies without carbon emission reduction initiatives was considered via engagement. Robeco engages with key high emitters in our investment portfolios via the engagement themes "Acceleration to Paris" and "Net Zero Carbon Emissions".

PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaintshandling mechanism was considered.

PAI 6, table 3 regarding insufficient whistleblower protection was considered.

PAI 7, table 3 regarding incidents of discrimination was considered.

PAI 8, table 3 regarding excessive CEO pay ratio was considered via proxy voting and engagement under the engagement program "Responsible Executive Remuneration".

— → *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- o Via the applied normative and activity-based exclusions, the following PAIs were considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.16% of the net assets, compared to 0.48% of the benchmark.
 - Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
 - The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.

o Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 44,525 tons, compared to 49,594 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 99 tons per EUR million EVIC, compared to 113 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 863 tons per EUR million revenue, compared to 813 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.16% of the net assets, compared to 0.48% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 55.20% of the net assets, compared to 51.92% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 56.72% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 1.34 GWh, compared to 0.02 GWh for the benchmark.
- The share of investments in investee companies without carbon emission reduction initiatives aimed at aligning with the Paris Agreement (PAI 4, Table 2) was 42.93% of the net assets, compared to 42.62% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.00 tons, compared to 0.00 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 0.00 tons, compared to 0.01 tons of the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 32.00%, compared to 33.88% for the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- o Via the application of the voting policy, the following PAIs were considered:
 - The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 44,525 tons, compared to 49,594 tons for the benchmark.
 - The carbon footprint of the portfolio (PAI 2, table 1) was 99 tons per EUR million EVIC, compared to 113 tons per EUR million EVIC for the benchmark.
 - The green house gas intensity of the portfolio (PAI 3, table 1) was 863 tons per EUR million revenue, compared to 813 tons per EUR million revenue for the benchmark.
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.16% of the net assets, compared to 0.48% of the benchmark.
 - The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 55.20% of the net assets, compared to 51.92% of the benchmark.
 - The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 56.72% of the benchmark.
 - The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 1.34 GWh, compared to 0.02 GWh for the benchmark.
 - Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation

Sustainability disclosures (Unaudited)

and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.

- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 0.00%, compared to 0.63% for the benchmark.
- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 71.70%, compared to 69.93% for the benchmark.
- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 25.01%, compared to 25.13% for the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 32.00%, compared to 33.88% for the benchmark.
- Indicators in relation to social and employee matters (PAI 5-7, Table 3).
- The average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest compensated individual) (PAI 8, Table 3) was 210, compared to 219 for the benchmark.

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 44,525 tons, compared to 49,594 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 99 tons per EUR million EVIC, compared to 113 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 863 tons per EUR million revenue, compared to 813 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.16% of the net assets, compared to 0.48% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 55.20% of the net assets, compared to 51.92% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 56.72% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 1.34 GWh, compared to 0.02 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.00 tons, compared to 0.00 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 0.00 tons, compared to 0.01 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
Goldman Sachs Group Inc/The	Capital Markets	3.37%	United States
Morgan Stanley	Capital Markets	3.15%	United States
Bank of America Corp	Banks	3.11%	United States
PayPal Holdings Inc	Diversified Financial Services	2.98%	United States
Fiserv Inc	Diversified Financial Services	2.91%	United States
Visa Inc	Diversified Financial Services	2.76%	United States
Blackrock Inc	Capital Markets	2.68%	United States
AIA Group Ltd	Insurance	2.61%	Hong Kong
Adyen NV	Diversified Financial Services	2.43%	Netherlands
Ameriprise Financial Inc	Capital Markets	2.32%	United States
Standard Chartered PLC	Banks	2.29%	United Kingdom
S&P Global Inc	Capital Markets	2.28%	United States
Julius Baer Group Ltd	Capital Markets	2.26%	Switzerland
Ping An Insurance Group Co of China Ltd	Insurance	2.13%	China
FinecoBank Banca Fineco SpA	Banks	2.08%	Italy

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	Average exposure in % over the reporting period
Other sectors	
Capital Markets	32.94%
Banks	28.33%
Diversified Financial Services	17.76%
Insurance	12.17%
Professional Services	2.62%
Consumer Finance	1.36%
IT Services	1.19%
Software	1.13%
Multiline Retail	0.56%
Real Estate Management & Development	0.54%
Interactive Media & Services	0.29%
Cash and other instruments	1.11%

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes
 In fossil gas In nuclear energy
 No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
0.0%.
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

0.5%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

67.2%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 8 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Carbon profile of the Sub-fund in terms of and greenhouse gas emissions of the Sub-fund remained well below that of the benchmark. The Sub-fund has a carbon profile that is more than 50% better than the benchmark.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Sustainable Property Equities

Legal entity identifier: 2138003BSHS5NJ9EBX10

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: ___%**

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 69.0% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective: ___%**

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breached the international norms were excluded from the investment universe.
3. All equity holdings granted the right to vote and Robeco exerted that right by voting according to Robeco's Proxy Voting Policy, unless impediments occurred (e.g. share blocking).
4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The sub-fund was limited to a maximum exposure of 2% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
5. The sub-fund's weighted carbon footprint (scope level 1, 2 and 3 upstream) was equal or better than that of the General Market Index.
6. The sub-fund's weighted average ESG score was better than that of the general market index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability disclosures (Unaudited)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
3. On behalf of the sub-fund votes, were cast on 698 agenda items at 58 shareholders' meetings.
4. 0.00% of the holdings in portfolio had an elevated sustainability risk profile.
5. The sub-fund's weighted carbon footprint (scope level 1, 2 and 3 upstream) was 27.42% better than that of the general market index.
6. The sub-fund's weighted average ESG score was 12.19 against 13.20 for the general market index. A lower score means a lower risk.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Number of votes casted	648	620	677
Weighted score for: - Carbon footprint (% better than the general market index)	27.42%	39.13%	34.80%
Companies in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Holdings with an elevated sustainability risk profile	0.00%	0.00%	0.00%
Weighted average ESG Score	12.19	12.24	12.51
Investments on exclusion list	0.00%	0.00%	0.00%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

Sustainability disclosures (Unaudited)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement, proxy voting and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement, proxy voting and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN

Sustainability disclosures (Unaudited)

Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement and proxy voting. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGP), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy. PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.

PAI 13, table 1 regarding board gender diversity was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmissbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 4, table 2 regarding investments in companies without carbon emission reduction initiatives was considered via engagement. Robeco engages with key high emitters in our investment portfolios via the engagement themes "Acceleration to Paris" and "Net Zero Carbon Emissions".

PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaintshandling mechanism was considered.

PAI 6, table 3 regarding insufficient whistleblower protection was considered.

PAI 7, table 3 regarding incidents of discrimination was considered.

PAI 8, table 3 regarding excessive CEO pay ratio was considered via proxy voting and engagement under the engagement program "Responsible Executive Remuneration".

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- o Via the applied normative and activity-based exclusions, the following PAIs were considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.00% of the net assets, compared to 0.01% of the benchmark.
 - Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
 - The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.

o Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 31,701 tons, compared to 18,414 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 80 tons per EUR million EVIC, compared to 50 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 428 tons per EUR million revenue, compared to 419 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.00% of the net assets, compared to 0.01% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 72.02% of the net assets, compared to 69.89% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 0.00% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.33 GWh, compared to 0.51 GWh for the benchmark.
- The share of investments in investee companies without carbon emission reduction initiatives aimed at aligning with the Paris Agreement (PAI 4, Table 2) was 34.02% of the net assets, compared to 43.98% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.00 tons, compared to 0.06 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 0.00 tons, compared to 0.68 tons of the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 32.01%, compared to 32.43% for the benchmark.

o Via the environmental footprint performance targets of the sub-fund, the following PAIs were considered:

- The carbon footprint of the portfolio (PAI 2, table 1) was 80 tons per EUR million EVIC, compared to 50 tons per EUR million EVIC for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.00 tons, compared to 0.06 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 0.00 tons, compared to 0.68 tons of the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via the application of the voting policy, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 31,701 tons, compared to 18,414 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 80 tons per EUR million EVIC, compared to 50 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 428 tons per EUR million revenue, compared to 419 tons per EUR million revenue for the benchmark.

Sustainability disclosures (Unaudited)

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.00% of the net assets, compared to 0.01% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 72.02% of the net assets, compared to 69.89% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 0.00% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.33 GWh, compared to 0.51 GWh for the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 1.27%, compared to 2.27% for the benchmark.
- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 86.15%, compared to 83.63% for the benchmark.
- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 19.13%, compared to 33.10% for the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 32.01%, compared to 32.43% for the benchmark.
- Indicators in relation to social and employee matters (PAI 5-7, Table 3).
- The average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest compensated individual) (PAI 8, Table 3) was 175, compared to 155 for the benchmark.

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 31,701 tons, compared to 18,414 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 80 tons per EUR million EVIC, compared to 50 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 428 tons per EUR million revenue, compared to 419 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.00% of the net assets, compared to 0.01% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 72.02% of the net assets, compared to 69.89% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 0.00% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.33 GWh, compared to 0.51 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.00 tons, compared to 0.06 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 0.00 tons, compared to 0.68 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
Equinix Inc	Specialized REITs	8.23%	United States
Prologis Inc	Industrial REITs	6.70%	United States
Welltower Inc	Health Care REITs	5.66%	United States
Simon Property Group Inc	Retail REITs	4.42%	United States
AvalonBay Communities Inc	Residential REITs	3.98%	United States
Extra Space Storage Inc	Specialized REITs	3.78%	United States
Essex Property Trust Inc	Residential REITs	3.15%	United States
Kimco Realty Corp	Retail REITs	2.92%	United States
Equity LifeStyle Properties Inc	Residential REITs	2.74%	United States
Mitsubishi Estate Co Ltd	Real Estate Management & Development	2.66%	Japan
Goodman Group	Industrial REITs	2.27%	Australia
Healthpeak Properties Inc	Health Care REITs	2.08%	United States
Federal Realty Investment Trust	Retail REITs	2.07%	United States
CubeSmart	Specialized REITs	2.03%	United States
CBRE Group Inc	Real Estate Management & Development	2.00%	United States

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

In which economic sectors were the investments made?

Sector	Average exposure in % over the reporting period
Other sectors	
Specialized REITs	20.07%
Real Estate Management & Development	19.73%
Residential REITs	15.72%
Retail REITs	14.32%
Industrial REITs	11.65%
Health Care REITs	9.15%
Office REITs	4.84%
Diversified REITs	2.59%
Diversified Telecommunication Services	0.58%
Cash and other instruments	1.35%

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
0.0%.
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

24.4%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

44.6%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 1 holding was under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Carbon profile of the Sub-fund in terms of and greenhouse gas emissions of the Sub-fund remained well below that of the benchmark. The Sub-fund has a carbon profile that is more than 20% better than the benchmark.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Global Consumer Trends **Legal entity identifier:** 213800PFG7CLST9A1742

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: ___%**

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 63.2% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective: ___%**

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies in the portfolio that have breached one of the international guidelines during the investment period, have become part of the Enhanced Engagement program. When engagement deemed highly unlikely to succeed, the company was excluded directly.
3. All equity holdings granted the right to vote and Robeco exerted that right by voting according to Robeco's Proxy Voting Policy, unless impediments occurred (e.g. share blocking).
4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The sub-fund was limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
5. The sub-fund's weighted carbon footprint (scope level 1, 2 and 3 upstream) was equal or better than that of the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability disclosures (Unaudited)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. On behalf of the sub-fund votes, were cast on 662 agenda items at 44 shareholders' meetings.
4. 0.00% of the holdings in portfolio had an elevated sustainability risk profile.
5. The sub-fund's weighted carbon footprint (scope level 1, 2 and 3 upstream) was 70.41% better than that of the general market index.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Number of votes casted	662	680	603
Weighted score for: - Carbon footprint (% better than the general market index)	70.41%	93.84%	93.00%
Companies in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Holdings with an elevated sustainability risk profile	0.00%	0.00%	0.00%
Investments on exclusion list	0.00%	0.00%	0.00%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement, proxy voting and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement, proxy voting and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement and proxy voting. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGP), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence

Sustainability disclosures (Unaudited)

processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy. PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.

PAI 13, table 1 regarding board gender diversity was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 4, table 2 regarding investments in companies without carbon emission reduction initiatives was considered via engagement. Robeco engages with key high emitters in our investment portfolios via the engagement themes "Acceleration to Paris" and "Net Zero Carbon Emissions".

PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaint handling mechanism was considered.

PAI 6, table 3 regarding insufficient whistleblower protection was considered.

PAI 7, table 3 regarding incidents of discrimination was considered.

PAI 8, table 3 regarding excessive CEO pay ratio was considered via proxy voting and engagement under the engagement program "Responsible Executive Remuneration".

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

o Via the applied normative and activity-based exclusions, the following PAIs were considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.10% of the net assets, compared to 3.76% of the benchmark.

- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation

Sustainability disclosures (Unaudited)

and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.50% of the benchmark.

- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 6.96% of the benchmark.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.42% of the benchmark.

o Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 374,748 tons, compared to 2,205,381 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 95 tons per EUR million EVIC, compared to 603 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 610 tons per EUR million revenue, compared to 1,409 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.10% of the net assets, compared to 3.76% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 51.69% of the net assets, compared to 57.81% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 58.25% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.07 GWh, compared to 0.76 GWh for the benchmark.
- The share of investments in investee companies without carbon emission reduction initiatives aimed at aligning with the Paris Agreement (PAI 4, Table 2) was 33.10% of the net assets, compared to 34.19% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 6.96% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.00 tons, compared to 0.05 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 0.16 tons, compared to 116.62 tons of the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 35.37%, compared to 34.03% for the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via the application of the voting policy, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 374,748 tons, compared to 2,205,381 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 95 tons per EUR million EVIC, compared to 603 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 610 tons per EUR million revenue, compared to 1,409 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.10% of the net assets, compared to 3.76% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 51.69% of the net assets, compared to 57.81% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 58.25% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.07 GWh, compared to 0.76 GWh for the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.50% of the benchmark.
- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 0.00%, compared to 0.40% for the benchmark.
- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 59.08%, compared to 56.65% for the benchmark.
- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 17.70%, compared to 17.57% for the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 35.37%, compared to 34.03% for the benchmark.
- Indicators in relation to social and employee matters (PAI 5-7, Table 3).
- The average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest compensated individual)

Sustainability disclosures (Unaudited)

(PAI 8, Table 3) was 825, compared to 922 for the benchmark.

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 374,748 tons, compared to 2,205,381 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 95 tons per EUR million EVIC, compared to 603 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 610 tons per EUR million revenue, compared to 1,409 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.10% of the net assets, compared to 3.76% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 51.69% of the net assets, compared to 57.81% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 58.25% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.07 GWh, compared to 0.76 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 6.96% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.00 tons, compared to 0.05 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 0.16 tons, compared to 116.62 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.50% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
NVIDIA Corp	Semiconductors & Semiconductor Equipment	7.01%	United States
Amazon.com Inc	Multiline Retail	7.00%	United States
Netflix Inc	Entertainment	4.89%	United States
Meta Platforms Inc	Interactive Media & Services	4.34%	United States
Microsoft Corp	Software	4.14%	United States
Apple Inc	Technology Hardware, Storage & Peripherals	3.96%	United States
Mastercard Inc	Diversified Financial Services	3.36%	United States
Alphabet Inc (Class A)	Interactive Media & Services	3.26%	United States
Visa Inc	Diversified Financial Services	2.30%	United States
EssilorLuxottica SA	Health Care Equipment & Supplies	2.24%	France
Industria de Diseno Textil SA	Specialty Retail	2.23%	Spain
Novo Nordisk A/S	Pharmaceuticals	2.21%	Denmark
Procter & Gamble Co/The	Household Products	2.20%	United States
Unilever PLC	Personal Products	2.18%	United Kingdom
Fiserv Inc	Diversified Financial Services	2.02%	United States

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	Average exposure in % over the reporting period
Other sectors	
Interactive Media & Services	9.52%
Diversified Financial Services	9.48%
Multiline Retail	8.96%
Personal Products	8.44%
Pharmaceuticals	7.27%
Semiconductors & Semiconductor Equipment	7.01%
Health Care Equipment & Supplies	6.69%
Software	5.91%
Specialty Retail	5.56%
Household Products	5.56%
Entertainment	4.89%
Technology Hardware, Storage & Peripherals	3.96%
Food & Staples Retailing	2.96%
Hotels, Restaurants & Leisure	2.83%
Banks	1.65%
Food Products	1.56%
Road & Rail	1.54%
Automobiles	1.53%
Chemicals	1.45%
Cash and other instruments	3.24%

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes
 In fossil gas In nuclear energy
 No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
0.0%.
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

1.7%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

61.5%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 20 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Carbon profile of the Sub-fund in terms of and greenhouse gas emissions of the Sub-fund remained well below that of the benchmark. The Sub-fund has a carbon profile that is more than 70% better than the benchmark.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Global Multi-Thematic

Legal entity identifier: 2138006ECAW1JTNY4V89

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: ___%**

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 85.5% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective: ___%**

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies in the portfolio that have breached one of the international guidelines during the investment period, have become part of the Enhanced Engagement program. When engagement deemed highly unlikely to succeed, the company was excluded directly.
3. All equity holdings granted the right to vote and Robeco exerted that right by voting according to Robeco's Proxy Voting Policy, unless impediments occurred (e.g. share blocking).
4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The sub-fund was limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability disclosures (Unaudited)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. On behalf of the sub-fund votes, were cast on 923 agenda items at 64 shareholders' meetings.
4. 0.00% of the holdings in portfolio had an elevated sustainability risk profile.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Number of votes casted	923	833	761
Companies in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Holdings with an elevated sustainability risk profile	0.00%	0.00%	0.00%
Investments on exclusion list	0.00%	0.00%	0.00%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement, proxy voting and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement, proxy voting and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement and proxy voting. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGP), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence

Sustainability disclosures (Unaudited)

processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy. PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.

PAI 13, table 1 regarding board gender diversity was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 4, table 2 regarding investments in companies without carbon emission reduction initiatives was considered via engagement. Robeco engages with key high emitters in our investment portfolios via the engagement themes "Acceleration to Paris" and "Net Zero Carbon Emissions".

PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaint handling mechanism was considered.

PAI 6, table 3 regarding insufficient whistleblower protection was considered.

PAI 7, table 3 regarding incidents of discrimination was considered.

PAI 8, table 3 regarding excessive CEO pay ratio was considered via proxy voting and engagement under the engagement program "Responsible Executive Remuneration".

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

o Via the applied normative and activity-based exclusions, the following PAIs were considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.92% of the net assets, compared to 3.76% of the benchmark.

- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation

Sustainability disclosures (Unaudited)

and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.50% of the benchmark.

- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 1.03% of the net assets, compared to 6.96% of the benchmark.

- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.42% of the benchmark.

o Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 48,771 tons, compared to 32,049 tons for the benchmark.

- The carbon footprint of the portfolio (PAI 2, table 1) was 819 tons per EUR million EVIC, compared to 603 tons per EUR million EVIC for the benchmark.

- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,527 tons per EUR million revenue, compared to 1,409 tons per EUR million revenue for the benchmark.

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.92% of the net assets, compared to 3.76% of the benchmark.

- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 55.96% of the net assets, compared to 57.81% of the benchmark.

- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 42.83% of the net assets, compared to 58.25% of the benchmark.

- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.17 GWh, compared to 0.76 GWh for the benchmark.

- The share of investments in investee companies without carbon emission reduction initiatives aimed at aligning with the Paris Agreement (PAI 4, Table 2) was 33.56% of the net assets, compared to 34.19% of the benchmark.

- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 1.03% of the net assets, compared to 6.96% of the benchmark.

- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.06 tons, compared to 0.05 tons of the benchmark.

- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 1.96 tons, compared to 116.62 tons of the benchmark.

- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 34.93%, compared to 34.03% for the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via the application of the voting policy, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 48,771 tons, compared to 32,049 tons for the benchmark.

- The carbon footprint of the portfolio (PAI 2, table 1) was 819 tons per EUR million EVIC, compared to 603 tons per EUR million EVIC for the benchmark.

- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,527 tons per EUR million revenue, compared to 1,409 tons per EUR million revenue for the benchmark.

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.92% of the net assets, compared to 3.76% of the benchmark.

- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 55.96% of the net assets, compared to 57.81% of the benchmark.

- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 42.83% of the net assets, compared to 58.25% of the benchmark.

- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.17 GWh, compared to 0.76 GWh for the benchmark.

- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.50% of the benchmark.

- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 0.00%, compared to 0.40% for the benchmark.

- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 56.68%, compared to 56.65% for the benchmark.

- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 17.42%, compared to 17.57% for the benchmark.

- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 34.93%, compared to 34.03% for the benchmark.

- Indicators in relation to social and employee matters (PAI 5-7, Table 3).

- The average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest compensated individual)

Sustainability disclosures (Unaudited)

(PAI 8, Table 3) was 824, compared to 922 for the benchmark.

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 48,771 tons, compared to 32,049 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 819 tons per EUR million EVIC, compared to 603 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,527 tons per EUR million revenue, compared to 1,409 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.92% of the net assets, compared to 3.76% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 55.96% of the net assets, compared to 57.81% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 42.83% of the net assets, compared to 58.25% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.17 GWh, compared to 0.76 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 1.03% of the net assets, compared to 6.96% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.06 tons, compared to 0.05 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 1.96 tons, compared to 116.62 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.50% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
NVIDIA Corp	Semiconductors & Semiconductor Equipment	4.53%	United States
Microsoft Corp	Software	3.62%	United States
Amazon.com Inc	Multiline Retail	3.57%	United States
Taiwan Semiconductor Manufactu ADR	Semiconductors & Semiconductor Equipment	3.56%	Taiwan
Alphabet Inc (Class A)	Interactive Media & Services	3.33%	United States
Intuitive Surgical Inc	Health Care Equipment & Supplies	2.67%	United States
Thermo Fisher Scientific Inc	Life Sciences Tools & Services	2.62%	United States
Visa Inc	Diversified Financial Services	2.35%	United States
Salesforce Inc	Software	2.20%	United States
Prysmian SpA	Electrical Equipment	2.11%	Italy
Quanta Services Inc	Construction & Engineering	2.09%	United States
EssilorLuxottica SA	Health Care Equipment & Supplies	2.08%	France
Analog Devices Inc	Semiconductors & Semiconductor Equipment	1.99%	United States
Zebra Technologies Corp	Electronic Equipment, Instruments & Components	1.97%	United States
Palo Alto Networks Inc	Software	1.96%	United States

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	Average exposure in % over the reporting period
Other sectors	
Semiconductors & Semiconductor Equipment	11.54%
Software	11.04%
Health Care Equipment & Supplies	9.63%
Electrical Equipment	5.64%
Diversified Financial Services	5.28%
Interactive Media & Services	5.00%
Multiline Retail	4.93%
Life Sciences Tools & Services	4.85%
Electronic Equipment, Instruments & Components	4.82%
Banks	3.64%
Automobiles	3.51%
Machinery	2.78%
Household Durables	2.62%
Construction & Engineering	2.09%
Hotels, Restaurants & Leisure	2.07%
Textiles, Apparel & Luxury Goods	1.94%
IT Services	1.78%
Multi-Utilities	1.67%
Trading Companies & Distributors	1.58%
Pharmaceuticals	1.51%
Personal Products	1.46%
Insurance	1.10%
Industrial Conglomerates	1.09%
Media	1.06%
Entertainment	1.00%
Commercial Services & Supplies	0.99%
Food & Staples Retailing	0.98%
Capital Markets	0.96%
Specialized REITs	0.91%
Leisure Products	0.66%
Electric Utilities	0.44%
Cash and other instruments	1.43%

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
- 0.0%.
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

9.3%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

76.2%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 22 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, The Sub-fund was not invested in holdings with an elevated risk profile.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Digital Innovations

Legal entity identifier: 213800WH91CRLWH4AL56

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ___%

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 91.6% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: ___%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies in the portfolio that have breached one of the international guidelines during the investment period, have become part of the Enhanced Engagement program. When engagement deemed highly unlikely to succeed, the company was excluded directly.
3. All equity holdings granted the right to vote and Robeco exerted that right by voting according to Robeco's Proxy Voting Policy, unless impediments occurred (e.g. share blocking).
4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The sub-fund was limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability disclosures (Unaudited)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. On behalf of the sub-fund votes, were cast on 674 agenda items at 46 shareholders' meetings.
4. 0.00% of the holdings in portfolio had an elevated sustainability risk profile.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Number of votes casted	674	666	679
Companies in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Holdings with an elevated sustainability risk profile	0.00%	0.00%	0.00%
Investments on exclusion list	0.00%	0.00%	0.00%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement, proxy voting and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement, proxy voting and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement and proxy voting. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGP), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy.

PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement and proxy voting. In

Sustainability disclosures (Unaudited)

2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.

PAI 13, table 1 regarding board gender diversity was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 4, table 2 regarding investments in companies without carbon emission reduction initiatives was considered via engagement. Robeco engages with key high emitters in our investment portfolios via the engagement themes "Acceleration to Paris" and "Net Zero Carbon Emissions".

PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaints handling mechanism was considered.

PAI 6, table 3 regarding insufficient whistleblower protection was considered.

PAI 7, table 3 regarding incidents of discrimination was considered.

PAI 8, table 3 regarding excessive CEO pay ratio was considered via proxy voting and engagement under the engagement program "Responsible Executive Remuneration".

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

o Via the applied normative and activity-based exclusions, the following PAIs were considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.97% of the net assets, compared to 3.76% of the benchmark.

- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.50% of the benchmark.

Sustainability disclosures (Unaudited)

- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 6.96% of the benchmark.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.42% of the benchmark.

o Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 141,568 tons, compared to 169,316 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 524 tons per EUR million EVIC, compared to 603 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,802 tons per EUR million revenue, compared to 1,409 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.97% of the net assets, compared to 3.76% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 42.22% of the net assets, compared to 57.81% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 58.25% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.13 GWh, compared to 0.76 GWh for the benchmark.
- The share of investments in investee companies without carbon emission reduction initiatives aimed at aligning with the Paris Agreement (PAI 4, Table 2) was 28.44% of the net assets, compared to 34.19% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 6.96% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.00 tons, compared to 0.05 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 0.21 tons, compared to 116.62 tons of the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 34.12%, compared to 34.03% for the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via the application of the voting policy, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 141,568 tons, compared to 169,316 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 524 tons per EUR million EVIC, compared to 603 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,802 tons per EUR million revenue, compared to 1,409 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.97% of the net assets, compared to 3.76% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 42.22% of the net assets, compared to 57.81% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 58.25% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.13 GWh, compared to 0.76 GWh for the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.50% of the benchmark.
- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 0.00%, compared to 0.40% for the benchmark.
- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 59.42%, compared to 56.65% for the benchmark.
- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 0.00%, compared to 17.57% for the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 34.12%, compared to 34.03% for the benchmark.
- Indicators in relation to social and employee matters (PAI 5-7, Table 3).
- The average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest compensated individual) (PAI 8, Table 3) was 551, compared to 922 for the benchmark.

Sustainability disclosures (Unaudited)

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 141,568 tons, compared to 169,316 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 524 tons per EUR million EVIC, compared to 603 tons per EUR million EVIC for the benchmark.
- The greenhouse gas intensity of the portfolio (PAI 3, table 1) was 1,802 tons per EUR million revenue, compared to 1,409 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.97% of the net assets, compared to 3.76% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 42.22% of the net assets, compared to 57.81% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 58.25% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.13 GWh, compared to 0.76 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 6.96% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.00 tons, compared to 0.05 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 0.21 tons, compared to 116.62 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.50% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
NVIDIA Corp	Semiconductors & Semiconductor Equipment	6.04%	United States
Salesforce Inc	Software	4.97%	United States
ServiceNow Inc	Software	4.87%	United States
SAP SE	Software	4.77%	Germany
Taiwan Semiconductor Manufacturing Co Lt	Semiconductors & Semiconductor Equipment	4.52%	Taiwan
Microsoft Corp	Software	3.81%	United States
Amazon.com Inc	Multiline Retail	3.72%	United States
CyberArk Software Ltd	Software	3.47%	Israel
Zebra Technologies Corp	Electronic Equipment, Instruments & Components	3.29%	United States
Intuitive Surgical Inc	Health Care Equipment & Supplies	2.98%	United States
PTC Inc	Software	2.75%	United States
Analog Devices Inc	Semiconductors & Semiconductor Equipment	2.72%	United States
Schneider Electric SE	Electrical Equipment	2.56%	France
Keyence Corp	Electronic Equipment, Instruments & Components	2.52%	Japan
Emerson Electric Co	Electrical Equipment	2.44%	United States

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **In which economic sectors were the investments made?**

Sector	Average exposure in % over the reporting period
Other sectors	
Software	35.30%
Semiconductors & Semiconductor Equipment	18.17%
Electronic Equipment, Instruments & Components	10.30%
Electrical Equipment	8.09%

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
0.0%.
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

7.5%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

84.1%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 7 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, The Sub-fund was not invested in holdings with an elevated risk profile.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco FinTech

Legal entity identifier: 213800XVWPYZAY58YG68

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: ___%**

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 68.9% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective: ___%**

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies in the portfolio that have breached one of the international guidelines during the investment period, have become part of the Enhanced Engagement program. When engagement deemed highly unlikely to succeed, the company was excluded directly.
3. All equity holdings granted the right to vote and Robeco exerted that right by voting according to Robeco's Proxy Voting Policy, unless impediments occurred (e.g. share blocking).
4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The sub-fund was limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability disclosures (Unaudited)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. On behalf of the sub-fund votes, were cast on 673 agenda items at 69 shareholders' meetings.
4. 0.00% of the holdings in portfolio had an elevated sustainability risk profile.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Number of votes casted	673	692	694
Companies in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Holdings with an elevated sustainability risk profile	0.00	0.00%	0.00%
Investments on exclusion list	0.00%	0.00%	0.00%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

—> *How were the indicators for adverse impacts on sustainability factors taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement, proxy voting and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement, proxy voting and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement and proxy voting. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGP), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy.

PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement and proxy voting. In

Sustainability disclosures (Unaudited)

2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.

PAI 13, table 1 regarding board gender diversity was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 4, table 2 regarding investments in companies without carbon emission reduction initiatives was considered via engagement. Robeco engages with key high emitters in our investment portfolios via the engagement themes "Acceleration to Paris" and "Net Zero Carbon Emissions".

PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaints handling mechanism was considered.

PAI 6, table 3 regarding insufficient whistleblower protection was considered.

PAI 7, table 3 regarding incidents of discrimination was considered.

PAI 8, table 3 regarding excessive CEO pay ratio was considered via proxy voting and engagement under the engagement program "Responsible Executive Remuneration".

