General information of the Fund

DPAM L (the "SICAV") was incorporated on 23 December 1987 as an Investment Company with Variable Capital (SICAV) with multiple Sub-Funds, governed by Luxembourg Law for an unlimited period. At the date of the report, the SICAV is subject to the law of 10 August 1915 and its amended laws related to commercial companies, to the Part I of the law of 17 December 2010 ("the Law of 2010") related to Undertakings for Collective Investment and to the Council Directive 2009/65/EC as amended.

The publications are made in "Recueil Electronique des Sociétés et Associations (RESA)" and accessible on the site "Registre de Commerce et des Sociétés de Luxembourg".

The Articles of Incorporation of the SICAV were published in the "Mémorial, Recueil des Sociétés et Associations" on 17 February 1988, and the Articles of Incorporation, amended for the last time by the Extraordinary General Meeting of Shareholders of 2 January 2017 were published in the "Registre Electronique des Sociétés et Associations".

The SICAV has appointed DEGROOF PETERCAM ASSET SERVICES S.A. as management company to perform globally all the collective portfolio management functions referred to in Appendix II to the Law of 2010, namely the management of the portfolio and the administration and sale of the shares in the SICAV.

As at 31 December 2022, the following Sub-Funds are active: -

- DPAM L BONDS EUR QUALITY SUSTAINABLE in EUR
- DPAM L BONDS UNIVERSALIS UNCONSTRAINED in EUR
- DPAM L BONDS HIGHER YIELD in EUR
- DPAM L BONDS GOVERNMENT SUSTAINABLE HEDGED in EUR

General information of the Fund

The Sub-Fund DPAM L BONDS CORPORATE HIGH YIELD EUR 2023 was liquidated on 12 December 2022.

The following share classes may be issued for the sub-funds currently offered for subscription:

Class A shares: distribution shares offered to the public.

Class A CHF shares: distribution shares which differ from class A shares in that they are denominated in Swiss francs.

Class A CHF Hedged shares: distribution shares which differ from class A CHF shares in that the exchange risk against the Swiss franc is hedged.

Class A EUR Hedged shares: distribution shares which differ from class A shares in that the exchange risk against the euro is hedged.

Class A USD shares: distribution shares which differ from A class shares in that they are denominated in US dollars.

Class B shares: capitalisation shares offered to the public.

Class B CHF shares: capitalisation shares which differ from class B shares in that they are denominated in Swiss francs.

Class B CHF Hedged shares: capitalisation shares which differ from class B CHF shares in that the exchange risk against the Swiss franc is hedged.

Class B EUR Hedged shares: capitalisation shares which differ from class B shares in that the exchange risk against the euro is hedged.

Class B LC shares: capitalisation shares which differ from class B shares by the fact that (i) they are reserved for investors affected, directly or indirectly, by one or more current "Services Agreement Life Cycle" contracts with Degroof Petercam Asset Management, (ii) and that they have a different management fee.

Class B USD shares: capitalisation shares which differ from B class shares in that they are denominated in US dollars.

Class B USD Hedged shares: capitalisation shares which differ from class B USD shares in that the exchange risk against the US dollar is hedged.

Class B BIS USD Hedged shares: capitalisation shares which differ from class B USD shares in that the subscription currency of the share class is hedged against the reference currency of the relevant sub-fund. However, the extent of hedging may fluctuate slightly around the full hedging level.

Class E shares: distribution shares which differ from class A shares in that they are reserved for institutional investors within the meaning of Article 174 (2) of the Law of 2010.

Class E CHF shares: distribution shares which differ from class E shares in that they are denominated in Swiss francs.

General information of the Fund

Class E CHF Hedged shares: distribution shares which differ from class E CHF shares in that the exchange risk against the Swiss franc is hedged.

Class E EUR Hedged shares: distribution shares which differ from class E shares in that the exchange risk against the euro is hedged.

Class E USD shares: distribution shares which differ from class E shares in that they are denominated in US dollars.

Class F shares: capitalisation shares which differ from class B shares in that they are reserved for institutional investors within the meaning of Article 174 (2) of the Law of 2010.

Class FCHF shares: capitalisation shares which differ from class F shares in that they are denominated in Swiss francs.

Class F CHF Hedged shares: capitalisation shares which differ from class F CHF shares in that the exchange risk against the Swiss franc is hedged.

Class F EUR hedged shares: capitalisation shares which differ from class F shares in that the exchange risk against the euro is hedged.

Class F LC shares: capitalisation shares which differ from class F shares by the fact that (i) they are reserved for investors affected, directly or indirectly, by one or more current "Services Agreement Life Cycle" contracts with Degroof Petercam Asset Management, (ii) they have no minimum initial subscription amount (iii) and that they have a different management fee.

Class F BIS USD Hedged shares: capitalisation shares which differ from class F USD shares in that the subscription currency of the share class is hedged against the reference currency of the relevant sub-fund. However, the extent of hedging may fluctuate slightly around the full hedging level.

Class F USD shares: capitalisation shares which differ from F class shares in that they are denominated in US dollars.

Class I shares: distribution shares that differ from class E shares in that (i) they are reserved (i) to institutional or professional investors having one or more current discretionary management mandates with one or more companies belonging to Degroof Petercam Group, (ii) to the account(s) to which these discretionary management mandates apply, and in that (iii) they have a different management fee.

Class I EUR Hedged shares: distribution shares which differ from class I shares in that the exchange risk against the euro is hedged.

Class I USD shares: distribution shares which differ from class I shares in that they are denominated in US dollars.

Class J shares: capitalisation shares that differ from class F shares in that (i) they are reserved (i) to institutional or professional investors having one or more current discretionary management mandates with one or more companies belonging to Degroof Petercam Group, (ii) to the account(s) to which these discretionary management mandates apply, and in that (iii) they have a different management fee.

General information of the Fund

Class J EUR Hedged shares: capitalisation shares which differ from class J shares in that the exchange risk against the euro is hedged.

Class J USD shares: capitalisation shares which differ from class J shares in that they are denominated in US dollars.

Class L shares: capitalisation shares which differ from class B shares by the fact they have (i) a minimum initial subscription, (ii) a different maximum marketing fee and (iii) a management fee that may be different.

Class L EUR Hedged shares: capitalisation shares which differ from class L shares in that the exchange risk against the euro is hedged.

Class L USD shares: capitalisation shares which differ from class L shares in that they are denominated in US dollars.

Class M shares: distribution shares which differ from class A shares due to the fact that they (i) are reserved for investors currently holding one or more discretionary management mandates with one or more Degroof Petercam Group companies, and that (ii) they are reserved for the account(s) to which these discretionary management mandates apply, and (iii) they are reserved for all-in mandates and due to the fact that (iv) they have a different management fee. In this context, "all-in" includes at least the management fees and custody fees charged to the account(s) to which these "all-in" discretionary management mandates apply.

Class M EUR Hedged shares: distribution shares which differ from class M shares in that the exchange risk against the euro is hedged.

Class M USD shares: distribution shares which differ from M class shares in that they are denominated in US dollars.

Class N shares: capitalisation shares which differ from class B shares due to the fact that they (i) are reserved for investors currently holding one or more discretionary management mandates with one or more Degroof Petercam Group companies, and that (ii) they are reserved for the account(s) to which these discretionary management mandates apply, and (iii) they are reserved for all-in mandates and due to the fact that (iv) they have a different management fee. In this context, "all-in" includes at least the management fees and custody fees charged to the account(s) to which these "all-in" discretionary management mandates apply.

Class N EUR Hedged shares: capitalisation shares which differ from class N shares in that the exchange risk against the euro is hedged.

Class N USD shares: capitalisation shares which differ from class N shares in that they are denominated in US dollars.

Class P shares: capitalisation shares which differ from class F shares by the absence of (i) a management fee and (ii) a minimum initial subscription amount and in that they are (i) they are reserved for investors currently holding one or more discretionary management mandates with Degroof Petercam Asset Management and (ii) they are reserved for the account(s) to which these discretionary management mandates apply.

Class P EUR Hedged shares: capitalisation shares which differ from class P shares in that the exchange risk against the euro is hedged.

General information of the Fund

Class V shares: distribution shares which differ from class A shares in that (i) at the discretion of the Management Company they may be offered to distributors and platforms in the United Kingdom, Switzerland and European Union Member States, except to Banque Degroof Petercam Belgique and Banque Degroof Petercam Luxembourg, (ii) that they may be offered by distributors and platforms which have separate remuneration agreements with their clients that are not subject to any rebate, and (iii) there is no rebate on the management fee.

Class V CHF shares: distribution shares which differ from class V shares in that they are denominated in Swiss francs.

Class V CHF Hedged shares: distribution shares which differ from class V CHF shares in that the exchange risk against the Swiss franc is hedged.

Class V EUR Hedged shares: distribution shares which differ from class V shares in that the exchange risk against the euro is hedged.

Class V USD shares: distribution shares which differ from V class shares in that they are denominated in US dollars.

Class V BIS USD Hedged shares: distribution shares which differ from class V USD shares in that the subscription currency of the share class is hedged against the reference currency of the relevant sub-fund. However, the extent of hedging may fluctuate slightly around the full hedging level. Investors are advised that implementing an exchange risk hedging policy may result in additional costs as mentioned in the section "COSTS AND EXPENSES".

Class W shares: capitalisation shares which differ from class B shares in that (i) at the discretion of the Management Company they may be offered to distributors and platforms in the United Kingdom, Switzerland and European Union Member States, except to Banque Degroof Petercam Belgique and Banque Degroof Petercam Luxembourg, (ii) that they may be offered by distributors and platforms which have separate remuneration agreements with their clients that are not subject to any rebate, and (iii) there is no rebate on the management fee.

Class W CHF shares: capitalisation shares which differ from class W shares in that they are denominated in Swiss francs.

Class W CHF Hedged shares: capitalisation shares which differ from class W CHF shares in that the exchange risk against the Swiss franc is hedged.

Class W EUR Hedged shares: capitalisation shares which differ from class W shares in that the exchange risk against the euro is hedged.

Class W USD shares: capitalisation shares which differ from class W shares in that they are denominated in US dollars.

Class W BIS USD Hedged shares: capitalisation shares which differ from class W USD shares in that the subscription currency of the share class is hedged against the reference currency of the relevant sub-fund. However, the extent of hedging may fluctuate slightly around the full hedging level.

General information of the Fund

Class Z shares: capitalisation shares which differ from class F shares in that they are reserved (i) for investors initially subscribing the minimum amount of EUR 25,000,000 and in that (ii) they have a different management fee, it being understood that shareholders investing in this class may not request the redemption of their shares so as to reduce their level of investment to below the minimum initial subscription amount.

Dividends payable on any distribution class may, at the request of the shareholder, be paid in cash or in the form of new shares of the respective class.

The Net Asset Value of each Sub-Fund is calculated each bank business day in Luxembourg ("Valuation Day") that corresponds to a net asset value which will be dated that Valuation Day but calculated on the bank business day following that Valuation Day.

With regard to the valuation day of DPAM L EQUITIES EMERGING MARKETS ESG LEADERS INDEX and only since 1 June 2022, if a market (including Shenzhen or Shanghai Hong Kong Stock Connect) representing 10% or more of the size of the Sub-fund is closed, the Valuation Day will be the following Business Day. The same applies when several markets representing together 10% or more of the size of the Sub-Fund are closed.

The Net Asset Value, issue price and redemption price (of each Sub-Fund) are available each business day at the registered office of the SICAV, and in Switzerland, available each business day in Geneva at the representative office BANQUE DEGROOF PETERCAM (SWITZERLAND) S.A., Geneva (for the relevant Sub-Funds).

The SICAV publishes, at the end of each year, an annual report audited by the Auditor and, at the end of each half year, an unaudited semi-annual report. These financial reports contain separate financial statements for each Sub-Fund. The consolidation currency is the Euro.

The following documents are available to the public at the Registered Office of the SICAV or from the http://funds.degroofpetercam.lu and http://funds.degroofpetercam.com:

- the articles of association of the SICAV;
- the prospectus of the SICAV (including the fact sheets for the SICAV's sub-funds);
- the Key Information (for each sub-fund and each class of shares);
- the financial reports of the SICAV.

A copy of the agreement entered into with the Manager of the SICAV manager can be consulted free of charge at the registered office of the SICAV.

Manager's Report

Macroeconomic report for 31/12/2021 to 31/12/2022

In 2022, global equities posted a negative performance of 13% in euro terms. By region and in terms of the common currency (euro), European equities outperformed other regions. Emerging equities finished at the rear of the pack. Technology stocks were a clear underperformer (Nasdaq: -33% in dollars). The energy sector alone was up, both in Europe and the US. In the foreign exchange market, the dollar was the big winner. The greenback appreciated by 6.2% against the euro. The yen was among the losers and depreciated by 7% against the euro. The big surprise of the year was the major decline in the bond markets. The German 10-year rate rose from -0.18% at the end of 2021 to 2.57% at the end of 2022, while the US 10-year rate rose from 1.51% to 3.87%. Corporate bond spreads also widened. As a result, all bond market segments recorded negative performance over the past year. Eurozone government bonds were down by more than 20%, while corporate bonds denominated in euros fared slightly better (-14.9%). The gold price remained unchanged at around USD 1800 per ounce. The oil price ended the year slightly up. The trend in the oil market was bullish in the first part of the year, but recession fears drove the price down in the second part of the period. The Russian invasion of Ukraine in February, the ensuing rise in energy inflation and faster than expected monetary tightening by the major central banks were the main challenges of the year.

United States of America

US economic growth slowed throughout the year, but remained in positive territory year-on-year, even after two quarters of decline (Q1 and Q2). The labour market remained strong throughout the year. There were sustained wage increases and job creation continued to be robust. Surging inflation was a major concern in 2022, both because of the obvious pressures on consumers and businesses, as well as because of the aggressive policy response on the part of global central banks. US inflation peaked at 9.0% year-on-year in June (its highest level since 1981) before gradually easing to a 7.1% year-on-year increase in the November report. Energy was one of the main drivers of the overall increase in inflation, driven by sharp increases in oil and gas prices, with the invasion of Ukraine playing a significant role. However, policymakers voiced serious concerns about rising housing-related inflation and continued significant pressure on wages. This was reflected in a 25 basis point increase in the Fed's policy rate in March followed by another 50 basis points in May. From June onwards, the Fed accelerated its pace of rate hikes, with hikes of 75 basis points each in June, July, September and November. By the end of the year, Fed members were signalling that a moderation in the pace of hikes was warranted, frequently citing the long and variable lags between policy actions and economic data.

Eurozone

The Russian invasion of Ukraine and the sanctions and counter-sanctions that followed had a significant impact on energy prices in Europe. The significant increase in the price of gas and electricity depressed business and household confidence. The Eurozone avoided a recession in 2022, thanks in part to the strong performance of the services sector and the labour market. The rise in inflation, which peaked at 10.6% in October, had a negative impact on real household incomes. Governments have adopted support measures in response to the energy crisis, but households nevertheless continued to experience a sharp loss of purchasing power. The European Central Bank began raising interest rates in the summer to counter inflationary pressures. Rate hikes then followed in quick succession. The deposit rate rose from -0.5% at the end of 2021 to 2% at the end of 2022. At its December meeting, the ECB announced that it would begin the process of reducing its portfolio of government bonds starting in March 2023.

Manager's Report

Japan

Economic activity in Japan held up reasonably well in a more difficult global environment. Economic growth (year-on-year) increased from 0.93% at the end of 2021 to 1.7% in Q3 2022. Inflation also rose in Japan in 2022, reaching a 30-year high of 3.8% in November. The Bank of Japan's monetary policy of fixing the 10-year rate had the effect of widening the bond yield differential between Japan and the rest of the world, which caused the yen to depreciate in 2022. The Bank of Japan surprised the market in December by deciding to widen its tolerance band for the 10-year rate.

Emerging markets

Economic activity in China was disappointing in 2022 on the back of weak domestic demand and a weak construction sector as well as slowing exports. China was a significant factor for the markets on several fronts in 2022. Beijing's strong commitment to its Zero-Covid approach meant that there was a risk of the strict lockdowns seen in the early days of the pandemic. And Shanghai introduced stringent measures in the spring to try to quell the pandemic. Secondly, there were concerns about the Chinese real estate sector throughout the year. Investor sentiment turned more positive towards the end of the period after announcements of government support for this important sector of the Chinese economy and the surprise decision to lift Covid restrictions. In other emerging countries, economic indicators in Eastern Europe plummeted during the year because of their economic proximity to the German industrial sector. Business activities were more resilient in India and Brazil. Most emerging market central banks raised their policy rates in 2022, sometimes at a fast pace. Several central banks ended their rate hike cycle at the end of the year. This was the case for Brazil, Poland and the Czech Republic.

DPAM L BONDS EUR QUALITY SUSTAINABLE

The net asset value of the capitalization shares (B share) lost 15.40% during the year 2022.

2022 was a thorny year for fixed income markets. Inflation shock that dominated financial headlines and led to a significant rise in interest rates and monetary policy expectations. Uncertainty reigned while the euro area was impacted by an additional idiosyncratic energy shock.

We were able to protect the portfolio via a reduced interest rate risk profile. Our overweight exposure towards sectors like real estate or banks was detrimental to our performance. Diversification was unrewarded throughout 2022 but we believe this will not continue going forward.

We started the year with an overweight in the subordinated space, with overweights in lower tier2 banks, on the limited issuance expectations and their cheapness vs Senior Non-Preferred, and overweight in subordinated insurance bonds. We also had an overweight in the real estate sector, constructed around logistics, German residential and Spain.

Credit selection in hybrid capital has been a detractor, in both subordinated debt; non-financial and financial. Selection to names like Prosus (Tencent exposure), SBBB (Swedish real estate), or Fidelidade Compania de Seguros (Chinese shareholder) have been detrimental. Our exposure to names like EDF has been positive, on the back of the nationalization of the company by the French government.

Future policy

Manager's Report

We continue to advocate a prudent stance on duration over the medium term and continue to have an underweight duration. Our positive stance towards credit still stands with high conviction. Resilient earnings coupled with returning capital flows into the asset class on the back of appealing spread valuations should continue to provide a tailwind for credit returns in 2023. Current credit break-even spreads still provide high buffer against further weakness. Fundamentals remain solid and while surely margins and earnings will decrease over the next quarters, we are entering this downturn in a position of strength.

We still advocate that corporate bonds with strong balance sheets can go through this period of turbulence. Selectivity and credit selection are key here since that the recovery is likely to be uneven across and within sectors. Our internal credit analysis is essential and will remain the cornerstone of the investment process so that the fund can best withstand episodes of strong volatility.

DPAM L BONDS UNIVERSALIS UNCONSTRAINED

DPAM L Bonds Universalis Unconstrained is a total return, global fixed-income portfolio built thanks to the dynamic management of risk factors across currencies, rates and credit spreads. The unconstrained character is manifest in the flexibility we apply when identifying and selecting investments across liquid bond sectors globally. This flexibility allows us to build a high quality, well diversified conviction fund that grows capital when value is present but tries to preserve capital when visibility is low and uncertain. On balance, the required investment horizon is between 3 and 5 years. Our strict risk management uses Value-at-Risk (VaR) measures to control for realized volatility.

The fund primarily seeks to protect and/or grow capital depending on the managers' overall confidence levels. Uncertain investment conditions are reflected through low VaR consumption. As soon as the bond outlook improves, the portfolio increases conviction levels and VaR consumption. The fund aims for a robust profile via optimal diversification, including into resilient investments that grow capital under stress. Essentially, we combine a total return investment style with an occasional absolute return bias. Experience has taught us not to limit ourselves to one of these two styles.

The unconstrained bond strategy has an attractive long-term track record. The fund's performance is consistent over time, as seen in our positioning on performance versus comparable peers sold in Europe according to Morningstar data.

The net asset value of the capitalization shares (B share) gained -13.29% in 2022. Most of it was caused by the major increase in government yields around the world. Central banks in major economies (except for Japan and China) hiked policy rates at an accelerated pace. For example, the Federal Reserve increased them by 425bps.

Inflation reached unexpectedly high levels and is lasting longer than expected. Economic data remained resilient. The labour market remained tight.

Compared to a EUR-only fund, there was a positive contribution from exposure to the appreciation of USD and MXN vs EUR.

Over the year, we reduced duration to protect the fund from losses from interest rates increases.

Our holdings in Central and Eastern European countries suffered from the proximity to the conflict in Ukraine.

Manager's Report

As credit and swap spreads on € IG and BTPs reached multi-year highs in June, we significantly increased our exposures to the asset class. Although, we mostly sticked to single-A rated corporates. High Yield didn't look as attractive as IG.

We reduced exposures to EM government debt.

For 2023, we want to keep a moderate level of risk while at same time benefiting from the current, attractive yields.

It looks as if the economy is still resilient notwithstanding much higher interest rates.

The drop in commodity prices will cause headline inflation to fall, but core inflation may prove sticky due to wage growth. When break-evens on inflation-linked bonds drop to interesting levels, we may increase our exposure to the asset class to benefit in case of long-lasting inflation.

If credit and swap spreads tighten, we may reduce exposures to € IG. Subsequently, when an economic slowdown gets priced in, we would re-enter.

DPAM L BONDS HIGHER YIELD

The high yield markets were not immune to the general market volatility in 2022. The tight policy stance of central banks and strong inflationary pressures (particularly in the first nine months of the year) pushed market rates up, which weighed on bond valuations. Additionally, the war in Ukraine and fears of an energy crisis in Europe caused a general widening of credit spreads, which also deepened the market correction.

The portfolio maintained USD exposure throughout the year, which provided a very effective hedge during difficult times. We also held more cash for a significant part of the year and tactically hedged credit exposure with CDS on the cross-over. Default rates remained very low in both the US and European HY markets.

The market recovered towards the end of the year thanks to a drop in energy prices and the reopening of China.

The fund (B shares) had a negative return of 10.58% for the year.

The fund does not have a sustainable objective but does promote E/S characteristics; however, it does not make sustainable investments.

Future policy

For 2023, we believe that the Fed and ECB rate policies will continue to be restrictive and that the uncertainty regarding the timing of the end of the monetary tightening phase will keep interest rate volatility high, especially in the first part of the year. The direction of the credit market will subsequently depend on the extent of the economic slowdown induced by the restrictive monetary policy of the central banks.

Manager's Report

DPAM L BONDS GOVERNMENT SUSTAINABLE HEDGED

DPAM L Bonds Government Sustainable Hedged aims to capitalise on the performance of developed markets government rates, based on a sustainable approach, through the construction of a balanced portfolio of debt securities issued by OECD governments and other related issuers. The investment is typically done in local currencies and any non-euro exposure is hedged in euro using FX forwards. The fund applies an SRI overlay via a best-in-class approach which ranks OECD member countries based on their efforts in terms of sustainability. Countries are ranked in a proprietary model on five sustainability dimensions, aligned with the United Nations sustainable development goals. Effectively the fund invests only in the top half best ranked countries.

The DPAM L Bonds Government Sustainable Hedged returned -14.71% (F-share class) in 2022.

The year 2022 was driven by central bank activity and very elevated inflation prints across the globe. The war in Russia added more uncertainty/pressure to energy and food inflation during the year.

As we expected, inflation remained elevated during 2022, which lead central banks to start a very forceful hiking cycle. In order to position for this type of environment we adjusted the portfolio by:

- Lowering duration in the beginning of the year by around 0.9 years. After June, we increased the duration by 0.35.
- Holding a large position in inflation linked bonds (up to 8% of portfolio). We started reducing our inflation exposure from the summer onwards as we judged that inflation expectations became fairly priced. We remained around 5% years of duration by the end of the year.
- Increasing our exposure to lower beta markets like Japan and Switzerland was a natural hedge against higher inflation prints around the world. In June we reduced our exposure to Japan as the pressure on the BoJ's Yield curve control increased.

The above helped mitigate the effect of the increase in yields.

In terms of CEE countries, we have reduced our exposure to Slovenia and sold our Estonian exposure through the year as we believed that spreads were going to react negatively to high uncertainty in terms of inflation prints/risk off environment, yet we re-added Slovenia in Q3 2022 as the inflation/risk off environment eased.

As rates sold off during 2022, spreads in the periphery also widened against core countries. As the portfolio is not exposed to these peripheral countries it was not impacted by this spread widening in 2022.

In 2022, after approved by the FISAB, we started to invest in Supranationals in Europe, i.e. the EFSF, ESM, EU, and EIB. These names added a positive performance while at the same time increased our portfolio rating.

The fund has received inflows during 2022 and closed the year above 1.1 billion of assets under management.

DPAM L EQUITIES CONVICTION RESEARCH

The Net Asset Value of the fund (B share) 1,401.84 as at 31 December 2022.

The strategy of the conviction research fund is to invest in companies in which the analyst team has a strong conviction while keeping a concentrated portfolio and a coverage neutral exposure.

Manager's Report

It was a difficult year for the European equity market, due to a combination of geopolitical tensions between Russia and Ukraine, a slowing economy, and a stronger than expected inflation. As such the compartment had a negative contribution of -11,07% in 2022. Except for energy, most sectors ended up in the red. The weakest contribution was registered by TMT (sector allocation), the Industrials (selection) and Healthcare (selection) sector.

In TMT, a rising interest rate environment led to a derating of most of the stocks like Cellnex, Worldline, SAP and Amadeus. The semiconductor companies like ASMI are also suffering from increased tensions between US and China regarding the need to protect the technology know-howdue as well as from the expected upcoming semiconductor cycle downturn. In industrials, companies like DSV, Schneider Electric, Atlas Copco and Interpump suffered also from a derating. Furthermore, Teleperformance suffered from news-flow related to potential wrongdoing in activities related to content moderation, and labor practices in emerging markets. In healthcare, Lonza weighed on the performance due to the impact of higher interest rates on valuation and Grifols performed badly due to the high debt leverage.

Positive contribution to the performance came from Equinor and Total Energies which benefit from the strong increase in both oil and gas prices. Equally benefitting the performance were insurance company Beazley who profited from a strong pricing environment. In the same financial sector holdings in Finecobank and to a lesser extent London Stock Exchange added to performance, helped by rising interest rates. In consumer staples, Beiersdorf contributed positively as the company's investments started to bear fruit while in consumer services Sodexo performed well. Finally in utilities, Iberdrola, part of the energy transition, was beneficial.

Sector positioning changed only marginally with some increase of weight in Financials.

Within financials we entered Fineco bank, which is poised to benefit from higher European interest rates in the shorter term and their lean and innovative business model over the medium to longer term. At the same time it has more limited exposure to credit losses compared to what a traditional bank may experience in a recessionary environment. We also added KBC to increase the rate sensitivity of the portfolio.

On the selling side, we reduced our exposure to asset managers by exiting Amundi. This decision was based on a more challenging liquidity outlook for the market and increasing questions around the company's longer term competitive advantage. We also sold our position in Mediobanca to lower market exposure.

Notable additions during 2022: KBC, Fineco bank, Nibe, Roche Holding, Tecan, Norsk Hydro

Notable dis-investments in 2022: Amundi, Mediobanca, Intrum, Grifols, Teleperformance,

FUTURE STRATEGY

The manager expects economic growth to be clearly below trend during 2023 as private spending drops. Prices which have been a major tailwind to revenues for many businesses last year, especially on the goods side, are expected to drop. While a positive for the cost side, structural challenges such as energy transition, climate change and labor market imbalances remain present and remain a factor to economic actors. Old and new thematic growth opportunities continue to be there but must face (and overcome) supply side- and financial constraints. Liquidity continues to be withdrawn from the market and financing costs are rising into the early part of 2023. The speed at which inflation can come down in response to monetary policies and supply additions will drive risk appetite and in turn performance of small and mid-caps. Nevertheless, policy

Manager's Report

intervention is expected to slow down growth enough resulting in such conditions, at which time stock picking will become a more important performance driver again.

In this environment, characteristics such as balance sheet strength, ability to generate cash flow to finance innovation and added value for customers will be important stock selection criteria. A new regime with more regulatory uncertainty warrants a need for a diversified portfolio construction from a sector point of view.

While being mindful of shorter-term cyclical risks the manager continues to invest with a medium to longer time horizon, focusing equity of European companies with good business models, avoiding areas under disruption.

DPAM L BONDS EUR HIGH YIELD SHORT TERM

The high yield markets were not immune to the general market volatility in 2022. The tight policy stance of central banks and strong inflationary pressures (particularly in the first nine months of the year) pushed market rates up, which weighed on bond valuations. Additionally, the war in Ukraine and fears of an energy crisis in Europe caused a general widening of credit spreads, which also deepened the market correction.

The fund's strategy was defensive throughout the year. The bulk of the portfolio is exposed to the "BB" rating category.

The fund (B shares) had a negative return of 3.88% for the year.

The fund does not have a sustainable objective but does promote E/S characteristics; however, it does not make sustainable investments.

Future policy

For 2023, we believe that the Fed and ECB rate policies will continue to be restrictive and that the uncertainty regarding the timing of the end of the monetary tightening phase will keep interest rate volatility high, especially in the first part of the year. The direction of the credit market will subsequently depend on the extent of the economic slowdown induced by the restrictive monetary policy of the central banks.

DPAM L PATRIMONIAL FUND

The Net Asset Value of the DPAM L - Patrimonial B-share was EUR 121.11 on 31 December 2022. The share declined -11.19% during the calendar year.

At the start of 2022, the portfolio was positioned with a moderately constructive stance towards equities to continue to profit from the post-Covid economic recovery and favorable earnings growth for developed market equities. We did become more cautious on fixed income though, as inflation pressures proved less transitory than initially expected. In January and February, the fund's sovereign bond exposure was reduced, -ahead of what became a defining moment for 2022: Russia's invasion of Ukraine. Uncertainty and risk premia increased across asset classes, and already high inflationary pressures were exacerbated.

Faced with higher volatility and an increased correlation between equities and fixed income, the portfolio's cash position was increased, -at the expense of both equities and bonds. The portfolio's equity positioning decreased from an above-average weight of ca. 30% at the start of the year to a below-average weight of

Manager's Report

around 21% by mid-May. This marked more or less the low in the fund's equity positioning in 2022. Despite increasing odds for a recession, the portfolio's equity weight was no longer reduced, -as we considered that the equity de-rating had gone far enough, -especially for non-US equities. Earnings for European companies also surprised very positively during the year. Towards the end of 2022, we were even compelled to increase the portfolio's equity weight -in spite of the fund's drawdown- as we believed that a recession had been priced in, and the energy crisis had faded. The fund's below-average position in emerging market equities was reinforced and a tactical position in European small caps was initiated. The year was ended with an equity weight around 25%.

Traditionally, the portfolio's equity exposure has been tilted towards growth and quality stocks. In 2022, growth stocks experienced headwinds, -reversing a trend that had been seen for the previous decade, among others due to rising interest rates. We therefore increased the diversification by investing in value and quality stocks. Examples are investments in the Russell 1000 Value, Nestlé and L'Oréal. Still, the fund has kept a net growth tilt throughout the year, which detracted from the performance. Equities overall performed negatively in 2022, but especially (US) growth stocks performed negatively, held back thus by rising interest rates.

Coming back then to the fund's fixed income exposure, it had been good to reduce the portfolio duration at the start of the year, because the rise in interest rates really accelerated after February with Central Banks' continued fight against inflation. Bond markets witnessed significant negative returns over the year, making 2022 a very difficult year for cautious balanced funds, with the two main asset classes posting significant negative returns. The traditional diversification between equities and bonds did not work. -Noteworthy transactions in the rest of the year were the 'relative profit-taking' on inflation-linked bonds in April. Inflation-linked bonds -a structural diversifier in the portfolio- mitigated some of the losses in fixed income due to rising inflation expectations. In the last months of the year, we then started to pick out opportunities in fixed income to lock in higher yields for the years to come, both in sovereign and corporate bonds. While this marked a change in the stance towards fixed income, bond purchases were gradual, and the year was still ended with an exposure well below the one at the start of 2022.

Gold -a hedge against geopolitical turmoil- reacted as expected by rising very strongly around the time of Russia's invasion of Ukraine. Eventually the precious metal fell back though, as war headlines receded, and interest rates increased. Only converted in EUR, it managed to post a positive return over the year, -due to the rising US dollar. Appreciating with around 5.8% against the EUR, the dollar was then really the main bright spot in financial markets and for the fund, tempering the losses coming from equities and bonds.

The year is started with a diversified portfolio with a neutral stance towards equities, despite a poor economic outlook. Reasons not to be more cautious relative to equities are cheap valuations -especially for non-US equities-, investors' prolonged expectations of an economic slowdown/recession, China's reopening, and a fading energy crisis. We are still weary about the future path of inflation though. Commodity and energy prices may have reverted lower together with shipping costs, but labor markets remain tight and supply chain bottlenecks stubbornly high. This motivates us to increase the portfolio's duration exposure only gradually, locking in higher yields. A tactical position in US value stocks is also kept.

Going forward, both the fundamental and the technical market environment will continue to steer the fund's asset allocation. The convictions of internal experts on different asset classes are considered, to come to a founded and diversified asset allocation and security selection.

Manager's Report

DPAM L BONDS EMERGING MARKETS SUSTAINABLE

DPAM L Bonds Emerging Markets Sustainable aims to capitalize on the robust long-term growth of emerging markets, based on a sustainable investment approach, through the construction of a balanced portfolio of debt securities issued by governments and supranational entities, mostly in local currency. The fund aims to deliver risk-adjusted returns above the local currency emerging market sovereign debt universe. The fund applies an SRI overlay and excludes 'not free' or 'authoritarian' countries via confirmation from two separate external sources. Second, a best-in-class approach ranks emerging countries based on their efforts in terms of sustainability. Countries are ranked in a proprietary model on five sustainability dimensions, aligned with the United Nations sustainable development goals.

The DPAM L Bonds Emerging Markets Sustainable fund returned -0.86% (F-share class) in EUR terms in 2021 and 2.99% annualized return since the launch date of the fund (18/03/2013).

At the start of 2022, we took a careful stance on emerging markets based on the higher inflation forecasts, rising rates globally and a strong USD.

In order to protect the portfolio, managers:

- reduced the overall duration of the portfolio to below 5, mainly via financial futures
- reduced exposure to the Central European region as inflation pressures in this region are considered high
- reduced exposure to some Sub Sahara Africa countries with a low rating and high vulnerability to higher US rates

Our sustainable approach, excluding non-democratic countries form the eligible universe, has been a major contribution to both relative and absolute return. Indeed, since the start of the fund in 2013, Russia has been on our country exclusion list.

Our positive Latin America call has worked well. High real yields and pro-active central banks have boosted returns in this region. Currencies like Mexican Peso and Brazilian Real even managed to outperform USD in a year of impressive USD strength. Our relative high weight in Uruguay and Costa Rica exposure in the portfolio worked very well. Colombia was a bad performer. The market still has not digested the 2021 downgrade to below investment grade and the move to the left after the elections has resulted in much higher yields.

Asia has been a stable region once again. Our exposure to Singapore, which serves as a low-risk diversifier, has worked very well. Our very small exposure to South-Korea was the only negative contributor to return.

Near simultaneous health (COVID), food and energy crises (Ukraine) have impacted the fiscal metrics of many emerging countries. Even commodity rich countries have barely benefited from a spike in prices, as extra revenues had to be used to subsidize the poorer part of the population. In combination with tight funding conditions throughout 2022, long term debt sustainability might become an issue. The reduction of exposure to these countries, especially within the Sub Sahara Africa region have contributed positively to performance.

Despite our careful stance on Central Europe, the region contributed very negatively to return. Yields went up at an unprecedented pace. Poland, were we started the year with close to zero exposure, saw yields rising from 1.00% to 8.50% after the invasion of Ukraine. Most negative contributors in the region are due to small

Manager's Report

exposures in Ukraine and Hungary. Croatia received EU membership and will be deleted form the eligible universe as of 01.01.2023.

Both from an absolute and relative angle, the fund showed a remarkable performance in 2022. In October, the fund saw a big outflow from one customer on tactical considerations. Assets under management closed the year at 2.470,62 million EUR (-11.5%).

A dedicated emerging markets sovereign analyst (Caleb Coppersmith), which we hired at the end of 2021, joined the team at the beginning of 2022. He will help the team with bottom-up country analysis, with a focus on debt sustainability issues.

DPAM L BONDS EUR CORPORATE HIGH YIELD

The high yield markets were not immune to the general market volatility in 2022. The tight policy stance of central banks and strong inflationary pressures (particularly in the first nine months of the year) pushed market rates up, which weighed on bond valuations. Additionally, the war in Ukraine and fears of an energy crisis in Europe caused a general widening of credit spreads, which also deepened the market correction.

The fund's strategy was prudent throughout the year. We held cash in the portfolio during the second half of the year as a precautionary measure, which weighed on the fund's relative performance against its benchmark. We avoided investing in companies where debt ratios were too high.

The fund (B shares) underperformed its benchmark, the Bloomberg Barclays Euro HY, 3% Issuer constrained, ex. Financials, by 2%.

The fund does not have a sustainable objective but does promote E/S characteristics; however, it does not make sustainable investments.

Future policy

For 2023, we believe that the Fed and ECB rate policies will continue to be restrictive and that the uncertainty regarding the timing of the end of the monetary tightening phase will keep interest rate volatility high, especially in the first part of the year. The direction of the credit market will subsequently depend on the extent of the economic slowdown induced by the restrictive monetary policy of the central banks.

DPAM L GLOBAL TARGET INCOME

At the end of 2022, the fund has 37,528,776.59€ assets under management.

The DPAM L Fund Global Target Income was launched in December 2014. The strategy of the fund is based on a quantitative approach that aims at a maximum diversification and the payment of a quarterly dividend of minimum 3% per annum. To achieve these goals, the fund invests in a variety of asset classes. An optimized mix between interest rate sensitivity, global equity allocation, currencies and high yield bonds leads to a strongly diversified portfolio.

During the year, the fund's interest rate exposure was particularly volatile. After starting the year with an exposure of 4.6 years, it increased towards 5.4 years in the first quarter and reached a new low of 2.5 years

Manager's Report

in the second quarter. At the end of 2022, exposure was at 2.4 years, a new all-time-low. The reason for this large allocation shifts throughout the year was the unprecedented level of bond volatility, which increased drastically in response to the aggressive interest rate hikes of central banks across the globe to tame inflation. The equity exposure of the fund was 34% at the start of the year. During the year, the allocation varied between 24% and 42%. In terms of individual asset classes, the most notable change during the year was for inflation-linked bonds. This asset class started the year at almost 0% but the allocation was gradually increased to reach a maximum of 15% in the beginning of July. The repositioning clearly indicates that the algorithm found diversification benefits in inflation-linkers at a time when inflation was reaching peak after peak. Further, we also observed the first ever decrease in the allocation of short-term high-yield bonds, from the allowed maximum of around 19% to 14.4% at the start of the second quarter. This trend reversed later on and at the end of the year the allocation was again close to its allowed maximum.

Performance in 2022

In the environment we witnessed during 2022, where inflation is rising, central banks are tightening and most asset classes are going down at the same time, the diversification potential is typically lower. However, the fund's defensive profile and focus on risk reduction, which is achieved by maximizing the diversification rate, helps to limit the overall losses in such extreme conditions. The Global Target Income Fund ended the year with a performance of -11.45% after costs. The largest negative contribution came from the fixed income side, causing the fund to drop about 6%. The equity investments contributed a little more than -3%, while the relatively small allocation to listed real estate was responsible for a loss of more than 2%.

Future strategy

The strategy for 2023 will depend on the evolution of the volatilities and correlations between the underlying funds. In the current market environment, the volatilities and correlations are heavily influenced by the evolution of inflation and central bank interest rate policy. As of now, inflation seems to be in a downward trend, strengthening hopes that central bank tightening cycles will end soon. If this trend continues, the diversification potential of the fund will increase again, which benefits the risk profile of the fund. The management of the fund remains active and is responsive to changes in such market dynamics.

DPAM L BALANCED CONSERVATIVE SUSTAINABLE

Performance

At 30 December 2022, the net asset value of the DPAM L Balanced Conservative Sustainable (F-shares) fund was EUR 27,945.85, an increase of 14.60% in 2022. All asset classes had a particularly difficult year in 2022. Both equities and bonds (government and corporate) were down between 12 and 20%. The fund's cautious equity positioning, large cash cushion and more defensive bond selection failed to offset negative equity returns. The fund's stock selection was impacted chiefly by a preference for quality growth stocks and stock picking focused on capital goods and materials.

Strategy pursued over the year

We entered the year with a positive outlook on risk assets because we expected the synchronised global economic recovery to continue after the Covid-19 crisis. However, the increase in commodity prices and global supply problems pushed inflation to levels that central banks were unable to ignore. As a result, policy rates were hiked at an unprecedented pace, leading to a significant fall in consumer and business confidence

Manager's Report

indicators. The Russian invasion of Ukraine and the West's counter-measures only served to darken the mood.

After Jerome Powell's aggressive remarks at the Fed meeting in January, we took some profits on growth names that were considered quality and reinvested the proceeds in value names that were well positioned to benefit from the reopening of the economy. After the Russian invasion, we steadily adopted a more defensive stance for the fund as the economic outlook worsened. We reduced risk in the fund on several occasions through the end of Q3 by thinning out holdings in cyclical sectors, energy-intensive companies, consumer durables and companies with weaker pricing power. We began cautiously adding names to the fund in Q4, while increasing the weight of the more defensive market caps and those identified as value.

In bonds, in Q1 we reduced the weight of Italian and Portuguese government bonds, reduced the duration of the portfolio and increased the weight of defensive government bonds in response to the geopolitical turmoil and the rise in interest rates. We increased our exposure to IG corporate bonds in Q2. In Q3, we leveraged our substantial cash position to buy defensive government bonds (US and EU) and investment grade corporate bonds.

Future strategy

While there were many negative catalysts in 2022, the outlook for 2023 does not suggest that risks have diminished. The financial markets should have had a good year in 2022, with the end of the pandemic potentially signaling the return of massive demand for goods and services that had previously been denied to the public. But in the end, the year was severely constrained by extreme supply bottlenecks, driving inflation into overdrive over the year.

We are starting 2023 with some caution, as we did for most of last year. We expect the stock markets to fall further in Q2 or Q3 as corporate profits decline. PMIs continue to suggest a slowdown in the economy ahead. New orders are weak while inventories are building up. At the same time, corporate margins remain at historically high levels as we enter what may be the most widely predicted recession in history. However, the stock markets do not appear to be reflecting this scenario. These are all valid reasons for us to take a cautious approach to risk assets as we start the year. We started to increase our exposure to bonds during Q4 2022. Yields have become more attractive in the current climate of economic uncertainty.

Headline inflation stabilised in Q4 2022, but core inflation remains stubbornly high. The risk of a negative wage-price spiral remains high in the context of a persistently tight labour market. As a consequence, we can see a possible dual scenario for 2023: either labour market tensions and inflation will ease - which would be a relief for the markets - or central banks will be forced to extend or tighten their restrictive monetary policy. In this latter case, the end of the tunnel is not yet in sight. How inflation develops will clearly dictate the roadmap for the portfolio. With respect to inflation expectations, natural gas prices have recently developed favourably. Significant negative base effects will also impact future inflation expectations. This means that it is possible that the macroeconomic outlook will stabilise later in the year. Against this backdrop, we may increase the weight of high-risk assets.

DPAM L BONDS CLIMATE TRENDS SUSTAINABLE

Policy pursued during the financial year

Manager's Report

The Net Asset Value of the fund (B shares) amounts to 83,37 euros as at 31 December 2022 with a performance of -18,82%.

2022 was a thorny year for fixed income markets that needed to cope with the biggest tightening of monetary policy expectations in decades. This synchronised repricing was a response by global central banks to the non-transitory character of the inflation. We continue to experience strong labour markets and a strong consumer although that the tightening of financial conditions clearly will have its impact over the upcoming quarters. Supply chain stress has eased backed to normal levels while the euro area faced an additional energy shock on the back of the Russian invasion in Ukraine and the decision to become more emery independent by the euro area members. The fiscal response, mild winter temperatures and coordinated gas purchases in the LNG market in 2022 ensured the worst outcome has been avoided. While in the short term some dubious climate emergency actions have been taken such as re-opening coal facilities, we believe that over the medium to longer term this crisis will serve as an accelerator for a cleaner and more sustainable energy mix in the euro area.

In terms of fixed income markets, we have witnessed a strong increase in yield over the first semester and a sharp move higher at the end of the summer break. 10y German rate started the year below 0% while they ended 2022 around 250 bps higher. Uncertainty reigned and rate volatility caused corporate bonds to underperform. Outflows in the credit segment and the removal of ECB support caused corporate bond spreads to move from historical tight levels to very wide levels across 2022. Higher duration sectors such as real estate and financials were hit the most.

ESG labelled debt issuance that posted yearly records since many years was not immune to the volatility shock and issuance finalised lower in 2022 versus previous years and especially versus expectations. Green bonds continue to remain the dominant market segment while sustainability-linked bonds faced increasing scrutiny by investors that feel that ambitions and disclosure is not up to the level they require. COP 27 provided only minor achievements, but climate change continues to remain a theme that is top of mind by investors, regulators and governments.

Over the course of the year, we have preferred corporate bonds over government bonds and held the duration profile very light versus the general market. We have reduced USD allocation to the detriment of more EM-like currencies.

Future policy

We continue to believe that the consensus is too downbeat on growth, especially in the euro area. Inflation has likely peaked and will come down, but this path will be volatile and uneven. Core inflation is the metric to follow and there we opinion that given the strong economy it is far from sure this indicator will be in synch with central bank targets any time soon. We are starting the year with a prudent stance on duration and continue to prefer corporate issuers that have strong balance sheets, pricing power and a high exposure to green capital expenditures that likely will be announced by fiscal authorities in the euro area. Active management will become even more important if central banks remove stimulus and fundamentals will once again dictate fixed income pricing.

DPAM L BONDS GOVERNMENT SUSTAINABLE

DPAM L Bonds Government Sustainable aims to capitalise on the performance of developed markets government rates, based on a sustainable approach, through the construction of a balanced portfolio of debt

Manager's Report

securities issued by OECD governments and other related issuers. The investment is typically done in local currencies. The fund applies an SRI overlay via a best-in-class approach which ranks OECD member countries based on their efforts in terms of sustainability. Countries are ranked in a proprietary model on five sustainability dimensions, aligned with the United Nations sustainable development goals. Effectively the fund invests only in the top half best ranked countries.

The DPAM L Bonds Government Sustainable returned -15.34% (F-share class) in 2022.

The year 2022 was driven by central bank activity and very elevated inflation prints across the globe. The war in Russia added more uncertainty/pressure to energy and food inflation during the year.

As we expected, inflation remained elevated during 2022, which lead central banks to start a very forceful hiking cycle. In order to position for this type of environment we adjusted the portfolio by:

- Lowering duration in the beginning of the year by around 0.9 years. After June, we increased the duration by 0.35.
- Holding a large position in inflation linked bonds (up to 8% of portfolio). We started reducing our inflation exposure from the summer onwards as we judged that inflation expectations became fairly priced. We remained around 5% years of duration by the end of the year.
- Increasing our exposure to lower beta markets like Japan and Switzerland was a natural hedge
 against higher inflation prints around the world. In June we reduced our exposure to Japan as the
 pressure on the BoJ's Yield curve control increased.
- The above helped mitigate the effect of the increase in yields.

In terms of CEE countries, we have reduced our exposure to Slovenia and sold our Estonian exposure through the year as we believed that spreads were going to react negatively to high uncertainty in terms of inflation prints/risk off environment, yet we re-added Slovenia in Q3 2022 as the inflation/risk off environment eased.

As rates sold off during 2022, spreads in the periphery also widened against core countries. As the portfolio is not exposed to these peripheral countries it was not impacted by this spread widening in 2022.

In 2022, after approved by the FISAB, we started to invest in Supranationals in Europe, i.e. the EFSF, ESM, EU, and EIB. These names added a positive performance while at the same time increased our portfolio rating.

The fund has received outflows during 2022 and closed the year around 85 million of assets under management.

DPAM L CONVERTIBLE WORLD SUSTAINABLE

The convertible bond markets were not immune to the general market volatility in 2022. The tight policy stance of central banks and strong inflationary pressures (particularly in the first nine months of the year) pushed market rates up, which weighed on bond valuations as well as on share prices. Additionally, the war in Ukraine and fears of an energy crisis in Europe caused a general widening of credit spreads, which also deepened the market correction.

The fund (B shares) had a negative return of 21.30% for the year.

Manager's Report

Future strategy

In early February 2023, the fund was liquidated.

DPAM L EQUITIES EMERGING MARKETS ESG LEADERS INDEX

The sub-fund's benchmark is the MSCI EM ESG Leaders Net DTR.

The performance of B shares class is -19,10%.

At the end of the year, the index included 450 positions. The value of the index can be found on MSCI's website, www.msci.com, under the heading "MSCI Index Performance". MSCI requires that its clients hold a licence to access the composition of its indices.

The Sub-Fund is a tracker type fund, the objective of which is to replicate the performance of the capitalisation-weighted MSCI Emerging Markets ESG Leaders index, net dividends reinvested in euros. MSCI's ESG Leaders methodology is a combination of sector exclusion and best-in-class selection.

At the end of the year, the investment universe consisted of 24 countries: Brazil, Chile, China, Colombia, Czech Republic, Egypt, Greece, Hungary, India, Indonesia, Kuwait, Malaysia, Mexico, Philippines, Poland, Qatar, Russia, Saudi Arabia, South Africa, South Korea, Taiwan, Thailand, Turkey and the United Arab Emirates.

During the year, the sub-fund closely followed the movement of the index.

Future strategy

The investment policy based on an indexation by geographical area and by sector will be maintained.

DPAM L BONDS EUR SHORT TERM

The net asset value of the capitalization shares lost 2.47% since 13 May 2022.

2022 was a thorny year for fixed income markets. Inflation shock that dominated financial headlines and led to a significant rise in interest rates and monetary policy expectations. Uncertainty reigned while the euro area was impacted by an additional idiosyncratic energy shock.

The Fund was launched in May 2022. We were able to protect the portfolio via a reduced interest rate risk profile, Average duration stayed between 1.5 and 1.8 on a portfolio level.

We started the fund with a position high yield bonds between 10 % and 15%. During the year we didn't have new issues that meet the conditions of the fund. We gave extra attention to diversification in terms of countries, sectors and ratings.

Future strategy

Manager's Report

Our positive stance towards credit still stands with high conviction. Resilient earnings coupled with returning capital flows into the asset class on the back of appealing spread valuations should continue to provide a tailwind for credit returns in 2023. Current credit break-even spreads still provide high buffer against further weakness. Fundamentals remain solid and while surely margins and earnings will decrease over the next quarters, we are entering this downturn in a position of strength.

We still advocate that corporate bonds with strong balance sheets can go through this period of turbulence. Selectivity and credit selection are key here since that the recovery is likely to be uneven across and within sectors. Our internal credit analysis is essential and will remain the cornerstone of the investment process so that the fund can best withstand episodes of strong volatility.

DPAM L BONDS EMU INV. GRADE GOV. INDEX

The performance of B share class is -7,59% for the period from 1st July to 31 December 2022.

As was the case for 2021, financial market participants in 2022 continued sticking to their transitory inflation calls. As the base effect argument coming from supply bottlenecks following the Covid crisis was no longer possible, they were quick in using the effects of the Russian war in Ukraine on energy prices as a new excuse to call for transitory inflation. However, as we have stressed last year too, underlying inflationary pressures were already on a clear uptrend in 2021, and the war only intensified this.

What is different from last year, is that the ECB finally have seemed to understand this persistent inflation environment and decided to start normalizing its monetary policy at a pace we have never seen before since it was founded. Since July, it cumulatively hiked its policy rate by 250bps and recently announced its intention to start quantitative tightening early next year. However, as they are very aware of the incompleteness of the monetary union and the disproportionate effects monetary policy tightening might have on peripheral spreads, it decided to launch a new program. It is called the transmission protection instrument that can be used whenever it is deemed necessary, with very limited conditionality, and unlimited firepower.

The current and expected macroeconomic environment of high inflation and decent growth levels, combined with the ECB's monetary policy actions moved the German 10Y bund from -0.16% at the start of the year to +2.50% by the end of 2022.

Conform with the investment policy, the compartment has as objective to replicate the JP Morgan EMU Investment Grade Government Bonds Index as close as possible in order to realize a performance that is comparable with that of the index. The daily operations to assure this consist out of maintaining the characteristics of the compartment (geographical allocation, duration, curve positioning) with the characteristics of the respective index.

Future strategy

We continue observing a high inflation environment with HICP inflation in Europe above 10% in October and November where especially the stickiness of underlying inflationary pressures is a worrying sign and expectations that ECB will stop tightening soon are unwarranted. Our preferred drivers to assess our medium-term inflation views remain the following and as long as these do not start turning, it is difficult to see inflation return to the ECB's target anytime soon:

Manager's Report

- Profit margins of firms are holding well as we continue seeing them being able to translate higher input prices in higher output prices which is quite exceptional in this kind of environment of extremely high inflation and low to negative real growth.
- The inflationary mindset at the consumer side is holding as short-term as well as more longer-term inflation expectations continue moving upward.
- The labor market remains extremely tight, and it is clear that this is being met by increasing labor compensation.

Although we do believe that the 10Y German Bund at levels between 2.50% and 3% based on our expected terminal policy rate are starting to get attractive, the ECB still has to start with normalizing its second pilar of monetary policy tools, i.e. its asset purchase programs. Although it is difficult to estimate the effects of quantitative tightening, it should lead to a normalization of different types of risk premia. We believe that this should be translated in a 'rationalization' of spreads, i.e. a return to country fundamentals where country selection will become even more important. And secondly, that term premia should normalize leading to a steepening of interest rate curves.

DPAM L Equities EUROPE Behavioral Value

The performance of B share class is 5,16% for the period from 1st July 2022 to 31 December 2022.

This year was favorable to value style as expensive stocks suffered from rising bond yields with inflation printing higher months after months while uncertainties over macro-economic backdrop weighed on growth factors. Over the year and despite very volatile markets, value style and behavioral strategy benefited from steady rotation out of growth factors and into cheaper alternatives. Fear of inflation and rising commodities prices drove bond yields strongly higher while war in Ukraine added uncertainties to energy and supply chain in many industries. Energy sector shined while financials outperformed the market in general, both providing strong support to value style on a non-sector neutral basis. The worst sectors were real estate and technology that suffered from their long duration exposure together with consumer discretionary which suffered from fear of recession and impact of rising inflation on consumer sentiment and spending behaviors. At the sector level, the portfolio maintained a slight overweight in financials, energy, and utilities, and kept an underweight in information technologies, consumer discretionary, (mainly durables) and bond proxies with long duration sectors like staples and real estate. In the defensive, health care was overweighed. Overall, the fund benefited from the allocation choices and the most from its stock selection in the financials (thanks to strong recovery of UBS and good performance of Investec, Allianz, ASR Nederland and Aegon as well as Standard Chartered, Bank of Ireland, Erste Bank or Commerzbank). The fund also gained from stock its picks in the utilities with RWE, Engle, or Iberdrola and Enel outperforming their peers. The stock picks in health care were also beneficial thanks to AstraZeneca, Novartis, or some biotech like Ipsen and health equipment makers such Biomerieux while avoiding Roche and Lonza helped too. Finally, in the industrials, the relatively better performance of Rexel, Eiffage, CNH Industrial, Siemens and Siemens Energy contributed positively. The most detrimental stock selections were in the durables as UK homebuilder (Barratt Development and Taylor Wimpey) lost dearly versus LVMH. In the materials, underweighting Glencore and RioTinto (excluded on ESG consideration hurt together with overweighting the chemicals (Covestro) or metals producer like VoestAlpine. Despite already strong recovery, the value style should benefit from cheap relative valuation as well as relatively better earnings growth and momentum currently. We will continue to implement the behavioral value systematic strategy by replacing relatively more expensive stocks within sectors by cheaper ones, avoiding value trapped, more financially challenged stocks, as well as highly controversial companies in terms of ESG, paying even closer attention to the balance sheet quality and

Manager's Report

leverage elements as economic growth weakened. The funds should keep a diversified sector allocation and start the year with slight overweight in energy, financials, utilities as well as health care in the defensives.

DPAM BONDS L CORPORATE EUR

The net asset value of the capitalization shares (B share) lost 14.6% during the year 2022.

2022 was a thorny year for fixed income markets. Inflation shock that dominated financial headlines and led to a significant rise in interest rates and monetary policy expectations. Uncertainty reigned while the euro area was impacted by an additional idiosyncratic energy shock.

We were able to protect the portfolio via a reduced interest rate risk profile. Our overweight exposure towards sectors like real estate or banks was detrimental to our performance. Diversification was unrewarded throughout 2022 but we believe this will not continue going forward.

We started the year with an overweight in the subordinated space, with overweight's in lower tier2 banks, on the limited issuance expectations and their cheapness vs Senior Non Preferred, and overweight in subordinated insurance bonds.

We also had an overweight in the real estate sector, constructed around logistics, German residential and Spain, which are all maturing stories but which should all continue to deliver solid operating performance which should protect investment yields and drive values higher.

Future strategy

We continue to advocate a prudent stance on duration over the medium term and continue to have an underweight duration. Our positive stance towards credit still stands with high conviction. Resilient earnings coupled with returning capital flows into the asset class on the back of appealing spread valuations should continue to provide a tailwind for credit returns in 2023. Current credit break-even spreads still provide high buffer against further weakness. Fundamentals remain solid and while surely margins and earnings will decrease over the next quarters, we are entering this downturn in a position of strength.

We still advocate that corporate bonds with strong balance sheets can go through this period of turbulence. Selectivity and credit selection are key here since that the recovery is likely to be uneven across and within sectors. Our internal credit analysis is essential and will remain the cornerstone of the investment process so that the fund can best withstand episodes of strong volatility.

DPAM L CONVERTIBLE EUROPE

The convertible bond markets were not immune to the general market volatility in 2022. The tight policy stance of central banks and strong inflationary pressures (particularly in the first nine months of the year) pushed market rates up, which weighed on bond valuations as well as on share prices. Additionally, the war in Ukraine and fears of an energy crisis in Europe caused a general widening of credit spreads, which also deepened the market correction.

The fund (B shares) had a positive return of 3.36% for the period from 1st July 2022 to 31 December 2022.

Manager's Report

Future strategy

In early February 2023, the fund was liquidated.

DPAM L BONDS EUR SELECTION

The performance of B share class is -7,19% for the period from 1st July 2022 to 31 December 2022.

As was the case for 2021, financial market participants in 2022 continued sticking to their transitory inflation calls. As the base effect argument coming from supply bottlenecks following the Covid crisis was no longer possible, they were quick in using the effects of the Russian war in Ukraine on energy prices as a new excuse to call for transitory inflation. However, as we have stressed last year too, underlying inflationary pressures were already on a clear uptrend in 2021, and the war only intensified this.

What is different from last year, is that the ECB finally have seemed to understand this persistent inflation environment and decided to start normalizing its monetary policy at a pace we have never seen before since it was founded. Since July, it cumulatively hiked its policy rate by 250bps and recently announced its intention to start quantitative tightening early next year. However, as they are very aware of the incompleteness of the monetary union and the disproportionate effects monetary policy tightening might have on peripheral spreads, it decided to launch a new program. It is called the transmission protection instrument that can be used whenever it is deemed necessary, with very limited conditionality, and unlimited firepower.

The current and expected macroeconomic environment of high inflation and decent growth levels, combined with the ECB's monetary policy actions moved the German 10Y bund from -0.16% at the start of the year to +2.50% by the end of 2022. Given our short duration stance in the strategy, this added significant performance to the fund.

Given the relatively unexpected emergence of the war and the proximity of most Central European countries to Russia and Ukraine, their bonds suffered quite significantly versus the traditional European government bond universe. However, as the sell-off in yields was relatively quick, it means that you also more quickly have a higher carry that can make up for the capital depreciation. As such by the end of the year, although the contribution of these countries was still negative, it was relatively limited compared to the initial shock. We also became more selective, removing Hungary in the strategy while having become more positive on Poland.

Future strategy

We continue observing a high inflation environment with HICP inflation in Europe above 10% in October and November where especially the stickiness of underlying inflationary pressures is a worrying sign and expectations that ECB will stop tightening soon are unwarranted. Our preferred drivers to assess our medium-term inflation views remain the following and as long as these do not start turning, it is difficult to see inflation return to the ECB's target anytime soon:

- Profit margins of firms are holding well as we continue seeing them being able to translate higher input prices in higher output prices which is quite exceptional in this kind of environment of extremely high inflation and low to negative real growth.
- The inflationary mindset at the consumer side is holding as short-term as well as more longer-term inflation expectations continue moving upward.

Manager's Report

 The labor market remains extremely tight, and it is clear that this is being met by increasing labor compensation.

Although we do believe that the 10Y German Bund at levels between 2.50% and 3% based on our expected terminal policy rate are starting to get attractive, the ECB still has to start with normalizing its second pilar of monetary policy tools, i.e. its asset purchase programs. Although it is difficult to estimate the effects of quantitative tightening, it should lead to a normalization of different types of risk premia. We believe that this should be translated in a 'rationalization' of spreads, i.e. a return to country fundamentals where country selection will become even more important. And secondly, that term premia should normalize leading to a steepening of interest rate curves.

DPAM L EQUITIES EMERGING MSCI INDEX

Its benchmark is the MSCI Emerging Markets Net DTR Index.

The performance of B share class is -5,33% for the period from 1st July 2022 to 31 December 2022.

At the end of the year, the index included 1377 positions. The value of the index can be found on MSCI's website, www.msci.com, under the heading "MSCI Index Performance". MSCI requires that its clients hold a licence to access the composition of its indices.

The Sub-Fund is a tracker type fund, the objective of which is to replicate the performance of the capitalisation-weighted MSCI Emerging Markets index, net dividends reinvested in euros.

At the end of the year, the investment universe consisted of 24 countries: Brazil, Chile, China, Colombia, Czech Republic, Egypt, Greece, Hungary, India, Indonesia, Kuwait, Malaysia, Mexico, Peru, Philippines, Poland, Qatar, Russia, Saudi Arabia, South Africa, South Korea, Taiwan, Thailand, Turkey and the United Arab Emirates.

More than 400 A-shares listed in Shanghai or Shenzhen joined the index in 2018.

During the year, the sub-fund closely followed the movement of the index.

Future strategy

The investment policy based on an indexation by geographical area and by sector will be maintained.

DPAM L Bonds EUR Inflation Linked

The performance of B share class is -3,59% for the period from 1st July 2022 to 31 December 2022.

As was the case for 2021, financial market participants in 2022 continued sticking to their transitory inflation calls. As the base effect argument coming from supply bottlenecks following the Covid crisis was no longer possible, they were quick in using the effects of the Russian war in Ukraine on energy prices as a new excuse to call for transitory inflation. However, as we have stressed last year too, underlying inflationary pressures were already on a clear uptrend in 2021, and the war only intensified this.

Manager's Report

What is different from last year, is that the ECB finally have seemed to understand this persistent inflation environment and decided to start normalizing its monetary policy at a pace we have never seen before since it was founded. Since July, it cumulatively hiked its policy rate by 250bps and recently announced its intention to start quantitative tightening early next year. However, as they are very aware of the incompleteness of the monetary union and the disproportionate effects monetary policy tightening might have on peripheral spreads, it decided to launch a new program. It is called the transmission protection instrument that can be used whenever it is deemed necessary, with very limited conditionality, and unlimited firepower.

The current and expected macroeconomic environment of high inflation and decent growth levels, combined with the ECB's monetary policy actions moved the nominal German 10Y bund from -0.16% at the start of the year to +2.50% by the end of 2022 and its real counterpart from -2% to slightly positive. This represents a significant increase in financial market participants' inflation expectations as represented by the breakeven rate, i.e. the difference between nominal and real rates. Given our short duration stance in the strategy this added decent performance to the fund.

Future strategy

We continue observing a high inflation environment with HICP inflation in Europe above 10% in October and November where especially the stickiness of underlying inflationary pressures is a worrying sign and expectations that ECB will stop tightening soon are unwarranted. Our preferred drivers to assess our medium-term inflation views remain the following and as long as these do not start turning, it is difficult to see inflation return to the ECB's target anytime soon:

- Profit margins of firms are holding well as we continue seeing them being able to translate higher input prices in higher output prices which is quite exceptional in this kind of environment of extremely high inflation and low to negative real growth.
- The inflationary mindset at the consumer side is holding as short-term as well as more longer-term inflation expectations continue moving upward.
- The labor market remains extremely tight, and it is clear that this is being met by increasing labor compensation.

Although we do believe that the 10Y real German Bund at levels between 0.50% and 1% based on our expected terminal policy rate are starting to get attractive, the ECB still has to start with normalizing its second pilar of monetary policy tools, i.e. its asset purchase programs. Although it is difficult to estimate the effects of quantitative tightening, it should lead to a normalization of different types of risk premia. We believe that this should be translated in a 'rationalization' of spreads, i.e. a return to country fundamentals where country selection will become even more important. And secondly, that term premia should normalize leading to a steepening of interest rate curves.

DPAM L Equities World SRI MSCI index

The performance of B share class is -2,00% for the period from 1st July 2022 to 31 December 2022.

Its benchmark is the MSCI WORLD AC SRI Net DTR index.

At the end of the year, the index included 538 positions. The value of the index can be found on MSCI's website, www.msci.com, under the heading "MSCI Index Performance". MSCI requires that its clients hold a licence to access the composition of its indices.

Manager's Report

The Sub-Fund is a tracker type fund, the objective of which is to replicate the performance of the capitalisation-weighted MSCI WORLD AC SRI index, net dividends reinvested in euros. The SRI methodology developed by MSCI combines the exclusion of stocks on the basis of their belonging to a given sector, and the pursuit of a best-in-class selection process.

At the end of the year, the index was composed of stocks from 41 developed and emerging countries.

During the year, the sub-fund closely followed the movement of the index.

Future strategy

The investment policy based on an indexation by geographical area and by sector will be maintained.

DPAM L EQUITIES US SRI MSCI INDEX

The performance of B share class is -2,44% for the period from 1st July 2022 to 31 December 2022.

Its benchmark is the MSCI US SRI Net DTR index.

At the end of the year, the index included 148 positions. The value of the index can be found on MSCI's website, www.msci.com, under the heading "MSCI Index Performance". MSCI requires that its clients hold a licence to access the composition of its indices.

The Sub-Fund is a tracker type fund, the objective of which is to replicate the performance of the capitalisation-weighted MSCI US SRI index, net dividends reinvested in euros. The SRI methodology developed by MSCI combines the exclusion of stocks on the basis of their belonging to a given sector, and the pursuit of a best-in-class selection process.

During the year, the sub-fund closely followed the movement of the index.

Future strategy

DPAM L EQUITIES EMU SRI MSCI INDEX

The performance of B share class is 7,01% for the period from 1st July 2022 to 31 December 2022.

Its benchmark is the MSCI EMU SRI Net DTR Index.

At the end of the year, the index included 53 positions. The value of the index can be found on MSCI's website, www.msci.com, under the heading "MSCI Index Performance". MSCI requires that its clients hold a licence to access the composition of its indices.

The Sub-Fund is a tracker type fund, the objective of which is to replicate the performance of the capitalisation-weighted MSCI EMU SRI Index, net dividends reinvested in euros. The SRI methodology

Manager's Report

developed by MSCI combines the exclusion of stocks on the basis of their belonging to a given sector, and the pursuit of a best-in-class selection process.

All countries in the EMU zone are included in this index, except Luxembourg, given its small market capitalisation.

During the year, the sub-fund closely followed the movement of the index.

All countries in the EMU zone are included in this index, except Luxembourg, given its small market capitalisation.

During the year, the sub-fund closely followed the movement of the index.

Future strategy

The investment policy based on an indexation by geographical area and by sector will be maintained.

DPAM BONDS L GOVERNMENT GLOBAL

DPAM Bonds L Government Global aims to capitalise on the performance of government bond markets. The strategy is benchmarked against the Bloomberg Global Developed Treasury GDP Weighted Total Return Index. The investment is typically done in local currencies, but the strategy is also available through hedged share classes which hedge the non-euro exposure into euro via FX forwards.

The DPAM Bonds L Government Global returned -11.83% (F-share class) in 2022 versus a benchmark return of -12.46%. The hedged strategy returned -14.62% versus a hedged benchmark of -15.06%.

The year 2022 was driven by central banks activity and very elevated inflation prints across the globe. The war in Russia added more uncertainty/pressure to energy and food inflation.

As we expected, inflation remained elevated during 2022, which lead central banks to start a very forceful hiking cycle. In order to position for this type of environment we adjusted the portfolio by:

- Lowering duration across the year from about neutral in the beginning of the year (duration of 8.2 in line with the benchmark) to 6.91 in June (while the benchmark duration was 7.4) and further down to 6.3 in the end of the year (while the benchmark duration was 7.1).
- Starting the year with a relatively high position in inflation linked bonds (around 0.42 years of duration) and increased even further to 0.61 years around June and decreased to 0.5 years in end of October as inflation expectations became fairly priced.

The above helped mitigate the effect of the increase in yields on the fund performance versus that of the benchmark

In terms of CEE countries, we have reduced our exposure through the year to Romania as we believed that spreads were going to react negatively to hight uncertainty in terms of inflation prints/risk off environment, yet we added to the position again in Q4 as the inflation/risk off environment eased. Another change we made in CEE countries was to reduce to zero our exposure to Czech Republic and added to Croatia, which Joined the Euro and was a positive contributor of performance.

Manager's Report

We shifted from an overweight in Italy to an underweight in the beginning of 2022 and we covered this underweight with an overweight in Portugal and Spain (leading to a close to neutral overall relative position in the European Periphery).

In Asia we sold our holdings in Chinese government bonds in Euro and USD. In Japan, we reduced our exposure against the benchmark due to the lack of clarity and in the yield curve control policy from the Bank of Japan. This had in fact a negative impact in our performance as Japan outperformed in a rising interest rate environment.

The Euro had a mixed year in terms of performance. In the beginning of the year, it weakened against the major currencies, yet in last semester the Euro regained some performance against some other currencies (in particular CAD and SEK). The non-hedged exposure outperformed the hedged strategy by 270 basis points in 2022. This was mainly due to the positions in USD and Swiss Francs, both currencies which performed very well in 2022 as they benefited from being a safe heaven.

The fund has received inflows during 2022 and closed the year above 300 million of assets under management.

DPAM L BONDS CORPORATE HIGH YIELD EUR 2023

The high yield markets were not immune to the general market volatility in 2022. The tight policy stance of central banks and strong inflationary pressures (particularly in the first nine months of the year) pushed market rates up, which weighed on bond valuations. Additionally, the war in Ukraine and fears of an energy crisis in Europe caused a general widening of credit spreads, which also deepened the market correction.

The fund's strategy was prudent throughout the year. Lots of positions were sold during the year.

The Sub-Fund was closed during the year.

DPAM L BONDS EMERGING MARKETS HARD CURRENCY SUSTAINABLE

DPAM L Bonds Emerging Markets Hard Currency Sustainable was launched on 15.12.2022. The fund aims to capitalize on the robust long-term growth of emerging markets, based on a sustainable investment approach, through the construction of a balanced portfolio of debt securities issued by governments and state-owned enterprises (with exception of mining, oil& gas) denominated in hard currency (USD, EUR, GBP, JPY, CHF) and with a credit rating above B- (S&P and Fitch) or at least B3 (Moody's) or equivalent by another rating agency. The fund aims to deliver risk-adjusted returns above the hard currency emerging market sovereign debt universe. The fund applies an SRI overlay and excludes 'not free' or 'authoritarian' countries via confirmation from two separate external sources. Second, a best-in-class approach ranks emerging countries based on their efforts in terms of sustainability. Countries are ranked in a proprietary model on five sustainability dimensions, aligned with the United Nations sustainable development goals. The fund uses the same ESG ranking as the local currency emerging market sustainable fund.

The DPAM L Bonds Emerging Markets Hard Currency Sustainable fund returned -1.64% (F-share class) in EUR terms in 2022.

Manager's Report

As this fund has only started on 15 December 2022, a performance attribution is unavailable. AUM was at 14MM on 31 December 2022.

DPAM L BONDS EUR CORPORATE 2026

During the month of December 2022, we have launched the strategy. The DPAM Bonds Corporate EUR 2026 invests in bonds of companies that have an investment grade. The bonds are exclusively denominated in EUR.

In the active management of the sub-fund, the manager selects securities, with the potential for an advantageous return in relation to the risk incurred based on criteria that are both financial and related to sustainable development (such as, for example, respect for the environment or social equity or respect for corporate governance principle). No Benchmark index. The sub-fund is actively managed, which means that the portfolio manager does not aim to replicate the performance of an index. Interest rate sensitivity gradually diminishes as the maturity date approaches.

The Investment Process is mainly based on a bottom-up approach. Our credit research team adopts a fundamental and value approach to credit management. Our resources are geared towards identifying fundamentally sound credits, while avoiding low or deteriorating ones. The Fund invests in a diversified portfolio of Corporate bonds rated between AAA and BB (explicit or implicit), with a maximum weight of 10% of its assets under management in high yield rated bonds.

At 31 December 2022, net assets amounted to 91,629,180.17 euros. The net asset value, capitalizing share (Cl. B. Cap), amounted to 98.18.

Future strategy

Our positive stance towards credit still stands with high conviction. Resilient earnings coupled with returning capital flows into the asset class on the back of appealing spread valuations should continue to provide a tailwind for credit returns in 2023.

Luxemburg February 2023

Audit report

To the Shareholders of **DPAM L**

Our opinion

In our opinion, the accompanying financial statements give a true and fair view of the financial position of DPAM L and of each of its sub-funds (the "Fund") as at 31 December 2022, and of the results of their operations and changes in their net assets for the year then ended in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of the financial statements.

What we have audited

The Fund's financial statements comprise:

- the combined statement of net assets for the Fund and the statement of net assets for each of the sub-funds as at 31 December 2022;
- the combined statement of operations and changes in net assets for the Fund and the statement of operations and changes in net assets for each of the sub-funds for the year then ended;
- the schedule of investments as at 31 December 2022; and
- the notes to the financial statements, which include a summary of significant accounting policies.

Basis for opinion

We conducted our audit in accordance with the Law of 23 July 2016 on the audit profession (Law of 23 July 2016) and with International Standards on Auditing (ISAs) as adopted for Luxembourg by the "Commission de Surveillance du Secteur Financier" (CSSF). Our responsibilities under the Law of 23 July 2016 and ISAs as adopted for Luxembourg by the CSSF are further described in the "Responsibilities of the "Réviseur d'entreprises agréé" for the audit of the financial statements" section of our report.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

We are independent of the Fund in accordance with the International Ethics Standards Board for Accountants' Code of Ethics for Professional Accountants (IESBA Code) as adopted for Luxembourg by the CSSF together with the ethical requirements that are relevant to our audit of the financial statements. We have fulfilled our other ethical responsibilities under those ethical requirements.

Other information

The Board of Directors of the Fund is responsible for the other information. The other information comprises the information stated in the annual report but does not include the financial statements and our audit report thereon.

Our opinion on the financial statements does not cover the other information and we do not express any form of assurance conclusion thereon.

In connection with our audit of the financial statements, our responsibility is to read the other information identified above and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

Responsibilities of the Board of Directors of the Fund for the financial statements

The Board of Directors of the Fund is responsible for the preparation and fair presentation of the financial statements in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of the financial statements, and for such internal control as the Board of Directors of the Fund determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the Board of Directors of the Fund is responsible for assessing the Fund's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the Board of Directors of the Fund either intends to liquidate the Fund or to cease operations, or has no realistic alternative but to do so.

Responsibilities of the "Réviseur d'entreprises agréé" for the audit of the financial statements

The objectives of our audit are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an audit report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with the Law of 23 July 2016 and with ISAs as adopted for Luxembourg by the CSSF will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As part of an audit in accordance with the Law of 23 July 2016 and with ISAs as adopted for Luxembourg by the CSSF, we exercise professional judgment and maintain professional scepticism throughout the audit. We also:

- identify and assess the risks of material misstatement of the financial statements, whether due to
 fraud or error, design and perform audit procedures responsive to those risks, and obtain audit
 evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting
 a material misstatement resulting from fraud is higher than for one resulting from error, as fraud
 may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal
 control;
- obtain an understanding of internal control relevant to the audit in order to design audit procedures
 that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the
 effectiveness of the Fund's internal control;
- evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the Board of Directors of the Fund;
- conclude on the appropriateness of the Board of Directors of the Fund's use of the going concern
 basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists
 related to events or conditions that may cast significant doubt on the Fund's ability to continue as a
 going concern. If we conclude that a material uncertainty exists, we are required to draw attention
 in our audit report to the related disclosures in the financial statements or, if such disclosures are
 inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to

- the date of our audit report. However, future events or conditions may cause the Fund to cease to continue as a going concern;
- evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

Notes to the financial statements as at 31 December 2022

NOTE 1 - ACCOUNTING PRINCIPLES AND METHODS

The financial statements of the SICAV are prepared on a going concern basis in accordance with the legal and regulatory requirements in force in Luxembourg relating to Undertakings for Collective Investment, on the basis of the official net asset values calculated at the end of the financial year, except for the Sub-Funds DPAM L Convertible Europe (liquidated on 3 February 2023), DPAM L Convertible World Sustainable (liquidated on 3 February 2023) and DPAM L BONDS CORPORATE HIGH YIELD EUR 2023 (liquidated on 12 December 2022).

- a) Securities portfolio valuation and derivatives
- 1) The value of cash on hand or on deposit, bills and notes payable on sight and accounts receivable, prepaid expenses, dividends and interest declared or matured and not yet received shall be the nominal value of such assets, except where it is unlikely that such value can be received; in the latter case, the value shall be determined by deducting such amount as the SICAV considers appropriate to reflect the real value of such assets.
- 2) The value of all transferable securities, money market instruments and derivative financial instruments which are listed on an exchange or traded on any other regulated market, which operates on a regular basis, is recognised and open to the public shall be determined according to their last available price.
- 3) In cases where investments of the SICAV are listed on a stock exchange or traded on another regulated market, which operates on a regular basis, is recognised and open to the public and traded by market makers outside the stock exchange on which the investments are listed or the market on which they are traded, the Board of Directors may determine the principal market for the investments in question, which will then be valued at the last price available on that market.
- 4) Derivative financial instruments that are not listed on an official stock exchange or traded on any other regulated market, which operates on a regular basis and is recognised and open to the public, will be valued in accordance with market practice, as further described in the Prospectus.
- 5) The value of the representative securities of any open-ended Collective Investment Scheme shall be determined according to the last official Net Asset Value per unit or according to the last estimated Net Asset Value if the latter is more recent than the official Net Asset Value, provided that the SICAV is satisfied that the valuation method used for this estimate is consistent with that used to calculate the official Net Asset Value.
- 6) To the extent that:
- the transferable securities, money market instruments and/or derivative financial instruments in the portfolio on the Valuation Day are not listed or traded on a stock exchange or other regulated market that operates regularly, is recognised and open to the public or,
- for transferable securities, time deposits, money market instruments, derivative financial instruments and/or securities representing Collective Investment Schemes listed and traded on an exchange or other market but for which the price determined in accordance with paragraphs 1) and 2) is not, in the opinion of the Board of Directors, representative of the real value of such transferable securities, time deposits, money market instruments, derivative financial instruments and/or securities representing Collective Investment Schemes the Board of Directors assesses the value with prudence and good faith.

b) Net realised gain or loss on investments

The net gains or loss realised on sales of securities are calculated based on the average cost of the securities sold.

Notes to the financial statements as at 31 December 2022

The amounts of net realised gains or losses attributable to changes in exchange rates are recognised in "Net realised exchange gains or losses" at the time of the sale.

c) Acquisition cost of the securities in the portfolio

For securities denominated in currencies other than the sub-fund's currency, the acquisition cost is calculated on the basis of the exchange rate in force on the day of purchase.

d) Change in the net unrealised gain and loss

The change in the net unrealised gain or loss on investments at the end of the financial year is included in "Statement of operations and changes in net assets".

e) Income, expenditure and related provisions

Interests on bonds and investments are recorded on a daily basis. Dividends are recorded on an ex-date basis. Interests and income are accounted net of non-recoverable withholding taxes.

When the SICAV incurs expenses relating to a particular Sub-Fund, these are allocated to that Sub-Fund. Expenses not attributable to a particular Sub-Fund are allocated among the various Sub-Funds on a pro rata basis of the net asset value of each Sub-Fund.

f) Formation expenses

Formation expenses and reorganisation fees are amortized on a straight-line basis over a period of five years.

If a Sub-Fund is launched after the launch date of the SICAV, the formation expenses relating to the launch of the new sub-fund will be charged to that sub-fund alone and may be amortised over a maximum period of five years from the date of launch of that sub-fund.

g) Change in the securities portfolio

The table of changes in the sub-funds' securities portfolio is available free of charge at the SICAV's registered office.

h) Conversion of foreign currencies

The SICAV's accounts are kept in euro. Bank deposits, other net assets and the stock market value of securities in the portfolio in currencies other than the euro are converted into euro at the exchange rate valid on the closing date.

Revenue and expenditure in currencies other than the euro are translated into euros at the exchange rate in force on the date of payment.

i) Combined financial statements

The combined financial statements of the SICAV are drawn up in EUR and are equal to the sum of the corresponding headings in the financial statements of each sub-fund.

Notes to the financial statements as at 31 December 2022

j) Crossed Investments

Cross-investments between the Sub-Funds of the SICAV have not been subtracted from the combined statement of net assets. As at 31 December 2022, the total amount of cross-investments is EUR 27.140.315,53 and therefore the combined net assets without cross-investments is EUR 10.401.134.502,40.

k) Purchases and sales of the securities in the portfolio

The details of the sales and purchases of securities in the portfolio can be obtained from the head office of the SICAV.

I) Interest receivable on bonds

The unrealized gain/loss on future contracts including the margin calls are disclosed in the Statement of Net Asset.

The realized gain/loss on future contracts and the change in net unrealized appreciation/depreciation are disclosed in the Statement of Operation and Changes in Net Assets.

NOTE 2 - EXCHANGE RATE

1 EUR = 0.98745 CHF 1 EUR = 1.06725 USD

NOTE 3 - TAXES AND EXPENSES PAYABLE

Management fee	8,288,794.79	EUR
Depositary fees	656,837.71	EUR
Subscription tax	450,681.98	EUR
Miscellaneous fees	2,490,844.30	EUR
Total	11,887,158.78	EUR

NOTE 4 - SUBSCRIPTION, REDEMPTION AND CONVERSION FEES

Jusqu'au 30 juin 2022 :

Subscription fee

Subscriptions in the Sub-Funds are accepted on the basis of the Net Asset Value on the Valuation Day, plus an entry fee at the below rates to be paid to the agents active in distribution and placing of shares:

Classe d'actions	Droit d'entrée
A	Max. 2%
B, B CHF, B EUR HEDGED, B USD HEDGED	Max. 2%
E	Max. 1%
F, F CHF, F LC, F USD	Max. 1%
J	0%
L	Max. 2%
M, M USD	Max. 1%
N, N USD	Max. 1%
P	0%
V, V EUR HEDGED	Max. 2%
W, W CHF, W EUR HEDGED, W USD	Max. 2%

Notes to the financial statements as at 31 December 2022

Z	0%

Moreover, a subscription fee of 0.25% will be taken and totally repaid in DPAM L EQUITIES EMERGING MARKETS ESG LEADERS INDEX. This right will be taken on the initial subscription of DPAM L EQUITIES EMERGING MARKETS ESG LEADERS INDEX.

Conversion fee

Difference between the respective entry fees of the sub-funds in question, if the entry fee of the sub-fund from which investment is withdrawn is less than the entry fee of the sub-fund into which investment is made, payable to the placement agents and/or distributors.

Depuis le 1er juillet 2022

Les actions de tous les compartiments sont émises à un prix de souscription se composant de la valeur nette d'inventaire d'une action majorée d'un droit d'entrée représentant un certain pourcentage de la valeur nette d'inventaire d'une action, tel que décrit ci-dessous :

Ces droits d'entrée peuvent être ristournés en tout ou en partie à des intermédiaires agréés.

Aucune commission n'est appliquée lors d'un rachat ni lors d'une conversion vers un autre compartiment.

Amount attributable to entities and agents active in the sale and placement of the shares.

Commissions for classes that hedge exchange risk

Each class hedging currency risk may incur additional costs for this currency hedging policy. Therefore, the Management Company and/or the delegated manager may receive from each relevant share class an additional fee as set out below:

Share class	Commission Maximum % per month
A CHF Hedged, A EUR Hedged, B CHF Hedged, B EUR Hedged, B USD Hedged, E CHF Hedged, E EUR Hedged, F CHF Hedged, F EUR Hedged, I EUR Hedged, J EUR Hedged, L EUR Hedged, M EUR Hedged, N EUR Hedged, P EUR Hedged, V CHF Hedged, V EUR Hedged, W CHF Hedged, W EUR Hedged	0.010
B BIS USD Hedged, F BIS USD Hedged, V BIS USD Hedged, W BIS USD Hedged	0.005

PERFORMANCE FEES

For the following sub-funds: DPAM L Bonds EUR Short Term, DPAM L Equities Conviction Research and DPAM L Patrimonial Fund, the Manager is entitled to receive, out of the net assets of the relevant Share Class of the relevant Sub-fund, a performance fee (the "Performance Fee") calculated by comparing the performance of the Net Asset Value per Share (the "NAV") to that of the Benchmark (as defined below) over the same period of time, as well as to a High Water Mark ("HWM").

The performance reference period ("Performance Reference Period" or "PRP") is the period over which performance is measured and lasts 5 years on a rolling basis. At the end of this period, the compensation mechanism for past underperformance (or negative performance) can be reset.

The Performance Fee is calculated and accrued for each Share Class within a Sub-fund on each Valuation Day.

The Performance Fee is measured over a calculation period (hereinafter the "Calculation Period") corresponding to one financial year of the Fund.

The applicable Performance Fee rate is set at

DPAM L Bonds EUR Short Term	20% for all classes and the benchmark index used to calculate the Performance Fee is the 20% €STR composite (ticker: OISESTR Index) + 80% IBOX Euro Corporate 1-3 years (ticker: QW5C Index) (the "Benchmark").
DPAM L Equities Conviction Research	20% for all classes and the benchmark index used to calculate the Performance Fee is the MSCI Europe Net Total Return denominated in EUR (ticker: MSDEE15N) (the "Benchmark").

Notes to the financial statements as at 31 December 2022

DPAM L Patrimonial Fund	10 % f	for al		classes	and	d the	benchma	rk i	ndex	used	to c	alculate	the
	Perfo	rman	ce	Fee	is	the	Euribor	3M	(tic	ker:	EUR	003M)	(the
	"Benc	hma	rk	").									

For each Calculation Period and for the purpose of calculating the Performance Fee, each year shall commence on the last Business Day of each Fund's financial year and end on the last Business Day of the following Fund's financial year. For any Share Class launched during a Calculation Period, the first Calculation Period will last at least 12 months and will end on the last Business Day of the following financial year of the Fund.

In case of underperformance, the Calculation Period lasts for a maximum of 5 financial years applied on a rolling basis.

Only at the end of a five-year overall underperforming PRP can losses be partially compensated, on a rolling annual basis, by cancelling the first year of performance of the current PRP for the Class. Within the PRP in question, losses in the first year can be offset by gains in subsequent years in that PRP.

Each time a Calculation Period begins, the NAV and Benchmark to be taken into account for the calculation of the Performance in respect of that Calculation Period shall be based on the NAV and Benchmark of the last Business Day of the Fund's previous financial year.

The first year of the Calculation Period will begin (i):

- the last Business Day of the Fund's financial year, or
- on the launch date of each Share Class launched after the last Business Day of the Fund's financial year.

The Performance Fee is calculated on the basis of the outperformance of the NAV compared to the benchmark. It is calculated after deducting all expenses and fees (excluding any Performance Fee accrued but not yet paid) and including subscriptions (subject to the following), redemptions and dividend distributions during the relevant Calculation Period.

Notwithstanding the above, the Performance Fee is only payable if the performance of the NAV exceeds that of the Benchmark during the PRP. In this case, in order to determine the Performance Fee, the performance fee rate is applied to the difference between:

- (i) the last NAV per share calculated at the end of a Calculation Period, and
- (ii) the higher of the following two values:
 - o (ii.a) the previous NAV on which a Performance Fee has been crystallised as at the last Business Day of the Fund's financial year of the current PRP OR the initial NAV if no Performance Fee has ever been paid (only under the 1st PRP) (the "HWM"), or
 - (ii.b) that same NAV but adjusted by the change in the Benchmark Index over the same Calculation Period.

The Performance Fee is accrued and calculated on each Valuation Day. Unless otherwise stated above and subject to the provisions of the paragraph below, the accrued performance fee is payable annually in arrears at the end of the Calculation Period.

The outperformance of the NAV compared to the Benchmark Index is determined by the difference between the performance of the relevant NAV and the Benchmark Index over the same period. The NAV performance is the change in the NAV between the relevant Valuation Day and the NAV at the end of the previous Calculation Period (which will be reduced by dividends paid to shareholders). The performance of the

DPAMI

Notes to the financial statements as at 31 December 2022

Benchmark Index is the change in the Benchmark Index over the same period as the NAV performance Calculation Period.

The Investment Manager will receive the Performance Fee at the end of the Calculation Period provided that the performance of the NAV of the relevant Share Class exceeds that of the Benchmark. The crystallisation frequency is annual and occurs on the last Business Day of the Fund's financial year.

In the event of a subscription, the calculation of the Performance Fee shall be adjusted in order to prevent the subscription from having an impact on the accrued amount of the Performance Fee. For the purpose of making this adjustment, the performance of the NAV against the Benchmark on the applicable Valuation Day on the subscription date shall not be taken into account in the calculation of the Performance Fee.

The amount of this adjustment is based on the product of the number of shares subscribed to and the difference between:

- the NAV of the last Business Day of the previous Calculation Period adjusted by the performance of the Benchmark over the same period, and
- the NAV of the Valuation Day applicable to the subscription.

This accrued adjustment amount is used in the calculation of the Performance Fee until the end of the relevant period and adjusted for subsequent redemptions during the period.

The Performance Fee Benchmark will be calculated in the currency of the Share Class for all Share Classes (regardless of the currency in which the relevant Share Class is denominated, and regardless of whether the relevant Share Class is hedged).

If a Shareholder redeems Shares prior to the end of a Calculation Period, any accrued but unpaid Performance Fee in respect of such redeemed Shares will be definitively accrued and paid to the Investment Manager after the end of the Calculation Period.

No performance fere were accounteed during the year.

NOTE 6 - DEPOSITARY FEES

As compensation for its depositary services for the SICAV, the Depositary shall receive an annual flatrate fee of at a minimum rate of 0.025% p.a. (+ VAT if applicable), chargeable to each Sub-Fund, excluding trading fees and corresponding charges.

This fee is payable on a quarterly basis and calculated based on average net assets in each of the Sub-Funds during the quarter under review.

NOTE 7 - SUBSCRIPTION TAX

The SICAV is governed by Luxembourg law.

Pursuant to the legislation and regulations in force, the SICAV is subject to an annual subscription tax ("taxe d'abonnement") of 0.05% which is payable quarterly and calculated on the basis of the net assets of each Sub-Fund on the last day of each quarter.

However, for the relevant Sub-Funds, a reduced rate of 0.01% is applied to classes of shares reserved for institutional investors.

DPAMI

Notes to the financial statements as at 31 December 2022

Pursuant to Article 175(a) of the law of 17 December 2010, the net assets invested in Undertakings for Collective Investment already subject to the "taxe d'abonnement" are exempt from this tax.

NOTE 8 - BELGIAN ANNUAL TAX

A subscription tax is payable annually by foreign funds distributed in Belgium and the taxable base is the net amounts invested in Belgium. The rate of this tax is 0.0925%.

The Fund is obliged to pay this tax by 31 March each year.