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

o Via the applied normative and activity-based exclusions, the following PAIs were considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.05% of the net assets, compared to 3.76% of the benchmark.

- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.50% of the benchmark.

Sustainability disclosures (Unaudited)

- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 6.96% of the benchmark.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.42% of the benchmark.

o Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 30,085 tons, compared to 320,120 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 64 tons per EUR million EVIC, compared to 603 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 398 tons per EUR million revenue, compared to 1,409 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.05% of the net assets, compared to 3.76% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 51.56% of the net assets, compared to 57.81% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 58.25% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.00 GWh, compared to 0.76 GWh for the benchmark.
- The share of investments in investee companies without carbon emission reduction initiatives aimed at aligning with the Paris Agreement (PAI 4, Table 2) was 62.00% of the net assets, compared to 34.19% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 6.96% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.00 tons, compared to 0.05 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 0.00 tons, compared to 116.62 tons of the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 31.22%, compared to 34.03% for the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via the application of the voting policy, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 30,085 tons, compared to 320,120 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 64 tons per EUR million EVIC, compared to 603 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 398 tons per EUR million revenue, compared to 1,409 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.05% of the net assets, compared to 3.76% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 51.56% of the net assets, compared to 57.81% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 58.25% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.00 GWh, compared to 0.76 GWh for the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.50% of the benchmark.
- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 0.00%, compared to 0.40% for the benchmark.
- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 85.13%, compared to 56.65% for the benchmark.
- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 0.00%, compared to 17.57% for the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 31.22%, compared to 34.03% for the benchmark.
- Indicators in relation to social and employee matters (PAI 5-7, Table 3).
- The average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest compensated individual) (PAI 8, Table 3) was 273, compared to 922 for the benchmark.

Sustainability disclosures (Unaudited)

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 30,085 tons, compared to 320,120 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 64 tons per EUR million EVIC, compared to 603 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 398 tons per EUR million revenue, compared to 1,409 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.05% of the net assets, compared to 3.76% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 51.56% of the net assets, compared to 57.81% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 58.25% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.00 GWh, compared to 0.76 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 6.96% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.00 tons, compared to 0.05 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 0.00 tons, compared to 116.62 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.50% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
Adyen NV	Diversified Financial Services	4.54%	Netherlands
PayPal Holdings Inc	Diversified Financial Services	4.29%	United States
Fiserv Inc	Diversified Financial Services	4.24%	United States
Shopify Inc	IT Services	3.91%	Canada
Tencent Holdings Ltd	Interactive Media & Services	3.76%	China
S&P Global Inc	Capital Markets	3.57%	United States
Block Inc	Diversified Financial Services	3.35%	United States
Coinbase Global Inc	Capital Markets	3.12%	United States
Wise PLC	Diversified Financial Services	2.90%	United Kingdom
Sea Ltd ADR	Entertainment	2.57%	Singapore

BlackLine Inc	Software	2.29%	United States
MSCI Inc	Capital Markets	2.26%	United States
Hundsun Technologies Inc	Software	2.24%	China

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	Average exposure in % over the reporting period
Other sectors	
Diversified Financial Services	28.88%
Capital Markets	24.95%
Software	15.54%
Professional Services	7.23%
IT Services	6.28%
Consumer Finance	3.86%
Interactive Media & Services	3.76%
Banks	3.49%
Entertainment	2.57%
Multiline Retail	2.14%
Cash and other instruments	1.30%

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
0.0%.
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

0.0%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

68.9%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 4 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, The Sub-fund was not invested in holdings with an elevated risk profile.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex V

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Circular Economy

Legal entity identifier: 21380076KKDPDXSFG955

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: 20.9%**

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective: 75.0%**

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The sub-fund's sustainable investment objective is: to finance solutions that support the transition from traditional production and consumption patterns toward a circular economy. The sustainable investment objective was attained by mainly investing in companies that advanced the following United Nations Sustainable Development Goals (SDGs): 6% of the companies in portfolio had a positive score on Zero Hunger (SDG 2), 13% of the companies in portfolio had a positive score on Good health and well-being (SDG 3), 27% of the companies in portfolio had a positive score on Decent work and economic growth (SDG 8), 52% of the companies in portfolio had a positive score on Industry, innovation and infrastructure (SDG 9), 26% of the companies in portfolio had a positive score on Sustainable cities and communities (SDG 11) and 23% of the companies in portfolio had a positive score on Responsible consumption and production (SDG 12).

Sustainability indicators measure how the sustainable objectives of this financial product are attained

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2025-02-28.

1. 100.00% of the investments held a positive or allowed neutral SDG score based on the internally developed SDG Framework.
2. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once

Sustainability disclosures (Unaudited)

selling is possible at a reasonable price, holdings will be sold.

3. 0.00% of the holdings in portfolio was in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.

4. On behalf of the sub-fund votes, were cast on 830 agenda items at 63 shareholders' meetings.

● ...and compared to previous periods?

Sustainability indicator	2024	2023	2022
Number of votes casted	830	730	696
Holdings with a positive or allowed neutral SDG score	100.00%	100.00%	100.00%
Holdings in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Investments on exclusion list	0.00%	0.00%	0.68%

● How did the sustainable investments not cause significant harm to any sustainable investment objective?

— → How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considered principal adverse impacts of its investment decisions on sustainability factors as part of its investment due diligence process and procedures. For sustainable investments this meant ensuring that the investments do no significant harm to any environmental or social objective. Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 Green House Gas emissions via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement, proxy voting and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement, proxy voting and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement and proxy voting. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGP), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy.

PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.

PAI 13, table 1 regarding board gender diversity was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaintshandling mechanism was considered.

PAI 6, table 3 regarding insufficient whistleblower protection was considered.

PAI 7, table 3 regarding incidents of discrimination was considered.

PAI 8, table 3 regarding excessive CEO pay ratio was considered via proxy voting and engagement under the engagement program "Responsible Executive Remuneration".

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDG's). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators. The average SDG score of the portfolio was 1.6604.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via the application of the voting policy, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 174,808 tons, compared to 187,224 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 627 tons per EUR million EVIC, compared to 565 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,620 tons per EUR million revenue, compared to 1,370 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.82% of the net assets, compared to 3.74% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 66.57% of the net assets, compared to 56.46% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the sub-fund was 0.00% of the net assets, compared to 55.16% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.31 GWh, compared to 0.61 GWh for the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.44% of the benchmark.
- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 0.71%, compared to 0.22% for the benchmark.
- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 50.18%, compared to 55.00% for the benchmark.
- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 16.70%, compared to 17.63% for the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 34.61%, compared to 35.49% for the benchmark.
- Indicators in relation to social and employee matters (PAI 5-7, Table 3).
- The average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest compensated individual) (PAI 8, Table 3) was 166, compared to 956 for the benchmark.

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 174,808 tons, compared to 187,224 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 627 tons per EUR million EVIC, compared to 565 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,620 tons per EUR million revenue, compared to 1,370 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.82% of the net assets, compared to 3.74% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 66.57% of the net assets, compared to 56.46% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the sub-fund was 0.00% of the net assets, compared to 55.16% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.31 GWh, compared to 0.61 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 1.55% of the net assets, compared to 7.27% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.01 tons, compared to 0.05 tons of the benchmark.

Sustainability disclosures (Unaudited)

- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 1.83 tons, compared to 119.72 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.44% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
NVIDIA Corp	Semiconductors & Semiconductor Equipment	4.44%	United States

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas

In nuclear energy

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● What was the share of investments made in transitional and enabling activities?

0.0%.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

20.9%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

75.0%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to attain the sustainable investment objective during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 9 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, all holdings in the Sub-fund had a positive, or allowed neutral SDG score.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Annex V

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: 23.2%**

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective: 74.8%**

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The sustainable investments of the sub-fund aimed to further the transformation and decarbonization of the global energy sector. The sustainable investment objective was attained by mainly investing in companies that advance the following United Nations Sustainable Development Goals (SDGs): 51% of the companies in portfolio had a positive score on Affordable and clean energy goal (SDG 7), 38% of the companies in portfolio had a positive score on Decent work and economic growth (SDG 8), 50% of the companies in portfolio had a positive score on Industry, innovation and infrastructure (SDG 9), 13% of the companies in portfolio had a positive score on Sustainable cities and communities (SDG 11) and 22% of the companies in portfolio had a positive score on Climate action (SDG 13).

As at the end of the reporting period, the sub-fund's sustainable investments with environmental objectives were not made in economic activities that qualify as environmentally sustainable under the EU Taxonomy.

The sub-fund carbon footprint (scope level; 1, 2 and 3) as of 31 December 2024 was 31.67% better than the Custom Bloomberg Climate Transition Benchmark.

Sustainability indicators measure how the sustainable objectives of this financial product are attained

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The sub-fund's weighted carbon footprint (scope level 1, 2 and 3) was 31.67% better than that of the Custom Bloomberg Climate Transition Benchmark.

Sustainability disclosures (Unaudited)

2. 100.00% of the investments held a positive or allowed neutral SDG score based on the internally developed SDG Framework.
3. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
4. 0.00% of the holdings in portfolio was in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
5. On behalf of the sub-fund votes, were cast on 646 agenda items at 52 shareholders' meetings.

● ...and compared to previous periods?

Sustainability indicator	2024	2023	2022
Number of votes casted	496	701	680
Holdings with a positive or allowed neutral SDG score	100.00%	100.00%	100.00%
Holdings in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Investments on exclusion list	0.00%	0.00%	0.80%
Weighted score for: - Carbon footprint (% better than the Custom Bloomberg Climate Transition Benchmark)	31.67%	36.60%	31.61%

● How did the sustainable investments not cause significant harm to any sustainable investment objective?

— → How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considered principal adverse impacts of its investment decisions on sustainability factors as part of its investment due diligence process and procedures. For sustainable investments this meant ensuring that the investments do no significant harm to any environmental or social objective. Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 Green House Gas emissions via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement, proxy voting and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement, proxy voting and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement and proxy voting. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGP), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy.

PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.

PAI 13, table 1 regarding board gender diversity was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaintshandling mechanism was considered.

PAI 6, table 3 regarding insufficient whistleblower protection was considered.

PAI 7, table 3 regarding incidents of discrimination was considered.

PAI 8, table 3 regarding excessive CEO pay ratio was considered via proxy voting and engagement under the engagement program "Responsible Executive Remuneration".

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Sustainability disclosures (Unaudited)

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDG's). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators. The average SDG score of the portfolio was 1.8623.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via the application of the voting policy, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 8,308,980 tons, compared to 1,565,357 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 2,821 tons per EUR million EVIC, compared to 565 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 6,093 tons per EUR million revenue, compared to 1,370 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.65% of the net assets, compared to 3.74% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 67.40% of the net assets, compared to 56.46% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the sub-fund was 37.13% of the net assets, compared to 55.16% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.25 GWh, compared to 0.61 GWh for the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.44% of the benchmark.
- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 0.00%, compared to 0.22% for the benchmark.
- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 56.00%, compared to 55.00% for the benchmark.
- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 5.00%, compared to 17.63% for the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 34.16%, compared to 35.49% for the benchmark.
- Indicators in relation to social and employee matters (PAI 5-7, Table 3).
- The average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest compensated individual) (PAI 8, Table 3) was 250, compared to 956 for the benchmark.

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 8,308,980 tons, compared to 1,565,357 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 2,821 tons per EUR million EVIC, compared to 565 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 6,093 tons per EUR million revenue, compared to 1,370 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.65% of the net assets, compared to 3.74% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was

Sustainability disclosures (Unaudited)

67.40% of the net assets, compared to 56.46% of the benchmark.

- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the sub-fund was 37.13% of the net assets, compared to 55.16% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.25 GWh, compared to 0.61 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 7.27% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.00 tons, compared to 0.05 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 0.41 tons, compared to 119.72 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.44% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
Quanta Services Inc	Construction & Engineering	5.13%	United States
Marvell Technology Inc	Semiconductors & Semiconductor Equipment	4.81%	United States
Vertiv Holdings Co	Electrical Equipment	4.35%	United States
Schneider Electric SE	Electrical Equipment	4.32%	France
Carlisle Cos Inc	Building Products	4.32%	United States
Autodesk Inc	Software	3.84%	United States
BYD Co Ltd	Automobiles	3.71%	China
Infineon Technologies AG	Semiconductors & Semiconductor Equipment	3.33%	Germany
SSE PLC	Electric Utilities	3.25%	United Kingdom
Regal Rexnord Corp	Electrical Equipment	3.24%	United States
nVent Electric PLC	Electrical Equipment	3.20%	United States
Procore Technologies Inc	Software	3.19%	United States
Legrand SA	Electrical Equipment	3.07%	France
PTC Inc	Software	2.92%	United States
ARM Holdings PLC ADR	Semiconductors & Semiconductor Equipment	2.87%	United Kingdom

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

Sustainability disclosures (Unaudited)

● **In which economic sectors were the investments made?**

Sector	Average exposure in % over the reporting period
Other sectors	
Semiconductors & Semiconductor Equipment	27.23%
Electrical Equipment	26.96%
Software	9.95%
Electric Utilities	6.43%
Construction & Engineering	5.88%
Building Products	5.32%
Electronic Equipment, Instruments & Components	4.74%
Independent Power and Renewable Electricity Producers	4.36%
Automobiles	3.71%
Communications Equipment	1.96%
Chemicals	1.27%

Not Classified	0.00%
Not Classified	0.00%
Cash and other instruments	1.54%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas

In nuclear energy

No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities are** economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● What was the share of investments made in transitional and enabling activities?

0.0%.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

23.2%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

74.8%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to attain the sustainable investment objective during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 7 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Carbon profile of the Sub-fund in terms of and greenhouse gas emissions of the Sub-fund remained well below that of the benchmark. The Sub-fund has a carbon profile that is more than 30% better than the benchmark.

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

- **How does the reference benchmark differ from a broad market index?**

The benchmark differs from a broad market index in that the latter does not take into account in its methodology any criteria on the carbon reduction objective and carbon footprint of companies.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?**

The sub-fund's weighted carbon footprint (scope level 1, 2 and 3) was 31.67% better than that of the Custom Bloomberg Climate Transition Benchmark.

- **How did this financial product perform compared with the reference benchmark?**

The green house gas emissions (t CO₂-eq/mUSD) amounted to 86.62 for Robeco Smart Energy, compared to 123.94 for the Custom Bloomberg Climate Transition Benchmark.

The weight of investments with a positive SDG score in portfolio was 97.58% for Robeco Smart Energy, compared to 78.98% for the Custom Bloomberg Climate Transition Benchmark.

- **How did this financial product perform compared with the broad market index?**

The green house gas emissions (t CO₂-eq/mUSD) amounted to 86.62 for Robeco Smart Energy, compared to 77.55 for the general market index.

The weight of investments with a positive SDG score in portfolio was 97.58% for Robeco Smart Energy, compared to 65.94% for the general market index.

Annex V

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Smart Materials

Legal entity identifier: 213800HUVXY434VECO29

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: 28.8%**

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective: 69.7%**

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The sustainable investments of the sub-fund aim to help mitigate the resource scarcity challenge within industries while supporting economic growth. The sustainable investment objective was attained by mainly investing in companies that advance the following United Nations Sustainable Development Goals (SDGs): 35% of the companies in portfolio had a positive score on Decent work and economic growth (SDG 8), 68% of the companies in portfolio had a positive score on Industry, innovation and infrastructure (SDG 9), 34% of the companies in portfolio had a positive score on Sustainable cities and communities (SDG 11), 8 companies in portfolio had a positive score on Responsible consumption and production (SDG 12) and 8 companies in portfolio had a positive score on Climate action (SDG 13).

As at the end of the reporting period, the sub-fund's sustainable investments with environmental objectives were not made in economic activities that qualify as environmentally sustainable under the EU Taxonomy.

The sub-fund carbon footprint (scope level; 1, 2 and 3) as of 31 December 2024 was 13.28% better than the Custom Bloomberg Climate Transition Benchmark.

Sustainability indicators measure how the sustainable objectives of this financial product are attained

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The sub-fund's weighted carbon footprint (scope level 1, 2 and 3) was 13.28% better than that of the Custom Bloomberg Climate Transition Benchmark.

Sustainability disclosures (Unaudited)

2. 100.00% of the investments held a positive or allowed neutral SDG score based on the internally developed SDG Framework.
3. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
4. 0.00% of the holdings in portfolio was in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
5. On behalf of the sub-fund votes, were cast on 623 agenda items at 54 shareholders' meetings.

● ...and compared to previous periods?

Sustainability indicator	2024	2023	2022
Number of votes casted	623	666	613
Holdings with a positive or allowed neutral SDG score	100.00%	100.00%	100.00%
Holdings in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Investments on exclusion list	0.00%	0.00%	0.00%
Weighted score for: - Carbon footprint (% better than the Custom Bloomberg Climate Transition Benchmark)	13.28%	18.52%	9.33%

● How did the sustainable investments not cause significant harm to any sustainable investment objective?

— → How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The fund considered principal adverse impacts of its investment decisions on sustainability factors as part of its investment due diligence process and procedures. For sustainable investments this meant ensuring that the investments do no significant harm to any environmental or social objective. Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 Green House Gas emissions via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement, proxy voting and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is

Sustainability disclosures (Unaudited)

developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement, proxy voting and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement and proxy voting. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGP), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy.

PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.

PAI 13, table 1 regarding board gender diversity was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaintshandling mechanism was considered.

PAI 6, table 3 regarding insufficient whistleblower protection was considered.

PAI 7, table 3 regarding incidents of discrimination was considered.

PAI 8, table 3 regarding excessive CEO pay ratio was considered via proxy voting and engagement under the engagement program "Responsible Executive Remuneration".

→ *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Sustainability disclosures (Unaudited)

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDG's). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators. The average SDG score of the portfolio was 1.6853.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via the application of the voting policy, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 490,267 tons, compared to 254,576 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 781 tons per EUR million EVIC, compared to 565 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,794 tons per EUR million revenue, compared to 1,370 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.98% of the net assets, compared to 3.74% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 66.07% of the net assets, compared to 56.46% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the sub-fund was 0.00% of the net assets, compared to 55.16% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.53 GWh, compared to 0.61 GWh for the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.44% of the benchmark.
- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 1.42%, compared to 0.22% for the benchmark.
- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 62.88%, compared to 55.00% for the benchmark.
- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 12.10%, compared to 17.63% for the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 31.92%, compared to 35.49% for the benchmark.
- Indicators in relation to social and employee matters (PAI 5-7, Table 3).
- The average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest compensated individual) (PAI 8, Table 3) was 155, compared to 956 for the benchmark.

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 490,267 tons, compared to 254,576 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 781 tons per EUR million EVIC, compared to 565 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,794 tons per EUR million revenue, compared to 1,370 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.98% of the net assets, compared to 3.74% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was

Sustainability disclosures (Unaudited)

66.07% of the net assets, compared to 56.46% of the benchmark.

- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the sub-fund was 0.00% of the net assets, compared to 55.16% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.53 GWh, compared to 0.61 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 2.26% of the net assets, compared to 7.27% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.02 tons, compared to 0.05 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 313.98 tons, compared to 119.72 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.44% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
Onto Innovation Inc	Semiconductors & Semiconductor Equipment	5.67%	United States
Teradyne Inc	Semiconductors & Semiconductor Equipment	5.49%	United States
Contemporary Amperex Technology Co Ltd	Electrical Equipment	4.56%	China
PTC Inc	Software	4.29%	United States
ARM Holdings PLC ADR	Semiconductors & Semiconductor Equipment	4.19%	United Kingdom
Keyence Corp	Electronic Equipment, Instruments & Components	4.16%	Japan
Owens Corning	Building Products	4.00%	United States
Shenzhen Inovance Technology Co Ltd	Machinery	3.84%	China
Autodesk Inc	Software	3.23%	United States
Cie de Saint-Gobain SA	Building Products	3.14%	France
Sociedad Quimica y Minera de C ADR	Chemicals	3.13%	Chile
IPG Photonics Corp	Electronic Equipment, Instruments & Components	3.07%	United States
Thermo Fisher Scientific Inc	Life Sciences Tools & Services	3.03%	United States
TopBuild Corp	Household Durables	3.02%	United States
Novonesis (Novozymes) B	Chemicals	2.84%	Denmark

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

Sustainability disclosures (Unaudited)

● **In which economic sectors were the investments made?**

Sector	Average exposure in % over the reporting period
Other sectors	
Semiconductors & Semiconductor Equipment	18.09%
Electronic Equipment, Instruments & Components	17.54%
Chemicals	14.07%
Building Products	9.12%
Software	7.52%
Electrical Equipment	7.12%
Metals & Mining	5.89%
Commercial Services & Supplies	5.80%
Machinery	3.84%
Life Sciences Tools & Services	3.03%
Household Durables	3.02%
Construction & Engineering	1.82%
Professional Services	0.56%
Not Classified	0.00%
Cash and other instruments	2.58%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

● **To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0.0%.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas

In nuclear energy

No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities are** economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● What was the share of investments made in transitional and enabling activities?

0.0%.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

28.8%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

69.7%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to attain the sustainable investment objective during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 8 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Carbon profile of the Sub-fund in terms of and greenhouse gas emissions of the Sub-fund remained well below that of the benchmark. The Sub-fund has a carbon profile

Sustainability disclosures (Unaudited)

that is more than 10% better than the benchmark.

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

- **How does the reference benchmark differ from a broad market index?**

The benchmark differs from a broad market index in that the latter does not take into account in its methodology any criteria on the carbon reduction objective and carbon footprint of companies.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?**

The sub-fund's weighted carbon footprint (scope level 1, 2 and 3) was 13.28% better than that of the Custom Bloomberg Climate Transition Benchmark.

- **How did this financial product perform compared with the reference benchmark?**

The green house gas emissions (t CO₂-eq/mUSD) amounted to 283.95 for Robeco Smart Materials, compared to 327.43 for the Custom Bloomberg Climate Transition Benchmark.
The weight of investments with a positive SDG score in portfolio was 98.48% for Robeco Smart Materials, compared to 78.98% for the Custom Bloomberg Climate Transition Benchmark.

- **How did this financial product perform compared with the broad market index?**

The green house gas emissions (t CO₂-eq/mUSD) amounted to 283.95 for Robeco Smart Materials, compared to 200.15 for the general market index.
The weight of investments with a positive SDG score in portfolio was 98.48% for Robeco Smart Materials, compared to 65.94% for the general market index.

Annex V

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Smart Mobility

Legal entity identifier: 21380025AXSQN7Y4RV82

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: 23.9%**

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective: 74.2%**

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The sustainable investments of the Sub-fund aim to support the transformation and decarbonization of the global transportation sector. The sustainable investment objective was attained by mainly investing in companies that advance the following United Nations Sustainable Development Goals (SDGs): 20% of the companies in portfolio had a positive score on Affordable and clean energy goal (SDG 7), 46% of the companies in portfolio had a positive score on Decent work and economic growth (SDG 8), 55% of the companies in portfolio had a positive score on Industry, innovation and infrastructure (SDG 9), 29% of the companies in portfolio had a positive score on Sustainable cities and communities (SDG 11) and 23% of the companies in portfolio had a positive score on Climate action (SDG 13).

As at the end of the reporting period, the sub-fund's sustainable investments with environmental objectives were not made in economic activities that qualify as environmentally sustainable under the EU Taxonomy.

The sub-fund carbon footprint (scope level; 1, 2 and 3) as of 31 December 2024 was 33.46% better than the Custom Bloomberg Climate Transition Benchmark.

Sustainability indicators measure how the sustainable objectives of this financial product are attained

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The sub-fund's weighted carbon footprint (scope level 1, 2 and 3) was 33.46% better than that of the Custom Bloomberg Climate Transition Benchmark.

Sustainability disclosures (Unaudited)

2. 100.00% of the investments held a positive or allowed neutral SDG score based on the internally developed SDG Framework.
3. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
4. 0.00% of the holdings in portfolio was in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
5. On behalf of the sub-fund votes, were cast on 648 agenda items at 48 shareholders' meetings.

● ...and compared to previous periods?

Sustainability indicator	2024	2023	2022
Number of votes casted	535	557	604
Holdings with a positive or allowed neutral SDG score	98.14%	100.00%	100.00%
Holdings in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Investments on exclusion list	0.00%	0.00%	0.00%
Weighted score for: - Carbon footprint (% better than the Custom Bloomberg Climate Transition Benchmark)	33.46%	57.09%	34.60%

● How did the sustainable investments not cause significant harm to any sustainable investment objective?

— → How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considered principal adverse impacts of its investment decisions on sustainability factors as part of its investment due diligence process and procedures. For sustainable investments this meant ensuring that the investments do no significant harm to any environmental or social objective. Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 Green House Gas emissions via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement, proxy voting and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement, proxy voting and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement and proxy voting. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGP), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy.

PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.

PAI 13, table 1 regarding board gender diversity was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaintshandling mechanism was considered.

PAI 6, table 3 regarding insufficient whistleblower protection was considered.

PAI 7, table 3 regarding incidents of discrimination was considered.

PAI 8, table 3 regarding excessive CEO pay ratio was considered via proxy voting and engagement under the engagement program "Responsible Executive Remuneration".

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Sustainability disclosures (Unaudited)

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDG's). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators. The average SDG score of the portfolio was 1.8593.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via the application of the voting policy, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 266,597 tons, compared to 198,980 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 670 tons per EUR million EVIC, compared to 565 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 5,308 tons per EUR million revenue, compared to 1,370 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.81% of the net assets, compared to 3.74% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 53.69% of the net assets, compared to 56.46% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the sub-fund was 0.00% of the net assets, compared to 55.16% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.19 GWh, compared to 0.61 GWh for the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.44% of the benchmark.
- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 0.62%, compared to 0.22% for the benchmark.
- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 33.59%, compared to 55.00% for the benchmark.
- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 5.00%, compared to 17.63% for the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 29.31%, compared to 35.49% for the benchmark.
- Indicators in relation to social and employee matters (PAI 5-7, Table 3).
- The average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest compensated individual) (PAI 8, Table 3) was 2,352, compared to 956 for the benchmark.

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 266,597 tons, compared to 198,980 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 670 tons per EUR million EVIC, compared to 565 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 5,308 tons per EUR million revenue, compared to 1,370 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.81% of the net assets, compared to 3.74% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was

Sustainability disclosures (Unaudited)

53.69% of the net assets, compared to 56.46% of the benchmark.

- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the sub-fund was 0.00% of the net assets, compared to 55.16% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.19 GWh, compared to 0.61 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 4.64% of the net assets, compared to 7.27% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.00 tons, compared to 0.05 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 52.58 tons, compared to 119.72 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.44% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country
BYD Co Ltd	Automobiles	5.26%	China
Contemporary Amperex Technology Co Ltd	Electrical Equipment	5.00%	China
Tesla Inc	Automobiles	4.89%	United States
Analog Devices Inc	Semiconductors & Semiconductor Equipment	4.49%	United States
Infineon Technologies AG	Semiconductors & Semiconductor Equipment	4.24%	Germany
Schneider Electric SE	Electrical Equipment	4.17%	France
Texas Instruments Inc	Semiconductors & Semiconductor Equipment	4.13%	United States
QUALCOMM Inc	Semiconductors & Semiconductor Equipment	3.87%	United States
Delta Electronics Inc	Electronic Equipment, Instruments & Components	3.59%	Taiwan
NXP Semiconductors NV	Semiconductors & Semiconductor Equipment	3.49%	United States
Sociedad Quimica y Minera de C ADR	Chemicals	3.49%	Chile
Renesas Electronics Corp	Semiconductors & Semiconductor Equipment	3.39%	Japan
TE Connectivity PLC	Electronic Equipment, Instruments & Components	3.03%	United States
Bizlink Holding Inc	Electrical Equipment	2.91%	Taiwan
XPeng Inc ADR	Automobiles	2.73%	China

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

Sustainability disclosures (Unaudited)

● **In which economic sectors were the investments made?**

Sector	Average exposure in % over the reporting period
Other sectors	
Semiconductors & Semiconductor Equipment	35.76%
Electrical Equipment	17.39%
Automobiles	15.18%
Electronic Equipment, Instruments & Components	13.14%
Chemicals	6.17%
Software	3.02%
Auto Components	1.47%
Leisure Products	1.44%
Household Durables	1.38%
Machinery	1.13%
Hotels, Restaurants & Leisure	0.78%
Cash and other instruments	3.13%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas

In nuclear energy

No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● What was the share of investments made in transitional and enabling activities?

0.0%.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

23.9%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

74.2%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to attain the sustainable investment objective during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 11 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Carbon profile of the Sub-fund in terms of and greenhouse gas emissions of the Sub-fund remained well below that of the benchmark. The Sub-fund has a carbon profile that is more than 20% better than the benchmark.

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

- **How does the reference benchmark differ from a broad market index?**

The benchmark differs from a broad market index in that the latter does not take into account in its methodology any criteria on the carbon reduction objective and carbon footprint of companies.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?**

The sub-fund's weighted carbon footprint (scope level 1, 2 and 3) was 33.46% better than that of the Custom Bloomberg Climate Transition Benchmark.

- **How did this financial product perform compared with the reference benchmark?**

The green house gas emissions (t CO₂-eq/mUSD) amounted to 222.04 for Robeco Smart Mobility, compared to 333.68 for the Custom Bloomberg Climate Transition Benchmark.

The weight of investments with a positive SDG score in portfolio was 98.14% for Robeco Robeco Smart Mobility, compared to 78.98% for the Custom Bloomberg Climate Transition Benchmark.

- **How did this financial product perform compared with the broad market index?**

The green house gas emissions (t CO₂-eq/mUSD) amounted to 222.04 for Robeco Smart Mobility, compared to 202.40 for the general market index.

The weight of investments with a positive SDG score in portfolio was 98.14% for Robeco Smart Mobility, compared to 65.94% for the general market index.

Annex V

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Sustainable Healthy Living

Legal entity identifier: 213800KMESITUG55WI14

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes No

<input type="checkbox"/> It made sustainable investments with an environmental objective: 15.5%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective: 81.4%	<input type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent was the sustainable investment objective of this financial product met?

The sustainable investments contributed to the Sustainable Development Goals, promoting good health and well-being and contributed to an efficient healthcare system. 80.8% of the assets were invested in companies with a positive score on Good Health and Well Being (SDG 3). The financial product did not take into account the EU criteria for environmentally sustainable economic activities. The sub-fund did make sustainable investments with a social objective.

Sustainability indicators measure how the sustainable objectives of this financial product are attained

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2025-02-28.

1. 100.00% of the investments held a positive or allowed neutral SDG score based on the internally developed SDG Framework.
2. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
3. 0.00% of the holdings in portfolio was in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
4. On behalf of the sub-fund votes, were cast on 726 agenda items at 43 shareholders' meetings.