For many years, the SICAV has applied to the Belgian tax authorities for recovery of the tax in order to preserve the Fund's rights, and therefore the interest of the shareholders, to benefit from a refund of the Belgian tax levied. A potential tax refund depends on the end of the legal proceedings and trials which are still ongoing

NOTE 9 - "SWING PRICING"

Swing pricing is a mechanism that allows the various sub-funds of the SICAV to settle the transaction fees arising from the subscriptions and redemptions of entering and exiting investors. With swing pricing, existing investors should, in principle, no longer indirectly incur the transaction fees, which will now be directly integrated into calculation of the NAV and borne by the entering and exiting investors.

The mechanism is applied at sub-fund level to all share classes and is not intended to address the specific requirements of individual investors.

The sub-funds apply partial swing pricing, which means that the NAV will be adjusted only when a given threshold value is reached. The Board of Directors determines a threshold value as the trigger event for net subscriptions and redemptions. This threshold value is defined per sub-fund and expressed as a percentage of the total net assets of the sub-fund in question.

In swing pricing, the NAV is adjusted to reflect the net transaction fees on each NAV calculation if this threshold value is exceeded.

The direction of the swing depends on the net flow of capital applicable to a NAV. In the case of a net inflow of capital, the swing factor linked to subscriptions of shares in the sub-fund will be added to the NAV. For net redemptions, the swing factor linked to redemptions of shares in the sub-fund in question will be deducted from the NAV. In both cases, all entering/exiting investors on a given date will have the same NAV applied.

The swing factors with which the NAV is adjusted are calculated on the basis of external brokerage charges, taxes and duties and estimated variances between the buy and sell prices of the transactions that the sub-fund carries out following share subscriptions and redemptions.

A performance fee, if any, will be applied on the basis of the non-swing NAV.

The swing factor value will be determined by the Board of Directors and may vary from one sub-fund to the next without, however, exceeding 3% of the unadjusted NAV.

For the current financial year, swing pricing was applied to the net asset values of

NOTE 14 - TRANSACTIONS WITH RELATED PARTS

Certain sub-fund of the SICAV proceeded during the period to purchases/sales of securities with related parts, acting as counterparty or as intermediary in the transactions.

According to the article 46. (3) Of the law modified of December 2010 an UCITS which invests an important part of its assets in others UCITS and\or other OPC has to indicate in its annual report the maximal percentage of the management fees supported both at the level of the UCITS as in that of UCITS and\or other OPC in which it invests.

There is no performance fee on target funds.

NOTE 15 - ADMINISTRATION AND DOMICILIATION FEES

In return for its services as central agent and domiciliary agent for the SICAV, the Management Company will receive, at the expense of each sub-fund of the SICAV, an annual fee at a maximum rate of 0.045% p.a. (+ VAT if applicable).

Compensation is payable on a quarterly basis and calculated based on average net assets in each of the sub-funds during the quarter under review.

The Management Company will also receive an annual flat-rate fee of EUR 2,000 (+ VAT if applicable) per active share class in the Sub-Fund concerned chargeable to each SICAV sub-fund, distributed among all the active share classes of the Sub-Fund concerned in proportion to the assets of each share class concerned.

NOTE 16 - INDEX TRACKING

Emerging MSCI Index

The performance of the Sub-Fund DPAM L Equities Emerging MSCI Index was -15.35% (class F) and -15.65% (class B) for the period from 1 January 2022 to 31 December 2022.

For the same period, the MSCI Emerging Index net total return in Euro decreased by -14.85%. This is due to the TER of the Sub-Fund.

World SRI MSCI Index

The performance of the Sub-Fund DPAM L Equities World SRI MSCI Index was -17.88% (class F) and -18.22% (class B) for the period from 1 January 2022 to 31 December 2022.

Notes to the financial statements as at 31 December 2022

For the same period, the MSCI ACWI SRI Index net total return in Euro decreased by 16.97%. This is due to the TER of the Sub-Fund.

US SRI MSCI Index

The performance of the Sub-Fund DPAM L Equities US SRI MSCI Index was -18.89% (class F) and -19.19% (class B) for the period from 1 January 2022 to 31 December 2022.

For the same period, the MSCI USA SRI Index net total return in Euro decreased by 18.56%. This is due to the TER of the Fund.

EMU SRI MSCI Index

The performance of the Sub-Fund DPAM L Equities EMU SRI MSCI Index was -16.51% (class B) and -19.06% (class A) for the period from 1 January 2022 to 31 December 2022.

For the same period, the MSCI EMU SRI Index net total return in Euro decreased by -16.01%. This is due to the TER of the Fund.

NOTE 17 - EVENTS DURING THE YEAR

After its liquidation on 12 December 2022, there is no liquidity left in the Sub-Fund DPAM L Corporate High Yield EUR 2023.

From 1 July 2022, the following 12 Sub-Funds will be clones of the existing Sub-Funds of DPAM Bonds L, DPAM Equities L, Degroof Petercam France SICAV and Degroof Inst. were transferred in DPAM L by merger or absorption.

Notes to the financial statements as at 31 December 2022

Concerning the manager of the DPAM L CONVERTIBLE WORLD SUSTAINABLE and DPAM L BONDS EUR SHORT TERM Sub-Funds, since 2 May 2022, the institutional management team of DEGROOF PETERCAM WEALTH MANAGEMENT has been transferred to the branch of DEGROOF PETERCAM ASSET MANAGEMENT S.A. in France, called DPAM Branch France and located at 44 rue de Lisbonne, 75008 Paris, France.

For DPAM L BONDS EUR CORPORATE HIGH YIELD, DPAM L BONDS HIGHER YIELD, DPAM L BONDS UNIVERSALIS UNCONSTRAINED, DPAM L GLOBAL TARGET INCOME and DPAM L PATRIMONIAL FUND, an SFDR reclassification from article 6 to article 8 took effect on 21 June 2022, after one month's notice of free exit from 20 May 2022 to 20 June 2022.

Impact of the Russian invasion in Ukraine.

The war in Ukraine has led to a surge in energy prices, highlighting the fragility of the European economy in the face of excessive dependence on its gas and oil needs. The rise in commodity prices is one of the primary channels for transmitting risk in the global economy, particularly through inflation. Although it has peaked in both Europe and the United States, inflation could remain permanently higher than in the last two decades. As a result, central banks around the world must remain vigilant in trying to combine rate hikes to slow inflation, without putting the economy into recession. The balance will remain difficult.

Russia is isolated from Western economies. However, it is finding trade partners to continue to trade with, such as China and India.

The sanctions against Russia will continue. Access to Russian financial markets will remain prohibited for some time. Even if changes were to occur in the short term, it is virtually impossible for Russia to regain its position in the equity or bond indices. The ruble is no longer tradable in the foreign exchange markets.

This war will leave traces for a long time, but it is impossible to predict a short or medium term scenario. The informed investor will take into account all these uncertainties when considering his investments.

International sanctions have been imposed by a large number of countries against Russia following the invasion of Ukraine, which began in late February 2022. Belarus has also been sanctioned. The sanctions were imposed by the United States, the European Union (EU) and other countries and international organisations.

The sanctions are wide-ranging, targeting Vladimir Putin and other members of the government, individuals, banks, businesses, currency exchanges, bank transfers, exports, imports and cutting off "certain Russian banks" from SWIFT, triggering the Russian financial crisis and a massive international boycott of Russia and Belarus.

The European Union thus imposed the most severe financial sanctions ever.

Due to the current market situation and the halt in trading, in agreement with the Management Company, the Board of Directors has decided to value the Russian shares at 0.00001 for prudential purposes.

This decision took effect on 9 March 2022, at the time of the NAV calculation, until accurate information is available to assess the residual value of these shares.

Notes to the financial statements as at 31 December 2022

NOTE 18 - EVENTS AFTER THE YEAR

The DPAM L BONDS EMERGING MARKETS CORPORATE SUSTAINABLE sub-fund was launched on 18 January 2023.

The Board of Directors has decided to liquidate the DPAM L CONVERTIBLE EUROPE and DPAM L CONVERTIBLE WORLD SUSTAINABLE sub-funds at the net asset value dated 3 February 2023 (calculated on 6 February 2023). The issue and redemption of shares in the sub-funds (as well as conversions to these sub-funds) are suspended as of 26 January 2023.

The underlying assets of the sub-funds will be liquidated in the best interests of the shareholders.

DPAMI

Additional information (unaudited) as at 31 December 2022

Overall risk assessment

Each sub-fund of the SICAV must ensure that its overall exposure to financial derivative instruments does not exceed its total net assets.

Overall exposure is a measurement designed to limit the leverage generated for each subfund by using derivatives. The method used to calculate overall exposure for each Sub-Fund of the SICAV is the 'commitment method'. The commitment method entails converting positions on derivatives into equivalent positions on underlying assets and then aggregating the market value of these equivalent positions.

Remuneration policies Degroof Petercam Asset Services

1) General

Degroof Petercam Asset Services S.A. ("DPAS") has implemented a Remuneration Policy that is designed as not to encourage taking excessive risks. In that context, it integrates in its performance management system, risk criteria specific to the activities of the business units concerned. DPAS has implemented a series of safeguards that refrain staff from taking undue risk compared to the activity profile.

The governance structure of the Remuneration Policy ("the Policy") aims at preventing internal conflicts of interest. The Policy is formulated by the Remuneration Policy and approved by the Management Board. The Policy follows a defined process establishing the principles, the approval, the communication, the implementation, the review and the update of the Policy involving the Management Board, Human Resources, Internal Audit and other control functions.

Performance is assessed at Group and DPAS level. Individual staff assessments are based on a weighting of financial and non-financial targets linked to the specific job scope and role. As such, the principle of individual performance assessment is based on an assessment of objectives reached as well as an appreciation of the employee's long-term value creation. Furthermore, the performance reflects an assessment of business and interpersonal skills and is linked to the achievement of the individual. The criteria applied to establish fixed remuneration are job complexity, level of responsibility, performance and local market conditions.

2) Methodology

DPAS is dual-licenced as a chapter 15 Management Company under the law of 17 December 2010 relating to Undertakings for Collective Investment in Transferable Securities, and as an AIFM under law of 12 July 2013 on Alternative Investment Fund Managers.

In line with those regulations, the responsibilities of DPAS in its two roles are very similar. DPAS considers a fair assumption to state that its staff is remunerated similarly for tasks related to Undertakings for Collective Investment in Transferable Securities ("UCITS") and Alternative Investment Funds ("AIF").

As a consequence, the remuneration, as previously mentioned, is the ratio between the assets under management ("AUM") of all the UCITS under the responsibility of DPAS and the total AUM plus the Assets Under Administration ("AUA"). On the basis of the AUM and ASA calculated on 31 December 2022, this ratio amounts to 57.78%.

DPAMI

Additional information (unaudited) as at 31 December 2022

As of 31 December 2022, DPAS is Management Company for a total AuM of 28.438 billion EUR for the UCITS.

In order to assess the proportion of the remuneration of the management company's staff attributable to all the UCITS managed, the above-mentioned ratio must be applied to the annual remuneration of the staff concerned.

In order to assess the proportion of the remuneration of the management company's staff attributable to this UCITS only, the ratio resulting from the ratio between the AUM of this UCITS and the total AUM of all UCITS must be applied to the annual remuneration of the staff concerned.

3) Allocated remuneration by category of staff

The table below represents the allocation of total remuneration of the employees of the Management Company based on the AuM of all UCITS, by category of staff:

Type of staff	Number of beneficiaries (*)	Total remuneration (in EUR)	Fixed remuneration paid (in EUR)	Variable remuneration paid (in EUR)
Senior Management (**)	4	725,013	529,072	195,941
Identified staff (***)	2	193,105	164,214	28,891
Other staff	117	5,297,260	4,862,505	434,755
	123	6,215,378	5,555,791	659,587

^(*) No proportionality applied

All figures refer to the 2022 calendar year.

4) Carried Interest paid by the UCITS

No employee of the Management Company receives Carried Interest paid by any UCITS.

- 5) Remuneration Policy review
- Results of reviews on the management company's annual review of the general principles of the compensation policy and their implementation:

The DPAS Compensation Policy was reviewed and updated in 2022. The DPAS Remuneration Policy was validated by the Board of Directors on 29 June 2022. No irregularities have been identified.

- Significant change to the adopted compensation policy:

The annual review of the Remuneration Policy did not result in any significant changes to the Remuneration Policy.

^(**) Management Board

^(***) Identified staff not already reported in Senior Management

Additional information (unaudited) as at 31 December 2022

Directors' remuneration

The remuneration of the Directors for the current financial year amounts to a total of EUR 20,000.

Transparency of securities financing transactions and reuse:

In accordance with Article 13 and Section A of the Annex to Regulation EU 2015/2365 (hereinafter the "Regulation"), the SICAV must inform investors of its use of securities financing transactions and total return swaps in the annual and semi-annual reports.

The portfolio does not contain any assets on loan as of the date of this report.

Periodic information for financial products referred to in Article 8(1), (2) and (2a) of Regulation (EU) 2019/2088 and in the first paragraph of Article 6 of Regulation (EU) 2020/852

Product name:

DPAM L BALANCED CONSERVATIVE SUSTAINABLE

Legal entity identifier: 549300IW5Z0SDSHBCL04

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020 /852 establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable	e investment objective?
Yes	● ○ ※ No
It has made sustainable investments with an environmental objective:	It promoted environmental and/or social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 58.15% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It has made sustainable investments with a social objective:%	It promoted E/S characteristics, but did not make any sustainable investments

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the Reference Period (01/01/2022-31/12/2022), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviors that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices and best efforts.

Derivative financial products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting environmental and/or social characteristics.

How did the sustainability indicators perform?

During the Reference Period, the Sub-fund achieved the following sustainability indicators:

For investments in equities or corporate bonds:

- a. The Sub-fund has not been exposed to companies considered to be non-compliant with Global Standards;
- b. The Sub-fund has not been exposed to companies involved in controversial activities according to the definitions and thresholds stipulated by the Manager's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-asset-

management/image/upload/v1614006839/DPAM policy Controversial activities.pdf);

- c. The Sub-fund has no exposure to companies facing ESG controversies of maximum severity on environmental or social issues;
- d. The Sub-fund has a better ESG profile than that of its investment universe, prior to the application of the ESG and sustainable investment selection methodology, distinguishing between companies and governments: 60.29 (funds) versus 57.95 (benchmark) (at 31/12/2022).
- e. The Sub-fund has a greenhouse gas emissions intensity of the investee companies of the Sub-fund below the average greenhouse gas emissions intensity of the investment universe prior to the application of the ESG and sustainable investment selection methodology: 703.43 tCO2e/\$Mio revenues (funds) versus 944.72 tCO2e/\$Mio revenues (benchmark) (at 31/12/2022).

For investments in sovereign bonds:

- The Sub-fund has not been exposed to issuers that do not meet minimum democratic requirements;
- b. The Sub-fund invested in sovereign bonds taking into account the analysis and rating of the country's sustainability profile using the proprietary model defined by the Manager through its country sustainability advisory board.

...and compared to previous periods?

Not applicable

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

For the Reference Period, the Sub-fund would aim to have at least 30% sustainable investments i.e. investments aimed at:

- companies aligned with one of the first two objectives of the EU taxonomy (climate change mitigation and adaptation);
- companies aiming to make a net positive contribution to the United Nations (UN) Sustainable Development Goals ("SDGs"), which are environmental in nature;
- companies aiming to make a net positive contribution to the social SDGs.

In addition, at the level of the overall portfolio, a minimum of 20% of companies aligned with the EU Taxonomy making a net positive¹ contribution to all SDGs.

For the Reference Period, the Sub-fund had 58.15% sustainable investments. These sustainable investments have contributed to the Sub-fund's partial sustainable investment objective in the following ways:

- 5.8% of the Sub-fund's portfolio contributed to the achievement of the environmental objectives defined by the EU Taxonomy (climate change mitigation and adaptation);
- 36.22% of the Sub-fund's portfolio contributed to the achievement of environmental objectives not aligned with the EU Taxonomy;
- 51.69% of the Sub-fund's portfolio contributed to the achievement of social objectives;
- 51.89% of the Sub-fund's portfolio was invested in companies making a net positive contribution to the SDGs (including impact bonds).

¹ The net positive contribution is the difference between the positive and negative impact contributions and is calculated at the level of the invested company and the overall portfolio. Based on the SDGs framework, the net positive contribution takes into account on the one hand (1) the extent to which the invested company's products and services contribute to the achievement of the SDGs and on the other hand (2) the negative impacts of their activities along the value chain.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Manager ensures that the Sub-fund's sustainable investments during the Reference Period do not materially undermine an environmentally or socially sustainable investment objective by:

Corporate issuer level:

- Consideration of the principal adverse impacts on the mandatory sustainability factors (hereinafter "PAIs") listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 which allows for the reduction of the negative impacts of the investment, including:
 - by incorporating several elements to avoid and/or reduce its exposure to activities or behaviours that could affect another environmental or social objective (such as the Global Standards compliance filter and the exclusion of ESG controversies of maximum severity or activities most harmful to other environmental and/or social objectives);
 - via an engagement process with investee companies, in accordance with its Engagement Policy, which can be accessed at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006835/DPAM policy engagement.pdf. The commitments made by the Manager are also the subject of an annual report available at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006835/DPAM report engagement activity. pdf).
- An impact calculation methodology which takes into account the positive and negative contribution of the company's products and services to the SDGs in order to optimise the net positive (resulting) contribution.

Government issuer level:

Consideration of the principal adverse impacts on the mandatory sustainability factors (hereinafter "PAIs") listed in Table 1 of Annex 1 "Indicators for investments in sovereign or supranational issuers" of the Delegated Regulation (EU) 2022/1288 which allows for the reduction of the negative impacts of the investment, including:

 Via a sustainability model based on environmental, social and governance factors such as carbon intensity or human rights that impact the score and quintile of an OECD member country in the sustainability ranking.

Over the Reference Period, the Sub-fund has accordingly incorporated the principal adverse effects as described below in the relevant section.

 Moreover, the Sub-fund has been attentive to the positive and negative contributions of investments to all 17 Sustainable Development Goals and has met its target of having at least 20% of the Sub-fund's assets invested in accordance with the EU Taxonomy or with a net positive contribution to the 17 SDGs or in impact bonds.

Overall portfolio level:

 A rule of a minimum 20% of assets invested in equities of bonds of companies aligned with the EU Taxonomy or in net positive contribution on all 17 SDGs. During the Reference Period, a minimum 51.89% of assets aligned with the EU Taxonomy or making a net positive contribution to all 17 SDGs.

How were the indicators for adverse impacts on sustainability factors taken into account?

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAI") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to the Manager's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated into the entire research and investment process.

In concrete terms, the PAIs have been integrated into the various stages of the Subfund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

- 1) Firstly, with regard to environmental PAIs:
 - a) they have been analyzed and monitored at the level of the invested issuers, particularly with respect to PAI related to greenhouse gas emissions and energy performance, including through the Manager's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD).
 - Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.
 - b) After that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with global standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.

- c) the exclusion filter for companies involved in controversial activities (in accordance with the Manager's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM_policy_Controversial_activities.pdf). The exclusion of companies involved in thermal coal production, for example, allows for better coverage of indicators such as biodiversity and greenhouse gas emissions.
- d) The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).
- e) Similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impact their best-in-class ranking.
- 2) Second, the social PAIs were systematically analyzed according to the stages of the research and investment process:
 - a) the Global Standards compliance filter is structured around human rights, labor rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.
 - b) the exclusion filter for companies involved in controversial activities (definitions and thresholds in accordance with the Manager's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM policy Controver sial_activities.pdf). In this way, companies involved in controversial armaments were directly excluded from the investment universe.
 - c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.
 - d) Similarly, social indicators have been included in the analysis of the ESG profile of companies and impact their best-in-class ranking.

The Manager's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006836/DPAM policy Sustainable and Responsible Investment.pdf and DPAM_report_TCFD.pdf (cloudinary.com).

For investments in sovereign bonds:

The Sub-fund benefits from the analysis and research of the proprietary country sustainability model developed by the Investment Manager:

- The first PAI relates to environmental issues and focuses on the greenhouse gas emission intensity of the investee countries. The indicator is an integral component of the country sustainability model that the Manager developed for its sovereign bond strategies. Consequently, it is included in the country's sustainability score and can influence it positively or negatively depending on its level and development compared to other issuer countries.
- 2) The second PAI relates to social issues and focuses on issues of social breaches. The Manager's country sustainability model monitors a number of indicators on this issue, such as respect for civil liberties and political rights, respect for human rights and the level of violence within the country, commitment to key labour law conventions, the issue of equal opportunities and distribution of wealth, etc. These different indicators are included in the country's sustainability score and may influence it positively or negatively depending on its level and evolution compared to other emitting countries.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

For investments in shares or corporate bonds, the first stage of the Sub-fund's investment is based on a normative screening, which includes compliance with Global Standards based on human rights, labour rights and the prevention of corruption. These include the OECD Guidelines for Multinational Enterprises and the UN Guidelines on Business and Human Rights. Companies that do not meet these criteria are excluded from the eligible investment universe. The Sub-fund has therefore not been invested during the Reference Period in any company that is deemed not to comply with these principles.

For investments in sovereign bonds: The principles defended by the above references are mainly related to the respect of human and labour rights. Our country sustainability model monitors a number of indicators on these issues, such as respect for civil liberties and political rights, respect for human rights and the level of violence within the country, commitment to key labour law conventions, the issue of equal opportunities, etc. These different indicators are included in the country's sustainability score and can influence it positively or negatively depending on its level and evolution compared to other emitting countries.

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAI") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288, as amended, for investments in shares or corporate bonds.

The PAIs are intrinsically linked to the Manager's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

1) Firstly, with regard to environmental PAIs:

a) they have been analyzed and monitored at the level of the invested issuers, particularly with respect to PAI related to greenhouse gas emissions and energy performance, including through the Manager's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD).

Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

b) After that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with global standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- c) the exclusion filter for companies involved in controversial activities (in accordance with the Manager's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM policy Controversial activities.pdf). The exclusion of companies involved in thermal coal production, for example, allows for better coverage of indicators such as biodiversity and greenhouse gas emissions. The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).
- d) Similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impact their best-in-class ranking.
- 2) Second, the social PAIs were systematically analyzed according to the stages of the research and investment process:
 - a) the Global Standards compliance filter is structured around human rights, labor rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.
 - b) the exclusion filter for companies involved in controversial activities (definitions and thresholds in accordance with the Manager's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM policy Controversial act ivities.pdf). In this way, companies involved in controversial armaments were directly excluded from the investment universe.
 - c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.
 - d) Similarly, social indicators are included in the analysis of the ESG profile of companies and impact their best-in-class ranking.

The Manager's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006836/DPAM policy Sustainable and Responsible Investment.pdf and DPAM_report_TCFD.pdf (cloudinary.com).

For investments in sovereign bonds: Yes, the Sub-fund takes into account the environmental and social PAIs listed in Table 1 of Annex I of the Delegated

Regulation (EU) 2022/1288, as amended. The first PAI relates to environmental issues and focuses on the greenhouse gas emission intensity of the investee countries. The indicator is an integral component of the country sustainability model that the Manager developed for its sovereign bond strategies. Consequently, it is included in the country's sustainability score and can influence it positively or negatively depending on its level and development compared to other issuer countries. This has an impact on its best-in-class ranking.

The second PAI relates to social issues and focuses on issues of social breaches. Our country sustainability model monitors a number of indicators on this issue, such as respect for civil liberties and political rights, respect for human rights and the level of violence within the country, commitment to key labour law conventions, the issue of equal opportunities and distribution of wealth, etc. These different indicators are included in the country's sustainability score and can influence it positively or negatively depending on its level and evolution compared to other emitting countries. This has an impact on its best-in-class ranking.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

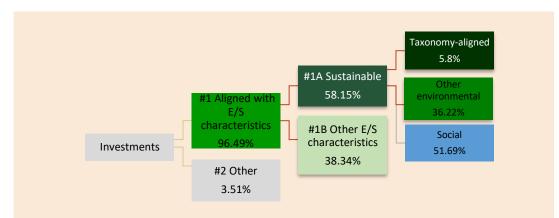

During the Reference Period, by applying the investment strategy, the Sub-fund invested 96.49% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as "#1 Aligned with E/S characteristics").

The Sub-fund invests at least 58.15% of its assets in sustainable investments with environmental or social objectives (in the table referred to as "#1A Sustainable").

The percentage of the portfolio invested in sustainable investments that meet an environmental and/or social objective (#1A Sustainable) is calculated using the cascade methodology described in the prospectus (section "What are the sustainable investment objectives that the financial product intends to partially achieve and how does the sustainable investment contribute to these objectives?"), which excludes double counting at the cascade level: an investment qualifying as sustainable at the level of a first element of the cascade is not then taken into account at the level of subsequent elements of the cascade.

In contrast, the percentages of the two sub-categories of sustainable investments (#1A Sustainable) in the portfolio invested in environmental investments other than those aligned with the taxonomy and social investments may involve some double counting. All portfolio companies are analysed against both (i) the environmental SDGs (and therefore may fall into the sub-category 'other environmental investments' even if they are also considered to be aligned with the taxonomy and/or as a social sustainable investment) and (ii) the social SDGs (and therefore may fall into the sub-

category 'social investments' even if they are also considered to be aligned with the taxonomy and/or as an other environmental investment).

- **#1** Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2** Other includes the remaining investments of the financial product which a re neither aligned with the environmental or social characteristics, nor a re qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Sustainable investments that are aligned with the EU Taxonomy (referred to in the table as "EU Taxonomy aligned") consist of investments in companies whose economic activities substantially contribute to the environmental objectives of climate change mitigation and/or adaptation as defined by the EU Taxonomy in accordance with the eligibility and technical selection criteria ("EU Taxonomy Technical Selection Criteria").

The Manager's methodology for assessing the EU Taxonomy alignment of investee companies is based on data provided either by the investee companies or by third party providers. The latter use a mixed approach:

- Firstly, a direct mapping between the business activities in their own sectoral classification system and the economic activities covered by the Technical Selection Criteria of the EU Taxonomy.
- Secondly, any business activity that could not be directly mapped is examined through a bottom-up assessment of its alignment with the EU Taxonomy's Technical Selection Criteria.
- Any economic activity remaining after the first and second steps is considered not to be aligned with the EU Taxonomy.

In principle, the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is assessed by means of turnover (based on performance data provided by third-party suppliers).

Where information on the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy cannot be readily obtained from information published by the invested issuers, the Manager shall rely on equivalent information obtained by third-party providers from the invested issuers.

Applying this methodology, over the Reference Period, the Sub-fund is aligned for 5.8% with the first two objectives of the Taxonomy (environmental objectives of climate change mitigation and/or adaptation), exceeding its commitment of a minimum target of 0.1%.

The compliance of these investments with the requirements set out in Article 3 of the EU Taxonomy is not subject to a guarantee provided by one or more auditors or a review by one or more auditors or a review by one or more third parties.

Has the financial product invested in fossil gas and/or nuclear energy activities in line with the EU Taxonomy?²

-

² Fossil gas and/or nuclear activities will only be compliant with the EU Taxonomy if they contribute to mitigating climate change ('climate change mitigation') and do not significantly undermine an objective of the EU Taxonomy - see explanatory note in the left margin. The full criteria for fossil gas and nuclear energy economic activities that are in line with the EU Taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

Yes: [specify below, and detail in the graphics in the box].

In fossil gas

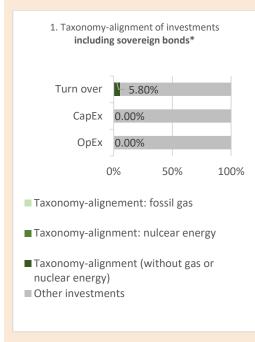

In nuclear energy

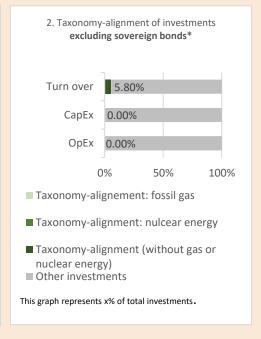

No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the "greenness" of investee companies today.
- capital expenditure (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not

yet available.

What was the share of investments made in transitional and enabling activities?

Transitional activities	Enabling activities
0.02682%	0.000008712%

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Based on the approach described below, the Sub-fund invested 36.22% of its portfolio in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

Only two of the six environmental objectives defined by the EU Taxonomy are currently covered by the regulatory framework of the EU Taxonomy Technical Selection Criteria that determine alignment with the EU Taxonomy (adaptation and climate change mitigation). Similar criteria for the other four environmental objectives have yet to be developed. In the meantime, the Manager wishes to continue to make sustainable investments that contribute to environmental objectives not covered by the current EU Taxonomy Technical Selection Criteria, including key environmental objectives such as the sustainable use and protection of water and marine resources, the prevention and control of pollution and the protection and restoration of biodiversity and ecosystems. To this end, the Manager has adopted and defined a specific framework for identifying the environmental objectives of these sustainable investments and assessing their contribution to these objectives. This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the UN Sustainable Development Goals (SDGs) that can be attributed to environmental objectives.

The Manager will review and reassess this framework when the EU Taxonomy Technical Selection Criteria have been implemented for the other four environmental objectives defined by the EU Taxonomy.

What was the share of socially sustainable investments?

Based on the approach described below, the Sub-fund invested 51.69% of its portfolio in sustainable investments with a social objective over the Reference Period. A European Taxonomy for social sustainability goals has yet to be developed. In the meantime, the Manager wishes to continue to make sustainable investments that contribute to the achievement of key social goals such as zero hunger, quality education and peace, justice and strong institutions. To this end, the Manager has adopted and defined a specific framework for identifying the social objectives of these sustainable investments and assessing their contribution to these objectives. This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the UN Sustainable Development Goals (SDGs) that can be attributed to social objectives. The Manager will review and reassess this

framework when the EU Taxonomy Technical Selection Criteria have been implemented for the social objectives under the EU Taxonomy.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding the:

- Liquid assets
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics.

The Sub-fund may invest or hold these types of assets for the purpose of achieving investment objectives, portfolio diversification, liquidity management and risk hedging.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 3.51% cash. There are no minimum environmental or social guarantees on this allocation.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e.:

For investments in equities or corporate bonds:

On a quarterly basis, a normative screening has been established based on compliance with Global Standards.

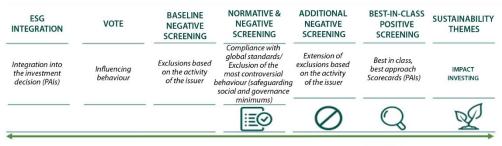

Subsequently, companies meeting the thresholds as defined in the activities excluded by the Manager's controversial activities policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

Finally, on a semi-annual basis, the resulting universe was subject to a "best-in-class" ranking in order to retain only the best ESG profiles of companies on a list of securities eligible for management.

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector. In

addition, this qualitative analysis also includes consideration of the sustainability theme and the issuer's total contribution to the UN Sustainable Development Goals.

ARTICLE 8+

For investments in sovereign bonds:

Normative screening was carried out on a semi-annual basis, based on the minimum democratic requirements that countries must meet, and countries were ranked on the basis of their sustainability profile defined by the Manager's proprietary model; the last quintile was excluded from investment. Accordingly, the countries eligible for the issuance of sovereign bonds have been defined for the universe eligible for management.

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How does the reference benchmark differ from a broad market index?
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?
- How did this financial product perform compared with the reference benchmark?
- How did this financial product perform compared with the broad market index?

Not applicable

APPENDIX IV

Periodic information for financial products referred to in Article 8(1), (2) and (2a) of Regulation (EU) 2019/2088 and in the first paragraph of Article 6 of Regulation (EU) 2020/852

Product name:DPAM L EQUITIES EMU SRI MSCI INDEX

Legal entity identifier: 391200SGB2MDX2L3YO19

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852 establishing a list of environmentally sustainable economic activities. This regulation does not set out a list socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics Did this financial product have a sustainable investment objective?

Yes	● ○ ≭ No
It made sustainable investments with an environmental objective:% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promoted environmental and/or social (E/S) characteristics and although it did not have a sustainable investment target, it had a sustainable investment ratio of 90.21%. with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environ mentally sustainable under the EU Taxonomy with a social objective
It made sustainable investments with a social objective:%	It promoted E/S features, but did not make sustainable investments

Sustainability indicators assess how the environmental or social characteristics promoted by

the financial product are

achieved.

To what extent have the environmental and/or social characteristics promoted by this financial product been achieved?

During the Reference Period (01/01/2022-31/12/2022), the Sub-fund was passively managed and aimed to physically replicate the MSCI EMU SRI index ("the Index").

The Index provides exposure to European large and mid-cap companies with high ESG performance relative to their peers in the same sector ("Best-in-Class" 25%).

By construction of the Replicated Index, the Sub-fund aimed to improve the environmental and social characteristics compared to the starting universe, the parent MSCI EMU Index ("Parent Index").

In addition, the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviors that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices and best efforts.

How did the sustainability indicators perform?

During the Reference Period, the sustainability indicators used to measure the attainment of all of the environmental and social characteristics promoted by the Sub-fund corresponded to the binding investment restrictions of the Index it aims to replicate (some of the indicators are compared to the Parent Index):

- a. The Sub-fund had zero exposure to companies deemed to be non-compliant with the UN Global Compact and international standards (as defined for example in the UN Declaration on Human Rights, or the ILO Declaration on Fundamental Principles and Rights at Work);
- b. The Sub-fund had zero exposure to companies involved in controversial economic activities, based on the exposure limits imposed by the index construction methodology including any companies owning reserves (proven or probable) of fossil fuels, any companies involved in non-conventional oil and gas extraction, thermal coal extraction and coal-fired power generation;
- c. Zero exposure to companies involved in severe ESG controversies;
- d. A portfolio average greenhouse gas emissions intensity below the average greenhouse gas emissions intensity of the Parent Index universe: 712.98 tCO2e/\$ mn revenues (funds) versus 998.11 tCO2e/\$ mn revenues (benchmark) (at 31/12/2022).
- e. An average ESG Score (MSCI rating) above the average ESG score of the Parent Index universe. 9.04 (funds) versus 7.84 (benchmark) (31/12/2022).

The methodologies used to construct the indices are available on the MSCI.com website: https://www.msci.com/index-methodology("MSCI SRI Indexes Methodology").

Further information, including methodologies for calculating ESG scores and controversy levels, can be found on the MSCI website: www.msci.com.

...and in comparison with previous periods?

Not applicable

What were the objectives of the sustainable investments that the financial product partially intended to make and how did the sustainable investment contribute to such objectives?

For the Reference Period, the Sub-fund would aim to have at least 50% sustainable investments i.e. investments aimed at:

- companies aiming to make a net positive contribution¹ to the United Nations (UN)
 Sustainable Development Goals ("SDGs"), which are environmental in nature;
- companies aiming to make a net positive contribution to the social SDGs.

For the Reference Period, the Sub-fund had 90.21% sustainable investments. These sustainable investments have contributed to the Sub-fund's partial sustainable investment objective in the following ways:

- 2% of the Sub-fund's portfolio contributed to the achievement of the environmental objectives defined by the EU Taxonomy (climate change mitigation and adaptation).
- 53.21% of the Sub-fund's portfolio contributed to the achievement of environmental objectives not aligned with the EU Taxonomy.
- 89.83% of the Sub-fund's portfolio contributed to the achievement of social objectives.
- 64.4% of the Sub-fund's portfolio was invested in companies making a net positive contribution to the SDGs (including impact bonds).

To what extent did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

By construction of the Replicated Index, the Sub-fund's strategy incorporated several elements to avoid and/or reduce its exposure to activities or behaviours that could affect another environmental or social objective (such as the exclusion of ESG controversies of maximum severity or activities most detrimental to other environmental and/or social objectives (e.g. thermal coal, ownership of fossil fuel reserves, tobacco, arms, etc.).

¹ The net positive contribution is the difference between the positive and negative impact contributions and is calculated at the level of the invested company and the overall portfolio. Based on the SDGs framework, the net positive contribution takes into account on the one hand (1) the extent to which the invested company's products and services contribute to the achievement of the SDGs and on the other hand (2) the negative impacts of their activities along the value chain.

In particular, the Sub-fund did not invest in companies involved in the most severe controversies and which may indicate a violation of the OECD Guidelines for Multinational Enterprises and/or the principles of the UN Global Compact or involvement in the most serious negative impacts.

How were the indicators for adverse impacts on sustainability factors taken into account?

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

In concrete terms, the PAIs were integrated into the different stages of the construction of the Index which the Sub-fund replicated passively:

1) Firstly, with regard to environmental PAIs:

- a) the Global Standards compliance filter includes a filter on environmental protection.
- b) the filtering of companies involved in economic sectors and activities that are subject to debate as to their ethical and sustainable character (e.g.: nuclear energy production, tobacco, thermal coal, non-conventional oil and gas).
- c) the filter on ESG score and level of controversy as defined by MSCI also includes controversies related to environmental issues, such as the environmental impact of company operations (emissions, waste, energy use, biodiversity and water consumption), the environmental impact on the supply chain and the impact of products and services (carbon and environmental impact).

2) Secondly, with regard to social PAIs:

- a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. In addition, the filter for companies involved in the selection of key ESG controversies includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.
- b) the exclusion filter for companies involved in controversial activities (inter alia: exclusion of companies involved in non-conventional armaments);
- c) the exclusion filter for companies involved in major ESG controversies on social issues.
- d) the best-in-class classification, which is based on an analysis of the ESG profile based in particular on the social PAIs.

The approach and processes are described in more detail in the documents available at $\underline{www.msci.com}$.

The methodologies for constructing the indices can be found at https://www.msci.com/index-methodology ("MSCI ESG Leaders Indexes Methodology").

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption

and antibribery matters.

Were the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The first stage of the Sub-fund's investment is based on a normative screening, which includes compliance with Global Standards based on human rights, labour rights and the prevention of corruption. These include the OECD Guidelines for Multinational Enterprises and the UN Guidelines on Business and Human Rights. Companies that do not meet these criteria are excluded from the eligible investment universe. The Subfund has therefore not been invested during the Reference Period in any company that is deemed not to comply with these principles.

The EU Taxonomy sets out a "does not significantly harm" principle by which Taxonomyaligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "does not significantly harm" principle only apples to the underlying investments of the financial product that consider the European Union's criteria regarding environmentally sustainable economic activities. The investments underlying the remaining share of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not cause significant harm to environmental or social objectives.

How has this financial product considered principal adverse impacts on sustainability factors?

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

In concrete terms, the PAIs were integrated into the different stages of the construction of the Index which the Sub-fund replicated passively:

- 1) Firstly, with regard to environmental PAIs:
 - a) the Global Standards compliance filter includes a filter on environmental protection.
 - b) the filtering of companies involved in economic sectors and activities that are subject to debate as to their ethical and sustainable character (e.g.: nuclear energy production, tobacco, thermal coal, non-conventional oil and gas).
 - c) the filter on ESG score and level of controversy as defined by MSCI also includes controversies related to environmental issues, such as the environmental

impact of company operations (emissions, waste, energy use, biodiversity and water consumption), the environmental impact on the supply chain and the impact of products and services (carbon and environmental impact).

2) Secondly, with regard to social PAIs:

- a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. In addition, the filter for companies involved in the selection of key ESG controversies includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.
- b) the exclusion filter for companies involved in controversial activities (inter alia: exclusion of companies involved in non-conventional armaments);
- c) the exclusion filter for companies involved in major ESG controversies on social issues.
- d) the best-in-class classification, which is based on an analysis of the ESG profile based in particular on the social PAIs.

The approach and processes are described in more detail in the documents available at www.msci.com.

The methodologies for constructing the indices can be found at https://www.msci.com/index-methodology ("MSCI ESG Leaders Indexes Methodology").

What were the main investments of this financial product?

The list includes the investments that constitute the largest share of the financial product's investments during the reference period, namely: 31/12/2022

Largest investments	Sector	% of assets	Country
ASML HOLDING	MANUFACTURING	17.10%	Netherlands
ALLIANZ (NOM)	FINANCIAL AND INSURANCE ACTIVITIES	6.85%	Germany
L'OREAL SA	MANUFACTURING	6.73%	France
SCHNEIDER ELECTRIC	MANUFACTURING	5.92%	France
PROSUS NV	INFORMATION AND COMMUNICATION	4.46%	Netherlands
ESSILOR	MANUFACTURING	4.10%	France
AXA S.A.	FINANCIAL AND INSURANCE ACTIVITIES	4.07%	France
HERMES INTERNATIONAL	MANUFACTURING	3.82%	France
INTESA SANPAOLO (ORD)	FINANCIAL AND INSURANCE ACTIVITIES	2.91%	Italy
BANCO BILBAO VIZCAYA	FINANCIAL AND INSURANCE ACTIVITIES		·
ARGENTARIA		2.87%	Spain
DANONE	MANUFACTURING	2.64%	France
DEUTSCHE BOERSE AG	FINANCIAL AND INSURANCE ACTIVITIES	2.55%	Germany
CRH	MANUFACTURING	2.34%	Ireland
INDUSTRIA DE DISENO TEXTIL SA	MANUFACTURING	2.25%	Spain
WOLTERS KLUWER NV	INFORMATION AND COMMUNICATION	2.17%	Netherlands
	I		

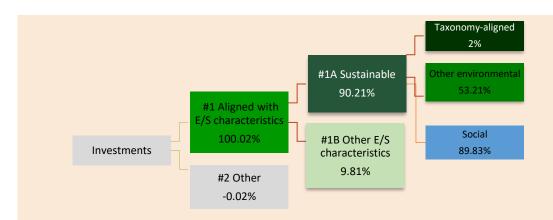

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

What was the ratio of sustainability-related investments?

During the Reference Period, by applying the investment strategy, the Sub-fund invested 100.02% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as "#1 Aligned with E/S characteristics").

The Sub-fund invested at least 90.21% of its assets in sustainable investments with environmental or social objectives (in the table referred to as "#1A Sustainable").

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- the sub-category **#1A Sustainable** covers sustainable investments at the environmental or social level.
- the sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The percentage of the portfolio invested in sustainable investments that meet an environmental and/or social objective (#1A Sustainable) is calculated using the cascade methodology described in the prospectus (section "What are the sustainable investment objectives that the financial product intends to partially achieve and how does the sustainable investment contribute to these objectives?"), which excludes double counting at the cascade level: an investment qualifying as sustainable at the level of a first element of the cascade is not then taken into account at the level of subsequent elements of the cascade.

In contrast, the percentages of the two sub-categories of sustainable investments (#1A Sustainable) in the portfolio invested in environmental investments other than those aligned with the taxonomy and social investments may involve some double counting. All portfolio companies are analysed against both (i) the environmental SDGs (and therefore may fall into the sub-category "other environmental investments" even if they are also considered to be aligned with the taxonomy and/or as a social sustainable investment) and

(ii) the social SDGs (and therefore may fall into the sub-category "social investments" even if they are also considered to be aligned with the taxonomy and/or as an other environmental investment).

In which economic sectors were investments made?

Sector	Sub-sector	% of assets
Manufacturing	Manufacture of computer, electronic and optical products	17.51%
Financial and insurance activities	Insurance, reinsurance and pension funding, except compulsory	11.80%
	social security	
Manufacturing	Manufacture of chemicals and chemical products	9.34%
Financial and insurance activities	Financial service activities, except insurance and pension funding	7.03%
Manufacturing	Manufacture of electrical equipment	6.92%
Information and communication	Publishing activities	4.46%
Manufacturing	Other manufacturing	4.10%
Manufacturing	Manufacture of textiles	3.82%
Manufacturing	Manufacture of food products	3.75%
Manufacturing	Manufacture of basic pharmaceutical products and pharmaceutical	2.76%
	preparations	
Financial and insurance activities	Activities auxiliary to financial services and insurance activities	2.55%
Manufacturing	Manufacture of leather and related products	2.35%
Manufacturing	Manufacture of other non-metallic mineral products	2.34%

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Has the financial product invested in fossil gas and/or nuclear energy activities in line with the EU Taxonomy? 2			
		Yes: [specify below, and	I detail in the graphics in the box].
		In fossil gas	In nuclear energy
	X	No	

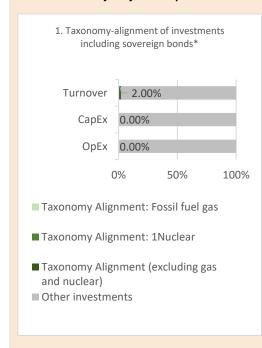

Taxonomy-aligned activities are expressed as a share of:

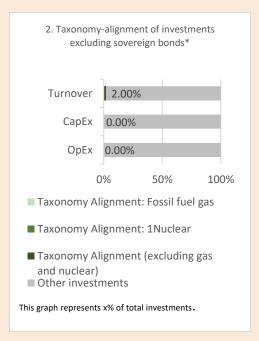

- **turnover** to reflect the current environmental character of the investee companies;
- capital expenditure (CapEx) showing the green investments made by investee companies, which is relevant for a transition to a green economy;
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available.

The graphs below show in green the percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

 $[\]hbox{\it *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures}$

² Fossil gas and/or nuclear activities will only be compliant with the EU Taxonomy if they contribute to mitigating climate change ("climate change mitigation") and do not significantly undermine an objective of the EU Taxonomy - see explanatory note in the left margin. The full criteria for fossil gas and nuclear energy economic activities that are in line with the EU Taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

What was the share of investments made in transitional and enabling activities?

Transitional activities	Enabling activities
0.0689%	0.01275%

What is the percentage of investments aligned with the EU Taxonomy compared to previous reporting periods?

Not applicable

The symbol represents sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activity under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Based on the approach described below, the Sub-fund invested 53.21% of its portfolio in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

The index replicated by the Sub-fund did not seek to align its investments with the EU Taxonomy. However, the Index's process of combining stock exclusion and best-inclass selection allowed the Sub-fund to commit a minimum of its assets to investments that contribute to environmental objectives but are not aligned with the EU Taxonomy.

Only two of the six environmental objectives defined by the EU Taxonomy are currently covered by the regulatory framework of the EU Taxonomy Technical Selection Criteria that determine alignment with the EU Taxonomy (adaptation and climate change mitigation). Similar criteria for the other four environmental objectives have yet to be developed. In the meantime, the Manager wishes to continue to make sustainable investments that contribute to environmental objectives not covered by the current EU Taxonomy Technical Selection Criteria, including key environmental objectives such as the sustainable use and protection of water and marine resources, the prevention and control of pollution and the protection and restoration of biodiversity and ecosystems.