Sustainability disclosures (Unaudited)

- ...and compared to previous periods?

Sustainability indicator	2024	2023	2022
Number of votes casted	726	653	621
Holdings with a positive or allowed neutral SDG score	100.00%	100.00%	100.00%
Holdings in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Investments on exclusion list	0.00%	0.00%	0.00%

- How did the sustainable investments not cause significant harm to any sustainable investment objective?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- → How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considered principal adverse impacts of its investment decisions on sustainability factors as part of its investment due diligence process and procedures. For sustainable investments this meant ensuring that the investments do no significant harm to any environmental or social objective. Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 Green House Gas emissions via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement, proxy voting and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic

Sustainability disclosures (Unaudited)

Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement, proxy voting and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement and proxy voting. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGP), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy.

PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.

PAI 13, table 1 regarding board gender diversity was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaintshandling mechanism was considered.

PAI 6, table 3 regarding insufficient whistleblower protection was considered.

PAI 7, table 3 regarding incidents of discrimination was considered.

PAI 8, table 3 regarding excessive CEO pay ratio was considered via proxy voting and engagement under the engagement program "Responsible Executive Remuneration".

— → *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDG's). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators. The average SDG score of the portfolio was 1.6437.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via the application of the voting policy, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 42,698 tons, compared to 173,853 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 136 tons per EUR million EVIC, compared to 565 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 308 tons per EUR million revenue, compared to 1,370 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.42% of the net assets, compared to 3.74% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 73.80% of the net assets, compared to 56.46% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the sub-fund was 0.00% of the net assets, compared to 55.16% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.15 GWh, compared to 0.61 GWh for the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.44% of the benchmark.
- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 0.00%, compared to 0.22% for the benchmark.
- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 47.56%, compared to 55.00% for the benchmark.
- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 9.51%, compared to 17.63% for the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 35.64%, compared to 35.49% for the benchmark.
- Indicators in relation to social and employee matters (PAI 5-7, Table 3).
- The average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest compensated individual) (PAI 8, Table 3) was 260, compared to 956 for the benchmark.

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 42,698 tons, compared to 173,853 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 136 tons per EUR million EVIC, compared to 565 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 308 tons per EUR million revenue, compared to 1,370 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.42% of the net assets, compared to 3.74% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 73.80% of the net assets, compared to 56.46% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the sub-fund was 0.00% of the net assets, compared to 55.16% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.15 GWh, compared to 0.61 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.53% of the net assets, compared to 7.27% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.03 tons, compared to 0.05 tons of the benchmark.

Sustainability disclosures (Unaudited)

- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 0.48 tons, compared to 119.72 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.44% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
Siemens Healthineers AG	Health Care Equipment & Supplies	3.71%	Germany
Grifols SA Pref	Biotechnology	3.66%	Spain
Alcon AG	Health Care Equipment & Supplies	3.60%	United States

Olympus Corp	Health Care Equipment & Supplies	2.87%	Japan
Deckers Outdoor Corp	Textiles, Apparel & Luxury Goods	2.85%	United States
Thermo Fisher Scientific Inc	Life Sciences Tools & Services	2.85%	United States
Nomad Foods Ltd	Food Products	2.79%	United Kingdom
Novo Nordisk A/S	Pharmaceuticals	2.65%	Denmark

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

● In which economic sectors were the investments made?

Sector	Average exposure in % over the reporting period
Other sectors	
Health Care Equipment & Supplies	21.29%
Life Sciences Tools & Services	12.25%
Food Products	11.90%
Personal Products	10.03%
Textiles, Apparel & Luxury Goods	5.98%
Pharmaceuticals	5.86%
Biotechnology	5.76%
Chemicals	5.43%
Health Care Providers & Services	5.25%
Professional Services	4.42%
Specialty Retail	3.89%
Hotels, Restaurants & Leisure	2.35%
Food & Staples Retailing	1.22%
Household Products	0.66%
Cash and other instruments	3.72%

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes
 In fossil gas In nuclear energy
 No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
 - **turnover** reflecting the share of revenue from green activities of investee companies.
 - **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
 - **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**

0.0%.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

15.5%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

81.4%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to attain the sustainable investment objective during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 16 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, all holdings in the Sub-fund had a positive, or allowed neutral SDG score.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Annex V

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Sustainable Water

Legal entity identifier: 2138006TSIFH5ZD97319

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: 13.4%**

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective: 82.6%**

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The sustainable investments of the sub-fund helped to mitigate the global challenges related to scarcity, quality, and allocation of water. The sustainable investment objective is attained by mainly investing in companies that advance the following United Nations Sustainable Development Goals (SDGs): 20% of the companies in portfolio had a positive score on Good health and well-being (SDG 3), 29% of the companies in portfolio had a positive score on Clean water and sanitation (SDG 6), 70% of the companies in portfolio had a positive score on Industry, innovation and infrastructure (SDG 9), 28% of the companies in portfolio had a positive score on Sustainable cities and communities (SDG 11) and 15% of the companies in portfolio had a positive score on Responsible consumption and production (SDG 12), and 9% of the companies in portfolio had a positive score on Life below water (SDG 14).

Sustainability indicators measure how the sustainable objectives of this financial product are attained

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2025-02-28.

1. 100.00% of the investments held a positive or allowed neutral SDG score based on the internally developed SDG Framework.
2. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
3. 0.00% of the holdings in portfolio was in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
4. On behalf of the sub-fund votes, were cast on 981 agenda items at 76 shareholders' meetings.

Sustainability disclosures (Unaudited)

- ...and compared to previous periods?

Sustainability indicator	2024	2023	2022
Number of votes casted	981	1041	959
Holdings with a positive or allowed neutral SDG score	100.00%	100.00%	100.00%
Holdings in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Investments on exclusion list	0.00%	0.00%	1.87%

- How did the sustainable investments not cause significant harm to any sustainable investment objective?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- → How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considered principal adverse impacts of its investment decisions on sustainability factors as part of its investment due diligence process and procedures. For sustainable investments this meant ensuring that the investments do no significant harm to any environmental or social objective. Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 Green House Gas emissions via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement, proxy voting and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

Sustainability disclosures (Unaudited)

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement, proxy voting and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement and proxy voting. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGP), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy.

PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.

PAI 13, table 1 regarding board gender diversity was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaintshandling mechanism was considered.

PAI 6, table 3 regarding insufficient whistleblower protection was considered.

PAI 7, table 3 regarding incidents of discrimination was considered.

PAI 8, table 3 regarding excessive CEO pay ratio was considered via proxy voting and engagement under the engagement program "Responsible Executive Remuneration".

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDG's). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators. The average SDG score of the portfolio was 1.7469.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via the application of the voting policy, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 3,494,104 tons, compared to 1,674,824 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 1,171 tons per EUR million EVIC, compared to 565 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 2,655 tons per EUR million revenue, compared to 1,370 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.82% of the net assets, compared to 3.74% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 77.17% of the net assets, compared to 56.46% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the sub-fund was 44.31% of the net assets, compared to 55.16% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.27 GWh, compared to 0.61 GWh for the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.44% of the benchmark.
- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 0.90%, compared to 0.22% for the benchmark.
- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 50.83%, compared to 55.00% for the benchmark.
- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 5.90%, compared to 17.63% for the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 36.33%, compared to 35.49% for the benchmark.
- Indicators in relation to social and employee matters (PAI 5-7, Table 3).
- The average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest compensated individual) (PAI 8, Table 3) was 168, compared to 956 for the benchmark.

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 3,494,104 tons, compared to 1,674,824 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 1,171 tons per EUR million EVIC, compared to 565 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 2,655 tons per EUR million revenue, compared to 1,370 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.82% of the net assets, compared to 3.74% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 77.17% of the net assets, compared to 56.46% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the sub-fund was 44.31% of the net assets, compared to 55.16% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.27 GWh, compared to 0.61 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 1.85% of the net assets, compared to 7.27% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.20 tons, compared to 0.05 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested,

Sustainability disclosures (Unaudited)

expressed as a weighted average were 7.38 tons, compared to 119.72 tons of the benchmark.

- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.44% of the benchmark.

- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

13.4%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

82.6%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to attain the sustainable investment objective during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 9 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, all holdings in the Sub-fund had a positive, or allowed neutral SDG score.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Global Gender Equality

Legal entity identifier: 213800FAEA843S2ACV24

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ___%

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 86.9% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: ___%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund invested a minimum of 66.7% in companies with a Gender Equality score of 50 or higher.
2. The sub-fund was solely invested in companies that hold a positive or neutral SDG score based on the internally developed SDG Framework.
3. The sub-fund excluded the bottom 20% ranked companies on ESG from the investment universe.
4. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
5. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breached the international norms were excluded from the investment universe.
6. All equity holdings granted the right to vote and Robeco exerted that right by voting according to Robeco's Proxy Voting Policy, unless impediments occurred (e.g. share blocking).

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability disclosures (Unaudited)

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The sub-fund invested 92.53% of its assets in companies with a Gender Equality score of 50 or higher.
2. 90.82% of the companies (on average) held a neutral or positive SDG score.
3. The sub-fund excluded the bottom 20% ranked companies on ESG from the investment universe.
4. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
5. 0.00% of the holdings in portfolio was in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
6. On behalf of the sub-fund votes, were cast on 794 agenda items at 49 shareholders' meetings.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Number of votes casted	794	919	882
Companies with Gender Equality score of 50 or higher	92.53%	94.23%	84.91%
Holdings with a neutral or positive SDG score	90.82%	93.31%	97.07%
Holdings in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Exclusion of bottom 20% ranked companies on ESG from the investment universe	20.00%	20.00%	20.00%
Investments on exclusion list	0.00%	0.00%	1.64%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

—> *How were the indicators for adverse impacts on sustainability factors taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024->

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement, proxy voting and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement, proxy voting and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement and proxy voting. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGPs), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy.

PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in

Sustainability disclosures (Unaudited)

relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.

PAI 13, table 1 regarding board gender diversity was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmissbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaintshandling mechanism was considered.

PAI 6, table 3 regarding insufficient whistleblower protection was considered.

PAI 7, table 3 regarding incidents of discrimination was considered.

PAI 8, table 3 regarding excessive CEO pay ratio was considered via proxy voting and engagement under the engagement program "Responsible Executive Remuneration".

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDG's). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators. The average SDG score of the portfolio was 1.4484.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via the application of the voting policy, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 29,152 tons, compared to 49,540 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 352 tons per EUR million EVIC, compared to 565 tons per

Sustainability disclosures (Unaudited)

EUR million EVIC for the benchmark.

- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,115 tons per EUR million revenue, compared to 1,370 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.38% of the net assets, compared to 3.74% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 46.10% of the net assets, compared to 56.46% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 19.85% of the net assets, compared to 55.16% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.25 GWh, compared to 0.61 GWh for the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.44% of the benchmark.
- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 0.00%, compared to 0.22% for the benchmark.
- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 45.57%, compared to 55.00% for the benchmark.
- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 17.70%, compared to 17.63% for the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 37.91%, compared to 35.49% for the benchmark.
- Indicators in relation to social and employee matters (PAI 5-7, Table 3).
- The average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest compensated individual) (PAI 8, Table 3) was 486, compared to 956 for the benchmark.

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 29,152 tons, compared to 49,540 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 352 tons per EUR million EVIC, compared to 565 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,115 tons per EUR million revenue, compared to 1,370 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.38% of the net assets, compared to 3.74% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 46.10% of the net assets, compared to 56.46% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 19.85% of the net assets, compared to 55.16% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.25 GWh, compared to 0.61 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 2.88% of the net assets, compared to 7.27% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.00 tons, compared to 0.05 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 7.13 tons, compared to 119.72 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.44% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
NVIDIA Corp	Semiconductors & Semiconductor Equipment	6.57%	United States
Microsoft Corp	Software	6.00%	United States
Alphabet Inc (Class A)	Interactive Media & Services	4.92%	United States
Mastercard Inc	Diversified Financial Services	3.24%	United States
Bank of America Corp	Banks	2.57%	United States
SAP SE	Software	2.54%	Germany
AstraZeneca PLC	Pharmaceuticals	2.24%	United Kingdom
CBRE Group Inc	Real Estate Management & Development	2.20%	United States
AbbVie Inc	Biotechnology	2.14%	United States
Thermo Fisher Scientific Inc	Life Sciences Tools & Services	2.14%	United States
Amazon.com Inc	Multiline Retail	2.13%	United States
Unilever PLC	Personal Products	2.10%	United Kingdom
Nasdaq Inc	Capital Markets	2.09%	United States
Union Pacific Corp	Road & Rail	2.05%	United States
Schneider Electric SE	Electrical Equipment	2.05%	France

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Sector	Average exposure in % over the reporting period
Other sectors	
Software	12.87%
Semiconductors & Semiconductor Equipment	7.14%
Personal Products	5.17%
Interactive Media & Services	4.92%
Pharmaceuticals	4.65%
Insurance	4.51%
Banks	4.29%
Diversified Financial Services	3.74%

Household Products	1.30%
Metals & Mining	1.14%
Auto Components	0.86%
Health Care REITs	0.71%
Cash and other instruments	2.33%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas

In nuclear energy

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● What was the share of investments made in transitional and enabling activities?

0.0%.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

4.2%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

82.7%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 24 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, all holdings in the Sub-fund had a positive, or allowed neutral SDG score.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Next Digital Billion

Legal entity identifier: 213800MRQK7VNZMYS210

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ___%

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 50.3% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: ___%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies in the portfolio that have breached one of the international guidelines during the investment period, have become part of the Enhanced Engagement program. When engagement deemed highly unlikely to succeed, the company was excluded directly.
3. All equity holdings granted the right to vote and Robeco exerted that right by voting according to Robeco's Proxy Voting Policy, unless impediments occurred (e.g. share blocking).
4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The sub-fund was limited to a maximum exposure of 10% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability disclosures (Unaudited)

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. On behalf of the sub-fund votes, were cast on 564 agenda items at 72 shareholders' meetings.
4. 0.00% of the holdings in portfolio had an elevated sustainability risk profile.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Number of votes casted	564	545	409
Companies in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Holdings with an elevated sustainability risk profile	0.00%	1.92%	4.83%
Investments on exclusion list	0.00%	0.00%	0.00%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement, proxy voting and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement, proxy voting and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement and proxy voting. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGP), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy.

PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.

PAI 13, table 1 regarding board gender diversity was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all

Sustainability disclosures (Unaudited)

strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmissbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 4, table 2 regarding investments in companies without carbon emission reduction initiatives was considered via engagement. Robeco engages with key high emitters in our investment portfolios via the engagement themes "Acceleration to Paris" and "Net Zero Carbon Emissions".

PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaintshandling mechanism was considered.

PAI 6, table 3 regarding insufficient whistleblower protection was considered.

PAI 7, table 3 regarding incidents of discrimination was considered.

PAI 8, table 3 regarding excessive CEO pay ratio was considered via proxy voting and engagement under the engagement program "Responsible Executive Remuneration".

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- o Via the applied normative and activity-based exclusions, the following PAIs were considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.25% of the net assets, compared to 3.89% of the benchmark.
 - Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 1.06% of the benchmark.
 - The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 4.17% of the benchmark.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 1.00% of the benchmark.

o Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs were considered:

Sustainability disclosures (Unaudited)

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 1,590 tons, compared to 7,922 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 189 tons per EUR million EVIC, compared to 945 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 723 tons per EUR million revenue, compared to 1,761 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.25% of the net assets, compared to 3.89% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 64.88% of the net assets, compared to 70.21% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 82.53% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 1.01 GWh, compared to 2.19 GWh for the benchmark.
- The share of investments in investee companies without carbon emission reduction initiatives aimed at aligning with the Paris Agreement (PAI 4, Table 2) was 72.99% of the net assets, compared to 49.54% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 4.17% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.00 tons, compared to 0.05 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 0.42 tons, compared to 91.52 tons of the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 23.26%, compared to 18.61% for the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via the application of the voting policy, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 1,590 tons, compared to 7,922 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 189 tons per EUR million EVIC, compared to 945 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 723 tons per EUR million revenue, compared to 1,761 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.25% of the net assets, compared to 3.89% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 64.88% of the net assets, compared to 70.21% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 82.53% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 1.01 GWh, compared to 2.19 GWh for the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 1.06% of the benchmark.
- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 1.52%, compared to 2.04% for the benchmark.
- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 89.82%, compared to 71.67% for the benchmark.
- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 0.00%, compared to 11.47% for the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 23.26%, compared to 18.61% for the benchmark.
- Indicators in relation to social and employee matters (PAI 5-7, Table 3).
- The average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest compensated individual) (PAI 8, Table 3) was 288, compared to 220 for the benchmark.

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 1,590 tons, compared to 7,922 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 189 tons per EUR million EVIC, compared to 945 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 723 tons per EUR million revenue, compared to 1,761 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.25% of the net assets, compared to

Sustainability disclosures (Unaudited)

3.89% of the benchmark.

- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 64.88% of the net assets, compared to 70.21% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 82.53% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 1.01 GWh, compared to 2.19 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 4.17% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.00 tons, compared to 0.05 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 0.42 tons, compared to 91.52 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 1.06% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
Prosus NV	Multiline Retail	5.46%	Netherlands
Sea Ltd ADR	Entertainment	4.99%	Singapore
Reliance Industries Ltd	Oil, Gas & Consumable Fuels	4.00%	India
Grab Holdings Ltd	Road & Rail	3.79%	Singapore
Airtel Africa PLC	Wireless Telecommunication Services	3.71%	United Kingdom
Meituan	Hotels, Restaurants & Leisure	3.47%	China
Remitly Global Inc	Diversified Financial Services	3.23%	United States
Kotak Mahindra Bank Ltd	Banks	3.11%	India
Globant SA	IT Services	3.07%	Argentina
GDS Holdings Ltd	IT Services	3.03%	China
NU Holdings Ltd/Cayman Islands	Banks	2.97%	Brazil
MediaTek Inc	Semiconductors & Semiconductor Equipment	2.97%	Taiwan
Baidu Inc	Interactive Media & Services	2.93%	China
SK Hynix Inc	Semiconductors & Semiconductor Equipment	2.71%	Korea
MercadoLibre Inc	Multiline Retail	2.34%	United States

What was the proportion of sustainability-related investments?

What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Sustainability disclosures (Unaudited)

● **In which economic sectors were the investments made?**

Sector	Average exposure in % over the reporting period
Sectors deriving revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels -	
Oil, Gas & Consumable Fuels	4.00%
Other sectors	
IT Services	12.51%
Multiline Retail	10.48%
Hotels, Restaurants & Leisure	7.70%
Wireless Telecommunication Services	7.51%
Banks	7.38%
Interactive Media & Services	6.99%
Diversified Financial Services	6.20%
Semiconductors & Semiconductor Equipment	5.68%
Entertainment	4.99%
Real Estate Management & Development	4.05%
Consumer Finance	3.96%
Road & Rail	3.79%
Technology Hardware, Storage & Peripherals	3.40%
Software	3.29%

Specialty Retail	1.81%
Diversified Consumer Services	1.10%
Food & Staples Retailing	0.45%
Personal Products	0.38%
Not Classified	1.52%
Cash and other instruments	0.50%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas

In nuclear energy

No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● What was the share of investments made in transitional and enabling activities?

0.0%.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

2.3%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

48.0%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 9 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex V

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Biodiversity Equities

Legal entity identifier: 213800YFIUFHGS8PLX94

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: 33.2%

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: 63.2%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The sustainable investments of the sub-fund supported the sustainable use of natural resources and ecosystem services, as well as technologies, products and services that help to reduce Biodiversity threats or restore natural habitats. The foregoing is implemented by mainly invested in companies that advance the following United Nations Sustainable Development Goals (UN SDGs): 24% of the companies in portfolio had a positive score on Good health and well-being (SDG 3), 35% of the companies in portfolio had a positive score on Industry, Innovation and infrastructure (SDG 9), 22% of the companies in portfolio had a positive score on Responsible consumption and production (SDG 12), 20% of the companies in portfolio had a positive score on Life below water (SDG 14) and 34% of the companies in portfolio had a positive score on Life on Land (SDG 15).

Sustainability indicators measure how the sustainable objectives of this financial product are attained

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2025-02-28.

- 100.00% of the companies (on average) held a neutral or positive SDG score.
- The sub-fund engaged with 40.74% of the holdings in the portfolio.
- The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
- 0.00% of the holdings in portfolio was in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
- On behalf of the sub-fund votes, were cast on 645 agenda items at 47 shareholders' meetings.

Sustainability disclosures (Unaudited)

- ...and compared to previous periods?

Sustainability indicator	2024	2023	2022
Number of votes casted	489	605	959
Holdings with a neutral or positive SDG score	100.00%	100.00%	99.01%
Holdings in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Holdings actively engaged with	40.74%	37.55%	28.57%
Investments on exclusion list	0.00%	0.00%	1.87%

- How did the sustainable investments not cause significant harm to any sustainable investment objective?

- → How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The fund considered principal adverse impacts of its investment decisions on sustainability factors as part of its investment due diligence process and procedures. For sustainable investments this meant ensuring that the investments do no significant harm to any environmental or social objective. Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 Green House Gas emissions via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement, proxy voting and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply

Sustainability disclosures (Unaudited)

enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement, proxy voting and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement and proxy voting. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGP), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy.

PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.

PAI 13, table 1 regarding board gender diversity was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaintshandling mechanism was considered.

PAI 6, table 3 regarding insufficient whistleblower protection was considered.

PAI 7, table 3 regarding incidents of discrimination was considered.

PAI 8, table 3 regarding excessive CEO pay ratio was considered via proxy voting and engagement under the engagement program "Responsible Executive Remuneration".

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDG's). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators. The average SDG score of the portfolio was 1.5012.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via the application of the voting policy, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 14,645 tons, compared to 3,561 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 2,694 tons per EUR million EVIC, compared to 565 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 2,526 tons per EUR million revenue, compared to 1,370 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.64% of the net assets, compared to 3.74% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 70.12% of the net assets, compared to 56.46% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the sub-fund was 43.39% of the net assets, compared to 55.16% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.47 GWh, compared to 0.61 GWh for the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.44% of the benchmark.
- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 0.00%, compared to 0.22% for the benchmark.
- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 46.37%, compared to 55.00% for the benchmark.
- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 17.32%, compared to 17.63% for the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 35.82%, compared to 35.49% for the benchmark.
- Indicators in relation to social and employee matters (PAI 5-7, Table 3).
- The average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest compensated individual) (PAI 8, Table 3) was 216, compared to 956 for the benchmark.

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 14,645 tons, compared to 3,561 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 2,694 tons per EUR million EVIC, compared to 565 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 2,526 tons per EUR million revenue, compared to 1,370 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.64% of the net assets, compared to 3.74% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 70.12% of the net assets, compared to 56.46% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the sub-fund was 43.39% of the net assets, compared to 55.16% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.47 GWh, compared to 0.61 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 4.19% of the net assets, compared to 7.27% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.14 tons, compared to 0.05 tons of the benchmark.

Sustainability disclosures (Unaudited)

- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 6.31 tons, compared to 119.72 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.44% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
Veolia Environnement SA	Multi-Utilities	5.17%	France
AECOM	Construction & Engineering	4.37%	United States
Danone SA	Food Products	4.35%	France
Cranswick PLC	Food Products	3.78%	United Kingdom
Unilever PLC	Personal Products	3.74%	United Kingdom
TOMRA Systems ASA	Machinery	3.51%	Norway
Signify NV	Electrical Equipment	3.48%	Netherlands
Zebra Technologies Corp	Electronic Equipment, Instruments & Components	3.47%	United States
Sika AG	Chemicals	3.42%	Switzerland
Williams-Sonoma Inc	Specialty Retail	3.38%	United States
Sensient Technologies Corp	Chemicals	3.23%	United States
Avery Dennison Corp	Containers & Packaging	3.17%	United States
Valmont Industries Inc	Construction & Engineering	3.16%	United States
Beiersdorf AG	Personal Products	3.09%	Germany
Darling Ingredients Inc	Food Products	2.96%	United States

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

In which economic sectors were the investments made?

Sector	Average exposure in % over the reporting period
Other sectors	
Food Products	14.11%
Personal Products	9.77%
Chemicals	8.52%
Machinery	8.13%
Construction & Engineering	7.53%
Textiles, Apparel & Luxury Goods	6.11%
Electronic Equipment, Instruments & Components	5.70%
Specialty Retail	5.28%
Multi-Utilities	5.17%
Food & Staples Retailing	4.35%
Household Products	4.04%

Containers & Packaging	4.02%
Electrical Equipment	3.48%
Life Sciences Tools & Services	2.88%
Commercial Services & Supplies	2.65%
Professional Services	1.94%
Auto Components	1.52%
Multiline Retail	1.06%
Paper & Forest Products	0.96%
Cash and other instruments	2.78%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes
 In fossil gas In nuclear energy
 No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

0.0%.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

33.2%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

63.2%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to attain the sustainable investment objective during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 21 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, all holdings in the Sub-fund had a positive, or allowed neutral SDG score.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Global Climate Transition Equities **Legal entity identifier:** 213800T59KJ3192BUA65

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes No

<input type="checkbox"/> It made sustainable investments with an environmental objective: 86.4%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 97.5% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	<input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: 11.0%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

- At least 50% was invested in Transition-related Investments contributing to the goals of the Paris Agreement.
- The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
- The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies in the portfolio that have breached one of the international guidelines during the investment period, have become part of the Enhanced Engagement program. When engagement deemed highly unlikely to succeed, the company was excluded directly.
- All equity holdings granted the right to vote and Robeco exerted that right by voting according to Robeco's Proxy Voting Policy, unless impediments occurred (e.g. share blocking).
- Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The sub-fund was limited to a maximum exposure of 5% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability disclosures (Unaudited)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The sub-fund invested 85.11% in Transition-related Investments contributing to the goals of the Paris Agreement.
2. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
3. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
4. On behalf of the sub-fund votes, were cast on 593 agenda items at 43 shareholders' meetings.
5. 0.00% of the holdings in portfolio had an elevated sustainability risk profile.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Number of votes casted	593	483	75
Companies in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Holdings with an elevated sustainability risk profile	0.00%	0.00%	2.38%
Assets invested in Transition-related investments	85.11%		
Investments on exclusion list	0.00%	0.00%	1.48%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Investments in transition assets can, but do not per se need to be, sustainable investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement, proxy voting and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement, proxy voting and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement and proxy voting. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGP), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence

Sustainability disclosures (Unaudited)

processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy. PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.

PAI 13, table 1 regarding board gender diversity was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 4, table 2 regarding investments in companies without carbon emission reduction initiatives was considered via engagement. Robeco engages with key high emitters in our investment portfolios via the engagement themes "Acceleration to Paris" and "Net Zero Carbon Emissions".

PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaintshandling mechanism was considered.

PAI 6, table 3 regarding insufficient whistleblower protection was considered.

PAI 7, table 3 regarding incidents of discrimination was considered.

PAI 8, table 3 regarding excessive CEO pay ratio was considered via proxy voting and engagement under the engagement program "Responsible Executive Remuneration".

→ → *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

o Via the applied normative and activity-based exclusions, the following PAIs were considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.77% of the net assets, compared to 3.76% of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.50% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 4.79% of the net assets, compared to 6.96% of the benchmark.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.42% of the benchmark.

o Via the environmental footprint performance targets of the sub-fund, the following PAIs were considered:

- The carbon footprint of the portfolio (PAI 2, table 1) was 569 tons per EUR million EVIC, compared to 603 tons per EUR million EVIC for the Climate Transition-Benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via the application of the voting policy, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 77,447 tons, compared to 83,241 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 569 tons per EUR million EVIC, compared to 603 tons per EUR million EVIC for the benchmark.
- The greenhouse gas intensity of the portfolio (PAI 3, table 1) was 1,801 tons per EUR million revenue, compared to 1,409 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.77% of the net assets, compared to 3.76% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 56.48% of the net assets, compared to 57.81% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 58.25% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.26 GWh, compared to 0.76 GWh for the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.50% of the benchmark.
- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 0.00%, compared to 0.40% for the benchmark.
- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 61.03%, compared to 56.65% for the benchmark.
- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 17.70%, compared to 17.57% for the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 35.38%, compared to 34.03% for the benchmark.
- Indicators in relation to social and employee matters (PAI 5-7, Table 3).
- The average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest compensated individual) (PAI 8, Table 3) was 935, compared to 922 for the benchmark.

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 77,447 tons, compared to 83,241 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 569 tons per EUR million EVIC, compared to 603 tons per EUR million EVIC for the benchmark.
- The greenhouse gas intensity of the portfolio (PAI 3, table 1) was 1,801 tons per EUR million revenue, compared to 1,409 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.77% of the net assets, compared to 3.76% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 56.48% of the net assets, compared to 57.81% of the benchmark.

Sustainability disclosures (Unaudited)

- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 58.25% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.26 GWh, compared to 0.76 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 4.79% of the net assets, compared to 6.96% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.01 tons, compared to 0.05 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 0.15 tons, compared to 116.62 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.50% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 4.79% of the net assets, compared to 6.96% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
NVIDIA Corp	Semiconductors & Semiconductor Equipment	5.25%	United States
Apple Inc	Technology Hardware, Storage & Peripherals	4.93%	United States
Microsoft Corp	Software	4.05%	United States
Alphabet Inc (Class A)	Interactive Media & Services	3.97%	United States
Sprouts Farmers Market Inc	Food & Staples Retailing	3.56%	United States
BYD Co Ltd	Automobiles	3.38%	China
Deutsche Telekom AG	Diversified Telecommunication Services	3.16%	Germany
Intercontinental Exchange Inc	Capital Markets	2.87%	United States
Bank of America Corp	Banks	2.72%	United States
Schneider Electric SE	Electrical Equipment	2.60%	France
Thermo Fisher Scientific Inc	Life Sciences Tools & Services	2.53%	United States
Hydro One Ltd	Electric Utilities	2.36%	Canada
Chart Industries Inc	Machinery	2.35%	United States
Linde PLC	Chemicals	2.22%	United States
Aon PLC	Insurance	2.16%	United States

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Sustainability disclosures (Unaudited)

● *In which economic sectors were the investments made?*

Sector	Average exposure in % over the reporting period
Sectors deriving revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels -	
Oil, Gas & Consumable Fuels	3.31%
Other sectors	
Semiconductors & Semiconductor Equipment	7.83%
Technology Hardware, Storage & Peripherals	6.59%

Cash and other instruments	2.82%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas

In nuclear energy

No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities are** economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● What was the share of investments made in transitional and enabling activities?

0.0%.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

86.5%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

11.0%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 20 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, 85.11% of the assets were invested Transition-related investments.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Fashion Engagement

Legal entity identifier: 2138001K05RJYHRY5H90

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: ___%**

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 63.1% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective: ___%**

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund promotes structural changes in the fashion industry by engaging with at least 80% of the companies in portfolio on the industry's sustainability challenges. The companies are selected by showing potential and intention to address the industry's sustainability challenges and driving systemic change for the fashion industry.
2. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
3. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breached the international norms were excluded from the investment universe.
4. All equity holdings granted the right to vote and Robeco exerted that right by voting according to Robeco's Proxy Voting Policy, unless impediments occurred (e.g. share blocking).
5. The sub-fund's weighted carbon footprint (scope level 1, 2 and 3 upstream) was equal or better than that of the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability disclosures (Unaudited)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The sub-fund value engaged with 83.02% of the portfolio
2. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
3. 0.00% of the holdings in portfolio was in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
4. On behalf of the sub-fund votes, were cast on 591 agenda items at 42 shareholders' meetings.
5. The sub-fund's weighted carbon footprint (scope level 1, 2 and 3 upstream) was 28.94% better than that of the general market index.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023
Number of votes casted	441	0
Companies actively engaged with	83.02%	100.00%
Weighted score for: - Carbon footprint (% better than the general market index)	28.94%	86.87%
Holdings in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%
Investments on exclusion list	0.00%	0.00%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement, proxy voting and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement, proxy voting and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement and proxy voting. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGP), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence

Sustainability disclosures (Unaudited)

processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy. PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.

PAI 13, table 1 regarding board gender diversity was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaintshandling mechanism was considered.

PAI 6, table 3 regarding insufficient whistleblower protection was considered.

PAI 7, table 3 regarding incidents of discrimination was considered.

PAI 8, table 3 regarding excessive CEO pay ratio was considered via proxy voting and engagement under the engagement program "Responsible Executive Remuneration".

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

o Via the applied normative and activity-based exclusions, the following PAIs were considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.43% of the net assets, compared to 3.76% of the benchmark.

- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.50% of the benchmark.

- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas

Sustainability disclosures (Unaudited)

where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 6.96% of the benchmark.

- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.42% of the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via the application of the voting policy, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 364 tons, compared to 2,181 tons for the benchmark.

- The carbon footprint of the portfolio (PAI 2, table 1) was 97 tons per EUR million EVIC, compared to 603 tons per EUR million EVIC for the benchmark.

- The green house gas intensity of the portfolio (PAI 3, table 1) was 261 tons per EUR million revenue, compared to 1,409 tons per EUR million revenue for the benchmark.

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.43% of the net assets, compared to 3.76% of the benchmark.

- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 47.15% of the net assets, compared to 57.81% of the benchmark.

- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 58.25% of the benchmark.

- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.08 GWh, compared to 0.76 GWh for the benchmark.

- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.50% of the benchmark.

- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 0.00%, compared to 0.40% for the benchmark.

- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 50.77%, compared to 56.65% for the benchmark.

- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 11.85%, compared to 17.57% for the benchmark.

- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 36.34%, compared to 34.03% for the benchmark.

- Indicators in relation to social and employee matters (PAI 5-7, Table 3).

- The average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest compensated individual) (PAI 8, Table 3) was 436, compared to 922 for the benchmark.

o Via the sub-fund's engagement program, different environmental and social PAIs were considered, depending on the materiality to the investee company.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
EssilorLuxottica SA	Health Care Equipment & Supplies	4.60%	France
Hermes International SCA	Textiles, Apparel & Luxury Goods	4.56%	France
Zebra Technologies Corp	Electronic Equipment, Instruments & Components	4.07%	United States
Pandora A/S	Textiles, Apparel & Luxury Goods	3.78%	Denmark
Cie Financiere Richemont SA	Textiles, Apparel & Luxury Goods	3.37%	Switzerland
Deckers Outdoor Corp	Textiles, Apparel & Luxury Goods	3.35%	United States
On Holding AG	Textiles, Apparel & Luxury Goods	3.24%	United States
Industria de Diseno Textil SA	Specialty Retail	3.14%	Spain
Bureau Veritas SA	Professional Services	2.97%	France
Beiersdorf AG	Personal Products	2.97%	Germany
Cintas Corp	Commercial Services & Supplies	2.97%	United States
Ross Stores Inc	Specialty Retail	2.96%	United States
PRADA SpA	Textiles, Apparel & Luxury Goods	2.79%	Hong Kong
Galderma Group AG	Pharmaceuticals	2.76%	Switzerland
Silgan Holdings Inc	Containers & Packaging	2.67%	United States

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	Average exposure in % over the reporting period
Other sectors	
Textiles, Apparel & Luxury Goods	45.30%
Specialty Retail	13.17%
Personal Products	9.31%
Health Care Equipment & Supplies	4.60%
Chemicals	4.57%
Electronic Equipment, Instruments & Components	4.07%
Professional Services	2.97%
Commercial Services & Supplies	2.97%
Pharmaceuticals	2.76%
Containers & Packaging	2.67%
IT Services	2.61%
Multiline Retail	2.46%
Diversified Financial Services	1.17%
Cash and other instruments	1.38%

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
0.0%.
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

13.6%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

49.5%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 44 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Carbon profile of the Sub-fund in terms of and greenhouse gas emissions of the Sub-fund remained well below that of the benchmark. The Sub-fund has a carbon profile that is more than 20% better than the benchmark.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Gravis Digital Infrastructure Income

Legal entity identifier: 2138000C7UH4PTYER332

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ___%

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 91.1% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: ___%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies in the portfolio that have breached one of the international guidelines during the investment period, have become part of the Enhanced Engagement program. When engagement deemed highly unlikely to succeed, the company was excluded directly.
3. All equity holdings granted the right to vote and Robeco exerted that right by voting according to Robeco's Proxy Voting Policy, unless impediments occurred (e.g. share blocking).
4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The sub-fund was limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability disclosures (Unaudited)

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. On behalf of the sub-fund votes, were cast on 384 agenda items at 35 shareholders' meetings.
4. 0.00% of the holdings in portfolio had an elevated sustainability risk profile.

● *...and compared to previous periods?*

The Sub-fund has been launched in 2024, so no comparison can be made.

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals that have both social and environmental objectives. Robeco used its proprietary SDG Framework and related SDG scores to determine which issuers constitute a sustainable investment as referred to in art 2(17) SFDR. Positive SDG scores (+1, +2, +3) are regarded as sustainable investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement, proxy voting and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement, proxy voting and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement and proxy voting. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGP), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy.

PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.

PAI 13, table 1 regarding board gender diversity was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear

Sustainability disclosures (Unaudited)

Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmissbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 4, table 2 regarding investments in companies without carbon emission reduction initiatives was considered via engagement. Robeco engages with key high emitters in our investment portfolios via the engagement themes "Acceleration to Paris" and "Net Zero Carbon Emissions".

PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaintshandling mechanism was considered.

PAI 6, table 3 regarding insufficient whistleblower protection was considered.

PAI 7, table 3 regarding incidents of discrimination was considered.

PAI 8, table 3 regarding excessive CEO pay ratio was considered via proxy voting and engagement under the engagement program "Responsible Executive Remuneration".

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

o Via the applied normative and activity-based exclusions, the following PAIs were considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.00% of the net assets, compared to 0.01% of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via the application of the voting policy, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 99 tons, compared to 143 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 34 tons per EUR million EVIC, compared to 50 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 525 tons per EUR million revenue, compared to 419 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.00% of the net assets, compared to 0.01% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 57.91% of the net assets, compared to 69.89% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 0.00% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.68 GWh, compared to 0.51 GWh for the benchmark.

Sustainability disclosures (Unaudited)

- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 0.00%, compared to 2.27% for the benchmark.
- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 78.91%, compared to 83.63% for the benchmark.
- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 50.90%, compared to 33.10% for the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 33.87%, compared to 32.43% for the benchmark.
- Indicators in relation to social and employee matters (PAI 5-7, Table 3).
- The average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest compensated individual) (PAI 8, Table 3) was 149, compared to 155 for the benchmark.

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 99 tons, compared to 143 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 34 tons per EUR million EVIC, compared to 50 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 525 tons per EUR million revenue, compared to 419 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.00% of the net assets, compared to 0.01% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 57.91% of the net assets, compared to 69.89% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 0.00% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.68 GWh, compared to 0.51 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.00 tons, compared to 0.06 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 0.03 tons, compared to 0.68 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
Equinix Inc	Specialized REITs	8.22%	United States
Goodman Group	Industrial REITs	7.11%	Australia
Prologis Inc	Industrial REITs	6.65%	United States
Digital Realty Trust Inc	Specialized REITs	6.23%	United States
SBA Communications Corp	Specialized REITs	4.56%	United States
NEXTDC Ltd	IT Services	4.46%	Australia
American Tower Corp	Specialized REITs	4.15%	United States
Segro PLC	Industrial REITs	3.84%	United Kingdom
Keppel DC REIT	Specialized REITs	3.54%	Singapore
SUNeVision Holdings Ltd	IT Services	3.35%	Hong Kong
Infrastrutture Wireless Italiane SpA	Diversified Telecommunication Services	2.76%	Italy
Cellnex Telecom SA	Diversified Telecommunication Services	2.68%	Spain
First Industrial Realty Trust Inc	Industrial REITs	2.59%	United States
EastGroup Properties Inc	Industrial REITs	2.51%	United States
Digital Core REIT Management Pte Ltd	Specialized REITs	2.51%	Singapore

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	Average exposure in % over the reporting period
Other sectors	
Industrial REITs	45.69%
Specialized REITs	31.54%
Diversified Telecommunication Services	7.92%
IT Services	7.82%
Real Estate Management & Development	2.50%
Capital Markets	2.47%
Not Classified	1.51%
Cash and other instruments	0.56%

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

0.0%.

The Sub-fund has been launched in 2024, so no comparison can be made.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

16.3%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

74.8%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, The portfolio did not contain any investments with an elevated risk profile.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco High Yield Bonds

Legal entity identifier: 21380044N3COGER50K12

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ___%

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 57.9% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: ___%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies in the portfolio that have breached one of the international guidelines during the investment period, have become part of the Enhanced Engagement program. When engagement deemed highly unlikely to succeed, the company was excluded directly.
3. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The sub-fund was limited to a maximum exposure of 10% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
4. The sub-fund invested a minimum of 2% in green, social, sustainable, and/or sustainability-linked bonds.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability disclosures (Unaudited)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. 2.51% of the holdings in portfolio had an elevated sustainability risk profile.
4. The sub-fund invested 6.71% of its assets in green, social, sustainable and/or sustainability-linked bonds.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Investments in green, social, sustainable and/or sustainability-linked bonds	6.71%	5.57%	4.87%
Companies in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Holdings with an elevated sustainability risk profile	2.51%	3.77%	4.88%
Investments on exclusion list	0.00%	0.00%	0.00%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are Green Bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

→ *How were the indicators for adverse impacts on sustainability factors taken into account?*

For sustainable investments that are either green, social, sustainability or sustainability-linked bonds, significant harm is avoided by the application of the Robeco's green, social, sustainability or sustainability-linked bond eligibility framework.

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit

Sustainability disclosures (Unaudited)

marktmissbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 4, table 2 regarding investments in companies without carbon emission reduction initiatives was considered via engagement. Robeco engages with key high emitters in our investment portfolios via the engagement themes "Acceleration to Paris" and "Net Zero Carbon Emissions".

— → Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

o Via the applied normative and activity-based exclusions, the following PAIs were considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 10.19% of the net assets, compared to 11.60% of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.82% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 3.92% of the net assets, compared to 2.96% of the benchmark.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.

o Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 7,281,957 tons, compared to 5,258,990 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 1,251 tons per EUR million EVIC, compared to 929 tons per EUR million EVIC for the benchmark.
- The greenhouse gas intensity of the portfolio (PAI 3, table 1) was 1,677 tons per EUR million revenue, compared to 1,290 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 10.19% of the net assets, compared to 11.60% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 70.00% of the net assets, compared to 74.30% of the benchmark.

Sustainability disclosures (Unaudited)

- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 47.35% of the net assets, compared to 59.45% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 1.22 GWh, compared to 2.05 GWh for the benchmark.
- The share of investments in investee companies without carbon emission reduction initiatives aimed at aligning with the Paris Agreement (PAI 4, Table 2) was 42.98% of the net assets, compared to 57.00% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 3.92% of the net assets, compared to 2.96% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.05 tons, compared to 0.05 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 98.13 tons, compared to 209.05 tons of the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 7,281,957 tons, compared to 5,258,990 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 1,251 tons per EUR million EVIC, compared to 929 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,677 tons per EUR million revenue, compared to 1,290 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 10.19% of the net assets, compared to 11.60% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 70.00% of the net assets, compared to 74.30% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 47.35% of the net assets, compared to 59.45% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 1.22 GWh, compared to 2.05 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 3.92% of the net assets, compared to 2.96% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.05 tons, compared to 0.05 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 98.13 tons, compared to 209.05 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.82% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	Average exposure in % over the reporting period
Sectors deriving revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels -

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas In nuclear energy

No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
0.0%.
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

18.8%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

39.1%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 18 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Sub-fund invested 6.86% in green, social, sustainable and/or sustainability linked bonds.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Global Credits

Legal entity identifier: 5493003I7YFQHV1J8E29

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: ___%**

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 62.7% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective: ___%**

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies in the portfolio that have breached one of the international guidelines during the investment period, have become part of the Enhanced Engagement program. When engagement deemed highly unlikely to succeed, the company was excluded directly.
3. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The sub-fund was limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
4. The sub-fund invested a minimum of 5% in green, social, sustainable, and/or sustainability-linked bonds.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability disclosures (Unaudited)

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. 0.37% of the holdings in portfolio had an elevated sustainability risk profile.
4. The sub-fund invested 12.90% of its assets in green, social, sustainable and/or sustainability-linked bonds.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Investments in green, social, sustainable and/or sustainability-linked bonds	12.90%	7.12%	11.47%
Companies in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Holdings with an elevated sustainability risk profile	0.37%	0.81%	0.84%
Investments on exclusion list	0.00%	0.00%	0.00%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are Green Bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. In addition, sustainable investments score positively on Robeco's SDG Framework or are assessed by either Robeco's Green Bond Framework or Social Bond Framework, and therefore do not cause significant harm.

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

For sustainable investments that are either green, social, sustainability or sustainability-linked bonds, significant harm is avoided by the application of the Robeco's green, social, sustainability or sustainability-linked bond eligibility framework.

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 4, table 2 regarding investments in companies without carbon emission reduction initiatives was considered via engagement. Robeco engages with key high emitters in our investment portfolios via the

Sustainability disclosures (Unaudited)

engagement themes “Acceleration to Paris” and “Net Zero Carbon Emissions”.

— → Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco’s Exclusion Policy and Robeco’s SDG Framework.

Robeco’s Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco’s SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

o Via the applied normative and activity-based exclusions, the following PAIs were considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 6.08% of the net assets, compared to 6.39% of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 1.05% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 5.16% of the net assets, compared to 6.79% of the benchmark.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.32% of the benchmark.

o Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 1,368,075 tons, compared to 1,421,625 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 532 tons per EUR million EVIC, compared to 507 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,378 tons per EUR million revenue, compared to 1,251 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 6.08% of the net assets, compared to 6.39% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 61.97% of the net assets, compared to 62.80% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 36.70% of the net assets, compared to 57.28% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 1.91 GWh, compared to 1.25 GWh for the benchmark.

Sustainability disclosures (Unaudited)

- The share of investments in investee companies without carbon emission reduction initiatives aimed at aligning with the Paris Agreement (PAI 4, Table 2) was 28.65% of the net assets, compared to 27.56% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 5.16% of the net assets, compared to 6.79% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.01 tons, compared to 0.03 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 27.86 tons, compared to 31.58 tons of the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 1,368,075 tons, compared to 1,421,625 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 532 tons per EUR million EVIC, compared to 507 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,378 tons per EUR million revenue, compared to 1,251 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 6.08% of the net assets, compared to 6.39% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 61.97% of the net assets, compared to 62.80% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 36.70% of the net assets, compared to 57.28% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 1.91 GWh, compared to 1.25 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 5.16% of the net assets, compared to 6.79% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.01 tons, compared to 0.03 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 27.86 tons, compared to 31.58 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 1.05% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
2.500 US TREASURY N/B 31-JAN-2025	TREASURIES	1.59%	United States

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	Average exposure in % over the reporting period
Sectors deriving revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels -	
ENERGY	6.36%
NATURAL_GAS	1.35%
Other sectors	
BANKING	31.20%
CONSUMER_CYCLICAL	7.75%
COMMUNICATIONS	7.42%
CONSUMER_NON_CYCLICAL	7.08%

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas In nuclear energy

No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
0.0%.
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

12.2%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

50.5%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 21 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Sub-fund invested 13.61% in green, social, sustainable and/or sustainability linked bonds.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Global Multi-Factor Credits

Legal entity identifier: 2138004NM2KLQ7YMDZ55

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ___%

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 65.4% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: ___%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The sub-fund's weighted carbon (scope level 1, 2 and 3 upstream), water and waste footprint was better than that of the General Market Index.
3. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies in the portfolio that have breached one of the international guidelines during the investment period, have become part of the Enhanced Engagement program. When engagement deemed highly unlikely to succeed, the company was excluded directly.
4. The sub-fund's weighted average ESG score was better than that of the general market index.
5. The sub-fund's weight in companies with a positive SDG score (1,2,3) was better than that of the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability disclosures (Unaudited)

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. The sub-fund's weighted score for the carbon (scope level 1, 2 and 3 upstream), water and waste footprint were respectively 23.11%, 51.25% and 88.44% better than the general market index.
3. 0.07% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
4. The sub-fund's weighted average ESG score was 19.94 against 21.54 for the general market index. A lower score means a lower risk.
5. 65.73% of the investments held a positive SDG score (1,2,3), compared to 56.79% for the general market index.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Holdings with a positive SDG rating	65.73%	72.03%	61.92%
Weighted score for:			
- Carbon footprint (% better than the general market index)	23.11%	44.83%	12.43%
- Water footprint (% better than the general market index)	51.25%	81.02%	66.11%
- Waste footprint (% better than the general market index)	88.44%	48.74%	79.10%
Companies in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.07%	0.00%	0.00%
Weighted average ESG Score	19.94	22.01	22.59
Investments on exclusion list	0.00%	0.00%	0.00%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation

Sustainability disclosures (Unaudited)

of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmissbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

o Via the applied normative and activity-based exclusions, the following PAIs were considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 3.49% of the net assets, compared to 6.39% of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.07% of the net assets, compared to 1.05% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 5.51% of the net assets, compared to 6.79% of the benchmark.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.32% of the benchmark.

o Via the environmental footprint performance targets of the sub-fund, the following PAIs were considered:

- The carbon footprint of the portfolio (PAI 2, table 1) was 419 tons per EUR million EVIC, compared to 507 tons per EUR million EVIC for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 5.51% of the net assets, compared to 6.79% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.02 tons, compared to 0.03 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 3.65 tons, compared to 31.58 tons of the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via Robeco's entity engagement program, the following PAIs were considered:

Sustainability disclosures (Unaudited)

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 424,977 tons, compared to 526,496 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 419 tons per EUR million EVIC, compared to 507 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 912 tons per EUR million revenue, compared to 1,251 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 3.49% of the net assets, compared to 6.39% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 58.45% of the net assets, compared to 62.80% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 55.65% of the net assets, compared to 57.28% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.36 GWh, compared to 1.25 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 5.51% of the net assets, compared to 6.79% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.02 tons, compared to 0.03 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 3.65 tons, compared to 31.58 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.07% of the net assets, compared to 1.05% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
6.627 MORGAN STANLEY 01-NOV-2034	BANKING	1.70%	United States
3.785 CITIGROUP INC 17-MAR-2033	BANKING	1.68%	United States
1.090 JPMORGAN CHASE & CO 11-MAR-2027	BANKING	1.10%	United States
1.625 APPLE INC 10-NOV-2026	TECHNOLOGY	1.00%	United States
6.092 CANADIAN IMPERIAL BANK 03-OCT-2033	BANKING	0.87%	Canada

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	Average exposure in % over the reporting period
Sectors deriving revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels -	
ENERGY	2.91%
NATURAL_GAS	0.47%
Other sectors	
BANKING	21.91%
TECHNOLOGY	15.18%
CONSUMER_NON_CYCLICAL	14.99%
COMMUNICATIONS	11.21%
CONSUMER_CYCLICAL	7.95%
INSURANCE	5.81%
OWNED_NO_GUARANTEE	4.10%
CAPITAL_GOODS	4.02%
ELECTRIC	3.11%
BROKERAGE_ASSETMANAGERS_EXCHANGES	2.90%
BASIC_INDUSTRY	1.29%
TRANSPORTATION	1.12%
INDUSTRIAL_OTHER	0.45%
FINANCE_COMPANIES	0.39%
Cash and other instruments	2.20%

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

0.0%.

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

4.1%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

61.3%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 25 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Carbon profile of the Sub-fund in terms of and greenhouse gas emissions of the Sub-fund remained well below that of the benchmark. The Sub-fund has a carbon profile that is more than 20% better than the benchmark.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Global Multi-Factor Bonds

Legal entity identifier: 2138009INGIOSX2F6B58

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: ___%**

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 22.0% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective: ___%**

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following Environmental and Social characteristics are applicable for investments in corporate bonds:

1. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The sub-fund's weighted carbon (scope level 1, 2 and 3 upstream), water and waste footprint was better than that of the corporate bonds in the general market index.
3. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies in the portfolio that have breached one of the international guidelines during the investment period, have become part of the Enhanced Engagement program. When engagement deemed highly unlikely to succeed, the company was excluded directly.
4. The sub-fund's weighted average ESG score was better than that of the corporate bonds in the general market index.
5. The sub-fund's weight in companies with a positive SDG score (1,2,3) was better than that of the General Market Index.

The following Environmental and Social characteristics are applicable for investments in government bonds:

1. The sub-fund's portfolio complied with Robeco's Exclusion Policy that is based on exclusion criteria that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom. This means that the

Sustainability disclosures (Unaudited)

sub-fund has no exposure to excluded securities, taking into account a grace period.

- The sub-fund's portfolio had a minimum weighted average score of at least better on Robeco's Country Sustainability Ranking.
- The sub-fund's weighted carbon emissions per capita of the government bonds in portfolio was better than that of the government bonds in the general market index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

For investments in corporate bonds:

- The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
 - The sub-fund's weighted score for the carbon (scope level 1, 2 and 3 upstream), water and waste footprint were respectively 16.35%, 49.63% and 80.65% better than the corporate bonds in the general market index.
 - 0.13% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
 - The sub-fund's weighted average ESG score was 20.85 against 20.85 for the corporate bonds in the general market index. A lower score means a lower risk.
 - 66.31% of the investments held a positive SDG score (1,2,3), compared to 39.93% for the general market index
- For investments in government bonds:

- The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
- The sub-fund's portfolio had a weighted average score of 7.34 on Robeco's Country Sustainability Ranking.
- The sub-fund's weighted carbon emissions per capita of the government bonds in portfolio was 2.54% better than that of the government bonds in the general market index.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Investments on exclusion list	0.00%	0.00%	0.00%
Holdings with a positive SDG rating	66.31%	48.14%	19.10%
Weighted score for: - Carbon emissions per capita (% better than the government bonds in the general market index)	2.54%	6.28%	18.62%
Companies in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.13%	0.00%	0.00%
Weighted average Country Sustainability Ranking	7.34	8.40	7.51
Weighted average ESG Score	20.85	21.91	22.48
Investments on exclusion list	0.00%	0.00%	0.00%
Weighted score for:			
- Carbon footprint (% better than the general market index)	16.35%	16.33%	22.42%
- Water footprint (% better than the general market index)	49.63%	61.90%	85.99%
- Waste footprint (% better than the general market index)	80.65%	38.03%	11.18%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges

Sustainability disclosures (Unaudited)

between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

- *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

- → *How were the indicators for adverse impacts on sustainability factors taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- o Via the applied normative and activity-based exclusions, the following PAIs were considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 3.13% of the net assets, compared to 4.37% of the benchmark.
 - Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.13% of the net assets,

Sustainability disclosures (Unaudited)

compared to 0.24% of the benchmark.

- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 4.75% of the net assets, compared to 4.79% of the benchmark.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.06% of the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 3,508 tons, compared to 1,023 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 364 tons per EUR million EVIC, compared to 496 tons per EUR million EVIC for the benchmark.
- The greenhouse gas intensity of the portfolio (PAI 3, table 1) was 950 tons per EUR million revenue, compared to 1,384 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 3.13% of the net assets, compared to 4.37% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 58.34% of the net assets, compared to 66.64% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 55.92% of the net assets, compared to 52.11% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.71 GWh, compared to 1.32 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 4.75% of the net assets, compared to 4.79% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.02 tons, compared to 0.03 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 5.65 tons, compared to 29.22 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.13% of the net assets, compared to 0.24% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments

	Sector	% Assets	Country
0.000 BUNDESOBLIGATION 11-APR-2025	TREASURIES	7.92%	Germany

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	Average exposure in % over the reporting period
Sectors deriving revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels -	
ENERGY	0.94%
Other sectors	
TREASURIES	65.78%
BANKING	6.13%
TECHNOLOGY	4.57%
CONSUMER_NON_CYCLICAL	4.51%
COMMUNICATIONS	3.75%
INSURANCE	2.09%
CAPITAL_GOODS	1.64%
CONSUMER_CYCLICAL	1.58%
ELECTRIC	1.55%
BASIC_INDUSTRY	0.73%
BROKERAGE_ASSETMANAGERS_EXCHANGES	0.63%
OWNED_NO_GUARANTEE	0.43%
TRANSPORTATION	0.30%
FINANCE_COMPANIES	0.15%
INDUSTRIAL_OTHER	0.15%
Cash and other instruments	5.06%

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes
 In fossil gas In nuclear energy
 No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
0.0%.
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

2.4%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

19.6%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 21 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Carbon profile of the Sub-fund in terms of and greenhouse gas emissions of the Sub-fund remained well below that of the benchmark. The Sub-fund has a carbon profile that is more than 10% better than the benchmark.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Global Credits - Short Maturity

Legal entity identifier: 2138001CC7H5L9AYFW22

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ___%

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 67.6% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: ___%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies in the portfolio that have breached one of the international guidelines during the investment period, have become part of the Enhanced Engagement program. When engagement deemed highly unlikely to succeed, the company was excluded directly.
3. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The sub-fund was limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
4. The sub-fund invested a minimum of 5% in green, social, sustainable, and/or sustainability-linked bonds.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability disclosures (Unaudited)

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. 0.12% of the holdings in portfolio had an elevated sustainability risk profile.
4. The sub-fund invested 10.99% of its assets in green, social, sustainable and/or sustainability-linked bonds.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Investments in green, social, sustainable and/or sustainability-linked bonds	10.99%	10.98%	8.69%
Companies in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Holdings with an elevated sustainability risk profile	0.12%	0.00%	0.00%
Investments on exclusion list	0.00%	0.00%	0.00%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are Green Bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

For sustainable investments that are either green, social, sustainability or sustainability-linked bonds, significant harm is avoided by the application of the Robeco's green, social, sustainability or sustainability-linked bond eligibility framework.

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 4, table 2 regarding investments in companies without carbon emission reduction initiatives was considered via engagement. Robeco engages with key high emitters in our investment portfolios via the

Sustainability disclosures (Unaudited)

engagement themes “Acceleration to Paris” and “Net Zero Carbon Emissions”.

— → Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco’s Exclusion Policy and Robeco’s SDG Framework.

Robeco’s Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco’s SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- o Via the applied normative and activity-based exclusions, the following PAIs were considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 3.25% of the net assets, compared to 4.48% of the benchmark.
 - Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.64% of the benchmark.
 - The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 5.92% of the net assets, compared to 5.43% of the benchmark.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.24% of the benchmark.

- o Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs were considered:
 - The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 269,042 tons, compared to 234,029 tons for the benchmark.
 - The carbon footprint of the portfolio (PAI 2, table 1) was 626 tons per EUR million EVIC, compared to 473 tons per EUR million EVIC for the benchmark.
 - The green house gas intensity of the portfolio (PAI 3, table 1) was 1,424 tons per EUR million revenue, compared to 1,223 tons per EUR million revenue for the benchmark.
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 3.25% of the net assets, compared to 4.48% of the benchmark.
 - The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 59.04% of the net assets, compared to 58.91% of the benchmark.
 - The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 29.10% of the net assets, compared to 57.19% of the benchmark.
 - The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 1.40 GWh, compared to 1.06 GWh for the benchmark.

Sustainability disclosures (Unaudited)

- The share of investments in investee companies without carbon emission reduction initiatives aimed at aligning with the Paris Agreement (PAI 4, Table 2) was 32.36% of the net assets, compared to 28.95% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 5.92% of the net assets, compared to 5.43% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.01 tons, compared to 0.03 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 3.31 tons, compared to 21.32 tons of the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 269,042 tons, compared to 234,029 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 626 tons per EUR million EVIC, compared to 473 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,424 tons per EUR million revenue, compared to 1,223 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 3.25% of the net assets, compared to 4.48% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 59.04% of the net assets, compared to 58.91% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 29.10% of the net assets, compared to 57.19% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 1.40 GWh, compared to 1.06 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 5.92% of the net assets, compared to 5.43% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.01 tons, compared to 0.03 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 3.31 tons, compared to 21.32 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.64% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments

	Sector	% Assets	Country
0.000 TREASURY BILL 21-JAN-2025	TREASURIES	1.32%	United States

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	Average exposure in % over the reporting period
Sectors deriving revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels -	
ENERGY	3.83%
NATURAL_GAS	0.46%
Other sectors	
BANKING	34.28%
CONSUMER_CYCLICAL	12.11%
CONSUMER_NON_CYCLICAL	10.05%

REITS	0.28%
Cash and other instruments	2.17%

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
0.0%.
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

14.1%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

53.5%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 11 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Sub-fund invested 10.68% in green, social, sustainable and/or sustainability linked bonds.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Corporate Hybrid Bonds **Legal entity identifier:** 213800KXAXX8MJC82S52

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes No

<input type="checkbox"/> It made sustainable investments with an environmental objective: ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 51.5% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	<input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies in the portfolio that have breached one of the international guidelines during the investment period, have become part of the Enhanced Engagement program. When engagement deemed highly unlikely to succeed, the company was excluded directly.
3. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The sub-fund was limited to a maximum exposure of 10% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
4. The sub-fund invested a minimum of 5% in green, social, sustainable, and/or sustainability-linked bonds.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability disclosures (Unaudited)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. 0.00% of the holdings in portfolio had an elevated sustainability risk profile.
4. The sub-fund invested 11.60% of its assets in green, social, sustainable and/or sustainability-linked bonds.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Investments in green, social, sustainable and/or sustainability-linked bonds	11.60%	7.66%	7.50%
Companies in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Holdings with an elevated sustainability risk profile	0.00%	0.00%	1.25%
Investments on exclusion list	0.00%	0.00%	0.00%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are Green Bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. In addition, sustainable investments score positively on Robeco's SDG Framework or are assessed by either Robeco's Green Bond Framework or Social Bond Framework, and therefore do not cause significant harm.