To this end, the Manager has adopted and defined a specific framework for identifying the environmental objectives of these sustainable investments and assessing their contribution to these objectives. This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the UN Sustainable Development Goals (SDGs) that can be attributed to environmental objectives.

Further information on methodology and data resources is available in the information on this Sub-fund via www.dpamfunds.com (in particular in the sections "Methodologies" and "Data Sources and Data Processing").

The Manager will review and reassess this framework when the EU Taxonomy Technical Selection Criteria have been implemented for the other four environmental objectives defined by the EU Taxonomy.

What was the share of socially sustainable investments?

Based on the approach described below, the Sub-fund invested 89.83% of its portfolio in sustainable investments with a social objective over the Reference Period.

The Replicated Index's process of combining stock exclusion and best-in-class selection allowed the Sub-fund to commit a minimum of its assets to investments that contribute to social objectives but are not aligned with the EU Taxonomy.

A European Taxonomy for social sustainability goals has yet to be developed. In the meantime, the Manager wishes to continue to make sustainable investments that contribute to the achievement of key social goals such as zero hunger, quality education and peace, justice and strong institutions.

To this end, the Manager has adopted and defined a specific framework for identifying the social objectives of these sustainable investments and assessing their contribution to these objectives. This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the UN Sustainable Development Goals (SDGs) that can be attributed to social objectives. The Manager will review and reassess this framework when the EU Taxonomy Technical Selection Criteria have been implemented for the social objectives under the EU Taxonomy.

Further information on methodology and data resources is available in the information on this Sub-fund via www.dpamfunds.com (in particular in the sections "Methodologies" and "Data Sources and Data Processing").

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding the:

- Liquid assets
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics.

The Sub-fund may invest or hold these types of assets for the purpose of achieving investment objectives, portfolio diversification, liquidity management and risk hedging.

Over the Reference Period, for liquidity management purposes, the Fund was exposed to -0.02% cash. There are no minimum environmental or social guarantees on this allocation.

What measures have been taken to comply with the environmental and/or social characteristics during the reporting period?

During the reference period, the Replicated Index was constructed in particular by applying a combination of securities-based exclusions and a Best-in-Class selection process to companies in the Parent Index:

- a) The exclusion process focused on:
 - Companies that do not have an MSCI ESG rating of 'A' or above. Companies must maintain an MSCI ESG rating of 'BB' or above to remain in the index.
 - Companies that are not in compliance with Global Standards and prevention of corruption.
 - Companies involved in economic sectors and activities that are subject to debate as to whether or not they are ethical and sustainable (e.g. alcohol, gambling, nuclear energy production, tobacco etc.).
 - Companies involved in severe ESG controversies: securities must have a score (according to the MSCI ESG Research methodology) of at least 4 to be eligible for inclusion.
- b) The MSCI Best-in-Class selection process was applied to the remaining eligible securities in the selection universe:

The Index targets sector weights consistent with those of the Parent Index to limit the systematic risk introduced by the ESG selection process. The methodology aims to include the securities of companies with the highest ESG ratings making up 25% of the market capitalisation of the Parent Index. Companies in the MSCI SRI Global Indices must maintain an MSCI ESG rating of 'BB' or above and a Controversy Score of '1' or above to remain in the index.

Additional information on this index and its composition can be found at www.msci.com. The weight of stocks included in the index will depend on their market capitalisation adjusted for free float.

How has this financial product performed in comparison to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product meets the environmental or social characteristics it promotes.

How does the reference benchmark differ from a broad market index?

During the reference period, the Sub-fund consisted of full physical replication of the Index (MSCI EMU SRI).

The MSCI SRI indices target sector weights that mirror the relative sector weights of the underlying MSCI Global Investable Market indices (Parent Indices) in order to limit the systematic risk introduced by the ESG selection process.

The Replicated Index was constructed by applying a process combining exclusions (Global Standards compliance filter, involvement in severe controversies, controversial activities) and a best-in-class selection of companies in the Parent Index (MSCI EMU).

The methodologies used to construct the indices are available on the MSCI.com website: www.msci.com/index-methodology ("MSCI SRI Indexes Methodology").

How has this financial product performed in relation to the sustainability indicators intended to determine the alignment of the benchmark with the environmental or social characteristics being promoted?

During the reference period, the Sub-fund's sustainability indicators were therefore aligned and performed in line with those of the Index.

How has this financial product performed in comparison to the reference benchmark?

During the reference period, the Index provided exposure companies with high ESG performance in 10 developed EMU (Economic and Monetary Union) countries. The policy of the Sub-fund was full physical replication and was followed throughout the reference period with the objective of tracking the Index as closely as possible.

How has this financial product performed in comparison to the broad market index?

During the Reference Period, the Index was included in the "SRI" category of indices established by MSCI. This Index has as its parent index the MSCI EMU (MSCI Global Investable Market indices).

During the Reference Period, the Index returned -15.97% and the Parent Index returned -12.47%. By tracking the Index, the Sub-fund therefore underperformed the Parent Index.

APPENDIX IV

Periodic information for financial products referred to in Article 8(1), (2) and (2a) of Regulation (EU) 2019/2088 and in the first paragraph of Article 6 of Regulation (EU) 2020/852

Product name:DPAM L EQUITIES US SRI MSCI INDEX

Legal entity identifier: 391200057ZJ9CUYKNG59

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852 establishing a list of environmentally sustainable economic activities. This regulation does not set out a list socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics Did this financial product have a sustainable investment objective?

••	Yes	• No
	It made sustainable investments with an environmental objective:% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promoted environmental and/or socia (E/S) characteristics and although it did not have a sustainable investment target, it had a sustainable investment ratio of 86.7%. with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environ mentally sustainable under the EU Taxonomy with a social objective
	It made sustainable investments with a social objective:%	It promoted E/S features, but did not make sustainable investments

Sustainability indicators assess how the environmental or social characteristics promoted by the financial product are

achieved.

To what extent have the environmental and/or social characteristics promoted by this financial product been achieved?

During the Reference Period (01/01/2022-31/12/2022), the Sub-fund was passively managed and aimed to physically replicate the MSCI USA SRI index ("the Index").

The Index provides exposure to US large and mid-cap companies with high ESG performance relative to their peers in the same sector ("Best-in-Class" 25%).

By construction of the Replicated Index, the Sub-fund aimed to improve the environmental and social characteristics compared to the starting universe, the parent MSCI USA Index ("Parent Index").

In addition, the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviors that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices and best efforts.

How did the sustainability indicators perform?

During the Reference Period, the sustainability indicators used to measure the attainment of all of the environmental and social characteristics promoted by the Sub-fund corresponded to the binding investment restrictions of the Index it aims to replicate (some of the indicators are compared to the Parent Index):

- a. The Sub-fund had zero exposure to companies deemed to be non-compliant with the UN Global Compact and international standards (as defined for example in the UN Declaration on Human Rights, or the ILO Declaration on Fundamental Principles and Rights at Work);
- b. The Sub-fund had zero exposure to companies involved in controversial economic activities, based on the exposure limits imposed by the index construction methodology including any companies owning reserves (proven or probable) of fossil fuels, any companies involved in non-conventional oil and gas extraction, thermal coal extraction and coal-fired power generation;
- c. Zero exposure to companies involved in severe ESG controversies;
- d. A portfolio average greenhouse gas emissions intensity below the average greenhouse gas emissions intensity of the Parent Index universe: 926.86 tCO2e/\$ mn revenues (funds) versus 985.62 tCO2e/\$ mn revenues (benchmark) (at 31/12/2022).
- e. An average ESG Score (MSCI rating) above the average ESG score of the Parent Index universe. 8.32 (funds) versus 6.65 (benchmark) (31/12/2022).

The methodologies used to construct the indices are available on the MSCI.com website: https://www.msci.com/index-methodology ("MSCI SRI Indexes Methodology").

Further information, including methodologies for calculating ESG scores and controversy levels, can be found on the MSCI website: www.msci.com.

...and in comparison with previous periods?

Not applicable

What were the objectives of the sustainable investments that the financial product partially intended to make and how did the sustainable investment contribute to such objectives?

For the Reference Period, the Sub-fund would aim to have at least 50% sustainable investments i.e. investments aimed at:

- companies aiming to make a net positive contribution¹ to the United Nations (UN)
 Sustainable Development Goals ("SDGs"), which are environmental in nature;
- companies aiming to make a net positive contribution to the social SDGs.

For the Reference Period, the Sub-fund had 86.7% sustainable investments. These sustainable investments have contributed to the Sub-fund's partial sustainable investment objective in the following ways:

- 1.56% of the Sub-fund's portfolio contributed to the achievement of the environmental objectives defined by the EU Taxonomy (climate change mitigation and adaptation).
- 67.7% of the Sub-fund's portfolio contributed to the achievement of environmental objectives not aligned with the EU Taxonomy.
- 77.94% of the Sub-fund's portfolio contributed to the achievement of social objectives.
- 81.48% of the Sub-fund's portfolio was invested in companies making a net positive contribution to the SDGs (including impact bonds).

To what extent did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

By construction of the Replicated Index, the Sub-fund's strategy incorporated several elements to avoid and/or reduce its exposure to activities or behaviours that could affect another environmental or social objective (such as the exclusion of ESG controversies of maximum severity or activities most detrimental to other environmental and/or social objectives (e.g. thermal coal, ownership of fossil fuel reserves, tobacco, arms, etc.).

¹ The net positive contribution is the difference between the positive and negative impact contributions and is calculated at the level of the invested company and the overall portfolio. Based on the SDGs framework, the net positive contribution takes into account on the one hand (1) the extent to which the invested company's products and services contribute to the achievement of the SDGs and on the other hand (2) the negative impacts of their activities along the value chain.

In particular, the Sub-fund did not invest in companies involved in the most severe controversies and which may indicate a violation of the OECD Guidelines for Multinational Enterprises and/or the principles of the UN Global Compact or involvement in the most serious negative impacts.

How were the indicators for adverse impacts on sustainability factors taken into account?

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

In concrete terms, the PAIs were integrated into the different stages of the construction of the Index which the Sub-fund replicated passively:

1) Firstly, with regard to environmental PAIs:

- a) the Global Standards compliance filter includes a filter on environmental protection.
- b) the filtering of companies involved in economic sectors and activities that are subject to debate as to their ethical and sustainable character (e.g.: nuclear energy production, tobacco, thermal coal, non-conventional oil and gas).
- a) the filter on ESG score and level of controversy as defined by MSCI also includes controversies related to environmental issues, such as the environmental impact of company operations (emissions, waste, energy use, biodiversity and water consumption), the environmental impact on the supply chain and the impact of products and services (carbon and environmental impact).

2) Secondly, with regard to social PAIs:

- a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. In addition, the filter for companies involved in the selection of key ESG controversies includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.
- b) the exclusion filter for companies involved in controversial activities (inter alia: exclusion of companies involved in non-conventional armaments);
- c) the exclusion filter for companies involved in major ESG controversies on social issues.
- d) the best-in-class classification, which is based on an analysis of the ESG profile based in particular on the social PAIs.

The approach and processes are described in more detail in the documents available at www.msci.com.

The methodologies used to construct the indices are available at: https://www.msci.com/index-methodology ("MSCI SRI Indexes Methodology").

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Were the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The first stage of the Sub-fund's investment is based on a normative screening, which includes compliance with Global Standards based on human rights, labour rights and the prevention of corruption. These include the OECD Guidelines for Multinational Enterprises and the UN Guidelines on Business and Human Rights. Companies that do not meet these criteria are excluded from the eligible investment universe. The Subfund has therefore not been invested during the Reference Period in any company that is deemed not to comply with these principles.

The EU Taxonomy sets out a "does not significantly harm" principle by which Taxonomyaligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "does not significantly harm" principle only apples to the underlying investments of the financial product that consider the European Union's criteria regarding environmentally sustainable economic activities. The investments underlying the remaining share of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not cause significant harm to environmental or social objectives.

How has this financial product considered principal adverse impacts on sustainability factors?

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

In concrete terms, the PAIs were integrated into the different stages of the construction of the Index which the Sub-fund replicated passively:

- 1) Firstly, with regard to environmental PAIs:
 - a) the Global Standards compliance filter includes a filter on environmental protection.
 - b) the filtering of companies involved in economic sectors and activities that are subject to debate as to their ethical and sustainable character (e.g.: nuclear energy production, tobacco, thermal coal, non-conventional oil and gas).
 - the filter on ESG score and level of controversy as defined by MSCI also includes controversies related to environmental issues, such as the environmental impact of company operations (emissions, waste, energy use, biodiversity and

water consumption), the environmental impact on the supply chain and the impact of products and services (carbon and environmental impact).

2) Secondly, with regard to social PAIs:

- a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. In addition, the filter for companies involved in the selection of key ESG controversies includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.
- b) the exclusion filter for companies involved in controversial activities (inter alia: exclusion of companies involved in non-conventional armaments);
- c) the exclusion filter for companies involved in major ESG controversies on social issues.
- d) the best-in-class classification, which is based on an analysis of the ESG profile based in particular on the social PAIs.

The approach and processes are described in more detail in the documents available at www.msci.com.

The methodologies used to construct the indices are available at: https://www.msci.com/index-methodology ("MSCI SRI Indexes Methodology").

What were the main investments of this financial product?

The list includes the investments that constitute the largest share of the financial product's investments during the reference period, namely: 31/12/2022

Largest investments	Sector	% of assets	Country
MICROSOFT	INFORMATION AND COMMUNICATION	19.95%	United States
NVIDIA CORP.	MANUFACTURING	4.26%	United States
TESLA MOTORS INC.	MANUFACTURING	3.86%	United States

LOWE'S COMPANIES INC.	WHOLESALE AND RETAIL TRADE; REPAIR OF	1.45%	United States
	MOTOR VEHICLES AND MOTORCYCLES		
ANTHEM INC.	FINANCIAL AND INSURANCE ACTIVITIES	1.45%	United States
S&P GLOBAL INC.	ADMINISTRATIVE AND SUPPORT SERVICE	1.33%	United States
	ACTIVITIES		

What was the ratio of sustainability-related investments?

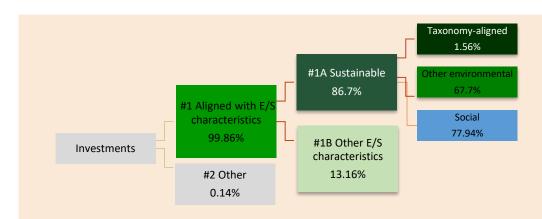

What was the asset allocation?

Asset allocation

describes the share of investments in specific assets.

During the Reference Period, by applying the investment strategy, the Sub-fund invested 99.86% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as "#1 Aligned with E/S characteristics").

The Sub-fund invested at least 86.7% of its assets in sustainable investments with environmental or social objectives (in the table referred to as "#1A Sustainable").

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- the sub-category **#1A Sustainable** covers sustainable investments at the environmental or social level.
- the sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The percentage of the portfolio invested in sustainable investments that meet an environmental and/or social objective (#1A Sustainable) is calculated using the cascade methodology described in the prospectus (section "What are the sustainable investment objectives that the financial product intends to partially achieve and how does the sustainable investment contribute to these objectives?"), which excludes double counting at the cascade level: an investment qualifying as sustainable at the level of a first element of the cascade is not then taken into account at the level of subsequent elements of the cascade.

In contrast, the percentages of the two sub-categories of sustainable investments (#1A Sustainable) in the portfolio invested in environmental investments other than those

aligned with the taxonomy and social investments may involve some double counting. All portfolio companies are analysed against both (i) the environmental SDGs (and therefore may fall into the sub-category "other environmental investments" even if they are also considered to be aligned with the taxonomy and/or as a social sustainable investment) and (ii) the social SDGs (and therefore may fall into the sub-category "social investments" even if they are also considered to be aligned with the taxonomy and/or as an other environmental investment).

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

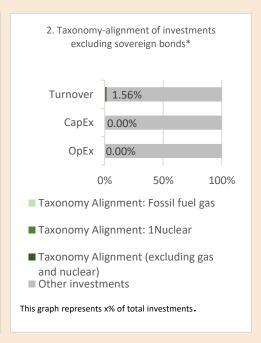

Has the financial product invested in fossil gas and/or nuclear energy activitie with the EU Taxonomy? ²			ssil gas and/or nuclear energy activities in line	
			Yes: [specify below, and	d detail in the graphics in the box].
			In fossil gas	In nuclear energy
		Χ	No	

Taxonomy-aligned activities are expressed as a share of:

- turnover to reflect the current environmental character of the investee companies;
- capital expenditure (CapEx) showing the green investments made by investee companies, which is relevant for a transition to a green economy;
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

 $[\]hbox{\it * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures}$

² Fossil gas and/or nuclear activities will only be compliant with the EU Taxonomy if they contribute to mitigating climate change ("climate change mitigation") and do not significantly undermine an objective of the EU Taxonomy - see explanatory note in the left margin. The full criteria for fossil gas and nuclear energy economic activities that are in line with the EU Taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available.

The symbol represents sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activity under Regulation (EU) 2020/852.

What was the share of investments made in transitional and enabling activities?

Transitional activities	Enabling activities
0.04796%	N/A

What is the percentage of investments aligned with the EU Taxonomy compared to previous reporting periods?

Not applicable

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Based on the approach described below, the Sub-fund invested 67.7% of its portfolio in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

The index replicated by the Sub-fund did not seek to align its investments with the EU Taxonomy. However, the Index's process of combining stock exclusion and best-inclass selection allowed the Sub-fund to commit a minimum of its assets to investments that contribute to environmental objectives but are not aligned with the EU Taxonomy.

Only two of the six environmental objectives defined by the EU Taxonomy are currently covered by the regulatory framework of the EU Taxonomy Technical Selection Criteria that determine alignment with the EU Taxonomy (adaptation and climate change mitigation). Similar criteria for the other four environmental objectives have yet to be developed. In the meantime, the Manager wishes to continue to make sustainable investments that contribute to environmental objectives not covered by the current EU Taxonomy Technical Selection Criteria, including key environmental objectives such as the sustainable use and protection of water and marine resources, the prevention and control of pollution and the protection and restoration of biodiversity and ecosystems.

To this end, the Manager has adopted and defined a specific framework for identifying the environmental objectives of these sustainable investments and assessing their contribution to these objectives. This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the UN Sustainable Development Goals (SDGs) that can be attributed to environmental objectives.

Further information on methodology and data resources is available in the information on this Sub-fund via www.dpamfunds.com (in particular in the sections "Methodologies" and "Data Sources and Data Processing").

The Manager will review and reassess this framework when the EU Taxonomy Technical Selection Criteria have been implemented for the other four environmental objectives defined by the EU Taxonomy.

What was the share of socially sustainable investments?

Based on the approach described below, the Sub-fund invested 77.94% of its portfolio in sustainable investments with a social objective over the Reference Period.

The Replicated Index's process of combining stock exclusion and best-in-class selection allowed the Sub-fund to commit a minimum of its assets to investments that contribute to social objectives but are not aligned with the EU Taxonomy.

A European Taxonomy for social sustainability goals has yet to be developed. In the meantime, the Manager wishes to continue to make sustainable investments that contribute to the achievement of key social goals such as zero hunger, quality education and peace, justice and strong institutions.

To this end, the Manager has adopted and defined a specific framework for identifying the social objectives of these sustainable investments and assessing their contribution to these objectives. This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the UN Sustainable Development Goals (SDGs) that can be attributed to social objectives. The Manager will review and reassess this framework when the EU Taxonomy Technical Selection Criteria have been implemented for the social objectives under the EU Taxonomy.

Further information on methodology and data resources is available in the information on this Sub-fund via www.dpamfunds.com (in particular in the sections "Methodologies" and "Data Sources and Data Processing").

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding the:

- Liquid assets
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics.

The Sub-fund may invest or hold these types of assets for the purpose of achieving investment objectives, portfolio diversification, liquidity management and risk hedging.

Over the Reference Period, for liquidity management purposes, the Fund was exposed to 0.14% cash. There are no minimum environmental or social guarantees on this allocation.

What measures have been taken to comply with the environmental and/or social characteristics during the reporting period?

During the reference period, the Replicated Index was constructed in particular by applying a combination of securities-based exclusions and a Best-in-Class selection process to companies in the Parent Index:

- a) The exclusion process focused on:
 - Companies that do not have an MSCI ESG rating of 'A' or above. Companies must maintain an MSCI ESG rating of 'BB' or above to remain in the index.
 - Companies that are not in compliance with Global Standards and prevention of corruption.
 - Companies involved in economic sectors and activities that are subject to debate as to whether or not they are ethical and sustainable (e.g. alcohol, gambling, nuclear energy production, tobacco etc.).
 - Companies involved in severe ESG controversies: securities must have a score (according to the MSCI ESG Research methodology) of at least 4 to be eligible for inclusion.
- b) The MSCI Best-in-Class selection process was applied to the remaining eligible securities in the selection universe:

The Index targets sector weights consistent with those of the Parent Index to limit the systematic risk introduced by the ESG selection process. The methodology aims to include the securities of companies with the highest ESG ratings making up 25% of the market capitalisation of the Parent Index. Companies in the MSCI SRI Global Indices must maintain an MSCI ESG rating of 'BB' or above and a Controversy Score of '1' or above to remain in the index.

Additional information on this index and its composition can be found at www.msci.com. The weight of stocks included in the index will depend on their market capitalisation adjusted for free float.

How has this financial product performed in comparison to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product meets the environmental or social characteristics it promotes.

How does the reference benchmark differ from a broad market index?

During the reference period, the Sub-fund consisted of full physical replication of the Index (MSCI USA SRI).

The MSCI SRI indices target sector weights that mirror the relative sector weights of the underlying MSCI Global Investable Market indices (Parent Indices) in order to limit the systematic risk introduced by the ESG selection process.

The Replicated Index was constructed by applying a process combining exclusions (Global Standards compliance filter, involvement in severe controversies, controversial activities) and a best-in-class selection of companies in the Parent Index (MSCI USA).

The methodologies used to construct the indices are available on the MSCI.com website: www.msci.com/index-methodology ("MSCI SRI Indexes Methodology").

How has this financial product performed in relation to the sustainability indicators intended to determine the alignment of the benchmark with the environmental or social characteristics being promoted?

During the reference period, the Sub-fund's sustainability indicators were therefore aligned and performed in line with those of the Index.

How has this financial product performed in comparison to the reference benchmark?

During the reference period, the Index provided exposure to companies with a high ESG performance.

The policy of the Sub-fund was full physical replication and was followed throughout the reference period with the objective of tracking the Index as closely as possible.

How has this financial product performed in comparison to the broad market index?

During the Reference Period, the Index was included in the "SRI" category of indices established by MSCI. This Index has as its parent index the MSCI USA (MSCI Global Investable Market indices).

During the Reference Period, the Index returned -18.56% and the Parent Index returned -14.59%. By tracking the Index, the Sub-fund therefore underperformed the Parent Index.

APPENDIX IV

Periodic information for financial products referred to in Article 8(1), (2) and (2a) of Regulation (EU) 2019/2088 and in the first paragraph of Article 6 of Regulation (EU) 2020/852

Product name:DPAM L EQUITIES WORLD SRI MSCI INDEX

Legal entity identifier: 391200EXH21C0Y8WU366

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852 establishing a list of environmentally sustainable economic activities. This regulation does not set out a list socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics Did this financial product have a sustainable investment objective?

	ie investment objective:
Yes	• No
It made sustainable investments with an environmental objective:% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promoted environmental and/or socia (E/S) characteristics and although it did not have a sustainable investment target, it had a sustainable investment ratio of 86.73%. with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environ mentally sustainable under the EU Taxonomy with a social objective
It made sustainable investments with a social objective:%	It promoted E/S features, but did not make sustainable investments

Sustainability indicators assess how the environmental or social characteristics promoted by the financial product are

achieved.

To what extent have the environmental and/or social characteristics promoted by this financial product been achieved?

During the Reference Period (01/01/2022-31/12/2022), the Sub-fund was passively managed and aimed to physically replicate the MSCI ACWI SRI index ("the Index").

The Index provides exposure to global large and mid-cap companies with high ESG performance relative to their peers in the same sector ("Best-in-Class" 25%).

By construction of the Replicated Index, the Sub-fund aimed to improve the environmental and social characteristics compared to the starting universe, the parent MSCI ACWI Index ("Parent Index").

In addition, the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviors that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices and best efforts.

How did the sustainability indicators perform?

During the Reference Period, the sustainability indicators used to measure the attainment of all of the environmental and social characteristics promoted by the Sub-fund corresponded to the binding investment restrictions of the Index it aims to replicate (some of the indicators are compared to the Parent Index):

- a. The Sub-fund had zero exposure to companies deemed to be non-compliant with the UN Global Compact and international standards (as defined for example in the UN Declaration on Human Rights, or the ILO Declaration on Fundamental Principles and Rights at Work);
- b. The Sub-fund had zero exposure to companies involved in controversial economic activities, based on the exposure limits imposed by the index construction methodology including any companies owning reserves (proven or probable) of fossil fuels, any companies involved in non-conventional oil and gas extraction, thermal coal extraction and coal-fired power generation;
- c. Zero exposure to companies involved in severe ESG controversies;
- d. A portfolio average greenhouse gas emissions intensity below the average greenhouse gas emissions intensity of the Parent Index universe: 872.27 tCO2e/\$ mn revenues (funds) versus 1178.04 tCO2e/\$ mn revenues (benchmark) (at 31/12/2022).
- e. An average ESG Score (MSCI rating) above the average ESG score of the Parent Index universe. 8.34 (funds) versus 6.78 (benchmark) (31/12/2022).

The methodologies used to construct the indices are available on the MSCI.com website: https://www.msci.com/index-methodology ("MSCI SRI Indexes Methodology").

Further information, including methodologies for calculating ESG scores and controversy levels, can be found on the MSCI website: www.msci.com.

...and in comparison with previous periods?

Not applicable

What were the objectives of the sustainable investments that the financial product partially intended to make and how did the sustainable investment contribute to such objectives?

For the Reference Period, the Sub-fund would aim to have at least 50% sustainable investments i.e. investments aimed at:

- companies aiming to make a net positive contribution¹ to the United Nations (UN)
 Sustainable Development Goals ("SDGs"), which are environmental in nature;
- companies aiming to make a net positive contribution to the social SDGs.

For the Reference Period, the Sub-fund had 86.73% sustainable investments. These sustainable investments have contributed to the Sub-fund's partial sustainable investment objective in the following ways:

- 2.07% of the Sub-fund's portfolio contributed to the achievement of the environmental objectives defined by the EU Taxonomy (climate change mitigation and adaptation);
- 65.71% of the Sub-fund's portfolio contributed to the achievement of environmental objectives not aligned with the EU Taxonomy;
- 80.7% of the Sub-fund's portfolio contributed to the achievement of social objectives.
- 78.21% of the Sub-fund's portfolio was invested in companies making a net positive contribution to the SDGs (including impact bonds).

To what extent did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

By construction of the Replicated Index, the Sub-fund's strategy incorporated several elements to avoid and/or reduce its exposure to activities or behaviours that could affect another environmental or social objective (such as the exclusion of ESG controversies of maximum severity or activities most detrimental to other environmental and/or social objectives (e.g. thermal coal, ownership of fossil fuel reserves, tobacco, arms, etc.).

¹ The net positive contribution is the difference between the positive and negative impact contributions and is calculated at the level of the invested company and the overall portfolio. Based on the SDGs framework, the net positive contribution takes into account on the one hand (1) the extent to which the invested company's products and services contribute to the achievement of the SDGs and on the other hand (2) the negative impacts of their activities along the value chain.

In particular, the Sub-fund did not invest in companies involved in the most severe controversies and which may indicate a violation of the OECD Guidelines for Multinational Enterprises and/or the principles of the UN Global Compact or involvement in the most serious negative impacts.

How were the indicators for adverse impacts on sustainability factors taken into account?

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

In concrete terms, the PAIs were integrated into the different stages of the construction of the Index which the Sub-fund replicated passively:

1) Firstly, with regard to environmental PAIs:

- a) the Global Standards compliance filter includes a filter on environmental protection.
- b) the filtering of companies involved in economic sectors and activities that are subject to debate as to their ethical and sustainable character (e.g.: nuclear energy production, tobacco, thermal coal, non-conventional oil and gas).
- c) the filter on ESG score and level of controversy as defined by MSCI also includes controversies related to environmental issues, such as the environmental impact of company operations (emissions, waste, energy use, biodiversity and water consumption), the environmental impact on the supply chain and the impact of products and services (carbon and environmental impact).

2) Secondly, with regard to social PAIs:

- a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. In addition, the filter for companies involved in the selection of key ESG controversies includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.
- b) the exclusion filter for companies involved in controversial activities (inter alia: exclusion of companies involved in non-conventional armaments);
- c) the exclusion filter for companies involved in major ESG controversies on social issues.
- d) the best-in-class classification, which is based on an analysis of the ESG profile based in particular on the social PAIs.

The approach and processes are described in more detail in the documents available at www.msci.com.

The methodologies used to construct the indices are available at: https://www.msci.com/index-methodology ("MSCI SRI Indexes Methodology").

Were the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

The first stage of the Sub-fund's investment is based on a normative screening, which includes compliance with Global Standards based on human rights, labour rights and the prevention of corruption. These include the OECD Guidelines for Multinational Enterprises and the UN Guidelines on Business and Human Rights. Companies that do not meet these criteria are excluded from the eligible investment universe. The Subfund has therefore not been invested during the Reference Period in any company that is deemed not to comply with these principles.

The EU Taxonomy sets out a "does not significantly harm" principle by which Taxonomyaligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "does not significantly harm" principle only apples to the underlying investments of the financial product that consider the European Union's criteria regarding environmentally sustainable economic activities. The investments underlying the remaining share of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not cause significant harm to environmental or social objectives.

How has this financial product considered principal adverse impacts on sustainability factors?

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

In concrete terms, the PAIs were integrated into the different stages of the construction of the Index which the Sub-fund replicated passively:

- 1) Firstly, with regard to environmental PAIs:
 - a) the Global Standards compliance filter includes a filter on environmental protection.
 - the filtering of companies involved in economic sectors and activities that are subject to debate as to their ethical and sustainable character (e.g.: nuclear energy production, tobacco, thermal coal, non-conventional oil and gas).
 - the filter on ESG score and level of controversy as defined by MSCI also includes controversies related to environmental issues, such as the environmental impact of company operations (emissions, waste, energy use, biodiversity and

water consumption), the environmental impact on the supply chain and the impact of products and services (carbon and environmental impact).

2) Secondly, with regard to social PAIs:

- a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. In addition, the filter for companies involved in the selection of key ESG controversies includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.
- b) the exclusion filter for companies involved in controversial activities (inter alia: exclusion of companies involved in non-conventional armaments);
- c) the exclusion filter for companies involved in major ESG controversies on social issues.
- d) the best-in-class classification, which is based on an analysis of the ESG profile based in particular on the social PAIs.

The approach and processes are described in more detail in the documents available at www.msci.com.

The methodologies used to construct the indices are available at: https://www.msci.com/index-methodology ("MSCI SRI Indexes Methodology").

What were the main investments of this financial product?

The list includes the investments that constitute the largest share of the financial product's investments during the reference period, namely: 31/12/2022

Largest investments	Sector	% of assets	Country
MICROSOFT	INFORMATION AND COMMUNICATION	11.81%	United States
NVIDIA CORP.	MANUFACTURING	2.53%	United States
TAIWAN SEMICONDUCTOR	MANUFACTURING		
MANUFACTURING		2.46%	Taiwan
TESLA MOTORS INC.	MANUFACTURING	2.27%	United States
HOME DEPOT	WHOLESALE AND RETAIL TRADE; REPAIR OF		
	MOTOR VEHICLES AND MOTORCYCLES	2.27%	United States
COCA-COLA CO	MANUFACTURING	1.80%	United States
PEPSICO	MANUFACTURING	1.75%	United States
NOVO NORDISK B	MANUFACTURING	1.57%	Denmark
ROCHE HOLDING	MANUFACTURING	1.52%	Switzerland
ASML HOLDING	MANUFACTURING	1.51%	Netherlands
LINDE (NEW)	MANUFACTURING	1.11%	United States
WALT DISNEY	INFORMATION AND COMMUNICATION	1.10%	United States
ADOBE SYSTEMS INCORPORATED	INFORMATION AND COMMUNICATION	1.09%	United States
TEXAS INSTRUMENTS	MANUFACTURING	1.05%	United States
AMGEN INC.	MANUFACTURING	0.98%	United States

What was the ratio of sustainability-related investments?

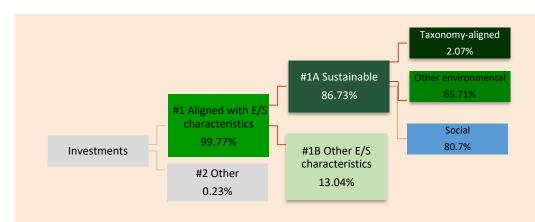

What was the asset allocation?

Asset allocation describes the share of investments in specific

assets.

During the Reference Period, by applying the investment strategy, the Sub-fund invested 99.77% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as "#1 Aligned with E/S characteristics").

The Sub-fund invested at least 86.73% of its assets in sustainable investments with environmental or social objectives (in the table referred to as "#1A Sustainable").

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- the sub-category **#1A Sustainable** covers sustainable investments at the environmental or social level.
- the sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The percentage of the portfolio invested in sustainable investments that meet an environmental and/or social objective (#1A Sustainable) is calculated using the cascade methodology described in the prospectus (section "What are the sustainable investment objectives that the financial product intends to partially achieve and how does the sustainable investment contribute to these objectives?"), which excludes double counting at the cascade level: an investment qualifying as sustainable at the level of a first element of the cascade is not then taken into account at the level of subsequent elements of the cascade.

In contrast, the percentages of the two sub-categories of sustainable investments (#1A Sustainable) in the portfolio invested in environmental investments other than those

aligned with the taxonomy and social investments may involve some double counting. All portfolio companies are analysed against both (i) the environmental SDGs (and therefore may fall into the sub-category "other environmental investments" even if they are also considered to be aligned with the taxonomy and/or as a social sustainable investment) and (ii) the social SDGs (and therefore may fall into the sub-category "social investments" even if they are also considered to be aligned with the taxonomy and/or as an other environmental investment).

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

		al product invested in for conomy? ²	ssil gas and/or nuclear energy activities in line
		Yes: [specify below, and	d detail in the graphics in the box].
		In fossil gas	In nuclear energy
	X	No	

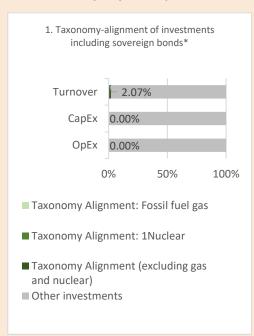

Taxonomy-aligned activities are expressed as a share of:

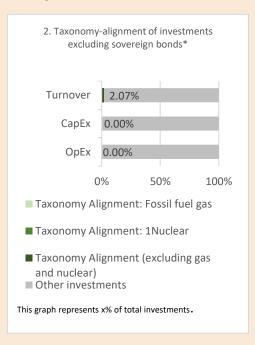

- **turnover** to reflect the current environmental character of the investee companies;
- capital expenditure (CapEx) showing the green investments made by investee companies, which is relevant for a transition to a green economy;
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available.

The graphs below show in green the percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

^{*} For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

² Fossil gas and/or nuclear activities will only be compliant with the EU Taxonomy if they contribute to mitigating climate change ("climate change mitigation") and do not significantly undermine an objective of the EU Taxonomy - see explanatory note in the left margin. The full criteria for fossil gas and nuclear energy economic activities that are in line with the EU Taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

What was the share of investments made in transitional and enabling activities?

Transitional activities	Enabling activities
0.05491%	0.00003153%

What is the percentage of investments aligned with the EU Taxonomy compared to previous reporting periods?

Not applicable

The symbol represents sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activity under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Based on the approach described below, the Sub-fund invested 65.71% of its portfolio in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

The Index replicated by the Sub-fund did not seek to align its investments with the EU Taxonomy. However, the Index's process of combining stock exclusion and best-inclass selection allowed the Sub-fund to commit a minimum of its assets to investments that contribute to environmental objectives but are not aligned with the EU Taxonomy.

Only two of the six environmental objectives defined by the EU Taxonomy are currently covered by the regulatory framework of the EU Taxonomy Technical Selection Criteria that determine alignment with the EU Taxonomy (adaptation and climate change mitigation). Similar criteria for the other four environmental objectives have yet to be developed. In the meantime, the Manager wishes to continue to make sustainable investments that contribute to environmental objectives not covered by the current EU Taxonomy Technical Selection Criteria, including key environmental objectives such as the sustainable use and protection of water and marine resources, the prevention and control of pollution and the protection and restoration of biodiversity and ecosystems.

To this end, the Manager has adopted and defined a specific framework for identifying the environmental objectives of these sustainable investments and assessing their contribution to these objectives. This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the UN Sustainable Development Goals (SDGs) that can be attributed to environmental objectives.

Further information on methodology and data resources is available in the information on this Sub-fund via www.dpamfunds.com (in particular in the sections "Methodologies" and "Data Sources and Data Processing").

The Manager will review and reassess this framework when the EU Taxonomy Technical Selection Criteria have been implemented for the other four environmental objectives defined by the EU Taxonomy.

What was the share of socially sustainable investments?

Based on the approach described below, the Sub-fund invested 80.7% of its portfolio in sustainable investments with a social objective over the Reference Period.

The Replicated Index's process of combining stock exclusion and best-in-class selection allowed the Sub-fund to commit a minimum of its assets to investments that contribute to social objectives but are not aligned with the EU Taxonomy.

A European Taxonomy for social sustainability goals has yet to be developed. In the meantime, the Manager wishes to continue to make sustainable investments that contribute to the achievement of key social goals such as zero hunger, quality education and peace, justice and strong institutions. To this end, the Manager has adopted and defined a specific framework for identifying the social objectives of these sustainable investments and assessing their contribution to these objectives. This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the UN Sustainable Development Goals (SDGs) that can be attributed to social objectives. The Manager will review and reassess this framework when the EU Taxonomy Technical Selection Criteria have been implemented for the social objectives under the EU Taxonomy.

Further information on methodology and data resources is available in the information on this Sub-fund via www.dpamfunds.com (in particular in the sections "Methodologies" and "Data Sources and Data Processing").

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding the:

- Liquid assets
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics.

The Sub-fund may invest or hold these types of assets for the purpose of achieving investment objectives, portfolio diversification, liquidity management and risk hedging.

Over the Reference Period, for liquidity management purposes, the Fund was exposed to 0.23% cash. There are no minimum environmental or social guarantees on this allocation.

What measures have been taken to comply with the environmental and/or social characteristics during the reporting period?

During the reference period, the Replicated Index was constructed in particular by applying a combination of securities-based exclusions and a Best-in-Class selection process to companies in the Parent Index:

- a) The exclusion process focused on:
 - Companies that do not have an MSCI ESG rating of 'A' or above. Companies must maintain an MSCI ESG rating of 'BB' or above to remain in the index.
 - Companies that are not in compliance with Global Standards and prevention of corruption.
 - Companies involved in economic sectors and activities that are subject to debate as to whether or not they are ethical and sustainable (e.g. alcohol, gambling, nuclear energy production, tobacco etc.).
 - Companies involved in severe ESG controversies: securities must have a score (according to the MSCI ESG Research methodology) of at least 4 to be eligible for inclusion.
- b) The MSCI Best-in-Class selection process was applied to the remaining eligible securities in the selection universe:

The Index targets sector weights consistent with those of the Parent Index to limit the systematic risk introduced by the ESG selection process. The methodology aims to include the securities of companies with the highest ESG ratings making up 25% of the market capitalisation of the Parent Index. Companies in the MSCI SRI Global Indices must maintain an MSCI ESG rating of 'BB' or above and a Controversy Score of '1' or above to remain in the index.

Additional information on this index and its composition can be found at www.msci.com. The weight of stocks included in the index will depend on their market capitalisation adjusted for free float.

How has this financial product performed in comparison to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product meets the environmental or social characteristics it promotes.

How does the reference benchmark differ from a broad market index?

During the reference period, the Sub-fund consisted of full physical replication of the Index (MSCI ACWI SRI).

The MSCI SRI indices target sector weights that mirror the relative sector weights of the underlying MSCI Global Investable Market indices (Parent Indices) in order to limit the systematic risk introduced by the ESG selection process.

The Replicated Index was constructed by applying a process combining exclusions (Global Standards compliance filter, involvement in severe controversies, controversial activities) and a best-in-class selection of companies in the Parent Index (MSCI ACWI).

The methodologies used to construct the indices are available on the MSCI.com website: www.msci.com/index-methodology ("MSCI SRI Indexes Methodology").

How has this financial product performed in relation to the sustainability indicators intended to determine the alignment of the benchmark with the environmental or social characteristics being promoted?

During the reference period, the Sub-fund's sustainability indicators were therefore aligned and performed in line with those of the Index.

How has this financial product performed in comparison to the reference benchmark?

During the reference period, the Index provided exposure to companies with a high ESG performance in 23 developed market countries and 24 emerging market countries.

The policy of the Sub-fund was full physical replication and was followed throughout the reference period with the objective of tracking the Index as closely as possible.

How has this financial product performed in comparison to the broad market index?

During the Reference Period, the Index was included in the "SRI" category of indices established by MSCI. This Index has as its parent index the MSCI ACWI (MSCI Global Investable Market indices).

During the Reference Period, the Index returned -17.37% and the Parent Index returned -13.01%. By tracking the Index, the Sub-fund therefore underperformed the Parent Index.

APPENDIX IV

Periodic information for financial products referred to in Article 8(1), (2) and (2a) of Regulation (EU) 2019/2088 and in the first paragraph of Article 6 of Regulation (EU) 2020/852

Product name:DPAM L BONDS CORPORATE EUR

Legal entity identifier: 391200XI1RVDDS6W3F18

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020 /852 establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable	e investment objective?
• • Yes	• No
It has made sustainable investments with an environmental objective:	It promoted environmental and/or social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It has made sustainable investments with a social objective:%	X It promoted E/S characteristics, but did not make any sustainable investments

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are

attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the Reference Period (01/01/2022-31/12/2022), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviors that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices.

Derivative products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting environmental and/or social characteristics.

The Sub-fund has not designated any benchmark index to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

How did the sustainability indicators perform?

Over the Reference Period, the Sub-fund achieved the following sustainability indicators:

At the level of direct line investments (corporate bonds):

- a) The Sub-fund was not exposed to companies considered to be below Global Standards during the reporting period;
- The Sub-fund was not exposed to companies involved in excluded controversial activities as defined by the Manager's Controversial Activities Policy (accessible via www.dpamfunds.com (Controversial Activities Policy);
- c) The Sub-fund has not been exposed to companies facing extremely serious controversies around environmental or social issues.

...and in comparison to previous periods?

Not applicable

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Not applicable

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Not applicable

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

For investments in corporate bonds:

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAI") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to the Manager's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

This commitment is incorporated throughout the research and investment process from its inception. In concrete terms, the PAIs have been integrated into the various stages of the Subfund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

- 1) Firstly, with regard to environmental PAIs:
 - a) They have been analyzed and monitored at the level of the invested issuers, particularly with regard to PAI related to greenhouse gas emissions and energy performance, notably through DPAM research in the framework of the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD). Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute the most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.
 - b) After that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not meet global standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity are thus excluded from the portfolio in advance.
 - c) In addition, the filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).
- 2) Second, the social PAIs were systematically analyzed according to the stages of the research and investment process:
 - a) the Global Standards compliance filter is structured around human rights, labor rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises are de facto excluded from the investment universe.
 - b) the exclusion filter for companies involved in controversial activities (in accordance with DPAM's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM policy Controversial activities.pdf). In this way, companies involved in controversial armaments are directly excluded from the investment universe.
 - c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

What were the top investments of this financial product?

The list includes the investments that constitute the greatest proportion of investments of the financial product during the reference period which is: 31/12/2022

Largest investments	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

What was the asset allocation?

Through the application of the investment strategy described above, the Sub-fund has invested 96.78% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as "#1 Aligned with E/S Characteristics").

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which a re neither aligned with the

In which economic sectors were the investments made?

Administrative and support service activities	Office administrative, office support and other business support activities	0.21%
Cash	Cash	3.22%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

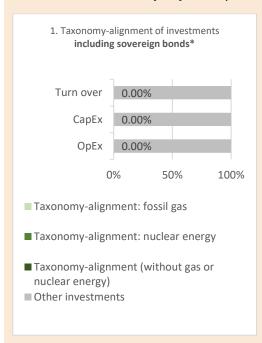

Taxonomy-aligned activities are expressed as a share of:

- turnover reflects the "greenness" of investee companies today.
- capital expenditure (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

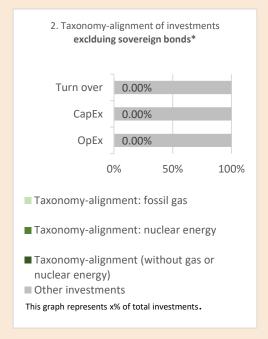

Has the financial product invested in fossil gas and/or nuclear energy activities in line with the EU Taxonomy?1

> Yes: [specify below, and detail in the graphics in the box]. In fossil gas In nuclear energy No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

X

^{*} For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹ Fossil gas and/or nuclear activities will only be compliant with the EU Taxonomy if they contribute to mitigating climate change ('climate change mitigation') and do not significantly undermine an objective of the EU Taxonomy - see explanatory note in the left margin. The full criteria for fossil gas and nuclear energy economic activities that are in line with the EU Taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available.

What was the share of investments made in transitional and enabling activities?

Not applicable

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable

What was the share of socially sustainable investments?

Not applicable

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding the:

- Liquid assets (excluding treasury bonds)
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics

The Sub-fund may invest or hold these types of assets in order to achieve its investment objectives, to diversify its portfolio, to manage liquidity and to hedge its risks.