—> *How were the indicators for adverse impacts on sustainability factors taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit

Sustainability disclosures (Unaudited)

marktmissbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 4, table 2 regarding investments in companies without carbon emission reduction initiatives was considered via engagement. Robeco engages with key high emitters in our investment portfolios via the engagement themes "Acceleration to Paris" and "Net Zero Carbon Emissions".

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

o Via the applied normative and activity-based exclusions, the following PAIs were considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 22.45% of the net assets, compared to 19.86% of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 34.73% of the net assets, compared to 22.45% of the benchmark.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.

o Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 293,021 tons, compared to 232,985 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 1,291 tons per EUR million EVIC, compared to 1,059 tons per EUR million EVIC for the benchmark.
- The greenhouse gas intensity of the portfolio (PAI 3, table 1) was 1,709 tons per EUR million revenue, compared to 1,748 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 22.45% of the net assets, compared to 19.86% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 75.73% of the net assets, compared to 75.60% of the benchmark.

Sustainability disclosures (Unaudited)

- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 50.11% of the net assets, compared to 52.70% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 2.92 GWh, compared to 3.65 GWh for the benchmark.
- The share of investments in investee companies without carbon emission reduction initiatives aimed at aligning with the Paris Agreement (PAI 4, Table 2) was 10.26% of the net assets, compared to 14.45% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 34.73% of the net assets, compared to 22.45% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.00 tons, compared to 0.03 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 4.44 tons, compared to 3.55 tons of the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 293,021 tons, compared to 232,985 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 1,291 tons per EUR million EVIC, compared to 1,059 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,709 tons per EUR million revenue, compared to 1,748 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 22.45% of the net assets, compared to 19.86% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 75.73% of the net assets, compared to 75.60% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 50.11% of the net assets, compared to 52.70% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 2.92 GWh, compared to 3.65 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 34.73% of the net assets, compared to 22.45% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.00 tons, compared to 0.03 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 4.44 tons, compared to 3.55 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments

	Sector	% Assets	Country
6.875 SEMPRA 01-OCT-2054	NATURAL_GAS	3.63%	United States

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	Average exposure in % over the reporting period
Sectors deriving revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels -	
ENERGY	31.21%
NATURAL_GAS	7.97%
Other sectors	
ELECTRIC	17.04%
COMMUNICATIONS	8.25%
TREASURIES	6.67%
CONSUMER_CYCLICAL	6.42%
OWNED_NO_GUARANTEE	5.42%
LOCAL_AUTHORITIES	5.27%
BANKING	3.76%
CONSUMER_NON_CYCLICAL	1.63%
INSURANCE	1.40%
BASIC_INDUSTRY	1.39%
Cash and other instruments	3.58%

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas In nuclear energy

No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
0.0%.
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

23.5%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

28.0%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 6 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Sub-fund invested 11.65% in green, social, sustainable and/or sustainability linked bonds.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Global Multi-Factor High Yield

Legal entity identifier: 213800AQVRERU8HLM03

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ___%

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 53.1% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: ___%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The sub-fund's weighted carbon (scope level 1, 2 and 3 upstream), water and waste footprint was better than that of the General Market Index.
3. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies in the portfolio that have breached one of the international guidelines during the investment period, have become part of the Enhanced Engagement program. When engagement deemed highly unlikely to succeed, the company was excluded directly.
4. The sub-fund's weighted average ESG score was better than that of the general market index.
5. The sub-fund's weight in companies with a positive SDG score (1,2,3) was better than that of the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability disclosures (Unaudited)

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. The sub-fund's weighted score for the carbon (scope level 1, 2 and 3 upstream), water and waste footprint were respectively 16.96%, 72.82% and 86.54% better than the general market index.
3. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
4. The sub-fund's weighted average ESG score was 22.52 against 25.04 for the general market index. A lower score means a lower risk.
5. 52.52% of the investments held a positive SDG score (1,2,3), compared to 46.30% for the general market index.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Holdings with a positive SDG rating	52.52%	54.83%	49.23%
Weighted score for:			
- Carbon footprint (% better than the general market index)	16.96%	14.36%	22.89%
- Water footprint (% better than the general market index)	72.82%	22.03%	38.18%
- Waste footprint (% better than the general market index)	86.54%	48.53%	70.29%
Companies in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Weighted average ESG Score	22.52	24.25	23.89
Investments on exclusion list	0.00%	0.00%	0.00%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation

Sustainability disclosures (Unaudited)

of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmissbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

o Via the applied normative and activity-based exclusions, the following PAIs were considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 7.46% of the net assets, compared to 12.06% of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.75% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 2.64% of the net assets, compared to 4.62% of the benchmark.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.

o Via the environmental footprint performance targets of the sub-fund, the following PAIs were considered:

- The carbon footprint of the portfolio (PAI 2, table 1) was 1,118 tons per EUR million EVIC, compared to 964 tons per EUR million EVIC for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 2.64% of the net assets, compared to 4.62% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.02 tons, compared to 0.06 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 40.90 tons, compared to 303.86 tons of the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via Robeco's entity engagement program, the following PAIs were considered:

Sustainability disclosures (Unaudited)

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 16,980 tons, compared to 24,573 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 1,118 tons per EUR million EVIC, compared to 964 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,314 tons per EUR million revenue, compared to 1,359 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 7.46% of the net assets, compared to 12.06% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 77.66% of the net assets, compared to 74.76% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 58.37% of the net assets, compared to 58.07% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 1.28 GWh, compared to 2.18 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 2.64% of the net assets, compared to 4.62% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.02 tons, compared to 0.06 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 40.90 tons, compared to 303.86 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.75% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
5.000 CCO HLDGS LLC/CAP CORP 01-FEB-2028	COMMUNICATIONS	1.64%	United States

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	Average exposure in % over the reporting period
Sectors deriving revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels -	
ENERGY	7.42%
Other sectors	
CONSUMER_CYCLICAL	25.48%
CONSUMER_NON_CYCLICAL	14.69%
COMMUNICATIONS	13.71%
TECHNOLOGY	12.74%
CAPITAL_GOODS	9.13%
BASIC_INDUSTRY	5.40%
INDUSTRIAL_OTHER	4.34%
ELECTRIC	3.67%
TRANSPORTATION	1.56%
Cash and other instruments	1.86%

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

0.0%.

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

9.0%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

44.1%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 9 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Carbon profile of the Sub-fund in terms of and greenhouse gas emissions of the Sub-fund remained well below that of the benchmark. The Sub-fund has a carbon profile that is more than 10% better than the benchmark.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco SDG Credit Income

Legal entity identifier: 213800T791C07EB3NL58

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: ___%**

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 72.0% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective: ___%**

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund was solely invested in companies that hold a positive or neutral SDG score based on the internally developed SDG Framework.
2. For its allocation to Emerging Markets sovereign bonds: The sub-fund was solely invested in countries that hold a positive or neutral SDG score.
3. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
4. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breached the international norms were excluded from the investment universe.
5. The sub-fund invested a minimum of 5% in green, social, sustainable, and/or sustainability-linked bonds.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability disclosures (Unaudited)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. 93.47% of the investments in portfolio held a neutral or positive SDG score based on the internally developed SDG framework.
2. For its allocation to Emerging Markets sovereign bonds: 0.00% was invested in countries that hold a positive or neutral SDG score.
3. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
4. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
5. The sub-fund invested 18.21% of its assets in green, social, sustainable and/or sustainability-linked bonds.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Investments in green, social, sustainable and/or sustainability-linked bonds	18.21%	11.44%	6.80%
Holdings with a neutral or positive SDG score	93.47%	105.89%	90.74%
Investments in Emerging Markets sovereign bonds with a neutral or positive SDG rating	0.00%		
Companies in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Investments on exclusion list	0.00%	1.45%	0.49%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

Sustainability disclosures (Unaudited)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

→ How were the indicators for adverse impacts on sustainability factors taken into account?

Robeco's SDG Framework assesses the contribution of companies and countries to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits

Sustainability disclosures (Unaudited)

the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- Pre-investment, Robeco's SDG Framework assesses companies' and countries' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies and countries on many of the topics considered by the PAI indicators. The average SDG score of the portfolio was 1.1872.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 792,116 tons.
- The carbon footprint of the portfolio (PAI 2, table 1) was 683 tons per EUR million EVIC, compared to 875 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,371 tons per EUR million revenue, compared to 1,528 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 3.10% of the net assets, compared to 9.65% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 54.95% of the net assets, compared to 70.36% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 36.82% of the net assets, compared to 60.75% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 2.06 GWh, compared to 2.09 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 2.30% of the net

Sustainability disclosures (Unaudited)

assets, compared to 6.72% of the benchmark.

- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.03 tons, compared to 0.06 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 323.22 tons, compared to 73.32 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 1.01% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas

In nuclear energy

No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● What was the share of investments made in transitional and enabling activities?

0.0%.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

17.4%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

54.6%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 8 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Sub-fund invested 16.68% in green, social, sustainable and/or sustainability linked bonds.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Global SDG Credits

Legal entity identifier: 213800CKSU373L6J3U62

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ___%

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 76.0% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: ___%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund was solely invested in companies that hold a positive or neutral SDG score based on the internally developed SDG Framework.
2. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
3. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breached the international norms were excluded from the investment universe.
4. The sub-fund invested a minimum of 10% in green, social, sustainable, and/or sustainability-linked bonds.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability disclosures (Unaudited)

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. 92.49% of the companies (on average) held a neutral or positive SDG score.
2. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
3. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
4. The sub-fund invested 16.61% of its assets in green, social, sustainable and/or sustainability-linked bonds.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Investments in green, social, sustainable and/or sustainability-linked bonds	16.61%	11.39%	13.52%
Holdings with a neutral or positive SDG score	92.49%	100.00%	92.40%
Companies in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Investments on exclusion list	0.00%	0.00%	1.76%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

Sustainability disclosures (Unaudited)

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDG's). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators. The average SDG score of the portfolio was 1.1734.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 704,559 tons, compared to 950,817 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 410 tons per EUR million EVIC, compared to 507 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,203 tons per EUR million revenue, compared to 1,251 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 2.47% of the net assets, compared to 6.39% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 59.61% of the net assets, compared to 62.80% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 35.03% of the net assets, compared to 57.28% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 1.58 GWh, compared to 1.25 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 3.62% of the net assets, compared to 6.79% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.01 tons, compared to 0.03 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 7.43 tons, compared to 31.58 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets,

Sustainability disclosures (Unaudited)

compared to 1.05% of the benchmark.

- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
(FRN) US TREASURY FRN 30-APR-2025	TREASURIES	2.11%	United States

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Sustainability disclosures (Unaudited)

● **In which economic sectors were the investments made?**

Sector	Average exposure in % over the reporting period
Sectors deriving revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels -

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

● **To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0.0%.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas

In nuclear energy

No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities are** economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● What was the share of investments made in transitional and enabling activities?

0.0%.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

18.0%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

58.0%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 15 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Sub-fund invested 18.09% in green, social, sustainable and/or sustainability linked bonds.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco SDG High Yield Bonds

Legal entity identifier: 2138004EB4XIM39VFW48

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ___%

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 73.7% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: ___%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund was solely invested in companies that hold a positive or neutral SDG score based on the internally developed SDG Framework.
2. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
3. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breached the international norms were excluded from the investment universe.
4. The sub-fund invested a minimum of 2% in green, social, sustainable, and/or sustainability-linked bonds.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability disclosures (Unaudited)

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. 100.00% of the companies (on average) held a neutral or positive SDG score.
2. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
3. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
4. The sub-fund invested 10.00% of its assets in green, social, sustainable and/or sustainability-linked bonds.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Investments in green, social, sustainable and/or sustainability-linked bonds	10.00%	7.53%	5.51%
Holdings with a neutral or positive SDG score	100.00%	99.08%	100.00%
Companies in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Investments on exclusion list	0.00%	1.05%	0.95%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of

Sustainability disclosures (Unaudited)

chemical weapons.

— → Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDG's). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators. The average SDG score of the portfolio was 1.1443.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 401,173 tons, compared to 431,166 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 882 tons per EUR million EVIC, compared to 858 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,213 tons per EUR million revenue, compared to 1,269 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 2.59% of the net assets, compared to 10.70% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 65.28% of the net assets, compared to 72.84% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 27.74% of the net assets, compared to 58.07% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 1.04 GWh, compared to 2.10 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 2.54% of the net assets, compared to 3.94% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.05 tons, compared to 0.06 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 233.40 tons, compared to 263.96 tons of the benchmark.

Sustainability disclosures (Unaudited)

- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.64% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
2.250 SILGAN HOLDINGS INC 01-JUN-2028	CAPITAL_GOODS	1.08%	United States

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Sustainability disclosures (Unaudited)

● **In which economic sectors were the investments made?**

Sector	Average exposure in % over the reporting period
Sectors deriving revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels -	
ENERGY	1.76%
NATURAL_GAS	1.26%

Cash and other instruments	3.86%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas

In nuclear energy

No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● What was the share of investments made in transitional and enabling activities?

0.0%.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

22.0%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

51.7%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 14 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Sub-fund invested 9.74% in green, social, sustainable and/or sustainability linked bonds.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex V

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Global Green Bonds

Legal entity identifier: 213800TZF61C5ZUI3146

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: 91.4%**

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective: 4.7%**

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The sub-fund invested 89.64% of its asset in green bonds, social bond, sustainable bonds and sustainability linked bonds. With this investments, the sub-fund contributed to environmental goals.

As at the end of the reporting period, the sub-fund's sustainable investments with environmental objectives were not made in economic activities that qualify as environmentally sustainable under the EU Taxonomy.

Sustainability indicators measure how the sustainable objectives of this financial product are attained

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The sub-fund invested 89.64% of its assets in green bonds.
2. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
3. 0.00% of the holdings in portfolio was in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.

Sustainability disclosures (Unaudited)

- ...and compared to previous periods?

Sustainability indicator	2024	2023	2022
Investments in green bonds	89.64%	93.81%	90.15%
Holdings in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Investments on exclusion list	0.00%	0.00%	4.42%

- How did the sustainable investments not cause significant harm to any sustainable investment objective?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- → How were the indicators for adverse impacts on sustainability factors taken into account?

Sustainable investments can be constituents of Paris-Aligned Benchmark.

PAI 1, table 1 was considered for scope 1, 2 and 3 Green House Gas emissions via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company

Sustainability disclosures (Unaudited)

from its investment universe.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGPR), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy. PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.

PAI 13, table 1 regarding board gender diversity was considered via engagement. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- Pre-investment, green, social and sustainable bonds were assessed via Robeco's Green Bond Framework and Social Framework, as well as via Robeco's SDG Framework. These Framework directly and indirectly assess PAI indicators. The percentage green, social and sustainability linked bonds in portfolio was 95.59%.

- Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDG's). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators. The average SDG score of the portfolio was 1.2184.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 19,185 tons, compared to 19,180 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 369 tons per EUR million EVIC, compared to 461 tons per EUR million EVIC for the benchmark.

Sustainability disclosures (Unaudited)

- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,128 tons per EUR million revenue, compared to 1,200 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.27% of the net assets, compared to 2.52% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 53.96% of the net assets, compared to 59.81% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the sub-fund was 36.47% of the net assets, compared to 39.50% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 1.43 GWh, compared to 2.29 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 1.64% of the net assets, compared to 3.22% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.01 tons, compared to 0.05 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 0.67 tons, compared to 2.71 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 0.00%, compared to 0.98% for the benchmark.
- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 38.62%, compared to 40.70% for the benchmark.
- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 20.66%, compared to 23.98% for the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 40.61%, compared to 38.21% for the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

A detailed description of the incorporation of Principal Adverse Impact is available via Robeco's Principal Adverse Impact Statement published on the Robeco website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas In nuclear energy

No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
0.0%.
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

91.4%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

4.7%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to attain the sustainable investment objective during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 3 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Sub-fund invested 89.4% in green, social, sustainable and/or sustainability linked bonds.

How did this financial product perform compared to the reference benchmark?

● **How does the reference benchmark differ from a broad market index?**

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria for eligibility and inclusion of green bonds.

● **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?**

89.64% of the sub-fund's assets were green bonds, social bonds, sustainable bonds or sustainability linked bonds compared to % for the Bloomberg MSCI Global Green Bond Index.

● **How did this financial product perform compared with the reference benchmark?**

The weight of green bonds in portfolio was 89.64% for Robeco Global Green Bonds, compared to 98.56% for the Bloomberg MSCI Global Green Bond Index.

● **How did this financial product perform compared with the broad market index?**

The weight of green bonds in portfolio was 89.64% for Robeco Global Green Bonds, compared to 4.76% for the general market index.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Annex V

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Climate Global Credits

Legal entity identifier: 213800LB657HDJBI4637

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: 86.0%**

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective: 6.6%**

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The sub-fund carbon footprint (scope level; 1, 2 and 3) as of 31 December 2024 was 13.66% better than the Solactive Paris Aligned Global Corporate Index.

The sub-fund invested 21.74% of its asset in green bonds, social bond, sustainable bonds and sustainability linked bonds. With this investments, the sub-fund contributed to environmental goals.

As at the end of the reporting period, the sub-fund's sustainable investments with environmental objectives were not made in economic activities that qualify as environmentally sustainable under the EU Taxonomy.

Sustainability indicators measure how the sustainable objectives of this financial product are attained

● **How did the sustainability indicators perform?**

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The sub-fund's weighted carbon footprint (scope level 1, 2 and 3) was 13.66% better than that of the Solactive Paris Aligned Global Corporate Index.
2. The sub-fund invested 21.74% of its assets in green, social, sustainable and/or sustainability-linked bonds.
3. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once

Sustainability disclosures (Unaudited)

selling is possible at a reasonable price, holdings will be sold.

4. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.

● ...and compared to previous periods?

Sustainability indicator	2024	2023	2022
Investments in green, social, sustainable and/or sustainability-linked bonds	21.74%	15.91%	12.71%
Holdings in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Investments on exclusion list	0.00%	0.00%	4.42%
Weighted score for: - Carbon footprint as % better than the Solactive Paris Aligned Global Corporate Index	13.66%	39.74%	23.85%

● How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainable investments did no significant harm to any environmental or social sustainable investment objective by applying Robeco's ESG bond eligibility frameworks in the selection process. Robeco's ESG bond eligibility frameworks require that international norms related to social and governance issues are met. Under the frameworks, ESG bond investments are assessed on (i) social safeguards – the issuer respects international Human and Labor Rights, (ii) controversial behaviour – the issuer is not in violation of the UN Global Compact, and (iii) sanctions – the issuer is not subject to international sanctions.

To identify whether an issuer is involved in a controversy, ratings and data from external providers are used to aid our in-house monitoring. If a controversy is found, the analyst determines whether this has material impacts on the ESG bond analysis and/or the SDG score. If the controversy is deemed material, the issuer receives a negative SDG Score and the investment is not sustainable.

— → How were the indicators for adverse impacts on sustainability factors taken into account?

All sustainable investments are constituents of Solactive Paris Aligned Global Corporate Index or follow the benchmark methodology.

PAI 1, table 1 was considered for scope 1, 2 and 3 Green House Gas emissions via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (≥ 20% of the revenues), oil sands (≥ 10% of the revenues) and arctic drilling (≥ 5% of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (≥ 20% of the revenues), oil sands (≥ 10% of the revenues) and arctic drilling (≥ 5% of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (≥ 20% of the revenues), oil sands (≥ 10% of the revenues) and arctic drilling (≥ 5% of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (≥ 20% of the revenues), oil sands (≥ 10% of the revenues) and arctic drilling (≥ 5% of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy as well as the methodology of the benchmark provider.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- o Via the applied normative and activity-based exclusions, the following PAIs were considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.60% of the net assets, compared to 0.30% of the benchmark.
 - Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.01% of the benchmark.
 - The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 5.53% of the net assets, compared to 2.46% of the benchmark.

Sustainability disclosures (Unaudited)

- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.01% of the benchmark.

o Via the environmental footprint performance targets of the sub-fund, the following PAIs were considered:

- The carbon footprint of the portfolio (PAI 2, table 1) was 171 tons per EUR million EVIC, compared to 176 tons per EUR million EVIC for the Paris-Aligned Benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 81,620 tons, compared to 94,533 tons for the benchmark.

- The carbon footprint of the portfolio (PAI 2, table 1) was 171 tons per EUR million EVIC, compared to 176 tons per EUR million EVIC for the benchmark.

- The greenhouse gas intensity of the portfolio (PAI 3, table 1) was 770 tons per EUR million revenue, compared to 810 tons per EUR million revenue for the benchmark.

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.60% of the net assets, compared to 0.30% of the benchmark.

- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 54.35% of the net assets, compared to 58.11% of the benchmark.

- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the sub-fund was 37.74% of the net assets, compared to 35.67% of the benchmark.

- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 1.52 GWh, compared to 0.49 GWh for the benchmark.

- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 5.53% of the net assets, compared to 2.46% of the benchmark.

- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.00 tons, compared to 0.11 tons of the benchmark.

- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 0.23 tons, compared to 19.80 tons of the benchmark.

- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.01% of the benchmark.

- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 5.53% of the net assets, compared to 2.46% of the benchmark.

- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

In fossil gas

In nuclear energy

No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
0.0%.
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

86.0%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

6.6%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to attain the sustainable investment objective during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 15 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Carbon profile of the Sub-fund in terms of and greenhouse gas emissions of the Sub-fund remained well below that of the benchmark. The Sub-fund has a carbon profile that is more than 0.1 better than the benchmark. Also, the Sub-fund invested 13.66% in green, social, sustainable and/or sustainability linked bonds.

How did this financial product perform compared to the reference benchmark?

● **How does the reference benchmark differ from a broad market index?**

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria for alignment with the Paris Agreement on greenhouse gas emission reduction and related exclusions.

● **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?**

The sub-fund's weighted carbon footprint (scope level 1, 2 and 3) was 13.66% better than that of the Solactive Paris Aligned Global Corporate Index.

● **How did this financial product perform compared with the reference benchmark?**

The green house gas emissions (t CO₂-eq/mUSD) amounted to 81,620 for Robeco Climate Global Credits, compared to 94,533 for the Solactive Paris Aligned Global Corporate Index.

The weight of green bonds in portfolio was 20.78% for Robeco Climate Global Credits, compared to 5.00% for the Solactive Paris Aligned Global Corporate Index.

● **How did this financial product perform compared with the broad market index?**

The green house gas emissions (t CO₂-eq/mUSD) amounted to 81,620 for Robeco Climate Global Credits, compared to 94,533 for the general market index.

The weight of green bonds in portfolio was 20.78% for Robeco Climate Global Credits, compared to 5.81% for the general market index.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Climate Global Bonds

Legal entity identifier: 213800QNYW5DK72HBQ97

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ___%

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 46.2% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: ___%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund invested a minimum of 2.5% in green, social, sustainable, and/or sustainability-linked bonds.

The following Environmental and Social characteristics are applicable for investments in corporate bonds:

1. The sub-fund's weighted carbon footprint (scope level 1, 2 and 3) was lower than that of the Solactive Paris Aware Global Aggregate Index.

2. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.

3. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breached the international norms were excluded from the investment universe.

The following Environmental and Social characteristics are applicable for investments in government bonds:

1. The sub-fund's weighted carbon emissions per capita was lower than that of the Solactive Paris Aware Global Aggregate Index.

2. The sub-fund's portfolio complied with Robeco's Exclusion Policy that is based on exclusion criteria that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom. This means that the sub-fund has no exposure to excluded securities, taking into account a grace period.

The sustainable investments made by the sub-fund contribute partly to the environmental objective of Climate Mitigation under the Taxonomy regulation. The Sub-fund follows the Solactive Paris Aware Global Aggregate Index as a reference index to meet the carbon footprint reduction objective of the sub-fund.

Sustainability disclosures (Unaudited)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The sub-fund invested 23.77% of its assets in green, social, sustainable and/or sustainability-linked bonds.

For investments in corporate bonds:

1. The sub-fund's weighted carbon footprint (scope level 1, 2 and 3) was 26.40% better than that of the Solactive Paris Aware Global Aggregate Index.
2. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
3. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.

For investments in government bonds:

1. The sub-fund's weighted carbon emissions per capita was 14.18% lower than that of the Solactive Paris Aware Global Aggregate Index.
2. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Investments in green, social, sustainable and/or sustainability-linked bonds	23.77%	15.26%	10.58%
Investments on exclusion list	0.00%	0.00%	0.00%
Holdings in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Investments on exclusion list	0.00%	0.00%	0.00%
Weighted score for: - Carbon emissions per capita (% better than the Solactive Paris Aware Global Aggregate Index)	14.18%	18.43%	27.91%
Weighted score for: - Carbon footprint (% better than the Solactive Paris Aware Global Aggregate Index)	26.40%	33.36%	26.31%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The sustainable investments of the Sub-fund contributed to the sustainable investment objective of keeping the maximum global temperature rise below 2 degrees Celsius by reducing the carbon footprint of its portfolio.

The sustainable investments contribute partly to the environmental objective of Climate Mitigation under the EU Taxonomy regulation.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. In addition, sustainable investments made through the Paris Aligned Benchmark follow eligibility requirements as per Article 12 of the EU regulation EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks and follows Robeco's Exclusion policy. For corporate investments, in accordance with Robeco's SDG framework, any off benchmark investments are only considered by the Sub-fund when they have a positive contribution to the UN SDGs and therefore not cause significant harm to any environmental or social sustainable investment objective.

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

All sustainable investments in corporates are constituents of the , or follow the benchmark methodology. The benchmark methodology directly assesses the following PAI indicators:

- Table 1, PAI 2 (Carbon Footprint)
- Table 1, PAI 4 (Exposure to companies in the fossil fuel sector)
- Table 1, PAI 10 (Violations of the UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

- Table 1, PAI 14 (Exposure to controversial weapons)

Post-investment, the Sub-fund assesses the performance on all mandatory PAI indicators as listed below on a regular basis.

PAI 1, table 1 was considered for scope 1, 2 and 3 Green House Gas emissions via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of

Sustainability disclosures (Unaudited)

chemical weapons.

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments in corporates were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, for corporates the following principal adverse impacts on sustainability factors were considered.

o Via the applied normative and activity-based exclusions, the following PAIs were considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.11% of the net assets, compared to 0.26% of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 1.92% of the net assets, compared to 2.25% of the benchmark.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.

o Via the environmental footprint performance targets of the sub-fund, the following PAIs were considered:

- The carbon footprint of the portfolio (PAI 2, table 1) was 204 tons per EUR million EVIC, compared to 174 tons per EUR million EVIC for the Paris-Aligned Benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 2,453 tons, compared to 908 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 204 tons per EUR million EVIC, compared to 174 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 891 tons per EUR million revenue, compared to 841 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.11% of the net assets, compared to 0.26% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 51.44% of the net assets, compared to 58.39% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 36.54% of the net assets, compared to 42.35% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 1.52 GWh, compared to 0.47 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas

Sustainability disclosures (Unaudited)

where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 1.92% of the net assets, compared to 2.25% of the benchmark.

- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.00 tons, compared to 0.10 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 0.21 tons, compared to 17.47 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 1.92% of the net assets, compared to 2.25% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Sustainability disclosures (Unaudited)

● **In which economic sectors were the investments made?**

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas

In nuclear energy

No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

0.0%.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

15.6%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

30.6%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, the Carbon profile of the Sub-fund in terms of and greenhouse gas emissions of the Sub-fund remained well below that of the benchmark. The Sub-fund has a carbon profile that is more than 40% better than the benchmark.

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How does the reference benchmark differ from a broad market index?**

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria for alignment with the Paris Agreement on greenhouse gas emission reduction and related exclusions.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The sub-fund's weighted carbon footprint (scope level 1, 2 and 3) was 21.10% better than that of the Solactive Paris Aware Global Aggregate Index.

- **How did this financial product perform compared with the reference benchmark?**

The green house gas emissions (t CO₂-eq/mUSD) amounted to 212 for Robeco Climate Global Bonds, compared to 289 for the Solactive Paris Aware Global Aggregate Index.

The weight of green bonds in portfolio was 23.77% for Robeco Climate Global Bonds, compared to 4.13% for the Solactive Paris Aware Global Aggregate Index.

- **How did this financial product perform compared with the broad market index?**

The green house gas emissions (t CO₂-eq/mUSD) amounted to 212 for Robeco Climate Global Bonds, compared to 820 for the general market index.

The weight of green bonds in portfolio was 23.77% for Robeco Climate Global Bonds, compared to 4.79% for the general market index.

Annex V

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Global SDG & Climate Multi-Factor Credits **Legal entity identifier:** 213800RF9TE5E4ZIIN66

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes No

<input checked="" type="checkbox"/> It made sustainable investments with an environmental objective: 83.4%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	<input type="checkbox"/> with a social objective
<input checked="" type="checkbox"/> It made sustainable investments with a social objective: 13.5%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent was the sustainable investment objective of this financial product met?

The sub-fund carbon footprint (scope level; 1, 2 and 3) as of 31 December 2024 was 9.85% better than the Solactive Paris Aligned Global Corporate Index.

As at the end of the reporting period, the sub-fund's sustainable investments with environmental objectives were not made in economic activities that qualify as environmentally sustainable under the EU Taxonomy.

Sustainability indicators measure how the sustainable objectives of this financial product are attained

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The sub-fund's weighted carbon footprint (scope level 1, 2 and 3) was 9.85% better than that of the Solactive Paris Aligned Global Corporate Index.
2. The sub-fund's weighted score for the carbon (scope level 1, 2 and 3), water and waste footprint were respectively 23.11%, 75.48% and 94.07% better than the general market index.
3. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
4. 0.00% of the holdings in portfolio was in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
5. 0.43% of the investments (on average) held a high, medium or low negative SDG score (-1, -2 or -3) based on the internally developed SDG framework.

Sustainability disclosures (Unaudited)

6. The sub-fund's weighted average ESG score was 19.08 against 19.21 for the Paris Aligned Benchmark. A lower score means a lower risk.

7. 84.01% of the investments held a positive SDG score (1,2,3), compared to 66.90% for the general market index

● ...and compared to previous periods?

Sustainability indicator	2024	2023	2022
Holdings with a positive SDG rating	84.01%	92.30%	93.45%
Weighted score for:			
- Water footprint (% better than general market index)	75.48%	68.75%	44.62%
- Waste footprint (% better than general market index)	94.07%	33.15%	37.86%
Holdings in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Weighted average ESG Score	19.08	20.70	20.78
Holdings with a neutral or positive SDG score	98.15%	100.00%	100.00%
Investments on exclusion list	0.00%	0.49%	0.00%
Weighted score for: - Carbon footprint (% better than the Solactive Paris Aligned Global Corporate Index)	9.85%	7.56%	8.40%

● How did the sustainable investments not cause significant harm to any sustainable investment objective?

— → How were the indicators for adverse impacts on sustainability factors taken into account?

Sustainable investments can be constituents of Paris-Aligned Benchmark.

PA1, table 1 was considered for scope 1, 2 and 3 Green House Gas emissions via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PA2, table 1 was considered for the carbon footprint via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PA3, table 1 was considered for the Green House Gas intensity of investee companies via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PA4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PA5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PA6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PA7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PA8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PA9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

o Via the applied normative and activity-based exclusions, the following PAIs were considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.39% of the net assets, compared to 0.30% of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.01% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 3.93% of the net assets, compared to 2.46% of the benchmark.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.01% of the benchmark.

o Via the environmental footprint performance targets of the sub-fund, the following PAIs were considered:

- The carbon footprint of the portfolio (PAI 2, table 1) was 190 tons per EUR million EVIC, compared to 176 tons per EUR million EVIC for the Paris-Aligned Benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.03 tons, compared to 0.11 tons of the benchmark.

Sustainability disclosures (Unaudited)

- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 1.17 tons, compared to 19.80 tons of the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 1,756 tons, compared to 1,636 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 190 tons per EUR million EVIC, compared to 176 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 791 tons per EUR million revenue, compared to 810 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.39% of the net assets, compared to 0.30% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 55.26% of the net assets, compared to 58.11% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the sub-fund was 32.49% of the net assets, compared to 35.67% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.45 GWh, compared to 0.49 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 3.93% of the net assets, compared to 2.46% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.03 tons, compared to 0.11 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 1.17 tons, compared to 19.80 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.01% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 3.93% of the net assets, compared to 2.46% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
4.656 MORGAN STANLEY 02-MAR-2029	BANKING	2.16%	United States
1.090 JPMORGAN CHASE & CO 11-MAR-2027	BANKING	2.00%	United States
6.364 HSBC HOLDINGS PLC 16-NOV-2032	BANKING	1.50%	United Kingdom
6.200 AT&T INC 15-MAR-2040	COMMUNICATIONS	1.20%	United States

BASIC_INDUSTRY	1.74%
INDUSTRIAL_OTHER	0.53%
TRANSPORTATION	0.39%
Cash and other instruments	1.44%

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
- 0.0%.
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

83.4%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

13.5%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to attain the sustainable investment objective during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 15 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Carbon profile of the Sub-fund in terms of and greenhouse gas emissions of the Sub-fund remained well below that of the benchmark. The Sub-fund has a carbon profile that is better than the benchmark.

How did this financial product perform compared to the reference benchmark?

● **How does the reference benchmark differ from a broad market index?**

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria for alignment with the Paris Agreement on greenhouse gas emission reduction and related exclusions.

● **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?**

The sub-fund's weighted carbon footprint (scope level 1, 2 and 3) was 9.85% better than that of the Solactive Paris Aligned Global Corporate Index.

● **How did this financial product perform compared with the reference benchmark?**

The greenhouse gas emissions (t CO₂-eq/mUSD) amounted to 273 for Robeco QI Global SDG & Climate Multi-Factor Credits, compared to 303 for the Solactive Paris Aligned Global Corporate Index.

● **How did this financial product perform compared with the broad market index?**

The greenhouse gas emissions (t CO₂-eq/mUSD) amounted to 273 for Robeco QI Global SDG & Climate Multi-Factor Credits, compared to 881 for the general market index.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Transition Emerging Credits

Legal entity identifier: 5493008QKCFW6Q0H681

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: ___%**

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 74.3% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective: ___%**

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. At least 50% was invested in Transition-related Investments contributing to the goals of the Paris Agreement and/or Transition-related Investments with an Environmental and/or Social objective.
2. The sub-fund invested a minimum of 15% in green, social, sustainable, and/or sustainability-linked bonds.
3. The sub-fund was solely invested in companies that hold a positive or neutral SDG score based on the internally developed SDG Framework.
4. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breached the international norms were excluded from the investment universe.
5. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
6. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The sub-fund was limited to a maximum exposure of 5% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability disclosures (Unaudited)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The sub-fund invested 65.08% in Transition-related Investments contributing to the goals of the Paris Agreement with an Environmental and/or Social objective.
2. The sub-fund invested 29.26% of its assets in green, social, sustainable and/or sustainability-linked bonds.
3. 92.16% of the investments in portfolio held a neutral or positive SDG score based on the internally developed SDG framework.
4. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
5. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
6. 0.00% of the holdings in portfolio had an elevated sustainability risk profile.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Investments in green, social, sustainable and/or sustainability-linked bonds	29.26%	22.86%	18.34%
Holdings with a neutral or positive SDG score	92.16%	92.92%	88.18%
Holdings in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Holdings with an elevated sustainability risk profile	0.00	0.00%	2.68%
Assets invested in Transition-related investments	55.21%		
Investments on exclusion list	0.00%	1.81%	11.15%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Investments in transition assets can, but do not per se need to be, sustainable investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

Sustainability disclosures (Unaudited)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

→ How were the indicators for adverse impacts on sustainability factors taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white

Sustainability disclosures (Unaudited)

phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDG's). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators. The average SDG score of the portfolio was 1.2428.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 138,025 tons, compared to 166,005 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 822 tons per EUR million EVIC, compared to 919 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,442 tons per EUR million revenue, compared to 2,116 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 2.78% of the net assets, compared to 12.92% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 66.35% of the net assets, compared to 76.97% of the benchmark.

Sustainability disclosures (Unaudited)

- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 50.03% of the net assets, compared to 77.57% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 2.34 GWh, compared to 2.44 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 1.78% of the net assets, compared to 10.09% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.04 tons, compared to 0.17 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 372.71 tons, compared to 321.58 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 1.38% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas

In nuclear energy

No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● What was the share of investments made in transitional and enabling activities?

0.0%.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

23.3%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

51.0%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 7 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Sub-fund invested 29.47% in green, social, sustainable and/or sustainability linked bonds.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex V

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Climate Global High Yield Bonds **Legal entity identifier:** 2138005J7Y35MUMDFU85

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes No

<input checked="" type="checkbox"/> It made sustainable investments with an environmental objective: 71.8%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	<input type="checkbox"/> with a social objective
<input checked="" type="checkbox"/> It made sustainable investments with a social objective: 22.2%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent was the sustainable investment objective of this financial product met?

The sub-fund carbon footprint (scope level; 1, 2 and 3) as of 31 December 2024 was 2.0% lower than the Solactive Global High Yield Corporate Paris Aligned Select Index.

The sub-fund invested 4.90% of its asset in green bonds, social bond, sustainable bonds and sustainability linked bonds. With this investments, the sub-fund contributed to environmental goals.

As at the end of the reporting period, the sub-fund's sustainable investments with environmental objectives were not made in economic activities that qualify as environmentally sustainable under the EU Taxonomy.

Sustainability indicators measure how the sustainable objectives of this financial product are attained

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The sub-fund's weighted carbon footprint (scope level 1, 2 and 3) was 4.90% better than that of the Solactive Global High Yield Corporate PAB Select Index.
2. The sub-fund invested 9.37% of its assets in green, social, sustainable and/or sustainability-linked bonds.
3. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
4. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.

Sustainability disclosures (Unaudited)

- ...and compared to previous periods?

Sustainability indicator	2024	2023
Investments in green, social, sustainable and/or sustainability-linked bonds	9.37%	6.69%
Holdings in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%
Investments on exclusion list	0.00%	0.00%
Weighted score for: - Carbon footprint (% better than the Solactive Global High Yield Corporate PAB Select Index)	4.90%	2.00%

- How did the sustainable investments not cause significant harm to any sustainable investment objective?

- → How were the indicators for adverse impacts on sustainability factors taken into account?

All sustainable investments are constituents of Solactive Global High Yield Corporate PAB Select Index or follow the benchmark methodology.

PAI 1, table 1 was considered for scope 1, 2 and 3 Green House Gas emissions via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmissbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy as well as the methodology of the benchmark provider.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

o Via the applied normative and activity-based exclusions, the following PAIs were considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.27% of the net assets, compared to 0.15% of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.66% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 1.19% of the net assets, compared to 1.92% of the benchmark.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.

o Via the environmental footprint performance targets of the sub-fund, the following PAIs were considered:

- The carbon footprint of the portfolio (PAI 2, table 1) was 275 tons per EUR million EVIC, compared to 320 tons per EUR million EVIC for the Paris-Aligned Benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 95,496 tons, compared to 132,809 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 275 tons per EUR million EVIC, compared to 320 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 585 tons per EUR million revenue, compared to 550

Sustainability disclosures (Unaudited)

tons per EUR million revenue for the benchmark.

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.27% of the net assets, compared to 0.15% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 58.60% of the net assets, compared to 68.70% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the sub-fund was 14.05% of the net assets, compared to 21.42% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.52 GWh, compared to 0.88 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 1.19% of the net assets, compared to 1.92% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.02 tons, compared to 0.01 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 39.39 tons, compared to 236.71 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.66% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 1.19% of the net assets, compared to 1.92% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas

In nuclear energy

No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● What was the share of investments made in transitional and enabling activities?

0.0%.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

71.8%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

22.2%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to attain the sustainable investment objective during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 12 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Carbon profile of the Sub-fund in terms of and greenhouse gas emissions of the Sub-fund remained well below that of the benchmark. The Sub-fund has a carbon profile that is more than 20% better than the benchmark.

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

- **How does the reference benchmark differ from a broad market index?**

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria for alignment with the Paris Agreement on greenhouse gas emission reduction and related exclusions.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?**

The sub-fund's weighted carbon footprint (scope level 1, 2 and 3) was 4.90% better than that of the Solactive Global High Yield Corporate PAB Select Index.

- **How did this financial product perform compared with the reference benchmark?**

The green house gas emissions (t CO₂-eq/mUSD) amounted to 436 for Robeco Climate Global High Yield Bonds, compared to 459 for the Solactive Global High Yield Corporate PAB Select Index.

The weight of green bonds in portfolio was 7.80% for Robeco Climate Global High Yield Bonds, compared to 5.56% for the Solactive Global High Yield Corporate PAB Select Index.

- **How did this financial product perform compared with the broad market index?**

The green house gas emissions (t CO₂-eq/mUSD) amounted to 436 for Robeco Climate Global High Yield Bonds, compared to 1,475 for the general market index.

The weight of green bonds in portfolio was 7.80% for Robeco Climate Global High Yield Bonds, compared to 6.63% for the general market index.

Annex V

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco High Income Green Bonds **Legal entity identifier:** 213800PLNWH9PVP39A71

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes No

<input checked="" type="checkbox"/> It made sustainable investments with an environmental objective: 84.9%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	<input type="checkbox"/> with a social objective
<input checked="" type="checkbox"/> It made sustainable investments with a social objective: 12.3%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent was the sustainable investment objective of this financial product met?

The sub-fund invested 82.98% of its asset in green bonds, social bond, sustainable bonds and sustainability linked bonds. With this investments, the sub-fund contributed to environmental goals.

As at the end of the reporting period, the sub-fund's sustainable investments with environmental objectives were not made in economic activities that qualify as environmentally sustainable under the EU Taxonomy.

Sustainability indicators measure how the sustainable objectives of this financial product are attained

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2025-02-28.

1. The sub-fund invested 82.98% of its assets in green bonds.
2. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
3. 0.00% of the holdings in portfolio was in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.

Sustainability disclosures (Unaudited)

- ...and compared to previous periods?

The Sub-fund has been launched in 2024, so no comparison can be made.

- *How did the sustainable investments not cause significant harm to any sustainable investment objective?*

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainable investments can be constituents of Paris-Aligned Benchmark.

PAI 1, table 1 was considered for scope 1, 2 and 3 Green House Gas emissions via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement. Robeco supports the human rights principles described in the Universal Declaration of

Sustainability disclosures (Unaudited)

Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGPR), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy. PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.

PAI 13, table 1 regarding board gender diversity was considered via engagement. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- Pre-investment, green, social and sustainable bonds were assessed via Robeco's Green Bond Framework and Social Framework, as well as via Robeco's SDG Framework. These Framework directly and indirectly assess PAI indicators. The percentage green, social and sustainability linked bonds in portfolio was 93.86%.

- Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDG's). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators. The average SDG score of the portfolio was 1.5300.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 5,499 tons.

- The carbon footprint of the portfolio (PAI 2, table 1) was 611 tons per EUR million EVIC, compared to 695 tons per EUR million EVIC for the benchmark.

- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,233 tons per EUR million revenue, compared to 1,084 tons EUR million revenue for the benchmark.

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.89% of the net assets, compared to 4.53% of the benchmark.

Sustainability disclosures (Unaudited)

- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 53.89% of the net assets, compared to 59.30% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the sub-fund was 31.25% of the net assets, compared to 51.88% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 1.65 GWh, compared to 1.59 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 5.60% of the net assets, compared to 5.60% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.03 tons, compared to 0.07 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 12.22 tons, compared to 84.99 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.05% of the benchmark.
- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 0.00%, compared to 0.72% for the benchmark.
- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 35.87%, compared to 42.01% for the benchmark.
- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 23.73%, compared to 17.33% for the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 37.94%, compared to 36.57% for the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.05% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
0.0%.
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Sub-fund has been launched in 2024, so no comparison can be made.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

84.9%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

12.3%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to attain the sustainable investment objective during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 5 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Sub-fund invested 80.07% in green, social, sustainable and/or sustainability linked bonds.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Global Dynamic Duration

Legal entity identifier: 213800RYROCMOVUZBN92

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ___%

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: ___%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The sub-fund's weighted average Country Sustainability Ranking was better than the average ranking of the index.
3. The sub-fund's weighted carbon emissions per capita was better than that of the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three

Sustainability disclosures (Unaudited)

months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.

2. The sub-fund's weighted average Country Sustainability Ranking was 7.29 against 7.11 for the average ranking of the index.
3. The sub-fund's weighted carbon emissions per capita was 1.65% better than that of the general market index.

● ...and compared to previous periods?

The Sub-fund has been launched in 2024, so no comparison can be made.

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The Sub-fund does not intend to make investments considered as sustainable investments as defined under the SFDR Regulation (EU) 2019/2088.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

The Sub-fund does not intend to make investments considered as sustainable investments as defined under the SFDR Regulation (EU) 2019/2088.

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

The Sub-fund does not intend to make sustainable investments, therefore this question is not applicable.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGPR), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy. PAI 15, table 1 regarding green house gas intensity was considered via engagement. Robeco monitors a set of country data on climate performance. These include GHG intensity (such as CO₂/GDP), CO₂ per capita data, emission trends and policy metrics. This dataset has been incorporated in the Country Sustainability Ranking, which is used for the fundamental analysis of government bonds.

PAI 16, table 1 regarding investee countries subject to social violations was considered via exclusions. The PRS political risk data, used for the measurement of this indicator, are an important component of Robeco's Country Sustainability Ranking. The PRS internal conflict score is used as an instrument to detect countries that run the risk of getting involved in serious internal conflict. The PRS metric is based on three components: civil disorder, terrorism, and civil war.

PAI 17, table 2 regarding the share of securities not issued under Union legislation on environmentally sustainable bonds was considered via targets in relation to investments in green, social, sustainable and sustainable linked bonds.

PAI 21, table 3 regarding the average corruption score was considered by setting targets on the country sustainability ranking (CSR).

— → *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Sub-fund does not intend to make sustainable investments, therefore this question is not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- o As part of Country Sustainability ranking, used for The Sub-fundamental analysis of bonds, the following PAIs were considered:
 - The Green House Gas intensity of investee countries was 205 tons per EUR million GDP, compared to 208 tons for the benchmark.
 - The number of investee countries subject to social violations (PAI 16, Table 1), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law was 0%, compared to 0% for the benchmark.
- o In addition, the sub-fund has E/S promoting characteristics in relation to:
 - The share of securities in investments not issued under Union legislation on environmentally sustainable bonds (PAI 17, table 2) was 98.70%, compared to 99.14% for the benchmark.
 - The level of corruption, lack of fundamental rights, and the deficiencies in civil and criminal justice (PAI 21, table 3) was 0.00, compared to 0.00 for the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- o Via the sub-fund's engagement program, different environmental and social PAIs were considered, depending on the materiality to the investee company.
 - The Green House Gas intensity of investee countries was 205 tons per EUR million GDP, compared to 208 tons for the benchmark.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector

Average exposure in % over the reporting period

Other sectors

TREASURIES

97.20%

Cash and other instruments

2.80%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹

Yes

In fossil gas

In nuclear energy

No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities are** economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● What was the share of investments made in transitional and enabling activities?

0.0%.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Sub-fund has been launched in 2024, so no comparison can be made.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

1.3%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

0.0%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, the Carbon profile of the Sub-fund in terms of and greenhouse gas emissions of the Sub-fund remained well below that of the benchmark. The Sub-fund has a carbon profile that is better than the benchmark.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Sustainable Global Bonds **Legal entity identifier:** 2138006CNQL5Q258WG77

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: ___%**

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 53.2% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective: ___%**

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

- The sub-fund invested a minimum of 20% in green, social, sustainable, and/or sustainability-linked bonds. The following Environmental and Social characteristics are applicable for investments in corporate bonds:
 - The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
 - The sub-fund's investments consist of a minimum of 30% of corporate and government related bonds, including the EU, that have a SDG rating of 1 or higher and the average corporate SDG rating is better than the average corporate SDG of the general market index.
 - The sub-fund's weighted corporate carbon (scope level 1, 2 and 3) footprint was better than that of the general market index.
 - Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The sub-fund was limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
 - The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breached the international norms were excluded from the investment universe.

The following Environmental and Social characteristics are applicable for investments in government bonds:

- The sub-fund's portfolio complied with Robeco's Exclusion Policy that is based on exclusion criteria that Robeco

Sustainability disclosures (Unaudited)

believes are detrimental to society and incompatible with sustainable investment strategies. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom. This means that the sub-fund has no exposure to excluded securities, taking into account a grace period.

2. The sub-fund's portfolio had a minimum score of 4.5 on the Robeco Country Sustainability Ranking and the weighted average score is better than the weighted average score of the General Market Index.
3. The sub-fund excluded sovereign bonds issued by the bottom 15% of the WGI Control of Corruption ranking.
4. The sub-fund's weighted government carbon footprint was better than that of the general market index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The sub-fund invested 24.17% of its assets in green, social, sustainable and/or sustainability-linked bonds.

For investments in corporate bonds:

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. 90.48% of the investments held a positive SDG score (1,2,3). The average SDG score of the sub-fund was 1.1102 based on the internally developed SDG framework, compared to 0.3851 for the general market index
3. The sub-fund's weighted score for the corporate carbon (scope level 1, 2 and 3) footprint was 57.54% lower than the general market index.
4. 0.00% of the holdings in portfolio had an elevated sustainability risk profile.
5. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.

For investments in government bonds:

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. The minimum absolute score on Robeco's Country Sustainability Rating was 4.70 and weighted average score on Robeco's Country Sustainable Ranking was 7.41.
3. The sub-fund excluded sovereign bonds issued by the bottom 15% of the WGI Control of Corruption ranking.
4. The sub-fund's weighted score for the government carbon footprint was 28.61% lower than the general market index.

● *...and compared to previous periods?*

The Sub-fund has been launched in 2024, so no comparison can be made.

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

A portion of the sustainable investments are green, social, sustainability and sustainability-linked bonds, and therefore contribute to the environmental objectives under EU Taxonomy. The portion of corporate sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

Robeco used its proprietary SDG Framework to assess which corporate investments constitute a sustainable investment as referred to in art 2(17) SFDR.

Sustainability disclosures (Unaudited)

- *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

For sustainable investments that are either green, social, sustainability or sustainability-linked bonds, significant harm is avoided by the application of the Robeco's green, social, sustainability or sustainability-linked bond eligibility frameworks.

For corporate investments, Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- → *How were the indicators for adverse impacts on sustainability factors taken into account?*

For sustainable investments that are either green, social or sustainability bonds, significant harm is avoided by the application of the Robeco's green, social or sustainability bond eligibility framework. As a result, the adverse impacts as listed below are taken into account.

For Corporates, Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators.

The following PAIs were considered in the fund:

PAI 15, table 1 regarding green house gas intensity was considered via engagement. Robeco monitors a set of country data on climate performance. These include GHG intensity (such as CO₂/GDP), CO₂ per capita data, emission trends and policy metrics. This dataset has been incorporated in the Country Sustainability Ranking, which is used for the fundamental analysis of government bonds.

PAI 16, table 1 regarding investee countries subject to social violations was considered via exclusions. The PRS political risk data, used for the measurement of this indicator, are an important component of Robeco's Country Sustainability Ranking. The PRS internal conflict score is used as an instrument to detect countries that run the risk of getting involved in serious internal conflict. The PRS metric is based on three components: civil disorder, terrorism, and civil war.

PAI 17, table 2 regarding the share of securities not issued under Union legislation on environmentally sustainable bonds was considered via targets in relation to investments in green, social, sustainable and sustainable linked bonds.

PAI 21, table 3 regarding the average corruption score was considered by setting targets on the country sustainability ranking (CSR).

- → *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

For the corporate investments, the sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

To sovereigns and supranationals, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are not applicable.

Sustainability disclosures (Unaudited)

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- o As part of Country Sustainability ranking, used for The Sub-fundamental analysis of bonds, the following PAIs were considered:
 - The Green House Gas intensity of investee countries was 169 tons per EUR million GDP, compared to 236 tons for the benchmark.
 - The number of investee countries subject to social violations (PAI 16, Table 1), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law was 0%, compared to 1% for the benchmark.
- o In addition, the sub-fund has E/S promoting characteristics in relation to:
 - The share of securities in investments not issued under Union legislation on environmentally sustainable bonds (PAI 17, table 2) was 86.59%, compared to 99.00% for the benchmark.
 - The level of corruption, lack of fundamental rights, and the deficiencies in civil and criminal justice (PAI 21, table 3) was 0.00, compared to 0.00 for the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- o Via the sub-fund's engagement program, different environmental and social PAIs were considered, depending on the materiality to the investee company.
 - The Green House Gas intensity of investee countries was 169 tons per EUR million GDP, compared to 236 tons for the benchmark.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	Average exposure in % over the reporting period
Sectors deriving revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels -	
NATURAL_GAS	0.31%

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
0.0%.
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Sub-fund has been launched in 2024, so no comparison can be made.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

14.8%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

38.4%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 20 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Carbon profile of the Sub-fund in terms of and greenhouse gas emissions of the Sub-fund remained well below that of the benchmark. The Sub-fund has a carbon profile that is more than 50% better than the benchmark.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Emerging Markets Bonds **Legal entity identifier:** 213800RAMXCKXFH4DA03

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes No

<input type="checkbox"/> It made sustainable investments with an environmental objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 9.8% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	<input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund's weighted average Country Sustainability Ranking was better than the average ranking of the index.
2. The sub-fund invested a minimum of 5% in green, social, sustainable, and/or sustainability-linked bonds.
3. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breached the international norms were excluded from the investment universe.
4. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
5. The sub-fund excluded sovereign bonds issued by the bottom 15% of the WGI Control of Corruption ranking.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability disclosures (Unaudited)

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The sub-fund's weighted average Country Sustainability Ranking was 5.35 against 5.22 for the average ranking of the index.
2. The sub-fund invested 8.40% of its assets in green, social, sustainable and/or sustainability-linked bonds.
3. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
4. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
5. The sub-fund excluded sovereign bonds issued by the bottom 15% of the WGI Control of Corruption ranking.

● *...and compared to previous periods?*

The Sub-fund has been launched in 2024, so no comparison can be made.

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

A portion of the sustainable investments are green, social, sustainability and sustainability-linked bonds, and therefore contribute to the environmental objectives under EU Taxonomy. The Sub-fund does not have an explicit goal for contribution to UN SDGs. If corporate investments were made then Robeco will use its proprietary SDG framework to examine which issuers make a positive contribution to the UN SDGs and which can be regarded as Sustainable investments as defined under Article 2(17) of SFDR. Positive SDG scores (+1, +2, +3) are regarded as sustainable investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score.

A portion of the sustainable investments concerns green, social, sustainability and sustainability-linked bonds. The Sub-fund does not have an explicit goal for contribution to UN SDGs. For the corporate investments made, Robeco used its proprietary SDG framework to examine which issuers make a positive contribution to the UN SDGs and which can be regarded as Sustainable investments as defined under Article 2(17) of SFDR. Positive company SDG scores (+1, +2, +3) are regarded as sustainable investments. Minus scores show harm. Scores of -2 or -3 may even cause significant harm.

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (≥ 20% of the revenues), oil sands (≥ 10% of the revenues) and arctic drilling (≥ 5% of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (≥ 20% of the revenues), oil sands (≥ 10% of the revenues) and arctic drilling (≥ 5% of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 15, table 1 regarding green house gas intensity was considered via engagement. Robeco monitors a set of country data on climate performance. These include GHG intensity (such as CO₂/GDP), CO₂ per capita data, emission trends and policy metrics. This dataset has been incorporated in the Country Sustainability Ranking, which is used for the fundamental analysis of government bonds.

PAI 16, table 1 regarding investee countries subject to social violations was considered via exclusions. The PRS political risk data, used for the measurement of this indicator, are an important component of Robeco's Country Sustainability Ranking. The PRS internal conflict score is used as an instrument to detect countries that run the risk of getting involved in serious internal conflict. The PRS metric is based on three components: civil disorder, terrorism, and civil war.

PAI 17, table 2 regarding the share of securities not issued under Union legislation on environmentally sustainable bonds was considered via targets in relation to investments in green, social, sustainable and sustainable linked bonds.

PAI 21, table 3 regarding the average corruption score was considered by setting targets on the country sustainability ranking (CSR).

— → *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The sustainable investments linked to companies were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy.

Sustainability disclosures (Unaudited)

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

o As part of Country Sustainability ranking, used for The Sub-fundamental analysis of bonds, the following PAIs were considered:

- The Green House Gas intensity of investee countries was 163 tons per EUR million GDP, compared to 129 tons for the benchmark.
- The number of investee countries subject to social violations (PAI 16, Table 1), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law was 2%, compared to 5% for the benchmark.

o In addition, the sub-fund has E/S promoting characteristics in relation to:

- The share of securities in investments not issued under Union legislation on environmentally sustainable bonds (PAI 17, table 2) was 96.61%, compared to 99.65% for the benchmark.
- The level of corruption, lack of fundamental rights, and the deficiencies in civil and criminal justice (PAI 21, table 3) was 0.00, compared to 0.00 for the benchmark.

- Pre-investment, green, social and sustainable bonds were assessed via Robeco's Green Bond Framework and Social Framework, as well as via Robeco's SDG Framework. These Framework directly and indirectly assess PAI indicators. The percentage green, social and sustainability linked bonds in portfolio was 8.40%.

- Pre-investment, Robeco's SDG Framework assesses issuer's positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens issuers on many of the topics considered by the PAI indicators. The average SDG score of the portfolio was -0.3526.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 15 tons, compared to 3 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 121 tons per EUR million EVIC, compared to 459 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 803 tons per EUR million revenue, compared to 3,088 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 9.32% of the net assets, compared to 32.77% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 98.69% of the net assets, compared to 97.82% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 84.90% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.80 GWh, compared to 1.98 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 44.99% of the net assets, compared to 48.28% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.00 tons, compared to 0.00 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 0.00 tons, compared to 0.00 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 4.60% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators,

Sustainability disclosures (Unaudited)

holdings of the Sub-fund that cause adverse impact might be selected for engagement.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Sustainability disclosures (Unaudited)

● In which economic sectors were the investments made?

Sector	Average exposure in % over the reporting period
Other sectors	
SOVEREIGN	71.48%
TREASURIES	10.68%
OWNED_NO_GUARANTEE	8.93%
GOVERNMENT_GUARANTEE	2.80%
TRANSPORTATION	1.39%
Cash and other instruments	4.72%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
 - **turnover** reflecting the share of revenue from green activities of investee companies.
 - **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
 - **operational expenditure (Opex)** reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹

Yes
 In fossil gas
 In nuclear energy
 No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● What was the share of investments made in transitional and enabling activities?

0.0%.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Sub-fund has been launched in 2024, so no comparison can be made.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

4.0%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

5.8%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, the Sub-fund invested 13.06% in green, social, sustainable and/or sustainability linked bonds.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Emerging Markets Bonds **Legal entity identifier:** 213800308WHTMH21BX88
Local Currency

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes No

<input type="checkbox"/> It made sustainable investments with an environmental objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 5.2% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	<input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund's weighted average Country Sustainability Ranking was better than the average ranking of the index.
2. The sub-fund invested a minimum of 5% in green, social, sustainable, and/or sustainability-linked bonds.
3. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breached the international norms were excluded from the investment universe.
4. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
5. The sub-fund excluded sovereign bonds issued by the bottom 15% of the WGI Control of Corruption ranking.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability disclosures (Unaudited)

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The sub-fund's weighted average Country Sustainability Ranking was 5.41 against 5.29 for the average ranking of the index.
2. The sub-fund invested 11.88% of its assets in green, social, sustainable and/or sustainability-linked bonds.
3. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
4. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
5. The sub-fund excluded sovereign bonds issued by the bottom 15% of the WGI Control of Corruption ranking.

● *...and compared to previous periods?*

The Sub-fund has been launched in 2024, so no comparison can be made.

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

A portion of the sustainable investments are green, social, sustainability and sustainability-linked bonds, and therefore contribute to the environmental objectives under EU Taxonomy. The Sub-fund does not have an explicit goal for contribution to UN SDGs. If corporate investments were made then Robeco will use its proprietary SDG framework to examine which issuers make a positive contribution to the UN SDGs and which can be regarded as Sustainable investments as defined under Article 2(17) of SFDR. Positive SDG scores (+1, +2, +3) are regarded as sustainable investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score.

A portion of the sustainable investments concerns green, social, sustainability and sustainability-linked bonds. The Sub-fund does not have an explicit goal for contribution to UN SDGs. For the corporate investments made, Robeco used its proprietary SDG framework to examine which issuers make a positive contribution to the UN SDGs and which can be regarded as Sustainable investments as defined under Article 2(17) of SFDR. Positive company SDG scores (+1, +2, +3) are regarded as sustainable investments. Minus scores show harm. Scores of -2 or -3 may even cause significant harm.