There are no minimum environmental or social guarantees.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 3.22% cash. There are no minimum environmental or social guarantees on these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reporting period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e.:

• For direct line investments (corporate bonds):

On a quarterly basis, a normative screening has been established based on compliance with global standards.

Secondly, companies meeting the thresholds as defined in the activities excluded by the responsible investment policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector.

The stages of the investment process are outlined below:

Integration into Influencing behaviour Influencing of the issuer behaviour Social and governance minimums) Compliance with global standards/ Exclusions based on the activity of the issuer behaviour (safeguarding social and governance minimums)	ESG INTEGRATION	VOTE	BASELINE NEGATIVE SCREENING	NORMATIVE & NEGATIVE SCREENING
	the investment		on the activity	global standards/ Exclusion of the most controversial behaviour (safeguarding social and governance

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020 /852 establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable	e investment objective?
Yes	● ● × No
It has made sustainable investments with an environmental objective:	It promoted environmental and/or social (E/S) characteristics and while it did not have as its objective a sustainable investment target, it had a proportion of% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It has made sustainable investments with a social objective:%	X It promoted E/S characteristics, but did not make any sustainable investments

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are

attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the Reference Period (01/01/2022-31/12/2022), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviors that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices.

Derivative products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting environmental and/or social characteristics.

The Sub-fund has not designated any benchmark index to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

How did the sustainability indicators perform?

Over the Reference Period, the Sub-fund achieved the following sustainability indicators:

- 1) At the level of direct line investments (corporate bonds):
 - a) The Sub-fund was not exposed to companies considered to be below Global Standards during the reporting period;
 - The Sub-fund was not exposed to companies involved in excluded controversial activities as defined by the Manager's Controversial Activities Policy (accessible via www.dpamfunds.com (Controversial Activities Policy);
 - c) The Sub-fund has not been exposed to companies facing extremely serious controversies around environmental or social issues.
- ...and in comparison to previous periods?

Not applicable

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Not applicable

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Not applicable

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

Principal adverse impacts are

the most significant negative impacts of investment

decisions on sustainability factors relating to

environmental, social and employee matters, respect for

human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

For investments in corporate bonds:

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAI") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to the Manager's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth.

This commitment is incorporated throughout the research and investment process from its inception. In concrete terms, the PAIs have been integrated into the various stages of the Subfund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

- 1) Firstly, with regard to environmental PAIs:
 - a) They have been analyzed and monitored at the level of the invested issuers, particularly with regard to PAI related to greenhouse gas emissions and energy performance, notably through the Manager's research in the framework of the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD). Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute the most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.
 - b) After that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not meet global standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity are thus excluded from the portfolio in advance.
 - c) In addition, the filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).
- 2) Second, the social PAIs were systematically analyzed according to the stages of the research and investment process:
 - a) the Global Standards compliance filter is structured around human rights, labor rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises are de facto excluded from the investment universe.
 - b) the exclusion filter for companies involved in controversial activities (in accordance with the Manager's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-assetmanagement/image/upload/v1614006839/DPAM policy Controversial activities.pdf). In this way, companies involved in controversial armaments are directly excluded from the investment universe.
 - c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

What were the top investments of this financial product?

The list includes the investments that constitute the greatest proportion of investments of the financial product during the reference period which is: 31/12/2022

Largest investments	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

What was the asset allocation?

Through the application of the investment strategy described above, the Sub-fund has invested 97.2% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as "#1 Aligned with E/S Characteristics").

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which a re neither aligned with the environmental or social characteristics, nor a re qualified as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub-sector	% of assets
Financial and insurance activities	Financial service activities, except insurance and pension funding	44.38%
Financial and insurance activities	Activities auxiliary to financial services and insurance activities	10.27%
Information and communication	Telecommunications	6.61%
Electricity, gas, steam and air conditioning supply	Electricity, gas, steam and air conditioning supply	5.80%
Manufacturing	Manufacture of computer, electronic and optical products	3.65%
Manufacturing	Other manufacturing	3.28%
Real estate activities	Real estate activities	2.80%
Manufacturing	Manufacture of beverages	2.51%
Manufacturing	Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.29%
Information and communication	Computer programming, consultancy and related activities	2.08%
Transportation and storage	Postal and courier activities	1.75%
Information and communication	Publishing activities	1.74%
Accommodation and food service activities	Food and beverage service activities	1.66%
Administrative and support service activities	Travel agency, tour operator reservation service and related activities	1.66%
Manufacturing	Manufacture of chemicals and chemical products	1.60%
Wholesale and retail trade; repair of motor vehicles and motorcycles	Wholesale trade, except of motor vehicles and motorcycles	1.32%
Construction	Civil engineering	0.81%
Transportation and storage	Warehousing and support activities for transportation	0.80%
Manufacturing	Manufacture of other transport equipment	0.78%
Administrative and support service activities	Rental and leasing activities	0.76%
Accommodation and food service activities	Accommodation	0.64%
Cash	Cash	2.80%

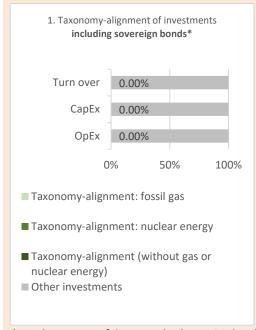

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

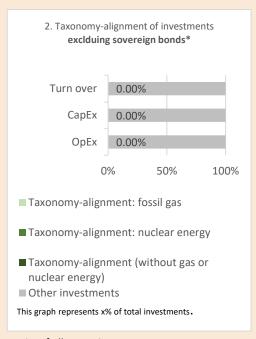

Has the financi with the EU Tax	·	sil gas and/or nuclear energy activities in line
Yes: [specify below, and detail in the graphics in the box].		
	In fossil gas	In nuclear energy
Х	No	

Taxonomy-aligned activities are expressed as a share of:

- turnover reflects the "greenness" of investee companies today.
- capital expenditure (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

^{*} For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹ Fossil gas and/or nuclear activities will only be compliant with the EU Taxonomy if they contribute to mitigating climate change ('climate change mitigation') and do not significantly undermine an objective of the EU Taxonomy - see explanatory note in the left margin. The full criteria for fossil gas and nuclear energy economic activities that are in line with the EU Taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available.

What was the share of investments made in transitional and enabling activities?

Not applicable

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable

What was the share of socially sustainable investments?

Not applicable

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding the:

- Liquid assets (excluding treasury bonds)
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics

The Sub-fund may invest or hold these types of assets in order to achieve its investment objectives, to diversify its portfolio, to manage liquidity and to hedge its risks.

There are no minimum environmental or social guarantees.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 2.80% cash. There are no minimum environmental or social guarantees on these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e.:

• For direct line investments (corporate bonds):

On a quarterly basis, a normative screening has been established based on compliance with global standards.

Secondly, companies meeting the thresholds as defined in the activities excluded by the responsible investment policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector.

The stages of the investment process are outlined below:

ESG INTEGRATION	VOTE	BASELINE NEGATIVE SCREENING	NORMATIVE & NEGATIVE SCREENING
Integration into the investment decision (PAIs)	Influencing behaviour	Exclusions based on the activity of the issuer	Compliance with global standards/ Exclusion of the most controversial behaviour (safeguarding social and governance minimums)
			─

How did this financial product perform compared to the reference benchmark?

Not applicable

How does the reference benchmark differ from a broad market index?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics they promote.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable

- How did this financial product perform compared with the reference benchmark?
 Not applicable
- How did this financial product perform compared with the broad market index?

APPENDIX IV

Periodic information for financial products referred to in Article 8(1), (2) and (2a) of Regulation (EU) 2019/2088 and in the first paragraph of Article 6 of Regulation (EU) 2020/852

Product name:DPAM L BONDS EUR CORPORATE HIGH YIELD

Legal entity identifier: 549300RHXDNMS7JGH745

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020 /852 establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?			
• • Yes	● No		
It has made sustainable investments with an environmental objective:	It promoted environmental and/or social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of% of sustainable investments. with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective		
It has made sustainable investments with a social objective:%	X It promoted E/S characteristics, but did not make any sustainable investments		

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are

attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the Reference Period (01/01/2022-31/12/2022), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviors that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices.

Derivative products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting environmental and/or social characteristics.

The Sub-fund has not designated any benchmark index to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

How did the sustainability indicators perform?

Over the Reference Period, the Sub-fund achieved the following sustainability indicators:

- 1) At the level of direct line investments (corporate bonds):
 - a) The Sub-fund was not exposed to companies considered to be below Global Standards during the reporting period;
 - b) The Sub-fund was not exposed to companies involved in excluded controversial activities as defined by the Manager's Controversial Activities Policy (accessible via www.dpamfunds.com (Controversial Activities Policy);
 - c) The Sub-fund has not been exposed to companies facing extremely serious controversies around environmental or social issues.

...and in comparison to previous periods?

Not applicable

How did the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Not applicable

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Not applicable

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

For investments in corporate bonds:

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAI") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to the Manager's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth.

This commitment is incorporated throughout the research and investment process from its inception. In concrete terms, the PAIs have been integrated into the various stages of the Subfund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

- 1) Firstly, with regard to environmental PAIs:
 - a) They have been analyzed and monitored at the level of the invested issuers, particularly with regard to PAI related to greenhouse gas emissions and energy performance, notably through the Manager's research in the framework of the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD). Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute the most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.
 - b) After that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not meet global standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity are thus excluded from the portfolio in advance.
 - c) In addition, the filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).
- 2) Second, the social PAIs were systematically analyzed according to the stages of the research and investment process:
 - a) the Global Standards compliance filter is structured around human rights, labor rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises are de facto excluded from the investment universe.
 - b) the exclusion filter for companies involved in controversial activities (in accordance with DPAM's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM policy Controversial activities.pdf). In this way, companies involved in controversial armaments are directly excluded from the investment universe.
 - c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.
 The issue of board gender diversity is addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet

a minimum of 30% gender diversity on their boards.

What were the top investments of this financial product?

The list includes the investments that constitute the greatest proportion of investments of the financial product during the reference period which is: 31/12/2022

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

 Has the financial product invested in fossil gas and/or nuclear energy activitie with the EU Taxonomy?¹ 			ssil gas and/or nuclear energy activities in line	
	Yes: [specify below, and detail in the graphics in the box].			
		In fossil gas	In nuclear energy	
	v	No		

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the "greenness" of investee companies today.
- capital expenditure (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

^{*} For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹ Fossil gas and/or nuclear activities will only be compliant with the EU Taxonomy if they contribute to mitigating climate change ('climate change mitigation') and do not significantly undermine an objective of the EU Taxonomy - see explanatory note in the left margin. The full criteria for fossil gas and nuclear energy economic activities that are in line with the EU Taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available.

What was the share of investments made in transitional and enabling activities?

Not applicable

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable

What was the share of socially sustainable investments?

Not applicable

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding the:

- Liquid assets (excluding treasury bonds)
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics

The Sub-fund may invest or hold these types of assets in order to achieve its investment objectives, to diversify its portfolio, to manage liquidity and to hedge its risks.

There are no minimum environmental or social guarantees.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 2.73% cash. There are no minimum environmental or social guarantees on these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e.:

• For direct line investments (corporate bonds):

On a quarterly basis, a normative screening has been established based on compliance with global standards.

Secondly, companies meeting the thresholds as defined in the activities excluded by the responsible investment policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector.

The stages of the investment process are outlined below:

ESG INTEGRATION	VOTE	BASELINE NEGATIVE SCREENING	NORMATIVE & NEGATIVE SCREENING
Integration into the investment decision (PAIs)	Influencing behaviour	Exclusions based on the activity of the issuer	Compliance with global standards/ Exclusion of the most controversial behaviour (safeguarding social and governance minimums)
			

How did this financial product perform compared to the reference benchmark?

Not applicable

How does the reference benchmark differ from a broad market index?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics they promote.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the benchmark with the environmental or social characteristics promoted?

Not applicable

- How did this financial product perform compared with reference benchmark?
 Not applicable

 Not applicable

APPENDIX IV

Periodic information for financial products referred to in Article 8(1), (2) and (2a) of Regulation (EU) 2019/2088 and in the first paragraph of Article 6 of Regulation (EU) 2020/852

Product name:DPAM L BONDS EUR HIGH YIELD SHORT TERM

Legal entity identifier: 549300U2IHEFSZPGWH97

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020 /852 establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?				
• • Yes	● ○ 🗶 No			
It has made sustainable investments with an environmental objective:	It promoted environmental and/or social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportio of% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective			
It has made sustainable investments with a social objective:%	X It promoted E/S characteristics, but did not make any sustainable investments			

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are

attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the Reference Period (01/01/2022-31/12/2022), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviors that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices.

Derivative products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting environmental and/or social characteristics.

The Sub-fund has not designated any benchmark index to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

How did the sustainability indicators perform?

Over the Reference Period, the Sub-fund achieved the following sustainability indicators:

1) At the level of direct line investments (corporate bonds):

- a) The Sub-fund was not exposed to companies considered to be below Global Standards during the reporting period;
- b) The Sub-fund was not exposed to companies involved in excluded controversial activities as defined by the Manager's Controversial Activities Policy (accessible via www.dpamfunds.com (Controversial Activities Policy);
- c) The Sub-fund has not been exposed to companies facing extremely serious controversies around environmental or social issues.

2) At the level of direct line investments (sovereign bonds):

The Sub-fund has not been exposed to issuers that do not meet minimum democratic requirements.

...and in comparison to previous periods?

Not applicable

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Not applicable

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Not applicable

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

Principal adverse impacts are

the most significant negative impacts of investment

decisions on sustainability factors relating to

environmental, social and

employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

For investments in corporate bonds:

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAI") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to the Manager's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth.

This commitment is incorporated throughout the research and investment process from its inception. In concrete terms, the PAIs have been integrated into the various stages of the Subfund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

- 1) Firstly, with regard to environmental PAIs:
 - a) They have been analyzed and monitored at the level of the invested issuers, particularly with regard to PAI related to greenhouse gas emissions and energy performance, notably through the Manager's research in the framework of the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD). Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute the most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.
 - b) After that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not meet global standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity are thus excluded from the portfolio in advance.
 - c) In addition, the filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).
- 2) Second, the social PAIs were systematically analyzed according to the stages of the research and investment process:
 - a) the Global Standards compliance filter is structured around human rights, labor rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises are de facto excluded from the investment universe.
 - b) the exclusion filter for companies involved in controversial activities (in accordance with the Manager's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-assetmanagement/image/upload/v1614006839/DPAM policy Controversial activities.pdf). In this way, companies involved in controversial armaments are directly excluded from the investment universe.
 - c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

What were the top investments of this financial product?

The list includes the investments that constitute the greatest proportion of investments of the financial product during the reference period which is: 31/12/2022

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

Through the application of the investment strategy described above, the Sub-fund has invested 96.16% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as "#1 Aligned with E/S Characteristics").

In which economic sectors were the investments made?

Sector	Sub-sector	% of
		assets
Financial and insurance activities	Financial service activities, except insurance and pension	22.64%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

	Has the financial product invested in fossil gas and/or nuclear energy activities in line with the EU Taxonomy? ¹			
Yes: [specify below, and detail in the graphics in the box].			nd detail in the graphics in the box].	
		In fossil gas	In nuclear energy	
	X	No		

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the "greenness" of investee companies today.
- capital expenditure (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

^{*} For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹ Fossil gas and/or nuclear activities will only be compliant with the EU Taxonomy if they contribute to mitigating climate change ('climate change mitigation') and do not significantly undermine an objective of the EU Taxonomy - see explanatory note in the left margin. The full criteria for fossil gas and nuclear energy economic activities that are in line with the EU Taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available.

What was the share of investments made in transitional and enabling activities?

Not applicable

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable

What was the share of socially sustainable investments?

Not applicable

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding the:

- Liquid assets (excluding treasury bonds)
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics

The Sub-fund may invest or hold these types of assets in order to achieve its investment objectives, to diversify its portfolio, to manage liquidity and to hedge its risks.

There are no minimum environmental or social guarantees.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 3.84% cash. There are no minimum environmental or social guarantees on these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e.:

• For direct line investments (corporate bonds):

On a quarterly basis, a normative screening has been established based on compliance with global standards.

Secondly, companies meeting the thresholds as defined in the activities excluded by the responsible investment policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector.

• For investments in sovereign bonds:

The Sub-fund did not invest in countries considered not to meet minimum democratic requirements. To determine whether a country does not meet this minimum requirement the Manager applied a methodology that is based primarily on the classifications of the International NGO Freedom House ("not free") and The Economist Intelligence Unit ("authoritarian regime").

The list of countries was reviewed on a semi-annual basis and provided to management via the management systems so that it could not give transaction orders on papers issued by these excluded countries.

The stages of the investment process are outlined below:

VOTE	BASELINE NEGATIVE SCREENING	NORMATIVE & NEGATIVE SCREENING
Influencing behaviour	Exclusions based on the activity of the issuer	Compliance with global standards/ Exclusion of the most controversial behaviour (safeguarding social and governance minimums)
	Influencing	VOTE NEGATIVE SCREENING Influencing Exclusions based on the activity

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852 establishing a list of environmentally sustainable economic activities. This regulation does not set out a list socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

It made sustainable investments with an environmental objective:% It promoted environmental and/or social (E/S) characteristics and although it did not have a sustainable investment target, it had a sustainable investment ratio of%. with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmental objective in economic activities that do not qualify as environ mentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environ mentally sustainable under the EU Taxonomy with a social objective It made sustainable investments with a social objective:%	Did this financial product have a sustainable investment objective?

		I X I I I I I I I I I I I I I I I I I I				

Sustainability indicators assess how the environmental or social characteristics promoted by the financial product are achieved.

To what extent have the environmental and/or social characteristics promoted by this financial product been achieved?

During the Reference Period (01/01/2022-31/12/2022), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- excluding countries that do not respect a minimum of democratic requirements.
- systematically applying a policy for impact bonds (such as green and social bonds).

Derivative products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting environmental and/or social characteristics.

The Sub-fund has not designated any benchmark index to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

How did the sustainability indicators perform?

Over the Reference Period, the sub-fund achieved the following sustainability indicators:

- a) The Sub-fund has not been exposed to issuers that do not meet minimum democratic requirements.
- b) The percentage of impact bonds ("Green, Social & Sustainability bonds") in the portfolio was not higher than the benchmark. Over the Reference Period, the percentage of impact bonds ("Green, Social & Sustainability bonds") in the portfolio was 2.70% while the benchmark was 0.82%.
- ...and in comparison with previous periods?

Not applicable

What were the objectives of the sustainable investments that the financial product partially intended to make and how did the sustainable investment contribute to such objectives?

Not applicable

To what extent did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Not applicable

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable

Were the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable

The EU Taxonomy sets out a "does not significantly harm" principle by which Taxonomyaligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "does not significantly harm" principle only apples to the underlying investments of the financial product that consider the European Union's criteria regarding environmentally sustainable economic activities. The investments underlying the remaining share of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not cause significant harm to environmental or social objectives.

How has this financial product considered principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

During the Reference Period, the sub-fund has taken into consideration all the principal adverse impacts on sustainability factors (hereinafter "PAI") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288 that are applicable to investments in sovereign or supranational issuers.

The PAIs are intrinsically linked to the Manager's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated into the entire research and investment process.

In concrete terms, the PAI have been integrated into the various stages of the sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

- The first PAI relates to environmental issues and focuses on the greenhouse gas emission intensity of the investee countries. The indicator is an integral component of the country sustainability model that the Manager developed for its sovereign bond strategies. Consequently, it is included in the country's sustainability score and can influence it positively or negatively depending on its level and development compared to other issuer countries.
- The second PAI relates to social issues and focuses on issues of social breaches. The country's sustainability model observes several indicators on this issue, such as respect for civil liberties and political rights, respect for human rights and the level of violence within the country, commitment to major labor conventions, the issue of equal opportunity and distribution of wealth, etc. These different indicators are included in the country's sustainability score and can influence it positively or negatively depending on its level and evolution compared to other issuing countries.

During the Reference Period, a dialogue was initiated on the results of the sustainability scores with some countries according to the Manager's engagement policy via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006835/DPAM policy engagement.pdf.

Details of the dialogues with countries and companies will be published in an annual report in the first quarter of 2023 on the DPAM website (https://www.dpamfunds.com).

The Manager's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006836/DPAM policy Sustainable and Responsible Investment.pdf and DPAM report TCFD.pdf (cloudinary.com).

What were the main investments of this financial product?

What was the ratio of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

Through the application of the investment strategy described above, the Sub-fund has invested 99.74% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as "#1 Aligned with E/S Characteristics").

In which economic sectors were investments made?

Sector	Sub-sector	% of
		assets
Public administration and defence;	Public administration and defence; compulsory social security	
compulsory social security		99.74%
Cash	Cash	0.26%

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

In r

ear energy

	Has the financial product invested in fossil gas and/or nuclear energy activities in line with the EU Taxonomy? 1		
	Yes: [specify below, and detail in the graphics in the box].		

x No

In fossil gas

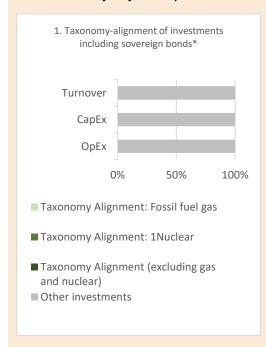

Taxonomy-aligned activities are expressed as a share of:

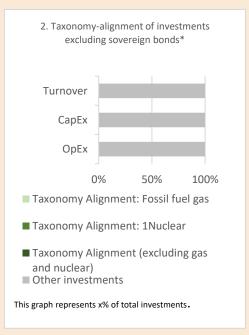

- **turnover** to reflect the current environmental character of the investee companies;
- capital expenditure (CapEx) showing the green investments made by investee companies, which is relevant for a transition to a green economy;
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available.

The graphs below show in green the percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

st For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹ Fossil gas and/or nuclear activities will only be compliant with the EU Taxonomy if they contribute to mitigating climate change ("climate change mitigation") and do not significantly undermine an objective of the EU Taxonomy - see explanatory note in the left margin. The full criteria for fossil gas and nuclear energy economic activities that are in line with the EU Taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding the:

- Liquid assets (excluding treasury bonds)
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics

The Sub-fund may invest or hold these types of assets in order to achieve its investment objectives, to diversify its portfolio, to manage liquidity and to hedge its risks.

There are no minimum environmental or social guarantees.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 0.26% cash. There are no minimum environmental or social guarantees on these investments.

What measures have been taken to comply with the environmental and/or social characteristics during the reporting period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e:

The sub-fund did not invest in countries considered not to meet minimum democratic requirements.

To determine whether a country does not meet this minimum requirement the Manager applied a methodology that is based primarily on the classifications of the International NGO Freedom House ("not free") and The Economist Intelligence Unit ("authoritarian regime"). The list of countries was reviewed on a semi-annual basis and provided to management via the management systems so that it could not give transaction orders on papers issued by these excluded countries.

The stages of the investment process are outlined below:

ESG INTEGRATION	VOTE	BASELINE NEGATIVE SCREENING	NORMATIVE & NEGATIVE SCREENING
Integration into the investment decision (PAIs)	Influencing behaviour	Exclusions based on the activity of the issuer	Compliance with global standards/ Exclusion of the most controversial behaviour (safeguarding social and governance minimums)

Reference benchmarks are indexes to measure whether the financial product meets the environmental or social characteristics it promotes.

APPENDIX IV

Sample periodic information for financial products referred to in Article 8(1), (2) and (2a) of Regulation (EU) 2019/2088 and in the first paragraph of Article 6 of Regulation (EU) 2020/852

Product name:DPAM L BONDS EUR SELECTION

Legal entity identifier: 391200CW2QF0AEFAVG20

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852 establishing a list of environmentally sustainable economic activities. This regulation does not set out a list socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics Did this financial product have a sustainable investment objective?

Did this iniancial product have a sustainable investment objective:			
• • Yes	• No		
It made sustainable investments with an environmental objective:% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promoted environmental and/or social (E/S) characteristics and although it did not have a sustainable investment target, it had a sustainable investment ratio of%. with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environ mentally sustainable under the EU Taxonomy with a social objective		
It made sustainable investments with a social objective:%	X It promoted E/S features, but did not make sustainable investments		

Sustainability indicators assess how the environmental or social characteristics promoted by the financial product are achieved.

To what extent have the environmental and/or social characteristics promoted by this financial product been achieved?

During the Reference Period (01/01/2022-31/12/2022), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- excluding countries that do not respect a minimum of democratic requirements.
- Systematically applying a policy for impact bonds (such as green and social bonds).

Derivative products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting environmental and/or social characteristics.

The Sub-fund has not designated any benchmark index to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

How did the sustainability indicators perform?

Over the Reference Period, the sub-fund achieved the following sustainability indicators:

- a. The Sub-fund has not been exposed to issuers that do not meet minimum democratic requirements.
- b. The percentage of impact bonds ("Green, Social & Sustainability bonds") in the portfolio was not higher than the benchmark. Over the Reference Period, the percentage of impact bonds ("Green, Social & Sustainability bonds") in the portfolio was 4.45% while the benchmark was 1.83%.
- ...and in comparison with previous periods?

Not applicable

What were the objectives of the sustainable investments that the financial product partially intended to make and how did the sustainable investment contribute to such objectives?

Not applicable

To what extent did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Not applicable

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable

Were the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable

The EU Taxonomy sets out a "does not significantly harm" principle by which Taxonomyaligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "does not significantly harm" principle only apples to the underlying investments of the financial product that consider the European Union's criteria regarding environmentally sustainable economic activities. The investments underlying the remaining share of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not cause significant harm to environmental or social objectives.

the most significant negative

How has this financial product considered principal adverse impacts on sustainability factors?

During the Reference Period, the sub-fund has taken into consideration all the principal adverse impacts on sustainability factors (hereinafter "PAI") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288 that are applicable to investments in sovereign Principal adverse impacts are or supranational issuers.

impacts of investment The PAIs are intrinsically linked to the Manager's commitment to reduce the negative decisions on sustainability impact of the Sub-fund's investments by avoiding activities or behaviours that may factors relating to environmental, social and significantly hinder sustainable and inclusive growth. This commitment is incorporated employee matters, respect for into the entire research and investment process. human rights, anticorruption and antibribery matters.

In concrete terms, the PAI have been integrated into the various stages of the sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

- The first PAI relates to environmental issues and focuses on the greenhouse gas emission intensity of the investee countries. The indicator is an integral component of the country sustainability model that the Manager developed for its sovereign bond strategies. Consequently, it is included in the country's sustainability score and can influence it positively or negatively depending on its level and development compared to other issuer countries.
- The second PAI relates to social issues and focuses on issues of social breaches. The country's sustainability model observes several indicators on this issue, such as respect for civil liberties and political rights, respect for human rights and the level of violence within the country, commitment to major labor conventions, the issue of equal opportunity and distribution of wealth, etc. These different indicators are included in the country's sustainability score and can influence it positively or negatively depending on its level and evolution compared to other issuing countries.

During the Reference Period, a dialogue was initiated on the results of the sustainability scores with some countries according to the Manager's engagement policy via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006835/DPAM policy engagement.pdf.

Details of the dialogues with countries and companies will be published in an annual report in the first quarter of 2023 on the DPAM website (https://www.dpamfunds.com).

The Manager's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006836/DPAM policy Sustainable and Responsible Inv

estment.pdf and DPAM_report_TCFD.pdf (cloudinary.com).

What were the main investments of this financial product?

The list includes the investments that constitute the largest share of the financial product's investments during the reference period, namely: 31/12/2022

Largest investments	Sector	% of assets	Country

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Has the financial product invested in fossil gas and/or nuclear energy activities in line with the EU Taxonomy? ¹
Yes: [specify below, and detail in the graphics in the box].

In fossil gas In r ear energy

x No

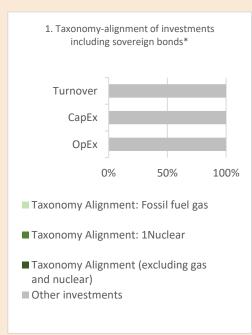

Taxonomy-aligned activities are expressed as a share of:

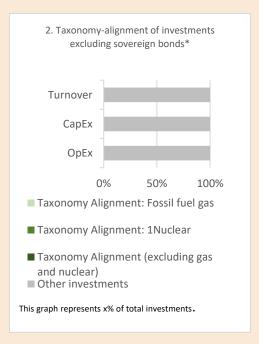

- **turnover** to reflect the current environmental character of the investee companies;
- capital expenditure (CapEx) showing the green investments made by investee companies, which is relevant for a transition to a green economy;
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available.

The graphs below show in green the percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

st For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹ Fossil gas and/or nuclear activities will only be compliant with the EU Taxonomy if they contribute to mitigating climate change ("climate change mitigation") and do not significantly undermine an objective of the EU Taxonomy - see explanatory note in the left margin. The full criteria for fossil gas and nuclear energy economic activities that are in line with the EU Taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

What was the share of investments made in transitional and enabling activities?

Not applicable

What is the percentage of investments aligned with the EU Taxonomy compared to previous reporting periods?

Not applicable

The symbol represents sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activity under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable

What was the share of socially sustainable investments?

Not applicable

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding the:

- Liquid assets (excluding treasury bonds)
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics

The Sub-fund may invest or hold these types of assets in order to achieve its investment objectives, to diversify its portfolio, to manage liquidity and to hedge its risks.

There are no minimum environmental or social guarantees.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 2.92% cash. There are no minimum environmental or social guarantees on these investments.

What measures have been taken to comply with the environmental and/or social characteristics during the reporting period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e:

The sub-fund did not invest in countries considered not to meet minimum democratic requirements.

To determine whether a country does not meet this minimum requirement the Manager applied a methodology that is based primarily on the classifications of the International NGO Freedom House ("not free") and The Economist Intelligence Unit ("authoritarian regime"). The list of countries was reviewed on a semi-annual basis and provided to management via the management systems so that it could not give transaction orders on papers issued by these excluded countries.

The stages of the investment process are outlined below:

ESG INTEGRATION	VOTE	BASELINE NEGATIVE SCREENING	NORMATIVE & NEGATIVE SCREENING
Integration into the investment decision (PAIs)	Influencing behaviour	Exclusions based on the activity of the issuer	Compliance with global standards/ Exclusion of the most controversial behaviour (safeguarding social and governance minimums)

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020 /852 establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes	• No
It has made sustainable investments with an environmental objective:	It promoted environmental and/or social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It has made sustainable investments with a social objective:%	X It promoted E/S characteristics, but did not make any sustainable investments

Sustainability indicators measure how the environmental or social characteristics promoted by

the financial product are

attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the Reference Period (01/01/2022-31/12/2022), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviors that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices.

Derivative products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting environmental and/or social characteristics.

The Sub-fund has not designated any benchmark index to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

How did the sustainability indicators perform?

Over the Reference Period, the Sub-fund achieved the following sustainability indicators:

- 1) At the level of direct line investments (corporate bonds):
 - a) The Sub-fund was not exposed to companies considered to be below Global Standards during the reporting period;
 - The Sub-fund was not exposed to companies involved in excluded controversial activities as defined by the Manager's Controversial Activities Policy (accessible via www.dpamfunds.com (Controversial Activities Policy);
 - c) The Sub-fund has not been exposed to companies facing extremely serious controversies around environmental or social issues.

...and in comparison to previous periods?

Not applicable

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Not applicable

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Not applicable

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative

employee matters, respect for human rights, anti-corruption

impacts of investment

decisions on sustainability factors relating to environmental, social and

and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

For investments in corporate bonds:

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAI") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Subfund's investments by avoiding activities or behaviors that may significantly hinder sustainable and inclusive growth.

This commitment is incorporated throughout the research and investment process from its inception. In concrete terms, the PAIs have been integrated into the various stages of the Subfund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

- 1) Firstly, with regard to environmental PAIs:
 - a) They have been analyzed and monitored at the level of the invested issuers, particularly with regard to PAI related to greenhouse gas emissions and energy performance, notably through DPAM research in the framework of the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD). Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute the most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.
 - b) After that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not meet global standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity are thus excluded from the portfolio in advance.
 - c) In addition, the filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).
- 2) Second, the social PAIs were systematically analyzed according to the stages of the research and investment process:
 - a) the Global Standards compliance filter is structured around human rights, labor rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises are de facto excluded from the investment universe.
 - b) the exclusion filter for companies involved in controversial activities (in accordance with DPAM's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM policy Controversial activities.pdf). In this way, companies involved in controversial armaments are directly excluded from the investment universe.
 - c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

What were the top investments of this financial product?

The list includes the investments that constitute the greatest proportion of investments of the financial product during the reference period which is: 31/12/2022

Largest investments	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

What was the asset allocation?

Through the application of the investment strategy described above, the Sub-fund has invested 99.05% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as "#1 Aligned with E/S Characteristics").

assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which a re neither aligned with the environmental or social characteristics, nor a re qualified as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub-sector	% of assets
Financial and insurance activities	Financial service activities, except insurance and pension funding	30.34%
Financial and insurance activities	Activities auxiliary to financial services and insurance activities	12.30%
Real estate activities	Real estate activities	6.81%
Manufacturing	Manufacture of motor vehicles, trailers and semi-trailers	6.06%
Professional, scientific and technical activities	Architectural and engineering activities; technical testing and analysis	4.58%
Professional, scientific and technical activities	Activities of head offices; management consultancy activities	4.14%
Accommodation and food service activities	Accommodation	3.49%
Information and communication	Publishing activities	3.45%
Construction	Civil engineering	3.35%
Transportation and storage	Land transport and transport via pipelines	2.97%
Manufacturing	Manufacture of coke and refined petroleum products	2.94%
Water supply; sewerage; waste management and remediation activities	Water collection, treatment and supply	2.42%
Wholesale and retail trade; repair of motor vehicles and motorcycles	Retail trade, except of motor vehicles and motorcycles	2.42%
Manufacturing	Manufacture of rubber and plastic products	2.39%
Information and communication	Telecommunications	2.39%
Transportation and storage	Postal and courier activities	2.03%
Administrative and support service activities	Rental and leasing activities	1.99%
Administrative and support service activities	Office administrative, office support and other business support activities	1.97%
Manufacturing	Manufacture of beverages	1.02%
Manufacturing	Manufacture of chemicals and chemical products	1.01%
Manufacturing	Manufacture of computer, electronic and optical products	0.97%
Cash	Cash	0.95%

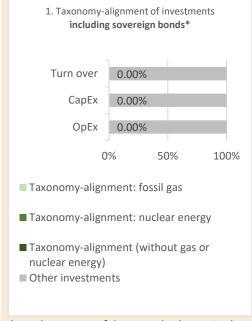

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

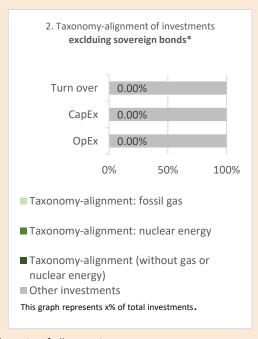

Has the fina with the EU		•	sil g	as and/or nuclear energy activities in line
	Y	es: [specify below, and	det	tail in the graphics in the box].
		In fossil gas		In nuclear energy
2	x N	No		

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the "greenness" of investee companies today.
- capital expenditure (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

^{*} For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹ Fossil gas and/or nuclear activities will only be compliant with the EU Taxonomy if they contribute to mitigating climate change ('climate change mitigation') and do not significantly undermine an objective of the EU Taxonomy - see explanatory note in the left margin. The full criteria for fossil gas and nuclear energy economic activities that are in line with the EU Taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available.

What was the share of investments made in transitional and enabling activities?

Not applicable

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable

What was the share of socially sustainable investments?

Not applicable

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding the:

- Liquid assets (excluding treasury bonds)
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics

The Sub-fund may invest or hold these types of assets in order to achieve its investment objectives, to diversify its portfolio, to manage liquidity and to hedge its risks.

There are no minimum environmental or social guarantees.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 0.95% cash. There are no minimum environmental or social guarantees on these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e.:

• For direct line investments (corporate bonds):

On a quarterly basis, a normative screening has been established based on compliance with global standards.

Secondly, companies meeting the thresholds as defined in the activities excluded by the responsible investment policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector.

• For investments in sovereign bonds:

The Sub-fund did not invest in countries considered not to meet minimum democratic requirements. To determine whether a country does not meet this minimum requirement the Manager applied a methodology that is based primarily on the classifications of the International NGO Freedom House ("not free") and The Economist Intelligence Unit ("authoritarian regime").

The list of countries was reviewed on a semi-annual basis and provided to management via the management systems so that it could not give transaction orders on papers issued by these excluded countries.

The stages of the investment process are outlined below:

ESG INTEGRATION	VOTE	BASELINE NEGATIVE SCREENING	NORMATIVE & NEGATIVE SCREENING
Integration into the investment decision (PAIs)	Influencing behaviour	Exclusions based on the activity of the issuer	Compliance with global standards/ Exclusion of the most controversial behaviour (safeguarding social and governance minimums)

Legal entity identifier: 391200NTFVF0HX852F74

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852 establishing a list of environmentally sustainable economic activities. This regulation does not set out a list socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable	e investment objective?
Yes	● ○ 🗶 No
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promoted environmental and/or social (E/S) characteristics and although it did not have a sustainable investment target, it had a sustainable investment ratio of%. with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environ mentally sustainable under the EU Taxonomy with a social objective
It made sustainable investments with a social objective:%	X It promoted E/S features, but did not make sustainable investments

Sustainability indicators assess how the environmental or social characteristics promoted by the financial product are achieved.

To what extent have the environmental and/or social characteristics promoted by this financial product been achieved?

During the Reference Period (01/01/2022-31/12/2022), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- excluding countries that do not respect a minimum of democratic requirements.
- systematically applying a policy for impact bonds (such as green and social bonds).

Derivative products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting environmental and/or social characteristics.

The Sub-fund has not designated any benchmark index to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

How did the sustainability indicators perform?

Over the Reference Period, the sub-fund achieved the following sustainability indicators:

- a) The Sub-fund has not been exposed to issuers that do not meet minimum democratic requirements.
- b) The percentage of impact bonds ("Green, Social & Sustainability bonds") in the portfolio was not higher than the benchmark. Over the Reference Period, the percentage of impact bonds ("Green, Social & Sustainability bonds") in the portfolio was 7.37% while the benchmark was 0.78%.
- ...and in comparison with previous periods?

What were the objectives of the sustainable investments that the financial product partially intended to make and how did the sustainable investment contribute to such objectives?

Not applicable

To what extent did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Not applicable

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable

Were the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable

The EU Taxonomy sets out a "does not significantly harm" principle by which Taxonomyaligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "does not significantly harm" principle only apples to the underlying investments of the financial product that consider the European Union's criteria regarding environmentally sustainable economic activities. The investments underlying the remaining share of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not cause significant harm to environmental or social objectives.

How has this financial product considered principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters. During the Reference Period, the sub-fund has taken into consideration all the principal adverse impacts on sustainability factors (hereinafter "PAI") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288 that are applicable to investments in sovereign or supranational issuers.

The PAIs are intrinsically linked to the Manager's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated into the entire research and investment process.

In concrete terms, the PAI have been integrated into the various stages of the sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

- The first PAI relates to environmental issues and focuses on the greenhouse gas emission intensity of the investee countries. The indicator is an integral component of the country sustainability model that the Manager developed for its sovereign bond strategies. Consequently, it is included in the country's sustainability score and can influence it positively or negatively depending on its level and development compared to other issuer countries.
- The second PAI relates to social issues and focuses on issues of social breaches. The country's sustainability model observes several indicators on this issue, such as respect for civil liberties and political rights, respect for human rights and the level of violence within the country, commitment to major labor conventions, the issue of equal opportunity and distribution of wealth, etc. These different indicators are included in the country's sustainability score and can influence it positively or negatively depending on its level and evolution compared to other issuing countries.

During the Reference Period, a dialogue was initiated on the results of the sustainability scores with some countries according to the Manager's engagement policy via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006835/DPAM policy engagement.pdf.

Details of the dialogues with countries and companies will be published in an annual report in the first quarter of 2023 on the DPAM website (https://www.dpamfunds.com).

The Manager's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006836/DPAM policy Sustainable and Responsible Investment.pdf and DPAM report TCFD.pdf (cloudinary.com).

What were the main investments of this financial product?

The list includes the investments that constitute the largest share of the financial product's investments during the reference period, namely: 31/12/2022

Sector	% of assets	Country

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

In r

ear energy

Has the finar with the EU	ncial product invested in fossil gas and/or nuclear energy activities in line Taxonomy?¹
	Yes: [specify below, and detail in the graphics in the box].

x No

In fossil gas

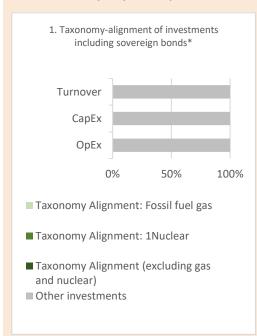

Taxonomy-aligned activities are expressed as a share of:

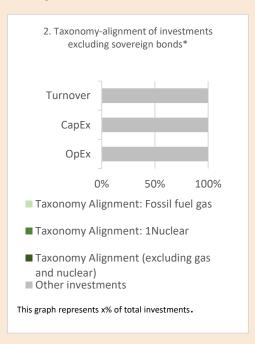

- **turnover** to reflect the current environmental character of the investee companies;
- capital expenditure (CapEx) showing the green investments made by investee companies, which is relevant for a transition to a green economy;
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available.

The graphs below show in green the percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹ Fossil gas and/or nuclear activities will only be compliant with the EU Taxonomy if they contribute to mitigating climate change ("climate change mitigation") and do not significantly undermine an objective of the EU Taxonomy - see explanatory note in the left margin. The full criteria for fossil gas and nuclear energy economic activities that are in line with the EU Taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

What was the share of investments made in transitional and enabling activities?

Not applicable

What is the percentage of investments aligned with the EU Taxonomy compared to previous reporting periods?

Not applicable

The symbol represents sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activity under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable

What was the share of socially sustainable investments?

Not applicable

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

the investment strategy described above is applied to the entire Sub-fund, excluding the:

- Liquid assets (excluding treasury bonds)
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics

The Sub-fund may invest or hold these types of assets in order to achieve its investment objectives, to diversify its portfolio, to manage liquidity and to hedge its risks.

There are no minimum environmental or social guarantees.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 1.96% cash. There are no minimum environmental or social guarantees on these investments.

What measures have been taken to comply with the environmental and/or social characteristics during the reporting period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e:

The sub-fund did not invest in countries considered not to meet minimum democratic requirements.

To determine whether a country does not meet this minimum requirement the Manager applied a methodology that is based primarily on the classifications of the International NGO Freedom House ("not free") and The Economist Intelligence Unit ("authoritarian regime"). The list of countries was reviewed on a semi-annual basis and provided to management via the management systems so that it could not give transaction orders on papers issued by these excluded countries.

The stages of the investment process are outlined below:

ESG INTEGRATION	VOTE	BASELINE NEGATIVE SCREENING	NORMATIVE & NEGATIVE SCREENING
Integration into the investment decision (PAIs)	Influencing behaviour	Exclusions based on the activity of the issuer	Compliance with global standards/ Exclusion of the most controversial behaviour (safeguarding social and governance minimums)

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow

good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020 /852 establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable	e investment objective?
Yes	● ○ 🗶 No
It has made sustainable investments with an environmental objective:	It promoted environmental and/or social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It has made sustainable investments with a social objective:%	X It promoted E/S features, but did not make sustainable investments

Sustainability indicators measure how the environmental or social characteristics promoted by

the financial product are

attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the Reference Period (01/01/2022-31/12/2022), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviors that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices.

Derivative products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting environmental and/or social characteristics.

The Sub-fund has not designated any benchmark index to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

How did the sustainability indicators perform?

Over the Reference Period, the Sub-fund achieved the following sustainability indicators:

- 1) At the level of direct line investments (corporate bonds):
 - a) The Sub-fund was not exposed to companies considered to be below Global Standards during the reporting period;
 - The Sub-fund was not exposed to companies involved in excluded controversial activities as defined by the Manager's Controversial Activities Policy (accessible via www.dpamfunds.com (Controversial Activities Policy);
 - c) The Sub-fund has not been exposed to companies facing extremely serious controversies around environmental or social issues.

...and in comparison to previous periods?

Not applicable

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Not applicable

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Not applicable

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

For investments in corporate bonds:

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAI") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to the Manager DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth.

This commitment is incorporated throughout the research and investment process from its inception. In concrete terms, the PAIs have been integrated into the various stages of the Subfund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

- 1) Firstly, with regard to environmental PAIs:
 - a) They have been analyzed and monitored at the level of the invested issuers, particularly with regard to PAI related to greenhouse gas emissions and energy performance, notably through the Manager's research in the framework of the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD). Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute the most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.
 - b) After that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not meet global standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity are thus excluded from the portfolio in advance.
 - c) In addition, the filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).
- 2) Second, the social PAIs were systematically analyzed according to the stages of the research and investment process:
 - a) the Global Standards compliance filter is structured around human rights, labor rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises are de facto excluded from the investment universe.
 - b) the exclusion filter for companies involved in controversial activities (in accordance with the Manager's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-assetmanagement/image/upload/v1614006839/DPAM policy Controversial activities.pdf). In this way, companies involved in controversial armaments are directly excluded from the investment universe.
 - c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

What were the top investments of this financial product?

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

 Has the financial product invested in fossil gas and/or nuclear energy activities in with the EU Taxonomy?¹ 			ssil gas and/or nuclear energy activities in line
Yes: [specify below, and detail in the graphics in the box].		d detail in the graphics in the box].	
		In fossil gas	In nuclear energy
	v	No	

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the "greenness" of investee companies today.
- capital expenditure (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

^{*} For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹ Fossil gas and/or nuclear activities will only be compliant with the EU Taxonomy if they contribute to mitigating climate change ('climate change mitigation') and do not significantly undermine an objective of the EU Taxonomy - see explanatory note in the left margin. The full criteria for fossil gas and nuclear energy economic activities that are in line with the EU Taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available.

What was the share of investments made in transitional and enabling activities?

Not applicable

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable

What was the share of socially sustainable investments?

Not applicable

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding the:

- Liquid assets (excluding treasury bonds)
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics

The Sub-fund may invest or hold these types of assets in order to achieve its investment objectives, to diversify its portfolio, to manage liquidity and to hedge its risks.

There are no minimum environmental or social guarantees.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 8.71% cash. There are no minimum environmental or social guarantees on these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e.:

• For direct line investments (corporate bonds):

On a quarterly basis, a normative screening has been established based on compliance with global standards.

Secondly, companies meeting the thresholds as defined in the activities excluded by the responsible investment policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector.

• For investments in sovereign bonds:

The Sub-fund did not invest in countries considered not to meet minimum democratic requirements. To determine whether a country does not meet this minimum requirement the Manager applied a methodology that is based primarily on the classifications of the International NGO Freedom House ("not free") and The Economist Intelligence Unit ("authoritarian regime").

The list of countries was reviewed on a semi-annual basis and provided to management via the management systems so that it could not give transaction orders on papers issued by these excluded countries.

The stages of the investment process are outlined below:

ESG INTEGRATION	VOTE	BASELINE NEGATIVE SCREENING	NORMATIVE & NEGATIVE SCREENING
Integration into the investment decision (PAIs)	Influencing behaviour	Exclusions based on the activity of the issuer	Compliance with global standards/ Exclusion of the most controversial behaviour (safeguarding social and governance minimums)

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020 /852 establishing a list of environmentally sustainable economic activities. That Regulation does not set out a list socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?			
• • Yes	• No		
It has made sustainable investments with an environmental objective:	It promoted environmental and/or social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective		
It has made sustainable investments with a social objective:%	X It promoted E/S characteristics, but did not make any sustainable investments		

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are

attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the Reference Period (01/01/2022-31/12/2022), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviors that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices.

Derivative products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting environmental and/or social characteristics.

The Sub-fund has not designated any benchmark index to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

How did the sustainability indicators perform?

Over the Reference Period, the Sub-fund achieved the following sustainability indicators:

1) At the level of direct line investments (corporate bonds):

- a) The Sub-fund was not exposed to companies considered to be below Global Standards during the reporting period;
- b) The Sub-fund was not exposed to companies involved in excluded controversial activities as defined by the Manager's Controversial Activities Policy (accessible via www.dpamfunds.com (Controversial Activities Policy);
- c) The Sub-fund has not been exposed to companies facing extremely serious controversies around environmental or social issues.

2) At the level of direct line investments (sovereign bonds):

The Sub-fund has not been exposed to issuers that do not meet minimum democratic requirements.

...and in comparison to previous periods?

Not applicable

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Not applicable

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Not applicable

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

Principal adverse impacts are

the most significant negative impacts of investment

decisions on sustainability factors relating to

environmental, social and

employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

• For investments in corporate bonds:

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAI") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to the Manager's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth.

This commitment is incorporated throughout the research and investment process from its inception. In concrete terms, the PAIs have been integrated into the various stages of the Subfund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

1) Firstly, with regard to environmental PAIs:

- a) They have been analyzed and monitored at the level of the invested issuers, particularly with regard to PAI related to greenhouse gas emissions and energy performance, notably through the Manager's research in the framework of the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD). Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute the most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.
- b) After that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not meet global standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity are thus excluded from the portfolio in advance.
- c) In addition, the filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).
- 2) Second, the social PAIs were systematically analyzed according to the stages of the research and investment process:
 - a) the Global Standards compliance filter is structured around human rights, labor rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises are de facto excluded from the investment universe.
 - b) the exclusion filter for companies involved in controversial activities (in accordance with the Manager's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM policy Controversial activities.pdf). In this way, companies involved in controversial armaments are directly excluded from the investment universe.
 - c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

For investments in sovereign bonds:

During the Reference Period, the Sub-fund took into consideration the environmental and social PAI listed in table 1 of appendix I of the Delegated Regulation (EU) 2022/1288.

The first PAI relates to environmental issues and focuses on the greenhouse gas emission intensity of the investee countries. The indicator is an integral component of the country sustainability model that the Manager developed for its sovereign bond strategies. Consequently, it is included in the country's sustainability score and can influence it positively or negatively depending on its level and development compared to other issuer countries.

The second PAI relates to social issues and focuses on issues of social breaches. Our country sustainability model monitors a number of indicators on this issue, such as respect for civil liberties and political rights, respect for human rights and the level of violence within the country, commitment to key labour law conventions, the issue of equal opportunities and distribution of wealth, etc. These different indicators are included in the country's sustainability score and may influence it positively or negatively depending on its level and evolution compared to other emitting countries.

During the Reference Period, a dialogue was initiated on the results of the sustainability scores with some countries according to DPAM's engagement policy via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006835/DPAM policy engagement.pdf.

Over the Reference Period, the management teams conducted 37 dialogues with the various participants in sovereign debt issues. These dialogues allowed us to verify with the stakeholders the points of attention of the governmental policies, notably in environmental and/or social matters.

Details of the dialogues with countries and companies will be published in an annual report in the first quarter of 2023 on the Manager's website (https://www.dpamfunds.com).

The Manager's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006836/DPAM policy Sustainable and Responsible Investment.pdf and DPAM_report TCFD.pdf (cloudinary.com).

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

Through the application of the investment strategy described above, the Sub-fund has invested 97.64% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as "#1 Aligned with E/S Characteristics").

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which a re neither aligned with the environmental or social characteristics, nor a re qualified as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub-sector	% of assets

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

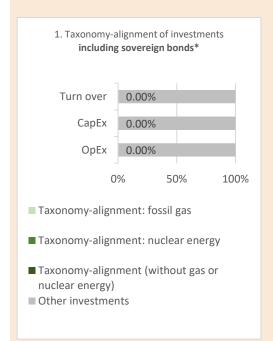

Has the financial product invested in fossil gas and/or nuclear energy activities in line with the EU Taxonomy?¹
 Yes: [specify below, and detail in the graphics in the box].
 In fossil gas

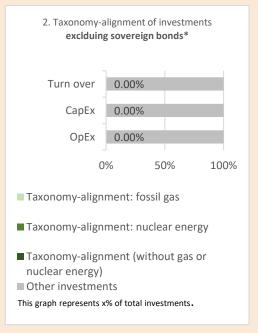

x No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the "greenness" of investee companies today.
- capital expenditure (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

 $\hbox{\it * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures}$

¹ Fossil gas and/or nuclear activities will only be compliant with the EU Taxonomy if they contribute to mitigating climate change ('climate change mitigation') and do not significantly undermine an objective of the EU Taxonomy - see explanatory note in the left margin. The full criteria for fossil gas and nuclear energy economic activities that are in line with the EU Taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available.

What was the share of investments made in transitional and enabling activities?

Not applicable

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable

What was the share of socially sustainable investments?

Not applicable

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding the:

- Liquid assets (excluding treasury bonds)
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics

The Sub-fund may invest or hold these types of assets in order to achieve its investment objectives, to diversify its portfolio, to manage liquidity and to hedge its risks.

There are no minimum environmental or social guarantees.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 2.22% cash. There are no minimum environmental or social guarantees on these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e.:

For direct line investments (corporate bonds):

On a quarterly basis, a normative screening has been established based on compliance with global standards.

Secondly, companies meeting the thresholds as defined in the activities excluded by the responsible investment policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

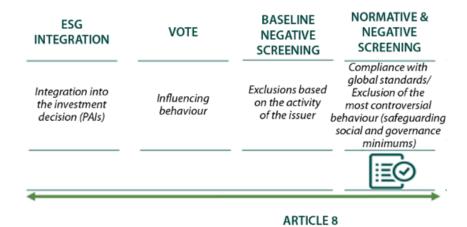

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector.

• For investments in sovereign bonds:

The Sub-fund did not invest in countries considered not to meet minimum democratic requirements. To determine whether a country does not meet this minimum requirement the Manager applied a methodology that is based primarily on the classifications of the International NGO Freedom House ("not free") and The Economist Intelligence Unit ("authoritarian regime").

The list of countries was reviewed on a semi-annual basis and provided to management via the management systems so that it could not give transaction orders on papers issued by these excluded countries.

The stages of the investment process are outlined below:

How did this financial product perform compared to the reference benchmark?

Not applicable

How does the reference benchmark differ from a broad market index?

Not applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics being promoted?

Not applicable

- How did this financial product perform compared with the reference benchmark?
 Not applicable
- How did this financial product perform compared with the broad market index?
 Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics they promote.

APPENDIX IV

Periodic information for financial products referred to in Article 8(1), (2) and (2a) of Regulation (EU) 2019/2088 and in the first paragraph of Article 6 of Regulation (EU) 2020/852

Product name:DPAM L CONVERTIBLE EUROPE

Legal entity identifier: 391200SAT1JESKJCU806

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020 /852 establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?			
• • Yes	● No		
It has made sustainable investments with an environmental objective:	It promoted environmental and/or social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective		
It has made sustainable investments with a social objective:%	X It promoted E/S characteristics, but did not make any sustainable investments		

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are

attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the Reference Period (01/01/2022-31/12/2022), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviors that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices.

Derivative products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting environmental and/or social characteristics.

The Sub-fund has not designated any benchmark index to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

How did the sustainability indicators perform?

Over the Reference Period, the Sub-fund achieved the following sustainability indicators:

- 1) At the level of direct line investments (equities or corporate bonds):
 - The Sub-fund was not exposed to companies considered to be below Global Standards during the reporting period;
 - b) The Sub-fund was not exposed to companies involved in excluded controversial activities as defined by the Manager's Controversial Activities Policy;
 - The Sub-fund has not been exposed to companies facing extremely serious controversies around environmental or social issues;
- ...and in comparison to previous periods?

Not applicable

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Not applicable

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Not applicable

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

For investments in shares or corporate bonds:

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAI") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to the Manager's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth.

This commitment is incorporated throughout the research and investment process from its inception. In concrete terms, the PAIs have been integrated into the various stages of the Subfund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

1) Firstly, with regard to environmental PAIs:

- a) They have been analyzed and monitored at the level of the invested issuers, particularly with regard to PAI related to greenhouse gas emissions and energy performance, notably through the Manager's research in the framework of the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD). Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute the most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.
- b) After that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not meet global standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity are thus excluded from the portfolio in advance.
- c) In addition, the filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).
- 2) Second, the social and governance PAIs were systematically analyzed according to the stages of the research and investment process:
 - a) the Global Standards compliance filter is structured around human rights, labor rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises are de facto excluded from the investment universe.
 - b) the exclusion filter for companies involved in controversial activities (in accordance with the Manager's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-asset- management/image/upload/v1614006839/DPAM_policy_Controversial_activities.p df). In this way, companies involved in controversial armaments are directly excluded from the investment universe.
 - c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

the environmental or social characteristics they promote.

Not applicable

How did this financial product perform compared with the broad market index?
Not applicable

APPENDIX IV

Periodic information for financial products referred to in Article 8(1), (2) and (2a) of Regulation (EU) 2019/2088 and in the first paragraph of Article 6 of Regulation (EU) 2020/852

Product name:DPAM L EQUITIES CONVICTION RESEARCH

Legal entity identifier: 549300K2SC8V3VLQR059

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020 /852 establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable	e investment objective?
• • Yes	• No
It has made sustainable investments with an environmental objective:	It promoted environmental and/or social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It has made sustainable investments with a social objective:%	X It promoted E/S characteristics, but did not make any sustainable investments

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are

attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the Reference Period (01/01/2022-31/12/2022), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviors that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices.

Derivative products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting environmental and/or social characteristics.

The Sub-fund has not designated any benchmark index to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

How did the sustainability indicators perform?

Over the Reference Period, the Sub-fund achieved the following sustainability indicators:

- a) The Sub-fund was not exposed to companies considered to be below Global Standards during the reporting period;
- b) The Sub-fund was not exposed to companies involved in excluded controversial activities as defined by the Manager's Controversial Activities Policy;
- c) The Sub-fund has not been exposed to companies facing extremely serious controversies around environmental or social issues;

...and in comparison to previous periods?

Not applicable

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Not applicable

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Not applicable

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative

employee matters, respect for human rights, anti-corruption

and anti-bribery matters.

impacts of investment decisions on sustainability factors relating to environmental, social and

How did this financial product consider principal adverse impacts on sustainability factors?

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAI") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviors that may significantly hinder sustainable and inclusive growth.

This commitment is incorporated throughout the research and investment process from its inception. In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

- 1) Firstly, with regard to environmental PAIs:
 - a) they have been analyzed and monitored at the level of the invested issuers, particularly with respect to PAI related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD). Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

- b) After that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not meet global standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity are thus excluded from the portfolio in advance.
- c) In addition, the filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).
- 2) Second, the social PAIs were systematically analyzed according to the stages of the research and investment process:
 - a) the Global Standards compliance filter is structured around human rights, labor rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises are de facto excluded from the investment universe.
 - b) the exclusion filter for companies involved in controversial activities (in accordance with DPAM's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM policy Controversial activities.pd
 f). In this way, companies involved in controversial armaments are directly excluded from the investment universe.
 - c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.
- DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006836/DPAM policy Sustainable and Responsible Investment.pdf and DPAM_report_TCFD.pdf (cloudinary.com).

What were the top investments of this financial product?

The list includes the investments that constitute the greatest proportion of investments of the financial product during the reference period which is: 31/12/2022

Largest investments	Sector	Sector % Assets	
KBC GROEP	FINANCIAL AND INSURANCE ACTIVITIES	4.50%	Belgium
TOTAL ENERGIES	MINING AND QUARRYING	4.39%	France
ASTRAZENECA	MANUFACTURING	4.31%	United Kingdom
NOVARTIS (NOM)	MANUFACTURING	4.03%	Switzerland
BEAZLEY PLC	FINANCIAL AND INSURANCE ACTIVITIES	3.89%	United Kingdom

IBERDROLA SA	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	3.86%	Spain
FINECOBANK S.P.A	FINANCIAL AND INSURANCE ACTIVITIES	3.77%	Italy
BEIERSDORF	MANUFACTURING	3.66%	Germany
SODEXO	ACCOMMODATION AND FOOD SERVICE ACTIVITIES	3.61%	France
BURBERRY GROUP PLC	MANUFACTURING	3.60%	United Kingdom
ORKLA ASA	MANUFACTURING	3.32%	Norway
NESTLE (NOM)	MANUFACTURING	3.13%	Switzerland
ALD SA	ADMINISTRATIVE AND SUPPORT SERVICE ACTIVITIES	3.06%	France
KERRY GROUP A	MANUFACTURING	3.04%	Ireland
LONZA GROUP AG	MANUFACTURING	2.86%	Switzerland
	I .		

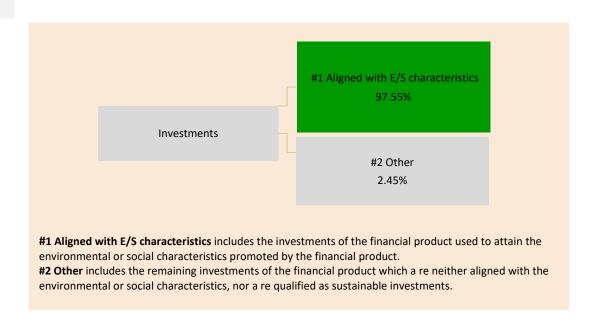

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

Through the application of the investment strategy described above, the Sub-fund has invested 97.55% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as "#1 Aligned with E/S Characteristics").

In which economic sectors were the investments made?

Sector	Sub-sector	% of assets	
Manufacturing	Manufacture of basic pharmaceutical products and	14.09%	
	pharmaceutical preparations		
Manufacturing	Manufacture of food products	9.49%	
Manufacturing	Manufacture of machinery and equipment n.e.c.	9.41%	
Financial and insurance activities	Financial service activities, except insurance and pension funding	8.26%	
Manufacturing	Manufacture of chemicals and chemical products	8.17%	
Mining and quarrying	Extraction of crude petroleum and natural gas	6.44%	
Financial and insurance activities	Insurance, reinsurance and pension funding, except	3.89%	
	compulsory social security		
Electricity, gas, steam and air	Electricity, gas, steam and air conditioning supply	3.86%	
conditioning supply			
Manufacturing	Manufacture of motor vehicles, trailers and semi-trailers	3.86%	
Manufacturing	Manufacture of electrical equipment	3.65%	
Accommodation and food service	Food and beverage service activities	3.61%	
activities			
Manufacturing	Manufacture of wearing apparel	3.60%	
Administrative and support service activities	Rental and leasing activities	3.06%	
Financial and insurance activities	Activities auxiliary to financial services and insurance activities	2.80%	
Transportation and storage	Air transport	2.32%	
Information and communication	Publishing activities	2.21%	
Information and communication	Telecommunications	2.21%	
Administrative and support service	Office administrative, office support and other business	2.04%	
activities	support activities		
Information and communication	Computer programming, consultancy and related activities	2.03%	
Manufacturing	Manufacture of computer, electronic and optical products	1.51%	
Manufacturing	Manufacture of basic metals	1.05%	
Cash	Cash	2.45%	

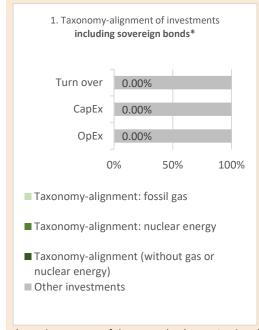

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

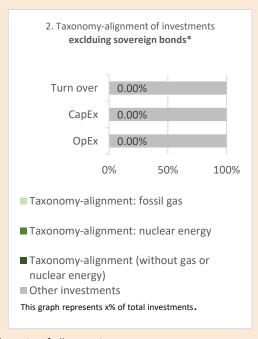

Has the financial product invested in fossil gas and/or nuclear energy activities in line with the EU Taxonomy? ¹			
		Yes: [specify below, and	detail in the graphics in the box].
		In fossil gas	In nuclear energy
	X	No	

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the "greenness" of investee companies today.
- capital expenditure (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

^{*} For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹ Fossil gas and/or nuclear activities will only be compliant with the EU Taxonomy if they contribute to mitigating climate change ('climate change mitigation') and do not significantly undermine an objective of the EU Taxonomy - see explanatory note in the left margin. The full criteria for fossil gas and nuclear energy economic activities that are in line with the EU Taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available.

What was the share of investments made in transitional and enabling activities?

Not applicable

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable

What was the share of socially sustainable investments?

Not applicable

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding the:

- Liquid assets
- Derivative instruments
- UCIs that do not promote environmental or social characteristics and/or do not have a sustainable investment objective under Regulation 2019/2088
- UCIs that are not subject to Regulation 2019/2088
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics.

The Sub-fund may invest or hold these types of assets in order to achieve its investment objectives, to diversify its portfolio, to manage liquidity and to hedge its risks.

There are no minimum environmental or social guarantees.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 2.45% cash.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e.:

On a quarterly basis, a normative screening has been established based on compliance with global standards.

Secondly, companies meeting the thresholds as defined in the activities excluded by the responsible investment policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an indepth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector.

The stages of the investment process are outlined below:

ESG INTEGRATION	VOTE	BASELINE NEGATIVE SCREENING	NORMATIVE & NEGATIVE SCREENING
Integration into the investment decision (PAIs)	Influencing behaviour	Exclusions based on the activity of the issuer	Compliance with global standards/ Exclusion of the most controversial behaviour (safeguarding social and governance minimums)

Product name:

DPAM L EQUITIES EMERGING MARKETS ESG LEADERS INDEX

Legal entity identifier: 2221009ZOF97R2VUXR95

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852 establishing a list of environmentally sustainable economic activities. This regulation does not set out a list socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?			
• No			
It promoted environmental and/or social (E/S) characteristics and although it did not have a sustainable investment target, it had a sustainable investment ratio of%. with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environ mentally sustainable under the EU Taxonomy with a social objective			
X It promoted E/S features, but did not make sustainable investments			

Sustainability indicators assess how the environmental or social characteristics promoted by the financial product are achieved.

To what extent have the environmental and/or social characteristics promoted by this financial product been achieved?

During the Reference Period (01/01/2022-31/12/2022), the Sub-fund was passively managed and aimed to physically replicate the MSCI EMERGING ESG LEADERS index ("the Index").

The Index provides exposure to emerging market large and mid-cap companies with high ESG performance relative to their peers in the same sector ("Best-in-Class" 50%).

By construction of the Replicated Index, the Sub-fund aimed to improve the environmental and social characteristics compared to the starting universe, the parent MSCI Emerging Markets ("Parent Index").

In addition, the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection);
- not funding controversial activities and behaviors that could affect the longterm reputation of the investments;
- promoting environmental, social and governance (ESG) best practices.

How did the sustainability indicators perform?

During the Reference Period, the sustainability indicators used to measure the attainment of all of the environmental and social characteristics promoted by the Sub-fund corresponded to the binding investment restrictions of the Index it aims to replicate (some of the indicators are compared to the Parent Index):

- a. The Sub-fund had zero exposure to companies deemed to be non-compliant with the UN Global Compact and international standards (as defined for example in the UN Declaration on Human Rights, or the ILO Declaration on Fundamental Principles and Rights at Work);
- b. The Sub-fund had zero exposure to companies involved in controversial economic activities, based on the exposure limits imposed by the index construction methodology including any companies owning reserves (proven or probable) of fossil fuels, any companies involved in non-conventional oil and gas extraction, thermal coal extraction and coal-fired power generation; and
- c. Zero exposure to companies involved in severe ESG controversies;

The methodologies used to construct the indices are available on the MSCI.com website: https://www.msci.com/index-methodology ("MSCI ESG Leaders Indexes Methodology").

Further information, including methodologies for calculating ESG scores and controversy levels, can be found on the MSCI website: www.msci.com.

...and in comparison with previous periods?

Not applicable

What were the objectives of the sustainable investments that the financial product partially intended to make and how did the sustainable investment contribute to such objectives?

Not applicable

To what extent did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Not applicable

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable

Were the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable

The EU Taxonomy sets out a "does not significantly harm" principle by which Taxonomyaligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "does not significantly harm" principle only apples to the underlying investments of the financial product that consider the European Union's criteria regarding environmentally sustainable economic activities. The investments underlying the remaining share of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not cause significant harm to environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

How has this financial product considered principal adverse impacts on sustainability factors?

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

In concrete terms, the PAIs were integrated into the different stages of the construction of the Index which the Sub-fund replicated passively:

- 1) Firstly, with regard to environmental PAIs:
 - a) the Global Standards compliance filter includes a filter on environmental protection.
 - b) the filtering of companies involved in economic sectors and activities that are subject to debate as to their ethical and sustainable character (e.g.: nuclear energy production, tobacco, thermal coal, non-conventional oil and gas).
 - c) the filter on ESG score and level of controversy as defined by MSCI also includes controversies related to environmental issues, such as the environmental impact of company operations (emissions, waste, energy use, biodiversity and water consumption), the environmental impact on the supply chain and the impact of products and services (carbon and environmental impact).
- 2) Secondly, with regard to social PAIs:
 - a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. In addition, the filter for companies involved in the selection of key ESG controversies includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.
 - b) the exclusion filter for companies involved in controversial activities (inter alia: exclusion of companies involved in non-conventional armaments);
 - c) the exclusion filter for companies involved in major ESG controversies on social issues.
 - d) the best-in-class classification, which is based on an analysis of the ESG profile based in particular on the social PAIs.

The approach and processes are described in more detail in the documents available at www.msci.com.

The methodologies for constructing the indices can be found at https://www.msci.com/index-methodology ("MSCI ESG Leaders Indexes Methodology").

What were the main investments of this financial product?

The list includes the investments that constitute the largest share of the financial product's investments during the reference period, namely: 31/12/2022

Largest investments	Sector	% of assets	Country
TAIWAN SEMICONDUCTOR MANUFACTURING	MANUFACTURING	10.74%	Taiwan
TENCENT HOLDINGS LTD	INFORMATION AND COMMUNICATION	7.85%	China
ALIBABA GROUP HOLDING LTD	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	4.89%	China

Asset allocation describes the share of investments in specific

assets.

What was the ratio of sustainability-related investments?

What was the asset allocation?

Through the application of the investment strategy described above, the Sub-fund has invested 99.54% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as "#1 Aligned with E/S Characteristics").

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were investments made?

Sector	Sub-sector	% of

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

		al product invested in for konomy?¹	ssil g	gas and/or nuclear energy activities in line
		Yes: [specify below, and	d de	tail in the graphics in the box].
		In fossil gas		In nuclear energy
	X	No		

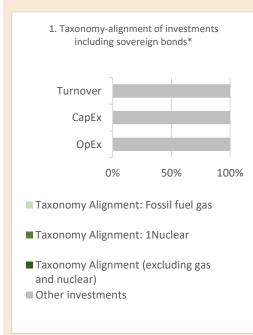

Taxonomy-aligned activities are expressed as a share of:

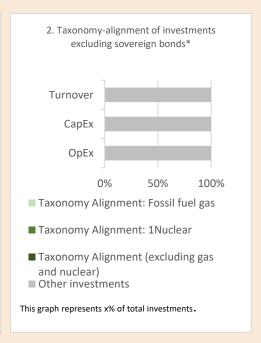

- **turnover** to reflect the current environmental character of the investee companies;
- capital expenditure (CapEx) showing the green investments made by investee companies, which is relevant for a transition to a green economy;
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available.

The graphs below show in green the percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

 $[\]hbox{\it * For the purpose of these graphs, 's overeign bonds' consist of all sovereign exposures}$

¹ Fossil gas and/or nuclear activities will only be compliant with the EU Taxonomy if they contribute to mitigating climate change ("climate change mitigation") and do not significantly undermine an objective of the EU Taxonomy - see explanatory note in the left margin. The full criteria for fossil gas and nuclear energy economic activities that are in line with the EU Taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

What was the share of investments made in transitional and enabling activities?

Not applicable

What is the percentage of investments aligned with the EU Taxonomy compared to previous reporting periods?

Not applicable

The symbol represents sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activity under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable

What was the share of socially sustainable investments?

Not applicable

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above have been applied to the entire sub-fund, excluding the:

- Liquid assets
- Derivative instruments
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics.

The Sub-fund may invest or hold these types of assets for the purpose of achieving investment objectives, portfolio diversification, liquidity management and risk hedging.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 0.46% cash. There are no minimum environmental or social guarantees on these investments.

What measures have been taken to comply with the environmental and/or social characteristics during the reporting period?

During the reference period, the Replicated Index was constructed in particular by applying a combination of securities-based exclusions and a Best-in-Class selection process to companies in the Parent Index:

a) The exclusion process focused on:

- Companies that do not have an MSCI ESG rating of 'BB' or above. Companies must maintain an MSCI ESG rating of 'BB' or above to remain in the index.
- Companies that are not in compliance with Global Standards and prevention of corruption.
- Companies involved in economic sectors and activities that are subject to debate as to whether or not they are ethical and sustainable (e.g. alcohol, gambling, nuclear energy production, tobacco etc.).
- Companies involved in severe ESG controversies: securities must have a score (according to the MSCI ESG Research methodology) of at least 3 to be eligible for inclusion.
- b) The MSCI Best-in-Class selection process was applied to the remaining eligible securities in the selection universe:

The Index targets sector weights consistent with those of the Parent Index to limit the systematic risk introduced by the ESG selection process. The methodology aims to include the securities of companies with the highest ESG ratings making up 50% of the market capitalisation of the Parent Index.

Additional information on this index and its composition can be found at www.msci.com. The weight of stocks included in the index will depend on their market capitalisation adjusted for free float.

In addition to the investment restrictions related to Index replication, the Sub-fund adopted the following constraints:

On a quarterly basis, a normative screening has been established based on compliance with the United Nations Global Compact principles: The Sub-fund does not invest in companies that do not comply with the 10 principles of the United Nations Global Compact and for which the ESG controversies outlook is neutral or negative.

Secondly, companies meeting the thresholds as defined in the activities excluded by the responsible investment policy were excluded. On a quarterly basis, the controversy exposure of the companies in the investment universe was analyzed to screen out the most severe controversies on environmental, social and governance issues.

How has this financial product performed in comparison to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product meets the environmental or social characteristics it promotes.

How does the reference benchmark differ from a broad market index?

During the reference period, the Sub-fund consisted of full physical replication of the Index.

The MSCI ESG Leaders indices target sector weights that mirror the relative sector weights of the underlying MSCI Global Investable Market indices (Parent Indices) in order to limit the systematic risk introduced by the ESG selection process.

The Replicated Index was constructed by applying a process combining exclusions (Global Standards compliance filter, involvement in severe controversies, controversial activities) and a best-in-class selection of companies from the Parent Index. In order to be included and maintained in the MSCI ESG Leaders indices, companies had to have an MSCI ESG rating of "BB" or above. The methodologies used to construct the indices are available on the MSCI.com website: https://www.msci.com/index-methodology ("MSCI ESG Leaders Indexes Methodology").

How has this financial product performed in relation to the sustainability indicators intended to determine the alignment of the benchmark with the environmental or social characteristics being promoted?

During the reference period, the Sub-fund's sustainability indicators were therefore aligned and performed in line with those of the Index.

How has this financial product performed in comparison to the reference benchmark?

During the reference period, the Index provided exposure to companies in the emerging markets with a high ESG performance.

The policy of the Sub-fund was full physical replication and was followed throughout the reference period with the objective of tracking the Index as closely as possible.

How has this financial product performed in comparison to the broad market index?

During the Reference Period, the Index was included in the "ESG Leaders" category of indices established by MSCI. This Index has as its parent index the MSCI Emerging Markets (MSCI Global Investable Market indices).

During the Reference Period, the Index returned -17.73% and the Parent Index returned -14.85%. By tracking the benchmark, the Sub-fund therefore underperformed the Parent Index.

APPENDIX IV

Periodic information for financial products referred to in Article 8(1), (2) and (2a) of Regulation (EU) 2019/2088 and in the first paragraph of Article 6 of Regulation (EU) 2020/852

Product name:DPAM L EQUITIES EUROPE BEHAVIORAL VALUE

Legal entity identifier: 391200ZNRBAEERN4FH35

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020 /852 establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable	e investment objective?
• • Yes	• No
It has made sustainable investments with an environmental objective:	It promoted environmental and/or social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It has made sustainable investments with a social objective:%	X It promoted E/S characteristics, but did not make any sustainable investments

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are

attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the Reference Period (01/01/2022-31/12/2022), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviors that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices.

Derivative products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting environmental and/or social characteristics.

The Sub-fund has not designated any benchmark index to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

How did the sustainability indicators perform?

Over the Reference Period, the Sub-fund achieved the following sustainability indicators:

- a) The Sub-fund was not exposed to companies considered to be below Global Standards during the reporting period;
- b) The Sub-fund was not exposed to companies involved in excluded controversial activities as defined by the Sub-fund Manager's Controversial Activities Policy;
- c) The Sub-fund has not been exposed to companies facing extremely serious controversies around environmental or social issues;

...and in comparison to previous periods?

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Not applicable

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Not applicable

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

Principal adverse impacts are

the most significant negative impacts of investment decisions on sustainability

human rights, anti-corruption

and anti-bribery matters.

factors relating to environmental, social and employee matters, respect for

How did this financial product consider principal adverse impacts on sustainability factors?

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAI") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288, as amended.

The PAIs are intrinsically linked to the Manager's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth.

This commitment is incorporated throughout the research and investment process from its inception. In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

- 1) Firstly, with regard to environmental PAIs:
 - a) they have been analyzed and monitored at the level of the invested issuers, particularly with respect to PAI related to greenhouse gas emissions and energy performance, including through the Manager's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD). Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

- b) After that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not meet global standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity are thus excluded from the portfolio in advance.
- c) In addition, the filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).
- 2) Second, the social PAIs were systematically analyzed according to the stages of the research and investment process:
 - a) the Global Standards compliance filter is structured around human rights, labor rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises are de facto excluded from the investment universe.
 - b) the exclusion filter for companies involved in controversial activities (in accordance with the Manager's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM policy Controversial activities.pd <a href="mailto:fi). In this way, companies involved in controversial armaments are directly excluded from the investment universe.
 - c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.
- The Manager's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at https://res.cloudinary.com/degroof-petercam-asset- management/image/upload/v1614006836/DPAM_policy_Sustainable_and_Responsible_ Investment.pdf et DPAM_report_TCFD.pdf (cloudinary.com).

What were the top investments of this financial product?

The list includes the investments that constitute the greatest proportion of investments of the financial product during the reference period which is: 31/12/2022

Largest investments	Sector	% Assets	Country
TOTAL ENERGIES	MINING AND QUARRYING	3.36%	France
NOVARTIS (NOM)	MANUFACTURING	3.15%	Switzerland
ASTRAZENECA	MANUFACTURING	2.90%	United Kingdom
HSBC HOLDINGS	FINANCIAL AND INSURANCE ACTIVITIES	2.41%	United Kingdom
SANOFI	MANUFACTURING	2.06%	France

HENKEL AG	MANUFACTURING	1.86%	Germany
ANHEUSER BUSCH INBEV	MANUFACTURING	1.77%	Belgium
ALLIANZ (NOM)	FINANCIAL AND INSURANCE ACTIVITIES	1.73%	Germany
SIEMENS (NOM)	MANUFACTURING	1.67%	Germany
REPSOL SA	MINING AND QUARRYING	1.66%	Spain
SAP AG	INFORMATION AND COMMUNICATION	1.66%	Germany
GSK PLC	MANUFACTURING	1.62%	United Kingdom
IBERDROLA SA	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	1.57%	Spain
MERCK KGAA	MANUFACTURING	1.55%	Germany
BNP PARIBAS	FINANCIAL AND INSURANCE ACTIVITIES	1.53%	France

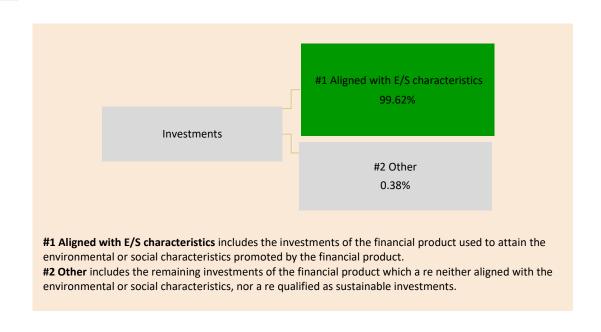

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

Through the application of the investment strategy described above, the Sub-fund has invested 99.62% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as "#1 Aligned with E/S Characteristics").

In which economic sectors were the investments made?

Sector	Sub-sector	% of assets
Manufacturing	Manufacture of basic pharmaceutical products and	14.28%
	pharmaceutical preparations	
Financial and insurance activities	Financial service activities, except insurance and pension	9.17%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Has the financial product invested in fossil gas and/or nuclear energy activities in line with the EU Taxonomy?

Yes: [specify below, and detail in the graphics in the box].

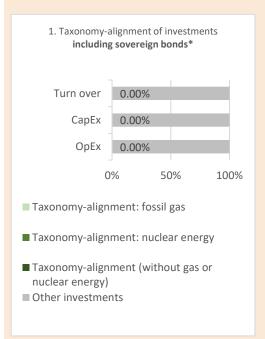

In fossil gas

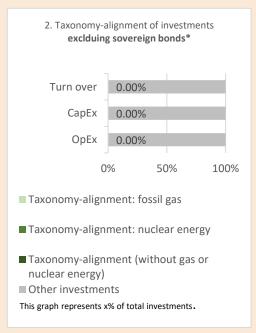

In nuclear energy

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the "greenness" of investee companies today.
- capital expenditure (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹ Fossil gas and/or nuclear activities will only be compliant with the EU Taxonomy if they contribute to mitigating climate change ('climate change mitigation') and do not significantly undermine an objective of the EU Taxonomy - see explanatory note in the left margin. The full criteria for fossil gas and nuclear energy economic activities that are in line with the EU Taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available.

What was the share of investments made in transitional and enabling activities?

Not applicable

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable

What was the share of socially sustainable investments?

Not applicable

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding the:

- Liquid assets
- Derivative instruments
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics.

The Sub-fund may invest or hold these types of assets in order to achieve its investment objectives, to diversify its portfolio, to manage liquidity and to hedge its risks.

There are no minimum environmental or social guarantees.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 0.38% cash.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e.:

On a quarterly basis, a normative screening has been established based on compliance with global standards.

Secondly, companies meeting the thresholds as defined in the activities excluded by the responsible investment policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an indepth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector.

The stages of the investment process are outlined below:

ESG INTEGRATION	VOTE	BASELINE NEGATIVE SCREENING	NORMATIVE & NEGATIVE SCREENING
Integration into the investment decision (PAIs)	Influencing behaviour	Exclusions based on the activity of the issuer	Compliance with global standards/ Exclusion of the most controversial behaviour (safeguarding social and governance minimums)

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852 establishing a list of environmentally sustainable economic activities. This regulation does not set out a list socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Yes It made sustainable investments with an environmental objective: % It promoted environmental and/or social (E/S) characteristics and
(-1-1-1-1-1-1-1-1-1-1-1-1-1-1-1-1-1-1-1
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with an environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that qualify as environmental objective in economic activities that do not qualify as environmental objective in economic activities that do not qualify as environ mentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environ mentally sustainable under the EU Taxonomy with a social objective
It made sustainable investments with a social objective:% It promoted E/S features, but did not make sustainable investments

Sustainability indicators assess how the environmental or social characteristics promoted by the financial product are

achieved.

To what extent have the environmental and/or social characteristics promoted by this financial product been achieved?

During the Reference Period (01/01/2022-31/12/2022), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviors that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices.

Derivative products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting environmental and/or social characteristics.

The Sub-fund has not designated any benchmark index to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

How did the sustainability indicators perform?

Over the Reference Period, the Sub-fund achieved the following sustainability indicators:

At the level of direct line investments (shares or corporate bonds):

- The Sub-fund was not exposed to companies considered to be below Global Standards during the reporting period;
- b) The Sub-fund was not exposed to companies involved in excluded controversial activities as defined by the Manager's Controversial Activities Policy;
- The Sub-fund has not been exposed to companies facing extremely serious controversies around environmental or social issues.

For investments in UCIs:

The sub-fund has invested in sub-funds that promote, among other things, environmental or social characteristics within the meaning of Regulation 2019/2088 and/or sub-funds of UCIs that have a sustainable investment objective within the meaning of Regulation 2019/2088.

...and in comparison with previous periods?

Not applicable

What were the objectives of the sustainable investments that the financial product partially intended to make and how did the sustainable investment contribute to such objectives?

Not applicable

To what extent did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Not applicable

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable

Were the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable

The EU Taxonomy sets out a "does not significantly harm" principle by which Taxonomyaligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "does not significantly harm" principle only apples to the underlying investments of the financial product that consider the European Union's criteria regarding environmentally sustainable economic activities. The investments underlying the remaining share of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not cause significant harm to environmental or social objectives.

How has this financial product considered principal adverse impacts on sustainability factors?

For investments in shares or corporate bonds:

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and

employee matters, respect for

and antibribery matters.

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAI") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288, as amended.

The PAIs are intrinsically linked to the Manager's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth.

human rights, anticorruption This commitment is incorporated throughout the research and investment process from its inception. In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

- 1) Firstly, with regard to environmental PAIs:
 - a) they have been analyzed and monitored at the level of the invested issuers, particularly with regard to PAI related to greenhouse gas emissions and energy performance, notably through the Manager's research in the framework of the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD). Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute the most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.
 - b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not meet global standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity are thus excluded from the portfolio in advance.
 - c) in addition, the filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).
- 2) Secondly, the social PAIs were systematically analysed according to the stages of the research and investment process:
 - a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises are de facto excluded from the investment universe.
 - b) the exclusion filter for companies involved in controversial activities (in accordance with Manager's Controversial Activities Policy (accessible the link via https://res.cloudinary.com/degroof-petercam-assetmanagement/image/upload/v1614006839/DPAM policy Controversial activities.pdf). In this way, companies involved in controversial armaments are directly excluded from the investment universe.

c) in addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

• For investments in UCIs:

Yes, the sub-fund has taken into account, over the Reference Period, the PAI only to the extent and according to the consideration of the PAI by the underlying UCI.

As mentioned above, the Sub-fund's ESG investments may include investments in UCIs which are classified as financial products that promote, inter alia, environmental and/or social characteristics within the meaning of Regulation 2019/2088 and/or have a sustainable investment objective within the meaning of Regulation 2019/2088.

As a result of their classification, these UCIs could possibly take into account certain PAI on sustainability factors listed in table 1 of appendix I of the Delegated Regulation (EU) 2022/1288, as amended.

The Manager's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006836/DPAM policy Sustainable and Responsible Invest ment.pdf and DPAM report TCFD.pdf (cloudinary.com).

What were the main investments of this financial product?

The list includes the investments that constitute the largest share of the financial product's investments during the reference period, namely: 31/12/2022

Largest investments	Sector	% of assets	Country

What was the ratio of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

By applying the investment strategy described above, the Sub-fund invested 87.14% of its assets in securities that satisfy the environmental and social characteristics it promotes (in the table referred to as "#1 Aligned with E/S characteristics"), including in UCIs which promote, inter alia, environmental or social characteristics within the meaning of Article 8 of Regulation 2019/2088 or have a sustainable investment objective within the meaning of Article 9 of Regulation 2019/2088.

In which economic sectors were investments made?

Sector	Sub-sector	% of
		assets
Financial and insurance activities	Financial service activities, except insurance and pension	87.14%
	funding	
Derivatives	Derivatives	0.88%
Cash	Cash	11.98%

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

	the financial product invested in fossil gas and/or nuclear energy activities in line the EU Taxonomy? 1			
Yes: [specify below, and detail in the graphics in the box].		etail in the graphics in the box].		
		In fossil gas		In nuclear energy
)	(No		

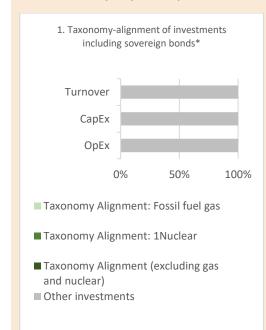

Taxonomy-aligned activities are expressed as a share of:

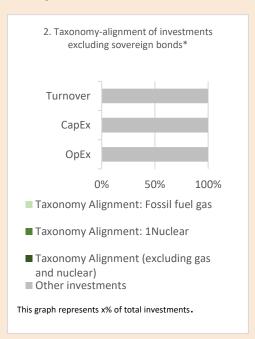

- turnover to reflect the current environmental character of the investee companies;
- capital expenditure (CapEx) showing the green investments made by investee companies, which is relevant for a transition to a green economy;
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available.

The graphs below show in green the percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

^{*} For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹ Fossil gas and/or nuclear activities will only be compliant with the EU Taxonomy if they contribute to mitigating climate change ("climate change mitigation") and do not significantly undermine an objective of the EU Taxonomy - see explanatory note in the left margin. The full criteria for fossil gas and nuclear energy economic activities that are in line with the EU Taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

What was the share of investments made in transitional and enabling activities?

Not applicable

What is the percentage of investments aligned with the EU Taxonomy compared to previous reporting periods?

Not applicable

The symbol represents sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activity under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable

What was the share of socially sustainable investments?

Not applicable

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding the:

- Liquid assets
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics.

The Sub-fund may invest or hold these types of assets in order to achieve its investment objectives, to diversify its portfolio, to manage liquidity and to hedge its risks.

There are no minimum environmental or social guarantees.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 11.98% cash.

What measures have been taken to comply with the environmental and/or social characteristics during the reporting period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e.:

For direct investments (shares or corporate bonds):

On a quarterly basis, a normative screening has been established based on compliance with global standards.

Secondly, companies meeting the thresholds as defined in the activities excluded by the responsible investment policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector.

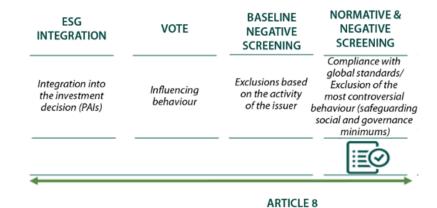

• For investments in UCIs:

Among its ESG investments, the sub-fund has invested in UCIs that are classified as UCIs that promote, among other things, environmental and/or social characteristics as defined in Regulation 2019/2088 and/or have a sustainable investment objective as defined in Regulation 2019/2088.

In its selection of these UCIs for the sub-fund, DPAM has therefore taken into account the integration of environmental, social and/or governance criteria by the third party manager in the management of these UCIs. The investment strategy and methodology for selecting ESG and/or sustainable investments by third-party managers may vary from one UCI to another.

The list of collective investment schemes in which the Sub-fund may invest is updated on a regular basis by DPAM and on an ad hoc basis in the event of deterioration. At least once a year, DPAM conducts an analysis of the underlying collective investment schemes to verify the extent to which their selection methodology is aligned with the environmental and/or social characteristics that the Sub-fund aims to promote.

In addition, DPAM is in regular dialogue with the managers of these funds. If a UCI no longer has the above-mentioned classification (Article 8 or Article 9 according to Regulation 2019/2088) according to the information declared in the sub-fund's prospectus, DPAM will sell the investment in the UCI concerned in the interest of the Sub-fund's shareholders within six months if such sale is necessary in order to comply, at the overall level of the Sub-fund, with the promoted environmental and social characteristics.

How has this financial product performed in comparison to the reference benchmark?

Not applicable

How does the reference benchmark differ from a broad market index?

Not applicable

How has this financial product performed in relation to the sustainability indicators intended to determine the alignment of the benchmark with the environmental or social characteristics being promoted?

Not applicable

How has this financial product performed in comparison to the reference benchmark?

Not applicable

How has this financial product performed in comparison to the broad market index?
Not applicable

Reference benchmarks are indexes to measure whether the financial product meets the environmental or social characteristics it promotes.

APPENDIX IV

Periodic information for financial products referred to in Article 8(1), (2) and (2a) of Regulation (EU) 2019/2088 and in the first paragraph of Article 6 of Regulation (EU) 2020/852

Product name:

DPAM L PATRIMONIAL FUND

Legal entity identifier: 549300W5350LFNV3J760

Environmental and/or social characteristics

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020 /852 establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?			
Yes	● ○ X No		
It has made sustainable investments with an environmental objective:	It promoted environmental and/or social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective		
It has made sustainable investments with a social objective:%	X It promoted E/S characteristics, but did not make any sustainable investments		

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are

attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the Reference Period (01/01/2022-31/12/2022), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviors that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices.
- excluding countries that do not respect a minimum of democratic requirements.