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 15, table 1 regarding green house gas intensity was considered via engagement. Robeco monitors a set of country data on climate performance. These include GHG intensity (such as CO₂/GDP), CO₂ per capita data, emission trends and policy metrics. This dataset has been incorporated in the Country Sustainability Ranking, which is used for the fundamental analysis of government bonds.

PAI 16, table 1 regarding investee countries subject to social violations was considered via exclusions. The PRS political risk data, used for the measurement of this indicator, are an important component of Robeco's Country Sustainability Ranking. The PRS internal conflict score is used as an instrument to detect countries that run the risk of getting involved in serious internal conflict. The PRS metric is based on three components: civil disorder, terrorism, and civil war.

PAI 17, table 2 regarding the share of securities not issued under Union legislation on environmentally sustainable bonds was considered via targets in relation to investments in green, social, sustainable and sustainable linked bonds.

PAI 21, table 3 regarding the average corruption score was considered by setting targets on the country sustainability ranking (CSR).

→ *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The sustainable investments linked to companies were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered

Sustainability disclosures (Unaudited)

a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

o As part of Country Sustainability ranking, used for The Sub-fundamental analysis of bonds, the following PAIs were considered:

o In addition, the sub-fund has E/S promoting characteristics in relation to:

- Pre-investment, green, social and sustainable bonds were assessed via Robeco's Green Bond Framework and Social Framework, as well as via Robeco's SDG Framework. These Framework directly and indirectly assess PAI indicators. The percentage green, social and sustainability linked bonds in portfolio was 11.88%.

- Pre-investment, Robeco's SDG Framework assesses issuer's positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens issuers on many of the topics considered by the PAI indicators. The average SDG score of the portfolio was -0.0200.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 0 tons, compared to 0 tons for the benchmark.

- The carbon footprint of the portfolio (PAI 2, table 1) was 0 tons per EUR million EVIC, compared to 0 tons per EUR million EVIC for the benchmark.

- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,991 tons per EUR million revenue, compared to 0 tons per EUR million revenue for the benchmark.

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.

- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 40.06% of the net assets, compared to 0.00% of the benchmark.

- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 0.00% of the benchmark.

- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.00 GWh, compared to 0.00 GWh for the benchmark.

- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.

- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.00 tons, compared to 0.00 tons of the benchmark.

- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 0.00 tons, compared to 0.00 tons of the benchmark.

- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.

- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Sustainability disclosures (Unaudited)

In which economic sectors were the investments made?

Average exposure in % over the reporting period

Other sectors

TREASURIES	83.01%
SOVEREIGN	11.33%
SUPRANATIONAL	3.85%
Cash and other instruments	1.82%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹

Yes

In fossil gas

In nuclear energy

No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 1.82% of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

0.0%.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Sub-fund has been launched in 2024, so no comparison can be made.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

1.5%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

3.7%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, the Sub-fund invested 10.04% in green, social, sustainable and/or sustainability linked bonds.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Sustainability disclosures (Unaudited)

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. The sub-fund's portfolio had a weighted average score of 7.84 on Robeco's Country Sustainability Ranking.
3. The sub-fund invested 16.61% of its assets in green, social, sustainable and/or sustainability-linked bonds.
4. The sub-fund excluded sovereign bonds issued by the bottom 15% of the WGI Control of Corruption ranking.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Investments in green, social, sustainable and/or sustainability-linked bonds	16.61%	24.04%	24.18%
Weighted average Country Sustainability Ranking	7.84	7.86	7.79
Exclusion of bottom 15% sovereign bonds of the WGI Control of Corruption ranking	15.00%	15.00%	15.00%
Investments on exclusion list	0.00%	0.00%	0.00%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The Sub-fund invested in green bonds, social bonds, sustainable bonds and/or sustainability-linked bonds used to finance environmental and social projects.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

The sustainable investments did no significant harm to any environmental or social sustainable investment objective by applying Robeco's ESG bond eligibility frameworks in the selection process. Robeco's ESG bond eligibility frameworks require that international norms related to social and governance issues are met. Under the frameworks, ESG bond investments are assessed on (i) social safeguards – the issuer respects international Human and Labor Rights, (ii) controversial behaviour – the issuer is not in violation of the UN Global Compact, and (iii) sanctions – the issuer is not subject to international sanctions.

To identify whether an issuer is involved in a controversy, ratings and data from external providers are used to aid our in-house monitoring. If a controversy is found, the analyst determines whether this has material impacts on the ESG bond analysis and/or the SDG score. If the controversy is deemed material, the issuer receives a negative SDG Score and the investment is not sustainable.

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

For sustainable investments that are either Green, Social, Sustainability or Sustainability-linked bonds, significant harm is avoided by the application of Robeco's green, social, sustainability or sustainability-linked bond eligibility framework. As a first step, ESG bonds are assessed in their alignment with standards or principles that exist in the market, such as the International Capital Market Association (ICMA) Green bond principles, the Climate bond initiative (CBI) or international standards as the EU Green Bond Standard (Table 2, PAI 17). As a second step, amongst others, GHG intensity (Table 1, PAI 15) is assessed in the project evaluation that considers the allocation of proceeds. In addition, the ESG bonds are assessed on their compliance with international norms related to social and governance issues (in relation to Table 1, PAI 16).

The following PAIs were considered in the fund:

PAI 15, table 1 regarding green house gas intensity was considered via engagement. Robeco monitors a set of country data on climate performance. These include GHG intensity (such as CO2/GDP), CO2 per capita data, emission trends and policy metrics. This dataset has been incorporated in the Country Sustainability Ranking, which is used for the fundamental analysis of government bonds.

PAI 16, table 1 regarding investee countries subject to social violations was considered via exclusions. The PRS political risk data, used for the measurement of this indicator, are an important component of Robeco's Country Sustainability Ranking. The PRS internal conflict score is used as an instrument to detect countries that run the risk of getting involved in serious internal conflict. The PRS metric is based on three components: civil disorder, terrorism, and civil war.

PAI 17, table 2 regarding the share of securities not issued under Union legislation on environmentally sustainable bonds was considered via targets in relation to investments in green, social, sustainable and sustainable linked bonds.

PAI 21, table 3 regarding the average corruption score was considered by setting targets on the country

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

sustainability ranking (CSR).

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As the Sub-fund invests in sovereigns and supnationals, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights were not applicable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

o As part of Country Sustainability ranking, used for The Sub-fundamental analysis of bonds, the following PAIs were considered:

- The Green House Gas intensity of investee countries was 136 tons per EUR million GDP, compared to 135 tons for the benchmark.
- The number of investee countries subject to social violations (PAI 16, Table 1), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law was 0%, compared to 0% for the benchmark.

o In addition, the sub-fund has E/S promoting characteristics in relation to:

- The share of securities in investments not issued under Union legislation on environmentally sustainable bonds (PAI 17, table 2) was 82.02%, compared to 97.17% for the benchmark.
- The level of corruption, lack of fundamental rights, and the deficiencies in civil and criminal justice (PAI 21, table 3) was 0.00, compared to 0.00 for the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via Robeco's entity engagement program, the following PAIs were considered:

- The Green House Gas intensity of investee countries was 136 tons per EUR million GDP, compared to 135 tons for the benchmark.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
2.600 BUNDESREPUB. DEUTSCHLAND 15-MAY-2041	TREASURIES	9.38%	Germany
2.750 FRANCE (GOVT OF) 25-FEB-2030	TREASURIES	4.01%	France

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	Average exposure in % over the reporting period
Other sectors	
TREASURIES	83.72%
SUPRANATIONAL	7.12%
GOVERNMENT_GUARANTEE	3.50%
OWNED_NO_GUARANTEE	1.86%
SOVEREIGN	1.25%
LOCAL_AUTHORITIES	0.56%
Cash and other instruments	2.00%

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
0.0%.
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

17.3%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

9.2%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, the Sub-fund invested 16.93% in green, social, sustainable and/or sustainability linked bonds.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Euro Credit Bonds

Legal entity identifier: 213800CVNA3PA3BONW52

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ___%

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 69.5% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: ___%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund invested a minimum of 5% in green, social, sustainable, and/or sustainability-linked bonds.
2. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
3. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The sub-fund was limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
4. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies in the portfolio that have breached one of the international guidelines during the investment period, have become part of the Enhanced Engagement program. When engagement deemed highly unlikely to succeed, the company was excluded directly.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability disclosures (Unaudited)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The sub-fund invested 20.02% of its assets in green, social, sustainable and/or sustainability-linked bonds.
2. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
3. 0.00% of the holdings in portfolio had an elevated sustainability risk profile.
4. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Investments in green, social, sustainable and/or sustainability-linked bonds	20.02%	16.61%	13.41%
Companies in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Holdings with an elevated sustainability risk profile	0.00%	0.00%	0.00%
Investments on exclusion list	0.00%	0.00%	0.00%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are Green Bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. In addition, sustainable investments score positively on Robeco's SDG Framework or are assessed by either Robeco's Green Bond Framework or Social Bond Framework, and therefore do not cause significant harm.

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

For sustainable investments that are either green, social, sustainability or sustainability-linked bonds, significant harm is avoided by the application of the Robeco's green, social, sustainability or sustainability-linked bond eligibility framework.

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of

Sustainability disclosures (Unaudited)

chemical weapons.

PAI 4, table 2 regarding investments in companies without carbon emission reduction initiatives was considered via engagement. Robeco engages with key high emitters in our investment portfolios via the engagement themes "Acceleration to Paris" and "Net Zero Carbon Emissions".

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

o Via the applied normative and activity-based exclusions, the following PAIs were considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 3.92% of the net assets, compared to 3.67% of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.02% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 3.26% of the net assets, compared to 5.54% of the benchmark.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.

o Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 467,753 tons, compared to 800,207 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 418 tons per EUR million EVIC, compared to 571 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,077 tons per EUR million revenue, compared to 1,089 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 3.92% of the net assets, compared to 3.67% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 58.07% of the net assets, compared to 55.68% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 44.20% of the net assets, compared to 51.12% of the benchmark.

Sustainability disclosures (Unaudited)

- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 1.05 GWh, compared to 0.79 GWh for the benchmark.
- The share of investments in investee companies without carbon emission reduction initiatives aimed at aligning with the Paris Agreement (PAI 4, Table 2) was 17.23% of the net assets, compared to 20.04% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 3.26% of the net assets, compared to 5.54% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.01 tons, compared to 0.04 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 0.86 tons, compared to 9.54 tons of the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 467,753 tons, compared to 800,207 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 418 tons per EUR million EVIC, compared to 571 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,077 tons per EUR million revenue, compared to 1,089 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 3.92% of the net assets, compared to 3.67% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 58.07% of the net assets, compared to 55.68% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 44.20% of the net assets, compared to 51.12% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 1.05 GWh, compared to 0.79 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 3.26% of the net assets, compared to 5.54% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.01 tons, compared to 0.04 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 0.86 tons, compared to 9.54 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.02% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	Average exposure in % over the reporting period
Sectors deriving revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels -	
ENERGY	3.62%

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?**¹

Yes
 In fossil gas In nuclear energy
 No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
0.0%.
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

21.7%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

47.8%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 15 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Sub-fund invested 21.23% in green, social, sustainable and/or sustainability linked bonds.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco All Strategy Euro Bonds **Legal entity identifier:** 213800PDS63NUN165C09

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes No

<input type="checkbox"/> It made sustainable investments with an environmental objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 49.4% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	<input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

- The sub-fund invested a minimum of 5% in green, social, sustainable, and/or sustainability-linked bonds. The following Environmental and Social characteristics are applicable for investments in corporate bonds:
 - The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
 - Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The sub-fund was limited to a maximum exposure of 3% to investments in corporated investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
 - The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies in the portfolio that have breached one of the international guidelines during the investment period, have become part of the Enhanced Engagement program. When engagement deemed highly unlikely to succeed, the company was excluded directly.

The following Environmental and Social characteristics are applicable for investments in government bonds:

- The sub-fund's portfolio complied with Robeco's Exclusion Policy that is based on exclusion criteria that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom. This means that the

Sustainability disclosures (Unaudited)

sub-fund has no exposure to excluded securities, taking into account a grace period.

2. The sub-fund's portfolio had a minimum weighted average score of at least 6 on Robeco's Country Sustainability Ranking.
3. The sub-fund excluded sovereign bonds issued by the bottom 15% of the WGI Control of Corruption ranking.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The sub-fund invested 17.88% of its assets in green, social, sustainable and/or sustainability-linked bonds.
For investments in corporate bonds:
 1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
 2. 0.00% of the corporate holdings in portfolio had an elevated sustainability risk profile.
 3. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
 For investments in government bonds:
 1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
 2. The sub-fund's portfolio had a weighted average score of 7.77 on Robeco's Country Sustainability Ranking.
 3. The sub-fund excluded sovereign bonds issued by the bottom 15% of the WGI Control of Corruption ranking.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Investments in green, social, sustainable and/or sustainability-linked bonds	17.88%	21.46%	19.71%
Investments on exclusion list	0.00%	0.00%	0.00%
Companies in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Weighted average Country Sustainability Ranking	7.77	7.53	7.94
Exclusion of bottom 15% sovereign bonds of the WGI Control of Corruption ranking	15.00%	15.00%	15.00%
Holdings with an elevated sustainability risk profile	0.00%	0.00%	0.00%
Investments on exclusion list	0.00%	0.00%	0.00%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

A portion of the sustainable investments are green, social, sustainability and sustainability-linked bonds, and therefore contribute to the environmental objectives under EU Taxonomy. The Sub-fund does not have an explicit goal for contribution to UN SDGs. If corporate investments were made then Robeco will use its proprietary SDG framework to examine which issuers make a positive contribution to the UN SDGs and which can be regarded as Sustainable investments as defined under Article 2(17) of SFDR. Positive SDG scores (+1, +2, +3) are regarded as sustainable investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

For sustainable investments that are either green, social, sustainability or sustainability-linked bonds, significant harm is avoided by the application of the Robeco's green, social, sustainability or sustainability-linked bond eligibility frameworks.

For corporate investments, Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's

Sustainability disclosures (Unaudited)

Principal Adverse Impact Statement published on the Robeco website.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

For sustainable investments that are either green, social, sustainability or sustainability-linked bonds, significant harm is avoided by the application of the Robeco's green, social, sustainability or sustainability-linked bond eligibility framework.

For corporates, Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators.

The following PAIs were considered in the fund:

PAI 15, table 1 regarding green house gas intensity was considered via engagement. Robeco monitors a set of country data on climate performance. These include GHG intensity (such as CO₂/GDP), CO₂ per capita data, emission trends and policy metrics. This dataset has been incorporated in the Country Sustainability Ranking, which is used for the fundamental analysis of government bonds.

PAI 16, table 1 regarding investee countries subject to social violations was considered via exclusions. The PRS political risk data, used for the measurement of this indicator, are an important component of Robeco's Country Sustainability Ranking. The PRS internal conflict score is used as an instrument to detect countries that run the risk of getting involved in serious internal conflict. The PRS metric is based on three components: civil disorder, terrorism, and civil war.

PAI 17, table 2 regarding the share of securities not issued under Union legislation on environmentally sustainable bonds was considered via targets in relation to investments in green, social, sustainable and sustainable linked bonds.

PAI 21, table 3 regarding the average corruption score was considered by setting targets on the country sustainability ranking (CSR).

— → *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

For the corporate investments, the sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

In addition, the Sub-fund invest in sovereigns and supnationals, for which sustainable investments defined as green, social, sustainability and/or sustainability-linked bonds from these issuers are not aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- o As part of Country Sustainability ranking, used for The Sub-fundamental analysis of bonds, the following PAIs were considered:
 - The Green House Gas intensity of investee countries was 146 tons per EUR million GDP, compared to 135 tons for the benchmark.
 - The number of investee countries subject to social violations (PAI 16, Table 1), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law was 0%, compared to 0% for the benchmark.
- o In addition, the sub-fund has E/S promoting characteristics in relation to:
 - The share of securities in investments not issued under Union legislation on environmentally sustainable bonds (PAI 17, table 2) was 86.08%, compared to 96.68% for the benchmark.
 - The level of corruption, lack of fundamental rights, and the deficiencies in civil and criminal justice (PAI 21, table 3) was 0.00, compared to 0.00 for the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- o Via Robeco's entity engagement program, the following PAIs were considered:
 - The Green House Gas intensity of investee countries was 146 tons per EUR million GDP, compared to 135 tons for the benchmark.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

0.0%.

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

16.7%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

32.7%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 15 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Sub-fund invested 16.93% in green, social, sustainable and/or sustainability linked bonds.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco European High Yield Bonds

Legal entity identifier: 21380033AH4QAGYE2R38

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: ___%**

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 71.5% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective: ___%**

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies in the portfolio that have breached one of the international guidelines during the investment period, have become part of the Enhanced Engagement program. When engagement deemed highly unlikely to succeed, the company was excluded directly.
3. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The sub-fund was limited to a maximum exposure of 10% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
4. The sub-fund invested a minimum of 2% in green, social, sustainable, and/or sustainability-linked bonds.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability disclosures (Unaudited)

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. 0.31% of the holdings in portfolio had an elevated sustainability risk profile.
4. The sub-fund invested 11.76% of its assets in green, social, sustainable and/or sustainability-linked bonds.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Investments in green, social, sustainable and/or sustainability-linked bonds	11.76%	8.66%	9.47%
Companies in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Holdings with an elevated sustainability risk profile	0.31%	1.14%	0.00%
Investments on exclusion list	0.00%	0.00%	0.00%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are Green Bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. In addition, sustainable investments score positively on Robeco's SDG Framework or are assessed by either Robeco's Green Bond Framework or Social Bond Framework, and therefore do not cause significant harm.

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

For sustainable investments that are either green, social, sustainability or sustainability-linked bonds, significant harm is avoided by the application of the Robeco's green, social, sustainability or sustainability-linked bond eligibility framework.

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 4, table 2 regarding investments in companies without carbon emission reduction initiatives was considered via engagement. Robeco engages with key high emitters in our investment portfolios via the

Sustainability disclosures (Unaudited)

engagement themes “Acceleration to Paris” and “Net Zero Carbon Emissions”.

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco’s Exclusion Policy and Robeco’s SDG Framework.

Robeco’s Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco’s SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- o Via the applied normative and activity-based exclusions, the following PAIs were considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.20% of the net assets, compared to 3.08% of the benchmark.
 - Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.38% of the benchmark.
 - The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 2.02% of the net assets, compared to 1.63% of the benchmark.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.

- o Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs were considered:
 - The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 347,486 tons, compared to 326,682 tons for the benchmark.
 - The carbon footprint of the portfolio (PAI 2, table 1) was 904 tons per EUR million EVIC, compared to 820 tons per EUR million EVIC for the benchmark.
 - The green house gas intensity of the portfolio (PAI 3, table 1) was 980 tons per EUR million revenue, compared to 818 tons per EUR million revenue for the benchmark.
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.20% of the net assets, compared to 3.08% of the benchmark.
 - The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 59.71% of the net assets, compared to 59.19% of the benchmark.
 - The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 31.02% of the net assets, compared to 43.18% of the benchmark.
 - The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.76 GWh, compared to 0.79 GWh for the benchmark.

Sustainability disclosures (Unaudited)

- The share of investments in investee companies without carbon emission reduction initiatives aimed at aligning with the Paris Agreement (PAI 4, Table 2) was 30.01% of the net assets, compared to 20.96% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 2.02% of the net assets, compared to 1.63% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.09 tons, compared to 0.10 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 3.46 tons, compared to 10.31 tons of the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 347,486 tons, compared to 326,682 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 904 tons per EUR million EVIC, compared to 820 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 980 tons per EUR million revenue, compared to 818 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.20% of the net assets, compared to 3.08% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 59.71% of the net assets, compared to 59.19% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 31.02% of the net assets, compared to 43.18% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.76 GWh, compared to 0.79 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 2.02% of the net assets, compared to 1.63% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.09 tons, compared to 0.10 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 3.46 tons, compared to 10.31 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.38% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
2.500 NOMAD FOODS BONDCO PLC 24-JUN-2028	CONSUMER_NON_CYCLICAL	1.49%	United Kingdom

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	Average exposure in % over the reporting period
Sectors deriving revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels -	
NATURAL_GAS	0.78%
ENERGY	0.29%
Other sectors	
CONSUMER_CYCLICAL	19.37%

ELECTRIC	1.77%
OWNED_NO_GUARANTEE	1.42%
CONSUMER_CYCLICAL	-0.01%
Cash and other instruments	3.16%

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
- 0.0%.
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

19.6%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

51.9%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 9 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Sub-fund invested 11.96% in green, social, sustainable and/or sustainability linked bonds.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Transition Asian Bonds **Legal entity identifier:** 21380096HMIZ4YU8CM47

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes No

<input type="checkbox"/> It made sustainable investments with an environmental objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 73.6% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	<input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

- The sub-fund promotes the following Environmental and Social characteristics:
- At least 50% was invested in Transition-related Investments contributing to the goals of the Paris Agreement and/or Transition-related Investments with an Environmental and/or Social objective.
 - The sub-fund invested a minimum of 15% in green, social, sustainable, and/or sustainability-linked bonds.
 - The sub-fund was solely invested in companies that hold a positive or neutral SDG score based on the internally developed SDG Framework.
 - The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breached the international norms were excluded from the investment universe.
 - The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
 - Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The sub-fund was limited to a maximum exposure of 5% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability disclosures (Unaudited)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The sub-fund invested 56.88% in Transition-related Investments contributing to the goals of the Paris Agreement with an Environmental and/or Social objective.
2. The sub-fund invested 33.66% of its assets in green, social, sustainable and/or sustainability-linked bonds.
3. 89.89% of the investments in portfolio held a neutral or positive SDG score based on the internally developed SDG framework.
4. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
5. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
6. 0.81% of the holdings in portfolio had an elevated sustainability risk profile.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Investments in green, social, sustainable and/or sustainability-linked bonds	33.66%	35.73%	15.40%
Holdings with a neutral or positive SDG score	89.89%	100.00%	85.39%
Holdings in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Holdings with an elevated sustainability risk profile	0.81%	0.00%	0.00%
Assets invested in Transition-related investments	43.47%		
Investments on exclusion list	0.00%	0.00%	0.00%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Investments in transition assets can, but do not per se need to be, sustainable investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

Sustainability disclosures (Unaudited)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

→ How were the indicators for adverse impacts on sustainability factors taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white

Sustainability disclosures (Unaudited)

phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDG's). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators. The average SDG score of the portfolio was 1.1475.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 8,297 tons, compared to 3,665 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 1,023 tons per EUR million EVIC, compared to 666 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,692 tons per EUR million revenue, compared to 2,096 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.32% of the net assets, compared to 9.45% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 81.06% of the net assets, compared to 84.42% of the benchmark.

Sustainability disclosures (Unaudited)

- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 50.10% of the net assets, compared to 80.83% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 1.76 GWh, compared to 2.53 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 3.39% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.02 tons, compared to 0.09 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 39.54 tons, compared to 9.36 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 3.68% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
0.000 TREASURY BILL 21-JAN-2025	TREASURIES	2.84%	United States
7.750 STANDARD CHARTERED PLC (Perp)	BANKING	1.88%	United Kingdom

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	Average exposure in % over the reporting period
Sectors deriving revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels -	
NATURAL_GAS	1.40%
Other sectors	
BANKING	20.83%
OWNED_NO_GUARANTEE	9.51%
COMMUNICATIONS	8.45%
SOVEREIGN	8.20%
ELECTRIC	8.08%
CONSUMER_CYCLICAL	7.33%
FINANCE_COMPANIES	5.41%
CAPITAL_GOODS	5.37%
TRANSPORTATION	4.92%
BASIC_INDUSTRY	4.37%
TECHNOLOGY	3.12%
TREASURIES	2.84%
GOVERNMENT_SPONSORED	1.83%
INDUSTRIAL_OTHER	1.82%
GOVERNMENT_GUARANTEE	1.77%
REITS	1.70%
INSURANCE	1.65%
Cash and other instruments	1.39%

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas In nuclear energy

No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
0.0%.
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

28.7%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

44.9%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 6 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Sub-fund invested 36.29% in green, social, sustainable and/or sustainability linked bonds.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Euro SDG Credits

Legal entity identifier: 213800MQYJBFHGNZW597

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ___%

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 83.2% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: ___%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund was solely invested in companies that hold a positive or neutral SDG score based on the internally developed SDG Framework.
2. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
3. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breached the international norms were excluded from the investment universe.
4. The sub-fund invested a minimum of 10% in green, social, sustainable, and/or sustainability-linked bonds.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability disclosures (Unaudited)

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. 95.11% of the companies (on average) held a neutral or positive SDG score.
2. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
3. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
4. The sub-fund invested 27.01% of its assets in green, social, sustainable and/or sustainability-linked bonds.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Investments in green, social, sustainable and/or sustainability-linked bonds	27.01%	19.92%	19.18%
Holdings with a neutral or positive SDG score	95.11%	100.00%	93.53%
Companies in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Investments on exclusion list	0.00%	0.00%	2.47%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of

Sustainability disclosures (Unaudited)

chemical weapons.

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy as well as Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDG's). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators. The average SDG score of the portfolio was 1.3939.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 355,506 tons, compared to 712,258 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 313 tons per EUR million EVIC, compared to 571 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,054 tons per EUR million revenue, compared to 1,089 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.22% of the net assets, compared to 3.67% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 54.78% of the net assets, compared to 55.68% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 39.18% of the net assets, compared to 51.12% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.80 GWh, compared to 0.79 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 2.48% of the net assets, compared to 5.54% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.06 tons, compared to 0.04 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 1.21 tons, compared to 9.54 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation

Sustainability disclosures (Unaudited)

and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.02% of the benchmark.

- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
0.500 BUNDESREPUB. DEUTSCHLAND 15-FEB-2025	TREASURIES	2.93%	Germany

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Sustainability disclosures (Unaudited)

● **In which economic sectors were the investments made?**

Sector	Average exposure in % over the reporting period
Sectors deriving revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels -

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas

In nuclear energy

No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● What was the share of investments made in transitional and enabling activities?

0.0%.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

25.1%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

58.1%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 17 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Sub-fund invested 26.16% in green, social, sustainable and/or sustainability linked bonds.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Financial Institutions Bonds

Legal entity identifier: 213800M7K3R9AYOXVL19

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ___%

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 85.5% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: ___%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies in the portfolio that have breached one of the international guidelines during the investment period, have become part of the Enhanced Engagement program. When engagement deemed highly unlikely to succeed, the company was excluded directly.
3. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The sub-fund was limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
4. The sub-fund invested a minimum of 5% in green, social, sustainable, and/or sustainability-linked bonds.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability disclosures (Unaudited)

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. 0.00% of the holdings in portfolio had an elevated sustainability risk profile.
4. The sub-fund invested 8.34% of its assets in green, social, sustainable and/or sustainability-linked bonds.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Investments in green, social, sustainable and/or sustainability-linked bonds	8.34%	8.46%	6.59%
Companies in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Holdings with an elevated sustainability risk profile	0.00%	0.00%	0.00%
Investments on exclusion list	0.00%	0.00%	2.76%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are Green Bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. In addition, sustainable investments score positively on Robeco's SDG Framework or are assessed by either Robeco's Green Bond Framework or Social Bond Framework, and therefore do not cause significant harm.

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

For sustainable investments that are either green, social, sustainability or sustainability-linked bonds, significant harm is avoided by the application of the Robeco's green, social, sustainability or sustainability-linked bond eligibility framework.

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 4, table 2 regarding investments in companies without carbon emission reduction initiatives was considered via engagement. Robeco engages with key high emitters in our investment portfolios via the

Sustainability disclosures (Unaudited)

engagement themes “Acceleration to Paris” and “Net Zero Carbon Emissions”.

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco’s Exclusion Policy and Robeco’s SDG Framework.

Robeco’s Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco’s SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- o Via the applied normative and activity-based exclusions, the following PAIs were considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
 - Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
 - The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
- o Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs were considered:
 - The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 206,188 tons, compared to 198,273 tons for the benchmark.
 - The carbon footprint of the portfolio (PAI 2, table 1) was 105 tons per EUR million EVIC, compared to 94 tons per EUR million EVIC for the benchmark.
 - The green house gas intensity of the portfolio (PAI 3, table 1) was 773 tons per EUR million revenue, compared to 716 tons per EUR million revenue for the benchmark.
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
 - The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 37.09% of the net assets, compared to 41.45% of the benchmark.
 - The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 0.00% of the benchmark.
 - The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.19 GWh, compared to 0.17 GWh for the benchmark.

Sustainability disclosures (Unaudited)

- The share of investments in investee companies without carbon emission reduction initiatives aimed at aligning with the Paris Agreement (PAI 4, Table 2) was 33.06% of the net assets, compared to 33.68% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.00 tons, compared to 0.01 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 0.03 tons, compared to 0.01 tons of the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 206,188 tons, compared to 198,273 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 105 tons per EUR million EVIC, compared to 94 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 773 tons per EUR million revenue, compared to 716 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 37.09% of the net assets, compared to 41.45% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 0.00% of the net assets, compared to 0.00% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.19 GWh, compared to 0.17 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.00 tons, compared to 0.01 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 0.03 tons, compared to 0.01 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	Average exposure in % over the reporting period
Other sectors	
BANKING	57.40%
INSURANCE	29.10%
TREASURIES	5.22%
OWNED_NO_GUARANTEE	2.69%
REITS	0.84%
FINANCIAL_OTHER	0.44%
CONSUMER_CYCLICAL	0.43%
BROKERAGE_ASSETMANAGERS_EXCHANGES	0.35%
Cash and other instruments	3.53%

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

0.0%.

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

9.3%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

76.2%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 3 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Sub-fund invested 8.98% in green, social, sustainable and/or sustainability linked bonds.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex V

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco US Green Bonds

Legal entity identifier: 213800N8SFP1LXXF4380

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: 84.6%**

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective: 6.7%**

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The sub-fund invested 88.87% of its asset in green bonds, social bond, sustainable bonds and sustainability linked bonds. With this investments, the sub-fund contributed to environmental goals.

As at the end of the reporting period, the sub-fund's sustainable investments with environmental objectives were not made in economic activities that qualify as environmentally sustainable under the EU Taxonomy.

Sustainability indicators measure how the sustainable objectives of this financial product are attained

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The sub-fund invested 88.87% of its assets in green bonds.
2. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
3. 0.00% of the holdings in portfolio was in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.

Sustainability disclosures (Unaudited)

- ...and compared to previous periods?

Sustainability indicator	2024	2023	2022
Investments in green bonds	88.87%	90.45%	91.67%
Holdings in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Investments on exclusion list	0.00%	6.44%	0.00%

- How did the sustainable investments not cause significant harm to any sustainable investment objective?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- → How were the indicators for adverse impacts on sustainability factors taken into account?