Derivative products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting environmental and/or social characteristics.

The Sub-fund has not designated any benchmark index to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

How did the sustainability indicators perform?

Over the Reference Period, the Sub-fund achieved the following sustainability indicators:

At the level of direct line investments (shares or corporate bonds):

- The Sub-fund was not exposed to companies considered to be below Global Standards during the reporting period;
- b) The Sub-fund was not exposed to companies involved in excluded controversial activities as defined by the Sub-fund Manager's Controversial Activities Policy;
- c) The Sub-fund has not been exposed to companies facing extremely serious controversies around environmental or social issues.

At the level of direct line investments (sovereign bonds):

The Sub-fund has not been exposed to issuers that do not meet minimum democratic requirements.

...and in comparison to previous periods?

Not applicable

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Not applicable

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters. How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Not applicable

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

For investments in shares or corporate bonds:

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAI") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to the Manager's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth.

This commitment is incorporated throughout the research and investment process from its inception. In concrete terms, the PAIs have been integrated into the various stages of the Subfund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

- 1) Firstly, with regard to environmental PAIs:
 - a) they have been analyzed and monitored at the level of the invested issuers, particularly with respect to PAI related to greenhouse gas emissions and energy performance, including through the Manager's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD). Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.
 - b) After that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not meet global standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity are thus excluded from the portfolio in advance.
 - c) In addition, the filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).
- 2) Second, the social PAIs were systematically analyzed according to the stages of the research and investment process:
 - a) the Global Standards compliance filter is structured around human rights, labor rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises are de facto excluded from the investment universe.
 - b) the exclusion filter for companies involved in controversial activities (in accordance with the Manager's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-assetmanagement/image/upload/v1614006839/DPAM policy Controversial activities.pdf). In this way, companies involved in controversial armaments are directly excluded from the investment universe.
 - c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

• For investments in sovereign bonds:

During the Reference Period, the Sub-fund took into consideration the environmental and social PAI listed in table 1 of appendix I of the Delegated Regulation (EU) 2022/1288.

The first PAI relates to environmental issues and focuses on the greenhouse gas emission intensity of the investee countries. The indicator is an integral component of the country sustainability model that the Manager developed for its sovereign bond strategies. Consequently, it is included in the country's sustainability score and can influence it positively or negatively depending on its level and development compared to other issuer countries.

The second PAI relates to social issues and focuses on issues of social breaches. Our country sustainability model monitors a number of indicators on this issue, such as respect for civil liberties and political rights, respect for human rights and the level of violence within the country, commitment to key labour law conventions, the issue of equal opportunities and distribution of wealth, etc. These different indicators are included in the country's sustainability score and may influence it positively or negatively depending on its level and evolution compared to other emitting countries.

During the Reference Period, a dialogue was initiated on the results of the sustainability scores with some countries according to the Manager's engagement policy via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006835/DPAM policy engagement.pdf.

Over the Reference Period, the management teams conducted 37 dialogues with the various participants in sovereign debt issues. These dialogues allowed us to verify with the stakeholders the points of attention of the governmental policies, notably in environmental and/or social matters.

Details of the dialogues with countries and companies will be published in an annual report in the first quarter of 2023 on the Manager's website (https://www.dpamfunds.com).

The Manager's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006836/DPAM_policy_Sustainable_and_Responsible_Invest_ment.pdf and DPAM_report_TCFD.pdf (cloudinary.com).

What were the top investments of this financial product?

The list includes the investments that constitute the greatest proportion of investments of the financial product during the reference period which is: 31/12/2022

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

Through the application of the investment strategy described above, the Sub-fund has invested 92.65% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as "#1 Aligned with E/S Characteristics").

In which economic sectors were the investments made?

Sector	Sub-sector	% of assets

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

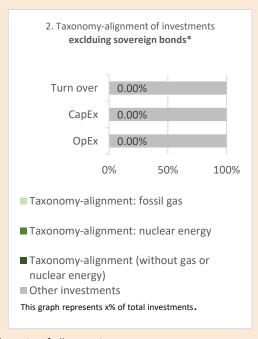

Has the financial product invested in fossil gas and/or nuclear energy activities in line with the EU Taxonomy? 1			
	Yes: [specify below, and detail in the graphics in the box].		
	In fossil gas	In nuclear energy	
X	No		

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the "greenness" of investee companies today.
- capital expenditure (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

^{*} For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹ Fossil gas and/or nuclear activities will only be compliant with the EU Taxonomy if they contribute to mitigating climate change ('climate change mitigation') and do not significantly undermine an objective of the EU Taxonomy - see explanatory note in the left margin. The full criteria for fossil gas and nuclear energy economic activities that are in line with the EU Taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available.

What was the share of investments made in transitional and enabling activities?

Not applicable

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable

What was the share of socially sustainable investments?

Not applicable

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding the:

- Liquid assets
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics.

The Sub-fund may invest or hold these types of assets in order to achieve its investment objectives, to diversify its portfolio, to manage liquidity and to hedge its risks.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 3.5% cash.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e.:

For direct investments (shares or corporate bonds):

On a quarterly basis, a normative screening has been established based on compliance with global standards.

Secondly, companies meeting the thresholds as defined in the activities excluded by the responsible investment policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

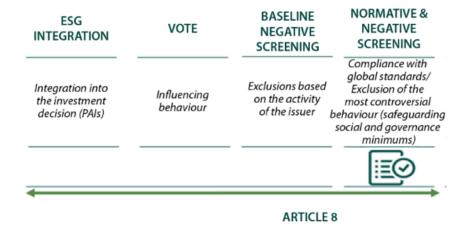

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector.

For investments in sovereign bonds:

The Sub-fund did not invest in countries considered not to meet minimum democratic requirements. To determine whether a country does not meet this minimum requirement the Manager applied a methodology that is based primarily on the classifications of the International NGO Freedom House ("not free") and The Economist Intelligence Unit ("authoritarian regime").

The list of countries was reviewed on a semi-annual basis and provided to management via the management systems so that it could not give transaction orders on papers issued by these excluded countries.

The stages of the investment process are outlined below:

How did this financial product perform compared to the reference benchmark?

Not applicable

How does the reference benchmark differ from a broad market index?

Not applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

- How did this financial product perform compared with the reference benchmark?
 Not applicable
- How did this financial product performed compared with the broad market index?
 Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics they promote.

Periodic information for financial products referred to in Article 9(1 to 4a) of Regulation (EU) 2019/2088 and in the first paragraph of Article 5 of Regulation (EU) 2020/852

Product name: Legal entity identifier:

DPAM L BONDS CLIMATE TRENDS SUSTAINABLE

549300VQ9Q8F1NPR1D70

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852 establishing a list of environmentally sustainable economic activities. This regulation does not set out a list socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?				tment objective?
••	×	Yes	••	No
X		de sustainable investments with avironmental objective: 73% in economic activities that qualify as environmentally sustainable under the EU Taxonomy	(a iı	t promoted environmental and/or social E/S) characteristics and Ithough it did not have a sustainable nvestment target, it had a sustainable nvestment ratio of%.
	x	in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy		with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environ mentally sustainable under the EU Taxonomy with a social objective
X		e sustainable investments with a objective: 42.63%		promoted E/S features, but did not make ustainable investments

Sustainability indicators assess how the environmental or social characteristics promoted by the financial product are achieved.

To what extent was the sustainable investment objective of this financial product met?

During the Reference Period (01/01/2022-31/12/2022), the aim of the Sub-fund was to achieve environmental objectives in order to generate a positive impact on the climate and to contribute to the transition to a low carbon economy. Through the majority of its investments, the Sub-fund aims to have a positive impact in environmental terms, particularly in the areas of energy efficiency, mobility and electrification, eco-society, regenerative economy, alternative and renewable energy, land use, agriculture and water and the decarbonisation of manufacturing processes. The objectives are in line with the objectives of the Taxonomy. The positive impact on the climate and the contribution to the transition to a low-carbon economy are assessed in two ways: first, by the impact projects financed by the impact bonds in which the Sub-fund invests and, in addition, by the contribution of the turnover of the invested companies to the UN Sustainable Development Goals and to the environmental impact themes mentioned above. This narrows the investment universe: the portfolio concentrates on green and equivalent bonds and net positive companies (as defined below), i.e. (1) whose core business is the development of products and services that contribute to the achievement of sustainable development goals (SDG) and (2) the most advanced in terms of sustainability and ESG risk engagement.

The Sub-fund has not designated a benchmark to achieve its sustainable investment objective within the meaning of Article 9 of Regulation 2019/2088.

Derivative financial products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting the environmental and/or social characteristics of the Sub-fund.

How did the sustainability indicators perform?

During the Reference Period, the Sub-fund achieved the following sustainability indicators:

- a minimum of 80% of recognised impact issues (green bonds or equivalents) or issuers meeting environmental or social Sustainable Development Goals (SDGs) i.e.:
- companies aligned with one of the first two objectives of the EU Taxonomy (climate change mitigation and adaptation); companies aiming to make a net positive contribution to environmental sustainability objectives;
- companies aiming to make a net positive contribution to social sustainability objectives.

In addition, in order to enhance the contribution to the financing of the 17 sustainable objectives defined by the United Nations (UN) as a whole and the principle of not causing significant harm to an environmental (under the EU Taxonomy or not) and/or social investment objective, the Sub-fund also achieved over the reference period:

- a minimum of 50% of issuers making a positive net contribution¹ to all the SDGs (min. 50% of the Sub-fund's AUM is invested in recognised sustainable bonds (green bonds or

¹ The net positive contribution is the difference between the positive and negative impact contributions and is calculated at the level of the invested company and the overall portfolio. Based on the UN SDG framework, the

equivalent) or issuers that individually make a positive contribution to all 17 SDGs on a net contribution basis);

- a positive net contribution at the level of the overall portfolio to the SDGs, i.e. the impact result based on a weighted average over all invested issuers at the level of the overall portfolio and in terms of net contribution to all 17 SDGs is positive.
- the Sub-fund focused on impact instruments such as green and sustainable emissions. The portfolio was 75.28% exposed to this type of instrument at the end of the reference period.

The other sustainability indicators used to measure the attainment of the Sub-fund's sustainability objective correspond to the binding investment restrictions in terms of exposure of the investee companies to certain controversial activities and behaviours, thus, over the reporting period, the Sub-fund achieved the following indicators:

- a. The Sub-fund has not been exposed to issuers considered to be non-compliant with Global Standards;
- b. The Sub-fund has not been exposed to issuers involved in controversial activities according to the definitions and thresholds stipulated by the Manager's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM_policy_Controversial_activities.pdf);
- c. The Sub-fund has no exposure to issuers facing ESG controversies of maximum severity;
- d. As at 31 December 2022, the Sub-fund's exposure to adherence to and validation of the Science Based Targets initiative (SBTi) was higher than its benchmark 94.5% (fund) vs 66.8% (benchmark).
- e. The Sub-fund had a higher weighted average ESG profile than its benchmark index, before the application of the ESG and sustainable investment selection methodology over a period of 3 years: 59.5 (funds) versus 58.59 (benchmark) (at 31/12/2022).
 - ...and in comparison with previous periods?

Not applicable

How did the sustainable investments not cause significant harm to any sustainable investment objective?

impact contribution takes into account both (1) the extent to which the products and services of the invested company contribute to the achievement of the SDGs and (2) the negative impacts associated with their activities along the value chain.

The Manager ensured that the Sub-fund's sustainable investments during the Reference Period did not materially undermine an environmentally or socially sustainable investment objective by:

Issuer level:

- consideration of the principal adverse impacts on the mandatory sustainability factors (hereinafter "PAIs") listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 which allows for the reduction of the negative impacts of the investment, including:
 - by incorporating several elements to avoid and/or reduce its exposure to activities or behaviours that could affect another environmental or social objective (such as the Global Standards compliance filter and the exclusion of ESG controversies of maximum severity or activities most harmful to other environmental and/or social objectives);
 - via an engagement process with investee companies, in accordance with its Engagement Policy, which can be accessed at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006835/DPAM policy engagement.pdf. The commitments made by the Manager are also the subject of an annual report available at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006835/DPAM report engagement activity.pdf).
- An impact calculation methodology which takes into account the positive and negative contribution of the company's products and services to the Sustainable Development Goals (SDGs) in order to optimise the net positive (resulting) contribution.

Overall portfolio level:

- A rule of a minimum of 50% of assets aligned with the EU Taxonomy or invested in impact bonds or in net positive contribution on all 17 SDGs. During the Reference Period, a minimum of 75.28% of assets aligned with the EU Taxonomy or making a net positive contribution to all 17 SDGs.
- a positive net contribution at the level of the overall portfolio to the SDGs, i.e. the impact result based on a weighted average over all invested issuers at the level of the overall portfolio and in terms of net contribution to all 17 SDGs is positive, taking into account investments in impact bonds and aligned with the taxonomy.

How were the indicators for adverse impacts on sustainability factors taken into account?

During the Reference Period, the Sub-fund has taken into consideration all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288 that are applicable to investments in sovereign or supranational issuers.

The PAIs are intrinsically linked to the Manager's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

1) Firstly, with regard to environmental PAIs:

- a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through the Manager's research in the context of the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD).
- b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with the Global Standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.
- c) the exclusion filter for companies involved in controversial activities (in accordance with the
- d) Manager's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM_policy_Controversial_activities.pdf). The exclusion of companies involved in thermal coal production, for example, allows for better coverage of indicators such as biodiversity and greenhouse gas emissions.
 - The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).
- e) similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impact their best-in-class ranking.

- 2) Secondly, the social PAIs were systematically analysed according to the stages of the research and investment process:
 - a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.
 - b) the exclusion filter for companies involved in controversial activities (definitions and thresholds in accordance with the Manager's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM policy Controversial activities.pdf). In this way, companies involved in controversial armaments were directly excluded from the investment universe.
 - c) in addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.
 - d) similarly, social indicators are included in the analysis of the ESG profile of companies and impact their best-in-class ranking.

The Manager's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at https://res.cloudinary.com/degroof-petercam-asset-

management/image/upload/v1614006836/DPAM_policy_Sustainable_a nd_Responsible_Investment.pdf and DPAM_report_TCFD.pdf (cloudinary.com).

Were the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The first stage of the Sub-fund's investment is based on a normative screening, which includes compliance with Global Standards based on human rights, labour rights and the prevention of corruption. These include the OECD Guidelines for Multinational Enterprises and the UN Guidelines on Business and Human Rights. Companies that do not meet these criteria are excluded from the eligible investment universe.

The Sub-fund has therefore not been invested during the Reference Period in any company that is deemed not to comply with these principles.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

How has this financial product considered principal adverse impacts on sustainability factors?

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to the Manager's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

- 1) Firstly, with regard to environmental PAIs:
 - a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through the Manager's research in the context of the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD).
 - b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with the Global Standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.
 - c) the exclusion filter for companies involved in controversial activities (in accordance with the Manager's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM policy Controversial activities.pdf). The exclusion of companies involved in thermal coal production, for example, allows for better coverage of indicators such as biodiversity and greenhouse gas emissions.
 - The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).
 - d) similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impact their best-in-class ranking.
- 2) Secondly, the social PAIs were systematically analysed according to the stages of the research and investment process:
- a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global

The list includes the investments that constitute the largest share of the financial product's investments during the reference period, namely: 31/12/2022

- Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.
- b) the exclusion filter for companies involved in controversial activities (definitions and thresholds in accordance with the Manager's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM policy Controversial activities.p df). In this way, companies involved in controversial armaments were directly excluded from the investment universe.
- c) in addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.
- d) similarly, social indicators are included in the analysis of the ESG profile of companies and impact their best-in-class ranking.

The Manager's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006836/DPAM_policy_Sustainable_and_Responsible_Investment.pdf and DPAM report_TCFD.pdf (cloudinary.com).

What was the ratio of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

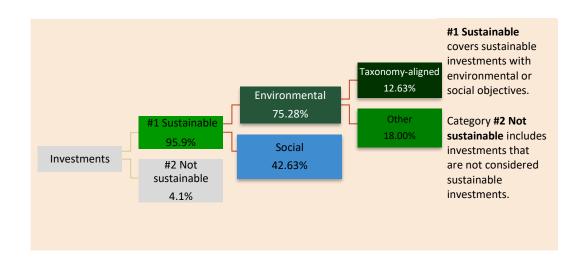

In the Reference Period, the Sub-fund invested at least 95.9% of its assets in sustainable investments with environmental or social objectives. These sustainable investments (in the table below referred to as "#1 Sustainable") are:

COMPULSORY SOCIAL SECURITY

- recognised impact emissions (green bonds or equivalent)
- companies aligned with one of the first two objectives of the EU taxonomy (climate change mitigation and adaptation);
- companies aiming to make a net positive contribution to the United Nations (UN) Sustainable Development Goals ("SDGs"), which are environmental in nature;
- companies aiming to make a net positive contribution to the social SDGs.

The percentage of the portfolio invested in sustainable investments that meet an environmental and/or social objective (#1A Sustainable) is calculated using the cascade methodology described in the prospectus (section "Environmental, social and governance (ESG) considerations – Sustainability transparency"), which excludes double counting at the cascade level: an investment qualifying as sustainable at the level of a first element of the cascade is not then taken into account at the level of subsequent elements of the cascade.

In contrast, the percentages of the two sub-categories of sustainable investments (#1A Sustainable) in the portfolio invested in environmental investments other than those aligned with the taxonomy and social investments may involve some double counting. All portfolio companies are analysed against both (i) the environmental SDGs (and therefore may fall into the sub-category "other environmental investments" even if they are also considered to be aligned with the taxonomy and/or as a social sustainable investment) and (ii) the social SDGs (and therefore may fall into the sub-category "social investments" even if they are also considered to be aligned with the taxonomy and/or as an other environmental investment).

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Manager's methodology for assessing the EU Taxonomy alignment of investee companies is based on data provided either by the investee companies or by third-party providers. The latter use a mixed approach:

- Firstly, a direct mapping between the business activities in their own sectoral classification system and the economic activities covered by the Technical Selection Criteria of the EU Taxonomy.
- Secondly, any business activity that could not be directly mapped is examined through a bottom-up assessment of its alignment with the EU Taxonomy's Technical Selection Criteria.
- Any economic activity remaining after the first and second steps is considered not to be aligned with the EU Taxonomy.

In principle, the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is assessed by means of turnover (based on performance data provided by third-party suppliers).

Where information on the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy cannot be readily obtained from information published by the invested issuers, the Manager shall rely on equivalent information obtained by third-party providers from the invested issuers.

Applying this methodology, over the Reference Period, the Sub-fund is aligned for 12.63% with the first two objectives of the Taxonomy (environmental objectives of climate change mitigation and/or adaptation). The compliance of these investments with the requirements set out in Article 3 of the EU Taxonomy is not subject to a guarantee provided by one or more auditors or a review by one or more auditors or a review by one or more third parties.

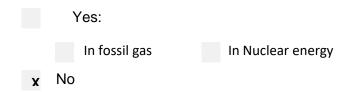

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

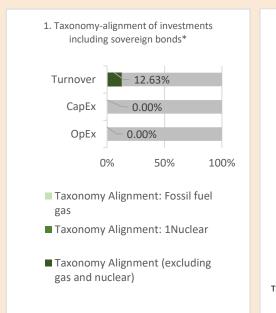

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

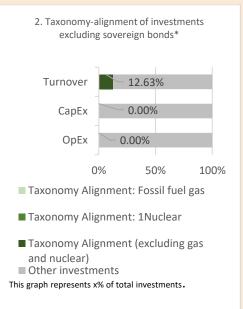

Transitional activities are economic activities for which low-carbon alternatives are not yet available and whose greenhouse gas emission levels correspond to the best achievable performance.

Has the financial product invested in fossil gas and/or nuclear energy activities in line with the EU Taxonomy²?

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

^{*} For the purpose of these graphs, "sovereign bonds" consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

Transitional activities	Enabling activities
3.5281%	N/A

² Fossil gas and/or nuclear activities will only be compliant with the EU Taxonomy if they contribute to mitigating climate change ("climate change mitigation") and do not significantly undermine an objective of the EU Taxonomy - see explanatory note in the left margin. The full criteria for fossil gas and nuclear energy economic activities that are in line with the EU Taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

What was the percentage of investments aligned with the EU Taxonomy compared to previous reporting periods?

Not applicable

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

Based on the approach described below, the Sub-fund invested 73% of its portfolio in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy over the Reference Period.

Only two of the six environmental objectives defined by the EU Taxonomy are currently covered by the regulatory framework of the EU Taxonomy Technical Selection Criteria that determine alignment with the EU Taxonomy (adaptation and climate change mitigation). Similar criteria for the other four environmental objectives have yet to be developed. In the meantime, the Manager wishes to continue to make sustainable investments that contribute to environmental objectives not covered by the current EU Taxonomy Technical Selection Criteria, including key environmental objectives such as the sustainable use and protection of water and marine resources, the prevention and control of pollution and the protection and restoration of biodiversity and ecosystems.

To this end, the Manager has adopted and defined a specific framework for identifying the environmental objectives of these sustainable investments and assessing their contribution to these objectives. This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the UN Sustainable Development Goals (SDGs) that can be attributed to environmental objectives.

The Manager will review and reassess this framework when the EU Taxonomy Technical Selection Criteria have been implemented for the other four environmental objectives defined by the EU Taxonomy.

What was the share of socially sustainable investments?

Based on the approach described below, the Sub-fund invested 42.63% of its portfolio in sustainable investments with a social objective over the Reference Period. A European Taxonomy for social sustainability goals has yet to be developed.

In the meantime, the Manager wishes to continue to make sustainable investments that contribute to the achievement of key social goals such as zero hunger, quality education and peace, justice and strong institutions.

To this end, the Manager has adopted and defined a specific framework for identifying the social objectives of these sustainable investments and assessing their contribution to these objectives. This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the UN Sustainable Development Goals (SDGs) that can be attributed to social objectives.

The Manager will review and reassess this framework when the EU Taxonomy Technical Selection Criteria have been implemented for the social objectives under the EU Taxonomy.

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards? Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding the:

- Liquid assets
- o Derivative instruments
- Collective investment schemes

The Sub-fund may invest or hold these types of assets for the purpose of achieving investment objectives, portfolio diversification, liquidity management and risk hedging.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 4.47% cash. There are no minimum environmental or social guarantees on this allocation.

What actions have been taken to attain the sustainable investment objective during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e:

On a quarterly basis, a normative screening has been established based on compliance with Global Standards. Companies must comply with the founding principles of the Global Compact (human rights, labour law, protection of the environment, fight against corruption and environmental protection) and the UN Guiding Principles, ILO instruments, the OECD Guidelines for Multinational Enterprises and the underlying conventions and treaties. The Manager used specific ESG research from non-financial rating agencies to determine whether or not a company is in compliance with these standards.

Subsequently, companies meeting the thresholds as defined in the activities excluded by the Manager's controversial activities policy were excluded. The policy of excluding controversial activities defined by the Manager (available at www.dpamfunds.com (Controversial Activities Policy)) covers several sectors and economic activities that are subject to debate as to whether or not they are ethical and sustainable. For each of these sectors and economic activities, the exclusion policy for controversial activities defines the exclusion criteria and thresholds. Companies involved in these controversial sectors and activities and meeting the exclusion criteria set out in the policy were excluded from the investment portfolio.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

Then, on a semi-annual basis, the resulting universe was subject to a "best-in-class" ranking in order to retain only the best ESG profiles of companies on a list of securities eligible for management. The last quartile (10%) of the lowest scores in the ranking were removed from the eligible list by sector.

The Manager ensured that the products and/or services of the company contribute – as a proportion of its revenue – to the achievement of the 17 environmental or social Sustainable Development Goals (SDGs) defined by the United Nations (UN) such as health products and services, education services, water saving and access solutions, energy efficiency solutions, digitalisation services, sustainable mobility services, etc.

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector. In addition, this qualitative analysis also includes consideration of the sustainability theme and the issuer's total contribution to the UN Sustainable Development Goals.

In addition, in order to integrate the proprietary investment universe that unifies issuers committed to addressing climate change, the three investment categories (impact bonds, climate challengers and climate enablers) were subject to a specific qualitative climate assessment:

- To assess the effectiveness of "Environmentally sustainable financing instruments", the
 Manager has created a proprietary qualitative scorecard that is applied before an
 investment is made. This scoreboard is based on best practices and market standards,
 and specifically analyzes UoP obligations. In addition, a qualitative assessment ensures
 that the issuance of environmentally sustainable financing instruments is an integral part
 of the issuer's business strategy.
- Climate challengers: An assessment model was developed to evaluate the company's
 efforts based on the four pillars of the Taskforce on Climate-related Financial Disclosures
 (TCFD): governance, strategy, risk management, measures and targets. Only companies
 that demonstrated that they have a state-of-the-art integrated strategy in place to
 address the transition risks of their sector were invested in their ordinary bonds.
- Climate enablers: For climate enablers, issuers' business activities must be clearly documented and show a clear strategic focus on climate-friendly products or services that are in line with one of the sustainable environmental themes/objectives pursued by the portfolio and that account for a significant share of the issuers' revenues.

Finally, the sustainable objective was measured by ensuring that:

- the net contribution at the level of the whole portfolio to the 17 SDGs is positive (5.75%) and;
- a minimum of 50% of assets under management has been invested in companies making a net positive contribution to the 17 SDGs:

The stages of the investment process are outlined below:

ESG INTEGRATION	VOTE	BASELINE NEGATIVE SCREENING	NORMATIVE & NEGATIVE SCREENING	ADDITIONAL NEGATIVE SCREENING	BEST-IN-CLASS POSITIVE SCREENING	SUSTAINABILITY THEMES
Integration into the investment decision (PAIs)	Influencing behaviour	Exclusions based on the activity of the issuer	most controversial behaviour (safeguarding social and governance	Extension of exclusions based on the activity of the issuer	Best in class, best approach Scorecards (PAIs)	IMPACT INVESTING
			minimums)	\oslash	Q	V

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852 establishing a list of environmentally sustainable economic activities. This regulation does not set out a list socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did	this fin	ancial product have a sustainable	e invest	tment objective?
••	×	Yes	••	No
x		de sustainable investments with nvironmental objective: 63.86% in economic activities that qualify as environmentally sustainable under the EU Taxonomy	(a iı	t promoted environmental and/or social E/S) characteristics and although it did not have a sustainable envestment target, it had a sustainable envestment ratio of%.
	X	in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy		with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environ mentally sustainable under the EU Taxonomy with a social objective
X		le sustainable investments with a objective: 71.65%		promoted E/S features, but did not make ustainable investments

Sustainability indicators assess how the environmental or social characteristics promoted by the financial product are achieved.

To what extent was the sustainable investment objective of this financial product met?

During the Reference Period (01/01/2022-31/12/2022), the Sub-fund invested in countries that are committed to respecting fundamental rights (human rights, labour rights, democratic rights, etc.), protecting their environmental capital and promoting the well-being of their present and future generations. By combining a rigorous selection of countries with a formal and systematic engagement policy and prioritising recognised impact bonds (green bonds and equivalents), the Sub-fund invested in the most committed or best performing countries in terms of sustainable development.

The objective of sustainable development was pursued via:

- rigorous ESG screening, based on a proprietary sustainability model of states aligned with the Sustainable Development Goals
- promoting best practices and best efforts by defining eligibility rules based on ESG ratings
- formal and systematic engagement with issuers and investment in impact securities (green bonds and similar).

The Sub-fund has not designated a benchmark to achieve its sustainable investment objective within the meaning of Article 9 of Regulation 2019/2088.

Derivative financial products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting the environmental and/or social characteristics of the Sub-fund.

How did the sustainability indicators perform?

During the Reference Period, the Sub-fund achieved the following sustainability indicators:

- a. The Sub-fund was not exposed to countries which do not meet a minimum standard of democracy in accordance with the Manager's controversial activities policy
- b. The Sub-fund invested a minimum of 40% of its assets in countries ranked in the top quartile according to the proprietary country sustainability model
- c. The Sub-fund invested a maximum of 10% of its assets in countries ranked in the last quartile according to the proprietary country sustainability model
- d. The Sub-fund engaged in a dialogue with the invested issuers according to the approach described in its Engagement Policy

Thus, over the Reference Period, the Sub-fund achieved:

- achieve a weighted average democratic score above the weighted average democratic score of the reference universe (consisting of emerging and developing countries as defined by the IMF): 63.4 vs 31.2
- a greenhouse gas emission intensity of the investee countries that is lower than the greenhouse gas emission intensity of its reference universe (consisting of emerging and developing countries as defined by the IMF) as defined by regulatory technical standards: 1714 tCO2e/\$ GDP bn versus 6466 tCO2e/*GDP bn (at 31/12/2022).

...and in comparison with previous periods?

Not applicable

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The Manager ensured that the Sub-fund's sustainable investments during the Reference Period did not materially undermine an environmentally or socially sustainable investment objective by:

- excluding issuers that do not meet a democratic minimum
- sustainability analysis of countries to identify those that show the greatest commitment to sustainable development on governance, environmental and social issues but also those that show a willingness to make progress on these issues; the resulting country rankings form the basis of the investment rules i.e. min. 40% of assets in countries ranked in the top quartile and max. 10% in countries ranked in the bottom quartile.
- an engagement process with investee countries, in accordance with its Engagement Policy, which can be accessed at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006835/DPAM_policy_engagement.pd
 https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006835/DPAM_report_engagement_activity.pdf).
- How were the indicators for adverse impacts on sustainability factors taken into account?

During the Reference Period, the sub-fund has taken into consideration all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in

Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288 that are applicable to investments in sovereign or supranational issuers.

The PAIs are intrinsically linked to the Manager's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

The first PAI relates to environmental issues and focuses on the greenhouse gas emission intensity of the investee countries. The indicator is an integral component of the country sustainability model that the Manager developed for its sovereign bond strategies. Consequently, it is included in the country's sustainability score and can influence it positively or negatively depending on its level and development compared to other issuer countries.

The second PAI relates to social issues and focuses on issues of social breaches. Our country sustainability model monitors a number of indicators on this issue, such as respect for civil liberties and political rights, respect for human rights and the level of violence within the country, commitment to key labour law conventions, the issue of equal opportunities and distribution of wealth, etc. These different indicators are included in the country's sustainability score and can influence it positively or negatively depending on its level and evolution compared to other emitting countries.

Were the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable to sovereign bonds.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

How has this financial product considered principal adverse impacts on sustainability factors?

During the Reference Period, the sub-fund has taken into consideration all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288 that are applicable to investments in sovereign or supranational issuers.

The PAIs are intrinsically linked to the Manager's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

The first PAI relates to environmental issues and focuses on the greenhouse gas emission intensity of the investee countries. The indicator is an integral component of the country sustainability model that the Manager developed for its sovereign bond strategies. Consequently, it is included in the country's sustainability score and can influence it positively or negatively depending on its level and development compared to other issuer countries.

The second PAI relates to social issues and focuses on issues of social breaches. Our country sustainability model monitors a number of indicators on this issue, such as respect for civil liberties and political rights, respect for human rights and the level of violence within the country, commitment to key labour law conventions, the issue of equal opportunities and distribution of wealth, etc. These different indicators are included in the country's sustainability score and can influence it positively or negatively depending on its level and evolution compared to other emitting countries.

What were the main investments of this financial product?

The list includes the investments that constitute the largest share of the financial product's investments during the reference period, namely: 31/12/2022

What was the ratio of sustainability-related investments?

What was the asset allocation?

In the Reference Period, the Sub-fund invested at least 85.86% of its assets in sustainable investments with environmental or social objectives. These sustainable investments (in the table below referred to as "#1 Sustainable") are:

- countries that are committed to respecting fundamental rights (human rights, labour rights, democratic rights, etc.), protecting their environmental capital and promoting the well-being of their present and future generations.
- that have an environmental objective not aligned with the European Taxonomy, due to their more advanced positioning on energy efficiency, climate change, biodiversity and emissions or
- which have a social objective, due to their more advanced positioning on issues related to wealth distribution, population and welfare, health care, education and innovation.

The percentage of the portfolio invested in sustainable investments that meet an environmental and/or social objective (#1A Sustainable) is calculated using the following cascade methodology:

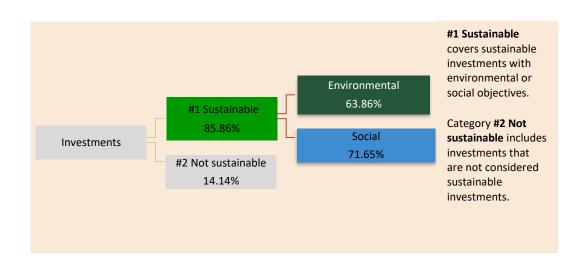

- impact instruments such as green and sustainable emissions (2.8%)
- bonds issued by a government whose environmental score is in the top three quartiles of the benchmark universe (environmental objective)
- bonds issued by a government whose social score is in the top three quartiles of the ranking of countries in the reference universe (social objective).

In contrast, the percentages of the two sub-categories of sustainable investments (#1A Sustainable) in the portfolio invested in environmental investments other than

Asset allocation describes the share of

investments in specific assets.

those aligned with the taxonomy and social investments may involve some double counting. All countries in the portfolio are analysed against both (i) the environmental aspect and (ii) the social aspect (and therefore may fall into the subcategory "social investments" even if they are also considered environmental investments).

In which economic sectors were investments made?

Sector	Sub-sector	% of assets	
Public administration and defence;	Public administration and defence; compulsory social security	88.82	%
compulsory social security			
Activities of extraterritorial Activities of extraterritorial organisations and bodies		3.38	%
organisations and bodies			
Financial and insurance activities	Financial service activities, except insurance and pension funding	1.51	%
Information and communication	Telecommunications	0.09	%
Derivatives Derivatives		0.31	%
Cash	Cash	5.90	%

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

To date, the EU Taxonomy does not provide a methodology for determining the alignment of sovereign bonds with the EU Taxonomy. These bonds are therefore not covered by the EU Taxonomy or its eligibility and technical selection criteria.

Has the financial product invested in fossil gas and/or nuclear energy activities in line with the EU Taxonomy¹?

Yes:

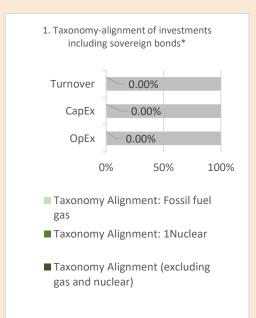

In fossil gas
In nuclear energy

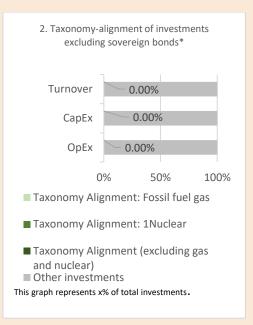

x No

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

^{*} For the purpose of these graphs, "sovereign bonds" consist of all sovereign exposures.

¹ Fossil gas and/or nuclear activities will only be compliant with the EU Taxonomy if they contribute to mitigating climate change ("climate change mitigation") and do not significantly undermine an objective of the EU Taxonomy - see explanatory note in the left margin. The full criteria for fossil gas and nuclear energy economic activities that are in line with the EU Taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and whose greenhouse gas emission levels correspond to the best achievable performance.

- What was the share of investments made in transitional and enabling activities?

 Not applicable
 - What was the percentage of investments aligned with the EU Taxonomy compared to previous reporting periods?

Not applicable

Are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

Based on the approach described below, the Sub-fund invested 63.86% of its portfolio in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy over the Reference Period.

The proprietary sustainability model is based on environmental, social and governmental aspects. In the environmental aspect, the proprietary model takes into account energy efficiency, climate change, biodiversity and country emissions. Investing in the highest ranked countries in this aspect therefore means that the Subfund has an environmental objective. The scores of the Environment component of the EM Manager country model make it possible to rank the member states in descending order. Countries in the bottom quartile of the ranking (rounding up the number of eligible countries) do not have an environmental target. Further information on methodology and data resources is available in the information on this Sub-fund via www.dpamfunds.com (in particular in the sections "Methodologies" and "Data Sources and Data Processing").

What was the share of socially sustainable investments?

Based on the approach described below, the Sub-fund invested 71.65% of its portfolio in sustainable investments with a social objective over the Reference Period.

The proprietary sustainability model is based on environmental, social and governmental aspects. In the social aspect, the proprietary model of sustainability of countries takes into account both current generations (wealth distribution, population, health care) and future generations (education and innovation). Investing in the highest ranked countries in this aspect therefore means that the Sub-

fund has a social objective. Similarly, the scores for the Social component (i.e. present and future generations of the proprietary model) allow the member states to be ranked in descending order. Countries in the bottom quartile of the ranking do not have a social target. Further information on methodology and data resources is available in the information on this Sub-fund via www.dpamfunds.com (in particular in the sections "Methodologies" and "Data Sources and Data Processing").

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding the:

- Liquid assets
- Derivative instruments
- Collective investment schemes

The Sub-fund may invest or hold these types of assets for the purpose of achieving investment objectives, portfolio diversification, liquidity management and risk hedging.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 5.9% cash. There are no minimum environmental or social guarantees on this allocation.

What actions have been taken to attain the sustainable investment objective during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e:

On a half-yearly basis, a normative screening has been established on the basis of compliance with democratic minimums by excluding countries that do not meet a democratic minimum as defined by the manager's controversial activities policy.

On a semi-annual basis, the eligible universe was subject to a best-in-class ranking based on the country sustainability model so as to invest a minimum of 40% of assets under management in top quartile countries and a maximum of 10% of assets under management in bottom quartile countries.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective. How has this financial product performed in comparison to the sustainable reference benchmark?

Not applicable

How does the reference benchmark differ from a broad market index?
Not applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852 establishing a list of environmentally sustainable economic activities. This regulation does not set out a list socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did	this fin	ancial product have a sustainable	e inve	estmen	nt objective?
••	×	Yes	•		No
x		de sustainable investments with nvironmental objective: 51.67% in economic activities that qualify as environmentally sustainable under the EU Taxonomy		(E/S) of althou	moted environmental and/or social characteristics and ugh it did not have a sustainable ment target, it had a sustainable ment ratio of%.
	X	in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy			with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environ mentally sustainable under the EU Taxonomy with a social objective
x		le sustainable investments with a objective: 68.08 %			noted E/S features, but did not make nable investments

Sustainability indicators assess how the environmental or social characteristics promoted by the financial product are achieved.

To what extent was the sustainable investment objective of this financial product met?

During the Reference Period (01/01/2022-31/12/2022), the Sub-fund aimed to invest in companies that contribute through their products and services to the 17 Sustainable Development Goals (SDGs) defined by the United Nations, and to advance companies on their contribution to sustainable development and environmental, social and governance (ESG) issues. The investment universe is narrowed: the portfolio focuses on companies with a net positive contribution (as defined below), i.e. (1) whose core business is the development of products and services that contribute to the achievement of sustainable development goals (SDG) and (2) the most advanced in terms of sustainability and ESG risk engagement. Some of the environmental objectives pursued by the Sub-fund contribute to climate change mitigation and adaptation as defined by Regulation (EU) 2019/2088.

The Sub-fund has not designated a benchmark to achieve its sustainable investment objective within the meaning of Article 9 of Regulation 2019/2088.

Derivative financial products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting the environmental and/or social characteristics of the Sub-fund.

How did the sustainability indicators perform?

- During the Reference Period, the Sub-fund achieved the following sustainability indicators: The Sub-fund was not exposed to issuers deemed to be non-compliant with Global Standards;
- b. The Sub-fund has not been exposed to issuers involved in controversial activities according to the definitions and thresholds stipulated by the Manager's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM_policy_Controversial_activities.pdf);
- c. The Sub-fund had no exposure to issuers facing ESG controversies of maximum severity;
- d. The Sub-fund has a better ESG profile than that of its investment universe, prior to the application of the ESG and sustainable investment selection methodology.
- e. The Sub-fund had a higher than benchmark exposure to companies aligned with the Science Based Targets initiative (SBTi) or equivalent.

Thus, over the Reference Period, the Sub-fund achieved:

- As at 31 December 2022, the Sub-fund's exposure to adherence to and validation of the Science Based Targets initiative (SBTi) was higher than its benchmark: 62.91 (funds) versus 62.36 (benchmark).
- The Sub-fund had a higher weighted average ESG profile than its benchmark index, before the application of the ESG and sustainable investment selection methodology over a period of 3 years: 59.2 (funds) versus 58.5 (benchmark) (at 31/12/2022).

For the Reference Period, the Sub-fund sought to have at least 80% sustainable investments i.e. investments aimed at:

- companies aligned with one of the first two objectives of the EU taxonomy (climate change mitigation and adaptation);
- companies aiming to make a net positive contribution to the United Nations (UN) Sustainable Development Goals ("SDGs"), which are environmental in nature;
- companies aiming to make a net positive contribution to the social SDGs. In addition, at the level of the overall portfolio, a minimum of 50% of companies aligned with the EU Taxonomy or in net positive contribution¹ on all the SDGs and a portfolio in net positive contribution on all 17 SDGs.

For the Reference Period, the Sub-fund had 82.3% sustainable investments. These sustainable investments have contributed to the Sub-fund's partial sustainable investment objective in the following ways:

- 5.36% of the Sub-fund's portfolio contributed to the achievement of the environmental objectives defined by the EU Taxonomy (climate change mitigation and adaptation);
- 51.67% of the Sub-fund's portfolio contributed to the achievement of environmental objectives not aligned with the EU Taxonomy;
- 68.08% of the Sub-fund's portfolio contributed to the achievement of social objectives.
- 77.31% of the Sub-fund's portfolio was invested in companies making a net positive contribution to the SDGs (including impact bonds).

...and in comparison with previous periods?

Not applicable

_

¹ The net positive contribution is the difference between the positive and negative impact contributions and is calculated at the level of the invested company and the overall portfolio. Based on the SDGs framework, the net positive contribution takes into account on the one hand (1) the extent to which the invested company's products and services contribute to the achievement of the SDGs and on the other hand (2) the negative impacts of their activities along the value chain.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The Manager ensured that the Sub-fund's sustainable investments during the Reference Period did not materially undermine an environmentally or socially sustainable investment objective by:

Issuer level:

- consideration of the principal adverse impacts on the mandatory sustainability factors (hereinafter "PAIs") listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 which allows for the reduction of the negative impacts of the investment, including:
 - by incorporating several elements to avoid and/or reduce its exposure to activities or behaviours that could affect another environmental or social objective (such as the Global Standards compliance filter and the exclusion of ESG controversies of maximum severity or activities most harmful to other environmental and/or social objectives);
 - via an engagement process with investee companies, in accordance with its Engagement Policy, which can be accessed at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006835/DPAM policy engagement.pdf. The commitments made by the Manager are also the subject of an annual report available at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006835/DPAM report_engagement activity.pdf).
- An impact calculation methodology which takes into account the positive and negative contribution of the company's products and services to the Sustainable Development Goals (SDGs) in order to optimise the net positive (resulting) contribution.

Overall portfolio level:

- A rule of a minimum of 50% of assets aligned with the EU Taxonomy or in net positive contribution on all 17 SDGs. During the Reference Period, a minimum of 77.31% of assets aligned with the EU Taxonomy or making a net positive contribution to all 17 SDGs.
- How were the indicators for adverse impacts on sustainability factors taken into account?

During the Reference Period, the Sub-fund has taken into consideration all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288 that are applicable to investments in sovereign or supranational issuers.

The PAIs are intrinsically linked to the Manager's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

- 1) Firstly, with regard to environmental PAIs:
 - a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through the Manager's research in the context of the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD).
 - b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with the Global Standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.
 - c) the exclusion filter for companies involved in controversial activities (in accordance with the Manager's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM policy Controversial_activities.pdf). The exclusion of companies involved in thermal coal production, for example, allows for better coverage of indicators such as biodiversity and greenhouse gas emissions.
 - The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).
 - d) similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impact their best-in-class ranking.
- 2) Secondly, the social PAIs were systematically analysed according to the stages of the research and investment process:
 - a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.

- b) the exclusion filter for companies involved in controversial activities (definitions and thresholds in accordance with the Manager's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-assetmanagement/image/upload/v1614006839/DPAM policy Controversial activities.pdf). In this way, companies involved in controversial armaments were directly excluded from the investment universe.
- c) in addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.
- d) similarly, social indicators are included in the analysis of the ESG profile of companies and impact their best-in-class ranking.

The Manager's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at https://res.cloudinary.com/degroof-petercam-asset-

management/image/upload/v1614006836/DPAM policy Sustainable a nd Responsible Investment.pdf and DPAM report TCFD.pdf (cloudinary.com).

Were the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The first stage of the Sub-fund's investment is based on a normative screening, which includes compliance with Global Standards based on human rights, labour rights and the prevention of corruption. These include the OECD Guidelines for Multinational Enterprises and the UN Guidelines on Business and Human Rights. Companies

that do not meet these criteria are excluded from the eligible investment universe.

The Sub-fund has therefore not been invested during the Reference Period in any company that is deemed not to comply with these principles.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

How has this financial product considered principal adverse impacts on sustainability factors?

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to the Manager's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

- 1) Firstly, with regard to environmental PAIs:
 - a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through the Manager's research in the context of the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD).
 - b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with the Global Standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.
 - c) the exclusion filter for companies involved in controversial activities (in accordance with the Manager's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM policy Controversial activities.pdf). The exclusion of companies involved in thermal coal production, for example, allows for better coverage of indicators such as biodiversity and greenhouse gas emissions.
 - The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).
 - d) similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impact their best-in-class ranking.
- 2) Secondly, the social PAIs were systematically analysed according to the stages of the research and investment process:

- a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.
- b) the exclusion filter for companies involved in controversial activities (definitions and thresholds in accordance with the Manager's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM policy Controversial activities.p df). In this way, companies involved in controversial armaments were directly excluded from the investment universe.
- c) in addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.
- d) similarly, social indicators are included in the analysis of the ESG profile of companies and impact their best-in-class ranking.