Sustainable investments can be constituents of Paris-Aligned Benchmark.

PAI 1, table 1 was considered for scope 1, 2 and 3 Green House Gas emissions via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company

Sustainability disclosures (Unaudited)

from its investment universe.

PAI 13, table 1 regarding board gender diversity was considered via engagement. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmissbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- Pre-investment, green, social and sustainable bonds were assessed via Robeco's Green Bond Framework and Social Framework, as well as via Robeco's SDG Framework. These Framework directly and indirectly assess PAI indicators. The percentage green, social and sustainability linked bonds in portfolio was 96.99%.

- Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDG's). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators. The average SDG score of the portfolio was 0.9615.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 11,867 tons, compared to 7,031 tons for the benchmark.

- The carbon footprint of the portfolio (PAI 2, table 1) was 491 tons per EUR million EVIC, compared to 658 tons per EUR million EVIC for the benchmark.

- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,458 tons per EUR million revenue, compared to 1,729 tons per EUR million revenue for the benchmark.

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 4.34% of the net assets, compared to 6.18% of the benchmark.

- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 57.64% of the net assets, compared to 72.67% of the benchmark.

- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the sub-fund was 40.02% of the net assets, compared to 57.01% of the benchmark.

- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6,

Sustainability disclosures (Unaudited)

Table 1) was 3.71 GWh, compared to 3.10 GWh for the benchmark.

- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 1.92% of the net assets, compared to 2.71% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.00 tons, compared to 0.01 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 3.20 tons, compared to 6.90 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?**¹

Yes

In fossil gas

In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 74.55% of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

0.0%.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

84.6%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

6.7%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to attain the sustainable investment objective during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 7 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Sub-fund invested 87.37% in green, social, sustainable and/or sustainability linked bonds.

How did this financial product perform compared to the reference benchmark?

How does the reference benchmark differ from a broad market index?

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria for eligibility and inclusion of green bonds.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?**

95.13% of the sub-fund's assets were green bonds, social bonds, sustainable bonds or sustainability linked bonds compared to 99.31% for the Bloomberg MSCI US Green Bond Index.

- **How did this financial product perform compared with the reference benchmark?**

The weight of green bonds in portfolio was 88.87% for Robeco US Green Bonds, compared to 97.69% for the Bloomberg MSCI US Green Bond Index.

- **How did this financial product perform compared with the broad market index?**

The weight of green bonds in portfolio was 88.87% for Robeco US Green Bonds, compared to 3.28% for the general market index.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Euro SDG Short Duration Bonds **Legal entity identifier:** 213800YAYEQ8JA643775

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes No

<input type="checkbox"/> It made sustainable investments with an environmental objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 41.2% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	<input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. All bond investments of the sub-fund have a neutral or positive SDG score based on the internally developed SDG framework.
2. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breached the international norms were excluded from the investment universe.
3. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
4. The sub-fund excluded sovereign bonds issued by the bottom 15% of the WGI Control of Corruption ranking.
5. The sub-fund invested a minimum of 2.5% in green, social, sustainable, and/or sustainability-linked bonds.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability disclosures (Unaudited)

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. 97.73% of the companies (on average) held a neutral or positive SDG score based on the internally developed SDG framework.
2. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
3. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
4. The sub-fund excluded sovereign bonds issued by the bottom 15% of the WGI Control of Corruption ranking.
5. The sub-fund invested 20.62% of its assets in green, social, sustainable and/or sustainability-linked bonds.

● *...and compared to previous periods?*

The Sub-fund has been launched in 2024, so no comparison can be made.

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the issuer concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the issuer, meaning it is not a sustainable investment.

Sustainability disclosures (Unaudited)

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- Pre-investment, Robeco's SDG Framework assesses issuer's positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens issuers on many of the topics considered by the PAI indicators. The average SDG score of the portfolio was 1.5512.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 497 tons, compared to 512 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 241 tons per EUR million EVIC, compared to 490 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,324 tons per EUR million revenue, compared to 1,032 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.48% of the net assets, compared to 2.38% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 50.56% of the net assets, compared to 52.12% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 59.73% of the net assets, compared to 41.94% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.99 GWh, compared to 0.87 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 0.00% of the net assets, compared to 4.27% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.00 tons, compared to 0.05 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 0.39 tons, compared to 4.75 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas

In nuclear energy

No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities are** economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● What was the share of investments made in transitional and enabling activities?

0.0%.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Sub-fund has been launched in 2024, so no comparison can be made.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

27.3%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

13.8%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 2 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Sub-fund invested 20.79% in green, social, sustainable and/or sustainability linked bonds.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ___%

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 66.6% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: ___%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund invested a minimum of 5% in green, social, sustainable, and/or sustainability-linked bonds.
2. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
3. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The sub-fund was limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
4. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies in the portfolio that have breached one of the international guidelines during the investment period, have become part of the Enhanced Engagement program. When engagement deemed highly unlikely to succeed, the company was excluded directly.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability disclosures (Unaudited)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. The sub-fund invested 15.21% of its assets in green, social, sustainable and/or sustainability-linked bonds.
2. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
3. 0.00% of the holdings in portfolio had an elevated sustainability risk profile.
4. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Investments in green, social, sustainable and/or sustainability-linked bonds	15.21%	14.60%	8.94%
Companies in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Holdings with an elevated sustainability risk profile	0.00%	0.00%	0.00%
Investments on exclusion list	0.00%	0.00%	0.00%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are Green Bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. In addition, sustainable investments score positively on Robeco's SDG Framework or are assessed by either Robeco's Green Bond Framework or Social Bond Framework, and therefore do not cause significant harm.

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

For sustainable investments that are either green, social, sustainability or sustainability-linked bonds, significant harm is avoided by the application of the Robeco's green, social, sustainability or sustainability-linked bond eligibility framework.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation

Sustainability disclosures (Unaudited)

of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmissbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 4, table 2 regarding investments in companies without carbon emission reduction initiatives was considered via engagement. Robeco engages with key high emitters in our investment portfolios via the engagement themes "Acceleration to Paris" and "Net Zero Carbon Emissions".

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

o Via the applied normative and activity-based exclusions, the following PAIs were considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 6.50% of the net assets.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 11.20% of the net assets.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets.

o Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 67,008 tons.
- The carbon footprint of the portfolio (PAI 2, table 1) was 767 tons per EUR million EVIC.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,096 tons per EUR million revenue.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 6.50% of the net assets.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 69.26% of the net assets.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 57.87% of the net assets.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.86 GWh.

Sustainability disclosures (Unaudited)

- The share of investments in investee companies without carbon emission reduction initiatives aimed at aligning with the Paris Agreement (PAI 4, Table 2) was 0.00% of the net assets.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 11.20% of the net assets.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.01 tons.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 0.81 tons.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 67,008 tons.
- The carbon footprint of the portfolio (PAI 2, table 1) was 767 tons per EUR million EVIC.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,096 tons per EUR million revenue.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 6.50% of the net assets.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 69.26% of the net assets.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 57.87% of the net assets.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.86 GWh.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 11.20% of the net assets.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.01 tons.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 0.81 tons.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
Bundesobligation	Treasuries	3.09%	Germany
Medtronic Global Holdings SCA	Consumer Non Cyclical	2.94%	United States
Volkswagen International Finance NV	Consumer Cyclical	2.76%	Germany
Thermo Fisher Scientific Inc	Consumer Non Cyclical	2.29%	United States
AT&T Inc	Communications	2.26%	United States
Visa Inc	Technology	2.15%	United States
Orange SA	Communications	2.08%	France
Enexis Holding NV	Local Authorities	2.03%	Netherlands
Deutsche Bahn Finance GMBH	Owned No Guarantee	1.90%	Germany
Procter & Gamble Co/The	Consumer Non Cyclical	1.80%	United States
Anheuser-Busch InBev SA/NV	Consumer Non Cyclical	1.78%	Belgium
Optus Finance Pty Ltd	Owned No Guarantee	1.71%	Australia
Danone SA	Consumer Non Cyclical	1.66%	France
British Telecommunications PLC	Communications	1.59%	United Kingdom
Roche Finance Europe BV	Consumer Non Cyclical	1.57%	United States

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	Average exposure in % over the reporting period
Sectors deriving revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels -	
Energy	2.46%
Other sectors	
Consumer Non Cyclical	25.94%
Communications	15.83%
Consumer Cyclical	11.88%
Owned No Guarantee	9.35%
Electric	8.48%
Technology	6.36%
Basic Industry	5.72%
Treasuries	3.09%
Local Authorities	2.79%
Natural Gas	1.92%
Capital Goods	1.61%
Utility Other	1.14%
Transportation	1.00%
Cash and other instruments	2.43%

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes
 In fossil gas In nuclear energy
 No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
0.0%.
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

18.4%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

48.2%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Sub-fund has been liquidated in September 2024.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Sustainable Income Allocation

Legal entity identifier: 213800SXP6WFIGLUYC39

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ___%

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 53.1% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: ___%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following Environmental and Social characteristics are applicable for investments in government bonds:

1. The sub-fund's portfolio complied with Robeco's Exclusion Policy that is based on exclusion criteria that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom. This means that the sub-fund has no exposure to excluded securities, taking into account a grace period.
2. The sub-fund's portfolio had a minimum weighted average score of at least 6 on Robeco's Country Sustainability Ranking.
3. The sub-fund excluded sovereign bonds issued by the bottom 15% of the WGI Control of Corruption ranking.
4. The sub-fund excludes all countries which have a high negative score (-3) on SDG 16.

The following Environmental and Social characteristics are applicable for investments in corporate investments, i.e. equity or bonds:

1. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breached the international norms were excluded from the investment universe.
3. The sub-fund excluded all high or medium negative SDG scores (-3 or -2).

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability disclosures (Unaudited)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

For investments in government bonds:

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. The sub-fund's portfolio had a weighted average score of 7.21 on Robeco's Country Sustainability Ranking.
3. The sub-fund excluded sovereign bonds issued by the bottom 15% of the WGI Control of Corruption ranking.
4. 0.00% of countries held a high negative score (-3) on SDG 16, based on the internally developed Country SDG Framework.

For investments in corporate investments, i.e. equity or bonds:

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
3. 0.28% of the investments (on average) held a high or medium negative SDG score (-2 or -3) based on the internally developed SDG framework.

● *...and compared to previous periods?*

The Sub-fund has been launched in 2024, so no comparison can be made.

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGPs), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy.

PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the

Sustainability disclosures (Unaudited)

gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.

PAI 13, table 1 regarding board gender diversity was considered via engagement. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaintshandling mechanism was considered.

PAI 6, table 3 regarding insufficient whistleblower protection was considered.

PAI 7, table 3 regarding incidents of discrimination was considered.

PAI 8, table 3 regarding excessive CEO pay ratio was considered via engagement under the engagement program "Responsible Executive Remuneration".

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Regulation for the direct line investments.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

o Via the applied normative and activity-based exclusions, the following PAIs were considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 2.19% of the net assets, compared to 4.05% of the benchmark.

- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets,

Sustainability disclosures (Unaudited)

compared to 0.31% of the benchmark.

- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 3.02% of the net assets, compared to 5.98% of the benchmark.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.15% of the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via the application of the voting policy, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 45,949 tons, compared to 18,136 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 566 tons per EUR million EVIC, compared to 563 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,271 tons per EUR million revenue, compared to 1,399 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 2.19% of the net assets, compared to 4.05% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 55.79% of the net assets, compared to 61.84% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 34.90% of the net assets, compared to 55.53% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.89 GWh, compared to 0.93 GWh for the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.31% of the benchmark.
- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 1.05%, compared to 1.63% for the benchmark.
- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 51.20%, compared to 59.26% for the benchmark.
- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 22.57%, compared to 18.60% for the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 36.02%, compared to 34.88% for the benchmark.
- Indicators in relation to social and employee matters (PAI 5-7, Table 3).
- The average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest compensated individual) (PAI 8, Table 3) was 382, compared to 705 for the benchmark.

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 45,949 tons, compared to 18,136 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 566 tons per EUR million EVIC, compared to 563 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,271 tons per EUR million revenue, compared to 1,399 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 2.19% of the net assets, compared to 4.05% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 55.79% of the net assets, compared to 61.84% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 34.90% of the net assets, compared to 55.53% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.89 GWh, compared to 0.93 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 3.02% of the net assets, compared to 5.98% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.01 tons, compared to 0.04 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 134.62 tons, compared to 86.70 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.31% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

Sustainability disclosures (Unaudited)

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
0.500 US TREASURY N/B 30-JUN-2027	TREASURIES	2.33%	United States

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes
 In fossil gas In nuclear energy
 No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
 - **turnover** reflecting the share of revenue from green activities of investee companies.
 - **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
 - **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
0.0%.
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Sub-fund has been launched in 2024, so no comparison can be made.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

6.8%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

46.3%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 60 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Sustainable Dynamic Allocation

Legal entity identifier: 213800GWKC7Z8TN6R360

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ___%

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 69.1% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: ___%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

- The following Environmental and Social characteristics are applicable for investments in government bonds:
1. The sub-fund's portfolio complied with Robeco's Exclusion Policy that is based on exclusion criteria that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom. This means that the sub-fund has no exposure to excluded securities, taking into account a grace period.
 2. The sub-fund's portfolio had a minimum weighted average score of at least 6 on Robeco's Country Sustainability Ranking.
 3. The sub-fund excluded sovereign bonds issued by the bottom 15% of the WGI Control of Corruption ranking.
 4. The sub-fund excludes all countries which have a high negative score (-3) on SDG 16.
- The following Environmental and Social characteristics are applicable for investments in corporate investments, i.e. equity or bonds:
1. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
 2. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breached the international norms were excluded from the investment universe.
 3. The sub-fund excluded all high or medium negative SDG scores (-3 or -2).

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability disclosures (Unaudited)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

For investments in government bonds:

1. The portfolio contained on average 0.02% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. The sub-fund's portfolio had a weighted average score of 6.74 on Robeco's Country Sustainability Ranking.
3. The sub-fund excluded sovereign bonds issued by the bottom 15% of the WGI Control of Corruption ranking.
4. 0.00% of countries held a high negative score (-3) on SDG 16, based on the internally developed Country SDG Framework.

For investments in corporate investments, i.e. equity or bonds:

1. The portfolio contained on average 0.02% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
3. 0.16% of the investments (on average) held a high or medium negative SDG score (-2 or -3) based on the internally developed SDG framework.

● *...and compared to previous periods?*

The Sub-fund has been launched in 2024, so no comparison can be made.

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

—> *How were the indicators for adverse impacts on sustainability factors taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGPs), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy.

Sustainability disclosures (Unaudited)

PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.

PAI 13, table 1 regarding board gender diversity was considered via engagement. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaintshandling mechanism was considered.

PAI 6, table 3 regarding insufficient whistleblower protection was considered.

PAI 7, table 3 regarding incidents of discrimination was considered.

PAI 8, table 3 regarding excessive CEO pay ratio was considered via engagement under the engagement program "Responsible Executive Remuneration".

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Regulation for the direct line investments.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

o Via the applied normative and activity-based exclusions, the following PAIs were considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.96% of the net assets, compared to 3.81% of the benchmark.

Sustainability disclosures (Unaudited)

- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.43% of the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 3.19% of the net assets, compared to 6.78% of the benchmark.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.33% of the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via the application of the voting policy, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 118,419 tons, compared to 87,149 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 660 tons per EUR million EVIC, compared to 596 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,315 tons per EUR million revenue, compared to 1,407 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.96% of the net assets, compared to 3.81% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 56.47% of the net assets, compared to 58.56% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 41.74% of the net assets, compared to 57.75% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.36 GWh, compared to 0.79 GWh for the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.43% of the benchmark.
- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 0.31%, compared to 0.63% for the benchmark.
- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 54.71%, compared to 57.13% for the benchmark.
- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 18.24%, compared to 17.72% for the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 34.36%, compared to 34.17% for the benchmark.
- Indicators in relation to social and employee matters (PAI 5-7, Table 3).
- The average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest compensated individual) (PAI 8, Table 3) was 610, compared to 888 for the benchmark.

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 118,419 tons, compared to 87,149 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 660 tons per EUR million EVIC, compared to 596 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,315 tons per EUR million revenue, compared to 1,407 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.96% of the net assets, compared to 3.81% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 56.47% of the net assets, compared to 58.56% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 41.74% of the net assets, compared to 57.75% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.36 GWh, compared to 0.79 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 3.19% of the net assets, compared to 6.78% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.02 tons, compared to 0.05 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 45.18 tons, compared to 111.84 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets,

Sustainability disclosures (Unaudited)

compared to 0.43% of the benchmark.

- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 0.31%, compared to 0.63% for the benchmark.
- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 54.71%, compared to 57.13% for the benchmark.
- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 18.24%, compared to 17.72% for the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 34.36%, compared to 34.17% for the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.43% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
NVIDIA Corp	Semiconductors & Semiconductor Equipment	1.01%	United States
Apple Inc	Technology Hardware, Storage & Peripherals	0.98%	United States

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?**¹

Yes

In fossil gas

In nuclear energy

No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● What was the share of investments made in transitional and enabling activities?

0.0%.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Sub-fund has been launched in 2024, so no comparison can be made.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

6.0%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

63.1%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 97 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Sustainable Diversified Allocation

Legal entity identifier: 2138005MYFA3NB4P5T55

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ___%

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 60.0% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: ___%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following Environmental and Social characteristics are applicable for investments in government bonds:

1. The sub-fund's portfolio complied with Robeco's Exclusion Policy that is based on exclusion criteria that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom. This means that the sub-fund has no exposure to excluded securities, taking into account a grace period.
2. The sub-fund's portfolio had a minimum weighted average score of at least 6 on Robeco's Country Sustainability Ranking.
3. The sub-fund excluded sovereign bonds issued by the bottom 15% of the WGI Control of Corruption ranking.
4. The sub-fund excludes all countries which have a high negative score (-3) on SDG 16.

The following Environmental and Social characteristics are applicable for investments in corporate investments, i.e. equity or bonds:

1. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breached the international norms were excluded from the investment universe.
3. The sub-fund excluded all high or medium negative SDG scores (-3 or -2).

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability disclosures (Unaudited)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

For investments in government bonds:

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. The sub-fund's portfolio had a weighted average score of 7.17 on Robeco's Country Sustainability Ranking.
3. The sub-fund excluded sovereign bonds issued by the bottom 15% of the WGI Control of Corruption ranking.
4. 0.00% of countries held a high negative score (-3) on SDG 16, based on the internally developed Country SDG Framework.

For investments in corporate investments, i.e. equity or bonds:

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
3. 0.33% of the investments (on average) held a high or medium negative SDG score (-2 or -3) based on the internally developed SDG framework.

● *...and compared to previous periods?*

The Sub-fund has been launched in 2024, so no comparison can be made.

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

—> *How were the indicators for adverse impacts on sustainability factors taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGPs), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy.

PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the

Sustainability disclosures (Unaudited)

gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.

PAI 13, table 1 regarding board gender diversity was considered via engagement. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaintshandling mechanism was considered.

PAI 6, table 3 regarding insufficient whistleblower protection was considered.

PAI 7, table 3 regarding incidents of discrimination was considered.

PAI 8, table 3 regarding excessive CEO pay ratio was considered via engagement under the engagement program "Responsible Executive Remuneration".

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Regulation for the direct line investments.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

o Via the applied normative and activity-based exclusions, the following PAIs were considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.18% of the net assets, compared to 3.90% of the benchmark.

- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets,

Sustainability disclosures (Unaudited)

compared to 0.37% of the benchmark.

- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 2.72% of the net assets, compared to 6.50% of the benchmark.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.24% of the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via the application of the voting policy, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 51,486 tons, compared to 32,693 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 572 tons per EUR million EVIC, compared to 585 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,236 tons per EUR million revenue, compared to 1,404 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.18% of the net assets, compared to 3.90% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 58.27% of the net assets, compared to 59.74% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 36.50% of the net assets, compared to 56.96% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.53 GWh, compared to 0.83 GWh for the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.37% of the benchmark.
- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 0.52%, compared to 0.99% for the benchmark.
- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 49.24%, compared to 57.89% for the benchmark.
- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 20.91%, compared to 18.00% for the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 34.82%, compared to 34.40% for the benchmark.
- Indicators in relation to social and employee matters (PAI 5-7, Table 3).
- The average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest compensated individual) (PAI 8, Table 3) was 453, compared to 829 for the benchmark.

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 51,486 tons, compared to 32,693 tons for the benchmark.
- The carbon footprint of the portfolio (PAI 2, table 1) was 572 tons per EUR million EVIC, compared to 585 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,236 tons per EUR million revenue, compared to 1,404 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.18% of the net assets, compared to 3.90% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 58.27% of the net assets, compared to 59.74% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 36.50% of the net assets, compared to 56.96% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.53 GWh, compared to 0.83 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 2.72% of the net assets, compared to 6.50% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.04 tons, compared to 0.05 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 72.09 tons, compared to 103.70 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.37% of the benchmark.
- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or

Sustainability disclosures (Unaudited)

- OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 0.52%, compared to 0.99% for the benchmark.
- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 49.24%, compared to 57.89% for the benchmark.
- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 20.91%, compared to 18.00% for the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 34.82%, compared to 34.40% for the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.37% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments

	Sector	% Assets	Country
Apple Inc	Technology Hardware, Storage & Peripherals	1.33%	United States

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas

In nuclear energy

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● What was the share of investments made in transitional and enabling activities?

0.0%.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Sub-fund has been launched in 2024, so no comparison can be made.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

9.5%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

50.5%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 129 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Flexible Allocation

Legal entity identifier: 213800K1HHD25EVUAK49

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: ___%**

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 21.5% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective: ___%**

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following Environmental and Social characteristics are applicable for investments in government bonds:

1. The sub-fund's portfolio complied with Robeco's Exclusion Policy that is based on exclusion criteria that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom. This means that the sub-fund has no exposure to excluded securities, taking into account a grace period.
2. The sub-fund's portfolio had a minimum weighted average score of at least 6 on Robeco's Country Sustainability Ranking.
3. The sub-fund excluded sovereign bonds issued by the bottom 15% of the WGI Control of Corruption ranking.

The following Environmental and Social characteristics are applicable for investments in corporate investments, i.e. equity or bonds:

1. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies in the portfolio that have breached one of the international guidelines during the investment period, have become part of the Enhanced Engagement program. When engagement deemed highly unlikely to succeed, the company was excluded directly.
3. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The sub-fund was limited to a maximum exposure of 3% to investments with an elevated sustainability

Sustainability disclosures (Unaudited)

risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

For investments in government bonds:

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. The sub-fund's portfolio had a weighted average score of 7.42 on Robeco's Country Sustainability Ranking.
3. The sub-fund excluded sovereign bonds issued by the bottom 15% of the WGI Control of Corruption ranking.

For investments in corporate investments, i.e. equity or bonds:

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. 0.00% of the holdings in portfolio had an elevated sustainability risk profile.

● *...and compared to previous periods?*

The Sub-fund has been launched in 2024, so no comparison can be made.

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

While the Sub-fund did not intend and committed to make investments considered as sustainable investments as defined under the SFDR Regulation (EU) 2019/2088, it did make such investments.

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

While the Sub-fund did not commit to make investments considered as sustainable investments as defined under the SFDR Regulation (EU) 2019/2088, it did make such investments.

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores

Sustainability disclosures (Unaudited)

show harm. Scores of -2 of -3 may even cause significant harm.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

— → *How were the indicators for adverse impacts on sustainability factors taken into account?*

While the Sub-fund does not commit to make investments considered as sustainable investments as defined under the SFDR Regulation (EU) 2019/2088, it may make such investments.

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website. In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may

Sustainability disclosures (Unaudited)

last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGPs), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy. PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.

PAI 13, table 1 regarding board gender diversity was considered via engagement. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaintshandling mechanism was considered.

PAI 6, table 3 regarding insufficient whistleblower protection was considered.

PAI 7, table 3 regarding incidents of discrimination was considered.

PAI 8, table 3 regarding excessive CEO pay ratio was considered via engagement under the engagement program "Responsible Executive Remuneration".

— → *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

While the Sub-fund did not commit to make investments considered as sustainable investments as defined under the SFDR Regulation (EU) 2019/2088, it may make such investments.

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- o Via the applied normative and activity-based exclusions, the following PAIs were considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 2.31% of the net assets, compared to 0.00% of the benchmark.
 - Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
 - The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 3.34% of the net assets, compared to 0.00% of the benchmark.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- o Via the application of the voting policy, the following PAIs were considered:
 - The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 2,426 tons, compared to 0 tons for the benchmark.
 - The carbon footprint of the portfolio (PAI 2, table 1) was 421 tons per EUR million EVIC, compared to 0 tons per EUR million EVIC for the benchmark.
 - The green house gas intensity of the portfolio (PAI 3, table 1) was 1,288 tons per EUR million revenue, compared to 0 tons per EUR million revenue for the benchmark.
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 2.31% of the net assets, compared to 0.00% of the benchmark.
 - The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 54.53% of the net assets, compared to 0.00% of the benchmark.
 - The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 43.41% of the net assets, compared to 0.00% of the benchmark.
 - The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.31 GWh, compared to 0.00 GWh for the benchmark.
 - Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
 - The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 0.00%, compared to 0.00% for the benchmark.
 - The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 60.67%, compared to 0.00% for the benchmark.
 - The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 17.70%, compared to 0.00% for the benchmark.
 - The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 35.16%, compared to 0.00% for the benchmark.
 - Indicators in relation to social and employee matters (PAI 5-7, Table 3).
 - The average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest compensated individual) (PAI 8, Table 3) was 743, compared to 0 for the benchmark.

- o Via Robeco's entity engagement program, the following PAIs were considered:
 - The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 2,426 tons, compared to 0 tons for the benchmark.
 - The carbon footprint of the portfolio (PAI 2, table 1) was 421 tons per EUR million EVIC, compared to 0 tons per EUR million EVIC for the benchmark.
 - The green house gas intensity of the portfolio (PAI 3, table 1) was 1,288 tons per EUR million revenue, compared to 0 tons per EUR million revenue for the benchmark.
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 2.31% of the net assets, compared to 0.00% of the benchmark.
 - The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 54.53% of the net assets, compared to 0.00% of the benchmark.
 - The share of non-renewable energy production of investee companies from non-renewable energy sources compared

Sustainability disclosures (Unaudited)

- to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 43.41% of the net assets, compared to 0.00% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 0.31 GWh, compared to 0.00 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 3.34% of the net assets, compared to 0.00% of the benchmark.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.00 tons, compared to 0.00 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 8.88 tons, compared to 0.00 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 0.00%, compared to 0.00% for the benchmark.
- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 60.67%, compared to 0.00% for the benchmark.
- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 17.70%, compared to 0.00% for the benchmark.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 35.16%, compared to 0.00% for the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 0.00% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
5.000 UNITED KINGDOM GILT 07-MAR-2025	TREASURIES	8.78%	United Kingdom

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector

Average exposure in % over the reporting period

Sectors deriving revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels -

Oil, Gas & Consumable Fuels	0.84%

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes
 In fossil gas In nuclear energy
 No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
 - **turnover** reflecting the share of revenue from green activities of investee companies.
 - **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
 - **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
0.0%.
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Sub-fund has been launched in 2024, so no comparison can be made.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

0.8%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

20.7%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 30 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Sustainability disclosures (Unaudited)

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-02-29.

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. The sub-fund's weighted score for the carbon (scope level 1, 2 and 3 upstream), water and waste footprint were respectively 23.39%, 93.75% and 99.63% better than the general market index.
3. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
4. The sub-fund's weighted average ESG score was 19.67 against 18.22 for the general market index. A lower score means a lower risk. against for the general market index. A lower score means a lower risk.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Weighted score for:			
- Carbon footprint (% better than the general market index)	23.39%	48.01%	28.76%
- Water footprint (% better than the general market index)	93.75%	84.43%	83.25%
- Waste footprint (% better than the general market index)	99.63%	58.18%	67.00%
Companies in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Weighted average ESG Score	19.67	20.04	20.12
Investments on exclusion list	0.00%	0.00%	0.00%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

→ *How were the indicators for adverse impacts on sustainability factors taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosures (Unaudited)

impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement, proxy voting and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement, proxy voting and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement and proxy voting. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGP), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence

Sustainability disclosures (Unaudited)

processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy. PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.

PAI 13, table 1 regarding board gender diversity was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaintshandling mechanism was considered.

PAI 6, table 3 regarding insufficient whistleblower protection was considered.

PAI 7, table 3 regarding incidents of discrimination was considered.

PAI 8, table 3 regarding excessive CEO pay ratio was considered via proxy voting and engagement under the engagement program "Responsible Executive Remuneration".

→ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

o Via the applied normative and activity-based exclusions, the following PAIs were considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.60% of the net assets.

Sustainability disclosures (Unaudited)

- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 3.59% of the net assets.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0.00% of the net assets.

o Via the environmental footprint performance targets of the sub-fund, the following PAIs were considered:

- The carbon footprint of the portfolio (PAI 2, table 1) was 396 tons per EUR million EVIC.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 3.59% of the net assets.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.01 tons.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 4.39 tons.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via the application of the voting policy, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 1,165 tons.
- The carbon footprint of the portfolio (PAI 2, table 1) was 396 tons per EUR million EVIC.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 873 tons per EUR million revenue.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.60% of the net assets.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 63.61% of the net assets.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for de funds was 46.31% of the net assets.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 7.04 GWh.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to {{Narratives.P1100BM}} of the benchmark.
- The share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 0.63%.
- The share of investments in investee companies without grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (PAI 11, Table 1) was 55.28%.
- The average unadjusted gender pay gap of investee companies (PAI 12, Table 1) was 17.09%.
- The average ratio of female to male board members in investee companies expressed as a percentage of all board members (PAI 13, Table 1) was 34.48%.
- Indicators in relation to social and employee matters (PAI 5-7, Table 3).
- The average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest compensated individual) (PAI 8, Table 3) was 219.

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 1,165 tons.
- The carbon footprint of the portfolio (PAI 2, table 1) was 396 tons per EUR million EVIC.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 873 tons per EUR million revenue.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 1.60% of the net assets.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 63.61% of the net assets.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for de funds was 46.31% of the net assets.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 7.04 GWh.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 3.59% of the net assets.
- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.01 tons.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 4.39 tons.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

Sustainability disclosures (Unaudited)

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
2.250 FRANCE (GOVT OF) 25-MAY-2024	Treasuries	4.33%	France

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Sustainability disclosures (Unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹**

Yes

In fossil gas In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
0.0%.
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

5.4%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

56.0%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Sub-fund has been liquidated in March 2024.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.