The Manager's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006836/DPAM policy Sustainable and Responsible Investment.pdf and DPAM report TCFD.pdf (cloudinary.com).

The list includes the investments that constitute the largest share of the financial product's investments during the reference period, namely:

31/12/2022

What was the ratio of sustainability-related investments?

What was the asset allocation?

In the Reference Period, the Sub-fund invested at least 82.3% of its assets in sustainable investments with environmental or social objectives. These sustainable investments (in the table below referred to as "#1 Sustainable") are:

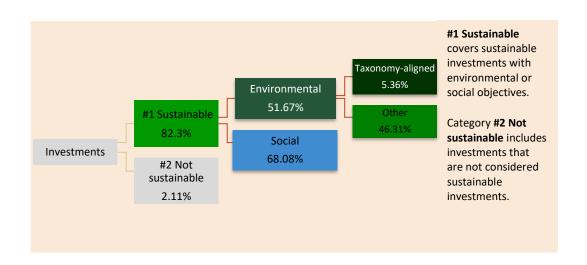

- companies aligned with one of the first two objectives of the EU taxonomy (climate change mitigation and adaptation);
- companies aiming to make a net positive contribution to the United Nations (UN) Sustainable Development Goals ("SDGs"), which are environmental in nature;
- companies aiming to make a net positive contribution to the social SDGs.

The percentage of the portfolio invested in sustainable investments that meet an environmental and/or social objective (#1A Sustainable) is calculated using the cascade methodology described in the prospectus (section "Environmental, social and governance (ESG) considerations – Sustainability transparency"), which excludes double counting at the cascade level: an investment qualifying as sustainable at the level of a first element of the cascade is not then taken into account at the level of subsequent elements of the cascade.

In contrast, the percentages of the two sub-categories of sustainable investments (#1A Sustainable) in the portfolio invested in environmental investments other than those aligned with the taxonomy and social investments may involve some double counting. All portfolio companies are analysed against both (i) the environmental SDGs (and therefore may fall into the sub-category "other environmental investments" even if they are also considered to be aligned with the taxonomy and/or as a social sustainable investment) and (ii) the social SDGs (and therefore may fall into the sub-category "social investments" even if they are also considered to be aligned with the taxonomy and/or as an other environmental investment).

Asset allocation

describes the share of investments in specific assets.

In which economic sectors were investments made?

Sector	Sub-sector	% of assets	
Financial and insurance activities	Financial service activities, except insurance and pension funding	45.98	%

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Manager's methodology for assessing the EU Taxonomy alignment of investee companies is based on data provided either by the investee companies or by third-party providers. The latter use a mixed approach:

- Firstly, a direct mapping between the business activities in their own sectoral classification system and the economic activities covered by the Technical Selection Criteria of the EU Taxonomy.
- Secondly, any business activity that could not be directly mapped is examined through a bottom-up assessment of its alignment with the EU Taxonomy's Technical Selection Criteria.
- Any economic activity remaining after the first and second steps is considered not to be aligned with the EU Taxonomy.

In principle, the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is assessed by means of turnover (based on performance data provided by third-party suppliers).

Where information on the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy cannot be readily obtained from information published by the invested issuers, the Manager shall rely on equivalent information obtained by third-party providers from the invested issuers.

Applying this methodology, over the Reference Period, the Sub-fund is aligned for 5.36% with the first two objectives of the Taxonomy (environmental objectives of climate

change mitigation and/or adaptation). The compliance of these investments with the requirements set out in Article 3 of the EU Taxonomy is not subject to a guarantee provided by one or more auditors or a review by one or more auditors or a review by one or more third parties.

Has the financial product invested in fossil gas and/or nuclear energy activities in line with the EU Taxonomy²?

Yes:

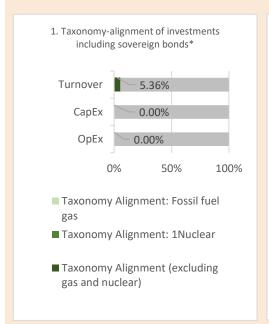

In fossil gas

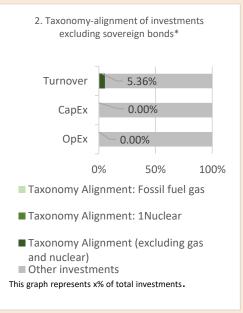

In nuclear energy

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure
 (CapEx) showing the green investments made by investee companies, e.g.
 for a transition to a green economy.
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

^{*} For the purpose of these graphs, "sovereign bonds" consist of all sovereign exposures.

² Fossil gas and/or nuclear activities will only be compliant with the EU Taxonomy if they contribute to mitigating climate change ("climate change mitigation") and do not significantly undermine an objective of the EU Taxonomy - see explanatory note in the left margin. The full criteria for fossil gas and nuclear energy economic activities that are in line with the EU Taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are economic activities for which low-carbon alternatives are not yet available and whose greenhouse gas emission levels correspond to the best achievable performance.

What was the share of investments made in transitional and enabling activities?

Transitional activities	Enabling activities		
2.1926%	N/A		

What was the percentage of investments aligned with the EU Taxonomy compared to previous reporting periods?

Not applicable

Are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

Based on the approach described below, the Sub-fund invested 51.67% of its portfolio in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy over the Reference Period.

Only two of the six environmental objectives defined by the EU Taxonomy are currently covered by the regulatory framework of the EU Taxonomy Technical Selection Criteria that determine alignment with the EU Taxonomy (adaptation and climate change mitigation). Similar criteria for the other four environmental objectives have yet to be developed. In the meantime, the Manager wishes to continue to make sustainable investments that contribute to environmental objectives not covered by the current EU Taxonomy Technical Selection Criteria, including key environmental objectives such as the sustainable use and protection of water and marine resources, the prevention and control of pollution and the protection and restoration of biodiversity and ecosystems.

To this end, the Manager has adopted and defined a specific framework for identifying the environmental objectives of these sustainable investments and assessing their contribution to these objectives. This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the UN Sustainable Development Goals (SDGs) that can be attributed to environmental objectives.

The Manager will review and reassess this framework when the EU Taxonomy Technical Selection Criteria have been implemented for the other four environmental objectives defined by the EU Taxonomy.

What was the share of socially sustainable investments?

Based on the approach described below, the Sub-fund invested 68.08% of its portfolio in sustainable investments with a social objective over the Reference Period. A European Taxonomy for social sustainability goals has yet to be developed. In the meantime, the Manager wishes to continue to make sustainable investments that contribute to the achievement of key social goals such as zero hunger, quality education and peace, justice and strong institutions.

To this end, the Manager has adopted and defined a specific framework for identifying the social objectives of these sustainable investments and assessing their contribution to these objectives. This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the UN Sustainable Development Goals (SDGs) that can be attributed to social objectives.

The Manager will review and reassess this framework when the EU Taxonomy Technical Selection Criteria have been implemented for the social objectives under the EU Taxonomy.

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding the:

- Liquid assets
- Derivative instruments
- Collective investment schemes

The Sub-fund may invest or hold these types of assets for the purpose of achieving investment objectives, portfolio diversification, liquidity management and risk hedging.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 1.87% cash. There are no minimum environmental or social guarantees on this allocation.

What actions have been taken to attain the sustainable investment objective during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e:

On a quarterly basis, a normative screening has been established based on compliance with Global Standards. Companies must comply with the founding principles of the Global Compact (human rights, labour law, protection of the environment, fight against corruption and environmental protection) and the UN Guiding Principles, ILO instruments, the OECD Guidelines for Multinational Enterprises and the underlying conventions and treaties. The Manager used specific ESG research from non-financial rating agencies to determine whether or not a company is in compliance with these standards.

Subsequently, companies meeting the thresholds as defined in the activities excluded by the Manager's controversial activities policy were excluded. The policy of excluding controversial activities defined by the Manager (available at www.dpamfunds.com (Controversial Activities Policy)) covers several sectors and economic activities that are subject to debate as to whether or not they are ethical and sustainable. For each of these sectors and economic activities, the exclusion policy for controversial activities defines the exclusion criteria and thresholds. Companies involved in these controversial sectors and activities and meeting the exclusion criteria set out in the policy were excluded from the investment portfolio.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

Then, on a semi-annual basis, the resulting universe was subject to a "best-in-class" ranking in order to retain only the best ESG profiles of companies on a list of securities eligible for management. The last quartile (10%) of the lowest scores in the ranking were removed from the eligible list by sector.

The Manager ensured that the products and/or services of the company contribute – as a proportion of its revenue – to the achievement of the 17 environmental or social Sustainable Development Goals (SDGs) defined by the United Nations (UN) such as health products and services, education services, water saving and access solutions, energy efficiency solutions, digitalisation services, sustainable mobility services, etc.

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector. In addition, this qualitative analysis also includes consideration of the sustainability theme and the issuer's total contribution to the UN Sustainable Development Goals.

Finally, the sustainable objective was measured by ensuring that:

- the net contribution at the level of the whole portfolio to the 17 SDGs is positive and
- a minimum of 50% of assets under management has been invested in companies making a net positive contribution to the 17 SDGs:

The stages of the investment process are outlined below:

ESG INTEGRATION	VOTE	BASELINE NEGATIVE SCREENING	NORMATIVE & NEGATIVE SCREENING	ADDITIONAL NEGATIVE SCREENING	BEST-IN-CLASS POSITIVE SCREENING	SUSTAINABILITY THEMES
Integration into the investment decision (PAIs)	Influencing behaviour	Exclusions based on the activity of the issuer	most controversial behaviour (safeguarding social and governance	Extension of exclusions based on the activity of the issuer	Best in class, best approach Scorecards (PAIs)	IMPACT INVESTING
			minimums)	\oslash	Q	W.

Sustainable investment objective

Sustainable investment It made sustainable investments with It promoted environmental and/or social means an investment in an (E/S) characteristics and an environmental objective: 66.69% economic activity that although it did not have a sustainable contributes to an environmental or social in economic activities that qualify investment target, it had a sustainable objective, provided that the as environmentally sustainable investment ratio of ____%. investment does not under the EU Taxonomy significantly harm any with an environmental objective in environmental or social in economic activities that do not economic activities that qualify as objective and that the qualify as environmentally investee companies follow environmentally sustainable under the sustainable under the EU good governance practices. **EU Taxonomy** Taxonomy with an environmental objective in economic activities that do not qualify The **EU Taxonomy** is a as environ mentally sustainable under classification system laid the EU Taxonomy down in Regulation (EU) 2020/852 establishing a list with a social objective of environmentally sustainable economic activities. This regulation It made sustainable investments with a It promoted E/S features, but did not make does not set out a list sustainable investments social objective: 78.04% socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned

Did this financial product have a sustainable investment objective?

Sustainability indicators assess how the environmental or social characteristics promoted by the financial product are achieved.

To what extent was the sustainable investment objective of this financial product met?

During the Reference Period (01/01/2022-31/12/2022), the Sub-fund invested in countries that are committed to respecting fundamental rights (human rights, labour rights, democratic rights, etc.), protecting their environmental capital and promoting the well-being of their present and future generations. By combining a rigorous selection of countries with a formal and systematic engagement policy and prioritising recognised impact bonds (green bonds and equivalents), the Sub-fund invested in the most committed or best performing countries in terms of sustainable development.

The Sub-fund has not designated a benchmark to achieve its sustainable investment objective within the meaning of Article 9 of Regulation 2019/2088.

Derivative financial products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting the environmental and/or social characteristics of the Sub-fund.

How did the sustainability indicators perform?

During the Reference Period, the Sub-fund achieved the following sustainability indicators:

- a. The Sub-fund was not exposed to countries which do not meet a minimum standard of democracy in accordance with the Manager's controversial activities policy
- b. The Sub-fund invested only in the top 50% of OECD countries ranked according to the proprietary country sustainability model
- c. The Sub-fund engaged in a dialogue with the invested issuers according to the approach described in its Engagement Policy
- d. The Sub-fund focused on impact instruments such as green and sustainable emissions. The portfolio was 17.78% exposed to this type of instrument at the end of the reference period.

Thus, over the Reference Period, the Sub-fund achieved:

- a weighted average democratic score above the weighted average democratic score of the reference universe (consisting of OECD member countries): 95 vs 87
- a greenhouse gas emission intensity of the investee countries higher than the greenhouse gas emission intensity of its reference universe (member states of the OECD) as defined by regulatory technical standards: 407.4 tCO2e/\$ GDP bn (at 31/12/2022).

...and in comparison with previous periods?

Not applicable

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The Manager ensured that the Sub-fund's sustainable investments during the Reference Period did not materially undermine an environmentally or socially sustainable investment objective by:

- excluding issuers that do not meet a democratic minimum as defined by the Manager's controversial activities policy;
- sustainability analysis of countries to identify those that show the greatest commitment to sustainable development on governance, environmental and social issues but also those that show a willingness to make progress on these issues; the resulting country rankings form the basis of the investment rules i.e. invest assets only in the top 50% of ranked countries.
- consideration of the principal adverse impacts on the mandatory sustainability factors (hereinafter "PAIs") listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 which allows for the reduction of the negative impacts of the investment
- an engagement process with investee countries, in accordance with its Engagement Policy, which can be accessed at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006835/DPAM policy engagement.pd
 f. The commitments made by DPAM are also the subject of an annual report available at (https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006835/DPAM report engagement a ctivity.pdf).

— How were the indicators for adverse impacts on sustainability factors taken into account?

During the Reference Period, the sub-fund has taken into consideration all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288 that are applicable to investments in sovereign or supranational issuers.

The PAIs are intrinsically linked to the Manager's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated into the entire

research and investment process.

The first PAI relates to environmental issues and focuses on the greenhouse gas emission intensity of the investee countries. The indicator is an integral component of the country sustainability model that the Manager developed for its sovereign bond strategies. Consequently, it is included in the country's

sustainability score and can influence it positively or negatively depending on its level and development compared to other issuer countries.

The second PAI relates to social issues and focuses on issues of social breaches. Our country sustainability model monitors a number of indicators on this issue, such as respect for civil liberties and political rights, respect for human rights and the level of violence within the country, commitment to key labour law conventions, the issue of equal opportunities and distribution of wealth, etc. These different indicators are included in the country's sustainability score and can influence it positively or negatively depending on its level and evolution compared to other emitting countries.

Were the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable for investments in sovereigns.

How has this financial product considered principal adverse impacts on sustainability factors?

During the Reference Period, the sub-fund has taken into consideration all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288 that are applicable to investments in sovereign or supranational issuers.

The PAIs are intrinsically linked to the Manager's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

The first PAI relates to environmental issues and focuses on the greenhouse gas emission intensity of the investee countries. The indicator is an integral component of the country sustainability model that the Manager developed for its sovereign bond strategies. Consequently, it is included in the country's sustainability score and can influence it positively or negatively depending on its level and development compared to other issuer countries.

The second PAI relates to social issues and focuses on issues of social breaches. Our country sustainability model monitors a number of indicators on this issue, such as respect for civil liberties and political rights, respect for human rights and the level of violence within the country, commitment to key labour law conventions, the issue of equal opportunities and distribution of wealth, etc. These different indicators are included in the country's sustainability score and can influence it positively or negatively depending on its level and evolution compared to other emitting countries.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social

and employee matters,

and antibribery matters.

respect for human rights, anticorruption

What were the main investments of this financial product?

The list includes the investments that constitute the largest share of the financial product's investments during the reference period, namely: 31/12/2022

Asset allocation describes the share of investments in specific assets.

What was the ratio of sustainability-related investments?

What was the asset allocation?

In the Reference Period, the Sub-fund invested at least 94.08% of its assets in sustainable investments with environmental or social objectives. These sustainable investments (in the table below referred to as "#1 Sustainable") are:

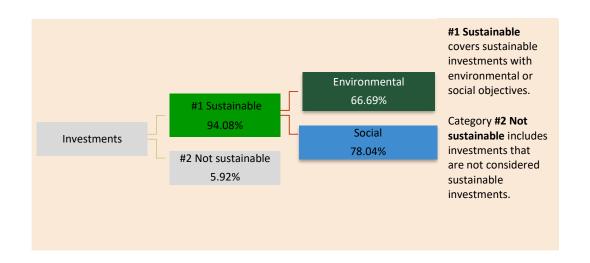

- countries that are committed to respecting fundamental rights (human rights, labour rights, democratic rights, etc.), protecting their environmental capital and promoting the well-being of their present and future generations:
 - that have an environmental objective not aligned with the European Taxonomy, due to their more advanced positioning on energy efficiency, climate change, biodiversity and emissions or
 - which have a social objective, due to their more advanced positioning on issues related to wealth distribution, population and welfare, health care, education and innovation.

The percentage of the portfolio invested in sustainable investments that meet an environmental and/or social objective (#1A Sustainable) is calculated using the following cascade methodology:

- impact instruments such as green and sustainable emissions
- bonds issued by a government whose environmental score is in the top three quartiles of the benchmark universe (environmental objective)
- bonds issued by a government whose social score is in the top three quartiles of the ranking of countries in the reference universe (social objective).

In contrast, the percentages of the two sub-categories of sustainable investments (#1A Sustainable) in the portfolio invested in environmental investments other than those aligned with the taxonomy and social investments may involve some double counting. All countries in the portfolio are analysed against both (i) the environmental aspect and (ii) the social aspect (and therefore may fall into the subcategory "social investments" even if they are also considered environmental investments).

The percentage of the portfolio invested in sustainable investments that meet an environmental and/or social objective (#1A Sustainable) is calculated using the cascade methodology described in the prospectus (section "Environmental, social and governance (ESG) considerations — Sustainability transparency"), which excludes double counting at the cascade level: an investment qualifying as sustainable at the level of a first element of the cascade is not then taken into account at the level of subsequent elements of the cascade.

In which economic sectors were investments made?

Sector	Sub-sector	% of	
2.10.1.1.1.1.		assets	
Public administration and defence;	Public administration and defence; compulsory social security	90.11	%
compulsory social security			
Activities of extraterritorial	Activities of extraterritorial organisations and bodies	7.95	%
organisations and bodies			
Financial and insurance activities	Financial service activities, except insurance and pension funding	0.44	%
Derivatives	Derivatives	0.07	%
Cash	Cash	1.44	%

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

To date, the EU Taxonomy does not provide a methodology for determining the alignment of sovereign bonds with the EU Taxonomy. These bonds are therefore not covered by the EU Taxonomy or its eligibility and technical selection criteria.

Has the financial product invested in fossil gas and/or nuclear energy activities in line with the EU Taxonomy¹?

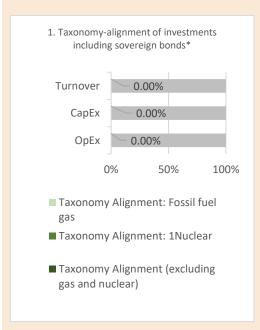

Yes:
In fossil gas
In nuclear energy

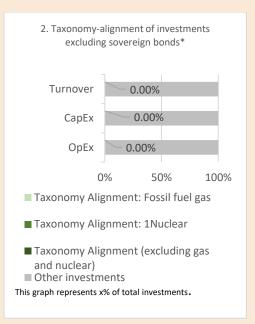

No

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure
 (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

^{*} For the purpose of these graphs, "sovereign bonds" consist of all sovereign exposures.

¹ Fossil gas and/or nuclear activities will only be compliant with the EU Taxonomy if they contribute to mitigating climate change ("climate change mitigation") and do not significantly undermine an objective of the EU Taxonomy - see explanatory note in the left margin. The full criteria for fossil gas and nuclear energy economic activities that are in line with the EU Taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are economic activities for which low-carbon alternatives are not yet available and whose greenhouse gas emission levels correspond to the best achievable performance.

What was the share of investments made in transitional and enabling activities?

Not applicable

What was the percentage of investments aligned with the EU Taxonomy compared to previous reporting periods?

Not applicable

Are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

Based on the approach described below, the Sub-fund invested 66.69% of its portfolio in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy over the Reference Period.

The Manager's proprietary sustainability model is based on environmental, social and governmental aspects. In the environmental aspect, the proprietary model takes into account energy efficiency, climate change, biodiversity and country emissions. Investing in the highest ranked countries in this aspect therefore means that the Sub-fund has an environmental objective. The scores of the Environment component of the OECD Manager country model make it possible to rank the member states in descending order. Countries in the bottom quartile of the ranking (rounding up the number of eligible countries) do not have an environmental target. Further information on methodology and data resources is available in the information on this Sub-fund via www.dpamfunds.com (in particular in the sections "Methodologies" and "Data Sources and Data Processing").

What was the share of socially sustainable investments?

Based on the approach described below, the Sub-fund invested 78.04% of its portfolio in sustainable investments with a social objective over the Reference Period.

The proprietary sustainability model is based on environmental, social and governmental aspects. In the social aspect, the proprietary model of sustainability of countries takes into account both current generations (wealth distribution, population, health care) and future generations (education and innovation). Investing in the highest ranked countries in this aspect therefore means that the Sub-

fund has a social objective. Similarly, the scores for the Social component (i.e. present and future generations of the proprietary model) allow the member states to be ranked in descending order. Countries in the bottom quartile of the ranking do not have a social target. Further information on methodology and data resources is available in the information on this Sub-fund via www.dpamfunds.com (in particular in the sections "Methodologies" and "Data Sources and Data Processing").

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding the:

- Liquid assets
- Derivative instruments
- Collective investment schemes

The Sub-fund may invest or hold these types of assets for the purpose of achieving investment objectives, portfolio diversification, liquidity management and risk hedging.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 1.44% cash. There are no minimum environmental or social guarantees on this allocation.

What actions have been taken to attain the sustainable investment objective during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e:

On a semi-annual basis, a normative screening has been established on the basis of compliance with democratic minimums as defined by the Manager's controversial activities policy.

On a semi-annual basis, the eligible universe was subject to a best-in-class ranking based on the country sustainability model so as to invest only in the top 50% of OECD countries ranked according to the proprietary country sustainability model.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852 establishing a list of environmentally sustainable economic activities. This regulation does not set out a list socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did	Did this financial product have a sustainable investment objective?						
•	×	Yes	••	No			
X		de sustainable investments with vironmental objective: 66.20% in economic activities that qualify as environmentally sustainable under the EU Taxonomy	(I a ir	t promoted environmental and/or social E/S) characteristics and although it did not have a sustainable nvestment target, it had a sustainable nvestment ratio of%.			
	x	in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy		with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environ mentally sustainable under the EU Taxonomy with a social objective			
x		e sustainable investments with a objective: 78.29%		promoted E/S features, but did not make ustainable investments			

Sustainability indicators assess how the environmental or social characteristics promoted by the financial product are achieved.

To what extent was the sustainable investment objective of this financial product met?

During the Reference Period (01/01/2022-31/12/2022), the Sub-fund invested in countries that are committed to respecting fundamental rights (human rights, labour rights, democratic rights, etc.), protecting their environmental capital and promoting the well-being of their present and future generations. By combining a rigorous selection of countries with a formal and systematic engagement policy and prioritising recognised impact bonds (green bonds and equivalents), the Sub-fund invested in the most committed or best performing countries in terms of sustainable development.

The Sub-fund has not designated a benchmark to achieve its sustainable investment objective within the meaning of Article 9 of Regulation 2019/2088.

Derivative financial products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting the environmental and/or social characteristics of the Sub-fund.

How did the sustainability indicators perform?

During the Reference Period, the Sub-fund achieved the following sustainability indicators:

- a. The Sub-fund was not exposed to countries which do not meet a minimum standard of democracy in accordance with the Manager's controversial activities policy
- b. The Sub-fund invested only in the top 50% of OECD countries ranked according to the proprietary country sustainability model. The Sub-fund engaged in a dialogue with the invested issuers according to the approach described in its Engagement Policy.
- c. The Sub-fund focused on impact instruments such as green and sustainable emissions. The portfolio was 16% exposed to this type of instrument at the end of the reference period.

Thus, over the Reference Period, the Sub-fund achieved:

- a weighted average democratic score above the weighted average democratic score of the reference universe (consisting of OECD member countries): 95 vs 87
- a greenhouse gas emission intensity of the investee countries lower than the greenhouse gas emission intensity of its reference universe (consisting of member states of the OECD) as defined by regulatory technical standards: 384.15 tCO2e/\$ GDP bn (at 31/12/2022).

...and in comparison with previous periods?

Not applicable

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The Manager ensured that the Sub-fund's sustainable investments during the Reference Period did not materially undermine an environmentally or socially sustainable investment objective by:

- excluding issuers that do not meet a democratic minimum
- sustainability analysis of countries to identify those that show the greatest commitment to sustainable development on governance, environmental and social issues but also those that show a willingness to make progress on these issues; the resulting country rankings form the basis of the investment rules i.e. only in the top 50% of OECD countries according to the proprietary country sustainability model the consideration of the principal adverse impacts on the mandatory sustainability factors (hereinafter "PAIs") listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 which allows for the reduction of the adverse impacts of the investment
- an engagement process with investee countries, in accordance with its Engagement Policy, which can be accessed at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006835/DPAM_report_engagement_activity.pdf).

— How were the indicators for adverse impacts on sustainability factors taken into account?

During the Reference Period, the sub-fund has taken into consideration all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288 that are applicable to investments in sovereign or supranational issuers.

The PAIs are intrinsically linked to the Manager's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated into the entire

research and investment process.

The first PAI relates to environmental issues and focuses on the greenhouse gas emission intensity of the investee countries. The indicator is an integral component of the country sustainability model that the Manager developed for its sovereign bond strategies. Consequently, it is included in the country's

sustainability score and can influence it positively or negatively depending on its level and development compared to other issuer countries.

The second PAI relates to social issues and focuses on issues of social breaches. Our country sustainability model monitors a number of indicators on this issue, such as respect for civil liberties and political rights, respect for human rights and the level of violence within the country, commitment to key labour law conventions, the issue of equal opportunities and distribution of wealth, etc. These different indicators are included in the country's sustainability score and can influence it positively or negatively depending on its level and evolution compared to other emitting countries.

Were the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable for investments in sovereigns.

How has this financial product considered principal adverse impacts on sustainability factors?

During the Reference Period, the sub-fund has taken into consideration all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288 that are applicable to investments in sovereign or supranational issuers.

The PAIs are intrinsically linked to the Manager's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

The first PAI relates to environmental issues and focuses on the greenhouse gas emission intensity of the investee countries. The indicator is an integral component of the country sustainability model that the Manager developed for its sovereign bond strategies. Consequently, it is included in the country's sustainability score and can influence it positively or negatively depending on its level and development compared to other issuer countries.

The second PAI relates to social issues and focuses on issues of social breaches. Our country sustainability model monitors a number of indicators on this issue, such as respect for civil liberties and political rights, respect for human rights and the level of violence within the country, commitment to key labour law conventions, the issue of equal opportunities and distribution of wealth, etc. These different indicators are included in the country's sustainability score and can influence it positively or negatively depending on its level and evolution compared to other emitting countries.

rincipal adverse
mpacts are the most
ignificant negative

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

What were the main investments of this financial product?

The list includes the investments that constitute the largest share of the financial product's investments during the reference period, namely: 31/12/2022

Asset allocation describes the share of investments in specific assets.

What was the ratio of sustainability-related investments?

What was the asset allocation?

In the Reference Period, the Sub-fund invested at least 94.11% of its assets in sustainable investments with environmental or social objectives. These sustainable investments (in the table below referred to as "#1 Sustainable") are:

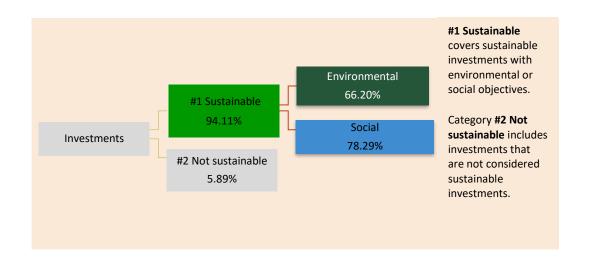

- countries that are committed to respecting fundamental rights (human rights, labour rights, democratic rights, etc.), protecting their environmental capital and promoting the well-being of their present and future generations:
- that have an environmental objective not aligned with the European Taxonomy, due to their more advanced positioning on energy efficiency, climate change, biodiversity and emissions or
- which have a social objective, due to their more advanced positioning on issues related to wealth distribution, population and welfare, health care, education and innovation.

The percentage of the portfolio invested in sustainable investments that meet an environmental and/or social objective (#1A Sustainable) is calculated using the following cascade methodology:

- impact instruments such as green and sustainable emissions
- bonds issued by a government whose environmental score is in the top three quartiles of the benchmark universe (environmental objective)
- bonds issued by a government whose social score is in the top three quartiles of the ranking of countries in the reference universe (social objective).

In contrast, the percentages of the two sub-categories of sustainable investments (#1A Sustainable) in the portfolio invested in environmental investments other than those aligned with the taxonomy and social investments may involve some double counting. All countries in the portfolio are analysed against both (i) the environmental aspect and (ii) the social aspect (and therefore may fall into the subcategory "social investments" even if they are also considered environmental investments).

The percentage of the portfolio invested in sustainable investments that meet an environmental and/or social objective (#1A Sustainable) is calculated using the cascade methodology described in the prospectus (section "Environmental, social and governance (ESG) considerations — Sustainability transparency"), which excludes double counting at the cascade level: an investment qualifying as sustainable at the level of a first element of the cascade is not then taken into account at the level of subsequent elements of the cascade.

In which economic sectors were investments made?

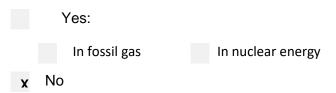

Sector	Sub-sector		
Public administration and defence; compulsory social security	Public administration and defence; compulsory social security	89.58	%
Activities of extraterritorial organisations and bodies	Activities of extraterritorial organisations and bodies	7.95	%
Financial and insurance activities	Financial service activities, except insurance and pension funding	0.38	%
Derivatives	Derivatives	0.76	%
Cash	Cash	1.33	%

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

To date, the EU Taxonomy does not provide a methodology for determining the alignment of sovereign bonds with the EU Taxonomy. These bonds are therefore not covered by the EU Taxonomy or its eligibility and technical selection criteria.

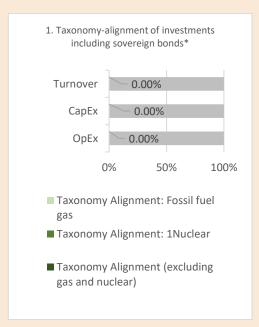

Has the financial product invested in fossil gas and/or nuclear energy activities in line with the EU Taxonomy¹?

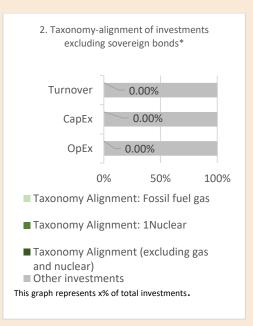

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

^{*} For the purpose of these graphs, "sovereign bonds" consist of all sovereign exposures.

¹ Fossil gas and/or nuclear activities will only be compliant with the EU Taxonomy if they contribute to mitigating climate change ("climate change mitigation") and do not significantly undermine an objective of the EU Taxonomy - see explanatory note in the left margin. The full criteria for fossil gas and nuclear energy economic activities that are in line with the EU Taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are economic activities for which low-carbon alternatives are not yet available and whose greenhouse gas emission levels correspond to the best achievable performance.

What was the share of investments made in transitional and enabling activities?

Not applicable

What was the percentage of investments aligned with the EU Taxonomy compared to previous reporting periods?

Not applicable

Are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

Based on the approach described below, the Sub-fund invested 66.20% of its portfolio in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy over the Reference Period.

The proprietary sustainability model is based on environmental, social and governmental aspects. In the environmental aspect, the proprietary model takes into account energy efficiency, climate change, biodiversity and country emissions. Investing in the highest ranked countries in this aspect therefore means that the Sub-fund has an environmental objective. The scores of the Environment component of the Manager's country model make it possible to rank the member states in descending order. Countries in the bottom quartile of the ranking (rounding up the number of eligible countries) do not have an environmental target. Further information on methodology and data resources is available in the information on this Sub-fund via www.dpamfunds.com (in particular in the sections "Methodologies" and "Data Sources and Data Processing").

What was the share of socially sustainable investments?

Based on the approach described below, the Sub-fund invested 78.29% of its portfolio in sustainable investments with a social objective over the Reference Period.

The proprietary sustainability model is based on environmental, social and governmental aspects. In the social aspect, the proprietary model of sustainability of countries takes into account both current generations (wealth distribution, population, health care) and future generations (education and innovation). Investing in the highest ranked countries in this aspect therefore means that the Sub-

fund has a social objective. Similarly, the scores for the Social component (i.e. present and future generations of the proprietary model) allow the member states to be ranked in descending order. Countries in the bottom quartile of the ranking do not have a social target. Further information on methodology and data resources is available in the information on this Sub-fund via www.dpamfunds.com (in particular in the sections "Methodologies" and "Data Sources and Data Processing").

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding the:

- Liquid assets
- Derivative instruments
- Collective investment schemes

The Sub-fund may invest or hold these types of assets for the purpose of achieving investment objectives, portfolio diversification, liquidity management and risk hedging.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 1.33% cash. There are no minimum environmental or social guarantees on this allocation.

What actions have been taken to attain the sustainable investment objective during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e:

On a semi-annual basis, a normative screening has been established on the basis of compliance with democratic minimums by excluding countries that are not free according to Freedom House and authoritarian according to the democracy index published by the Economist Intelligence Unit.

On a semi-annual basis, the eligible universe was subject to a best-in-class ranking based on the country sustainability model so as to invest only in the top 50% of OECD countries ranked according to the proprietary country sustainability model.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Sustainable investment objective

Did this financial product have a sustainable investment objective? Sustainable investment means an investment in an economic activity that contributes to an It made sustainable investments with It promoted environmental and/or social environmental or social (E/S) characteristics and an environmental objective: 62.56% objective, provided that the although it did not have a sustainable investment does not in economic activities that qualify investment target, it had a sustainable significantly harm any X as environmentally sustainable environmental or social investment ratio of ____%. objective and that the under the EU Taxonomy investee companies follow with an environmental objective in in economic activities that do not good governance practices. economic activities that qualify as qualify as environmentally environmentally sustainable under the sustainable under the EU **EU Taxonomy** Taxonomy The **EU Taxonomy** is a with an environmental objective in classification system laid economic activities that do not qualify down in Regulation (EU) as environ mentally sustainable under 2020/852 establishing a list of environmentally the EU Taxonomy sustainable economic activities. This regulation with a social objective does not set out a list socially sustainable It made sustainable investments with a It promoted E/S features, but did not make economic activities. sustainable investments Sustainable investments social objective: 87.52% with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators assess how the environmental or social characteristics promoted by the financial product are achieved.

To what extent was the sustainable investment objective of this financial product met?

During the Reference Period (01/01/2022-31/12/2022), the Sub-fund invested in companies that contribute through their products and services to the 17 Sustainable Development Goals (SDGs) defined by the United Nations, and to advance companies on their contribution to sustainable development and environmental, social and governance (ESG) issues.

The investment universe is narrowed: the portfolio focuses on companies with a net positive contribution (as defined below), i.e. (1) whose core business is the development of products and services that contribute to the achievement of sustainable development goals (SDG) and (2) the most advanced in terms of sustainability and ESG risk engagement.

Some of the environmental objectives pursued by the Sub-fund contribute to climate change mitigation and adaptation as defined by the EU Taxonomy.

The Sub-fund has not designated a benchmark to achieve its sustainable investment objective within the meaning of Article 9 of Regulation 2019/2088.

How did the sustainability indicators perform?

During the Reference Period, the Sub-fund achieved the following sustainability indicators:

- a. The Sub-fund has not been exposed to issuers considered to be non-compliant with Global Standards:
- b. The Sub-fund has not been exposed to issuers involved in controversial activities according to the definitions and thresholds stipulated by the Manager's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM policy Controversial activities.p df);
- c. The Sub-fund had no exposure to issuers facing ESG controversies of maximum severity;
- d. The Sub-fund focused on impact instruments such as green and sustainable emissions. The portfolio was 4.2% exposed to this type of instrument at the end of the reference period.

Thus, over the Reference Period, the Sub-fund achieved:

- As at 31 December 2022, the proportion of issuers with Science Based Targets initiative (SBTi) or equivalent in the Sub-fund's portfolio was 44.86% (by weight of portfolio assets). The target is to reach at least 40% by 2026;
- The Sub-fund had a higher weighted average ESG profile than its benchmark index, before the application of the ESG and sustainable investment selection methodology: 50.62 (funds) versus 59.73 (benchmark) (at 31/12/2022). The objective of the Sub-

fund is to achieve a weighted average ESG profile above that of its benchmark over a rolling three year period.

For the Reference Period, the Sub-fund sought to have at least 80% sustainable investments i.e. investments aimed at:

- companies aligned with one of the first two objectives of the EU taxonomy (climate change mitigation and adaptation);
- companies aiming to make a net positive contribution to the United Nations (UN) Sustainable Development Goals ("SDGs"), which are environmental in nature;
- companies aiming to make a net positive contribution to the social SDGs.

In addition, at the level of the overall portfolio, a minimum of 50% of companies aligned with the EU Taxonomy or in net positive contribution¹ on all the SDGs and a portfolio in net positive contribution on all 17 SDGs.

For the Reference Period, the Sub-fund had 92.52% sustainable investments. These sustainable investments have contributed to the Sub-fund's partial sustainable investment objective in the following ways:

- 6.83% of the Sub-fund's portfolio contributed to the achievement of the environmental objectives defined by the EU Taxonomy (climate change mitigation and adaptation);
- 62.56% of the Sub-fund's portfolio contributed to the achievement of environmental objectives not aligned with the EU Taxonomy;
- 87.52% of the Sub-fund's portfolio contributed to the achievement of social objectives.
- 64.31% of the Sub-fund's portfolio was invested in companies making a net positive contribution to the SDGs (including impact bonds).
- ...and in comparison with previous periods?

Not applicable

How did the sustainable investments not cause significant harm to any sustainable investment objective?

¹ The net positive contribution is the difference between the positive and negative impact contributions and is calculated at the level of the invested company and the overall portfolio. Based on the SDGs framework, the net positive contribution takes into account on the one hand (1) the extent to which the invested company's products and services contribute to the achievement of the SDGs and on the other hand (2) the negative impacts of their activities along the value chain.

The Manager ensured that the Sub-fund's sustainable investments during the Reference Period did not materially undermine an environmentally or socially sustainable investment objective by:

Issuer level:

- consideration of the principal adverse impacts on the mandatory sustainability factors (hereinafter "PAIs") listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 which allows for the reduction of the negative impacts of the investment, including:
 - by incorporating several elements to avoid and/or reduce its exposure to activities or behaviours that could affect another environmental or social objective (such as the Global Standards compliance filter and the exclusion of ESG controversies of maximum severity or activities most harmful to other environmental and/or social objectives);
 - via an engagement process with investee companies, in accordance with its Engagement Policy, which can be accessed at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006835/DPAM are also the subject of an annual report available at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006835/DPAM report engagement activity.pdf).
- An impact calculation methodology which takes into account the positive and negative contribution of the company's products and services to the Sustainable Development Goals (SDGs) in order to optimise the net positive (resulting) contribution.

Overall portfolio level:

- A rule of a minimum of 50% of assets aligned with the EU Taxonomy or in net positive contribution on all 17 SDGs. During the Reference Period, a minimum 64.31% of assets aligned with the EU Taxonomy or making a net positive contribution to the 17 SDGs.

— How were the indicators for adverse impacts on sustainability factors taken into account?

During the Reference Period, the sub-fund has taken into consideration all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288 that are applicable to investments in sovereign or supranational issuers.

The PAIs are intrinsically linked to the Manager's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

- 1) Firstly, with regard to environmental PAIs:
 - a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through the Manager's research in the context of the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD).
 - b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with the Global Standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.
 - c) the exclusion filter for companies involved in controversial activities (in accordance with the Manager's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM policy Controversial activities.pdf). The exclusion of companies involved in thermal coal production, for example, allows for better coverage of indicators such as biodiversity and greenhouse gas emissions.
 - The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).
 - d) similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impact their best-in-class ranking.
- 2) Secondly, the social PAIs were systematically analysed according to the stages of the research and investment process:
 - a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.

- b) the exclusion filter for companies involved in controversial activities (definitions and thresholds in accordance with the Manager's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-assetmanagement/image/upload/v1614006839/DPAM policy Controversial activities.pdf). In this way, companies involved in controversial armaments were directly excluded from the investment universe.
- c) in addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.
- d) similarly, social indicators are included in the analysis of the ESG profile of companies and impact their best-in-class ranking.

The Manager's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at https://res.cloudinary.com/degroof-petercam-asset-

management/image/upload/v1614006836/DPAM policy Sustainable a nd Responsible Investment.pdf and DPAM report TCFD.pdf (cloudinary.com).

Were the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The first stage of the Sub-fund's investment is based on a normative screening, which includes compliance with Global Standards based on human rights, labour rights and the prevention of corruption.

These include the OECD Guidelines for Multinational Enterprises and the UN Guidelines on Business and Human Rights. Companies that do not meet these criteria are excluded from the eligible investment universe.

The Sub-fund has therefore not been invested during the Reference Period in any company that is deemed not to comply with these principles.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

How has this financial product considered principal adverse impacts on sustainability factors?

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to the Manager's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

- 1) Firstly, with regard to environmental PAIs:
 - a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through the Manager's research in the context of the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD).
 - b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with the Global Standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.
 - c) the exclusion filter for companies involved in controversial activities (in accordance with the Manager's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM policy Controversial activities.pdf). The exclusion of companies involved in thermal coal production, for example, allows for better coverage of indicators such as biodiversity and greenhouse gas emissions.
 - The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).
 - d) similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impact their best-in-class ranking.
- 2) Secondly, the social PAIs were systematically analysed according to the stages of the research and investment process:

- a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.
- b) the exclusion filter for companies involved in controversial activities (definitions and thresholds in accordance with the Manager's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM policy Controversial activities.p df). In this way, companies involved in controversial armaments were directly excluded from the investment universe.
- c) in addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.
- d) similarly, social indicators are included in the analysis of the ESG profile of companies and impact their best-in-class ranking.

The Manager's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006836/DPAM policy Sustainable and Responsible Investment.pdf and DPAM report TCFD.pdf (cloudinary.com).

What were the main investments of this financial product?

The list includes the investments that constitute the largest share of the financial product's investments during the reference period, namely: 31/12/2022

Largest investments	Sector	% of assets	Country

Asset allocation describes the share of investments in specific assets.

What was the ratio of sustainability-related investments?

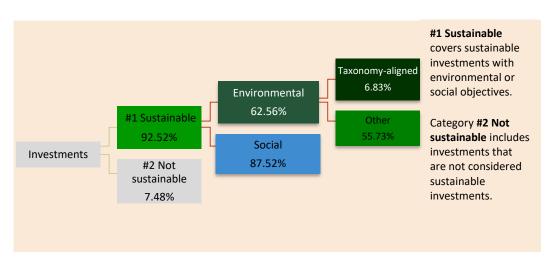

What was the asset allocation?

In the Reference Period, the Sub-fund invested at least 92.52% of its assets in sustainable investments with environmental or social objectives. These sustainable investments (in the table below referred to as "#1 Sustainable") are:

- companies aligned with one of the first two objectives of the EU taxonomy (climate change mitigation and adaptation);
- companies aiming to make a net positive contribution to the United Nations (UN) Sustainable Development Goals ("SDGs"), which are environmental in nature;
- companies aiming to make a net positive contribution to the social SDGs.

The percentage of the portfolio invested in sustainable investments that meet an environmental and/or social objective (#1A Sustainable) is calculated using the cascade methodology described in the prospectus (section "Environmental, social and governance (ESG) considerations — Sustainability transparency"), which excludes double counting at the cascade level: an investment qualifying as sustainable at the level of a first element of the cascade is not then taken into account at the level of subsequent elements of the cascade.

In contrast, the percentages of the two sub-categories of sustainable investments (#1A Sustainable) in the portfolio invested in environmental investments other than those aligned with the taxonomy and social investments may involve some double counting. All portfolio companies are analysed against both (i) the environmental SDGs (and therefore may fall into the sub-category "other environmental investments" even if they are also considered to be aligned with the taxonomy and/or as a social sustainable investment) and (ii) the social SDGs (and therefore may fall into the sub-category "social investments" even if they are also considered to be aligned with the taxonomy and/or as an other environmental investment).

In which economic sectors were investments made?

Sector	Sub-sector	% of assets	
Information and communication	Publishing activities	21.20	%

Derivatives	Derivatives	5.04	%
Cash	Cash	2.44	%

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Manager's methodology for assessing the EU Taxonomy alignment of investee companies is based on data provided either by the investee companies or by third-party providers. The latter use a mixed approach:

- Firstly, a direct mapping between the business activities in their own sectoral classification system and the economic activities covered by the Technical Selection Criteria of the EU Taxonomy.
- Secondly, any business activity that could not be directly mapped is examined through a bottom-up assessment of its alignment with the EU Taxonomy's Technical Selection Criteria.
- Any economic activity remaining after the first and second steps is considered not to be aligned with the EU Taxonomy.

In principle, the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is assessed by means of turnover (based on performance data provided by third-party suppliers).

Where information on the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy cannot be readily obtained from information published by the invested issuers, the Manager shall rely on equivalent information obtained by third-party providers from the invested issuers.

Applying this methodology, over the Reference Period, the Sub-fund is aligned for 6.83% with the first two objectives of the Taxonomy (environmental objectives of climate change mitigation and/or adaptation). The compliance of these investments with the requirements set out in Article 3 of the EU Taxonomy is not subject to a guarantee provided by one or more auditors or a review by one or more auditors or a review by one or more third parties.

Has the financial product invested in fossil gas and/or nuclear energy activities in line with the EU

Taxonomy²?

Yes:

In fossil gas

In nuclear energy

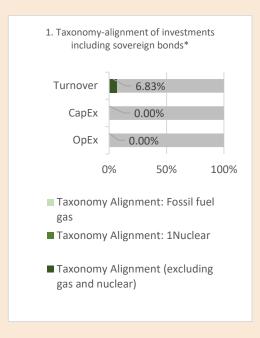

No

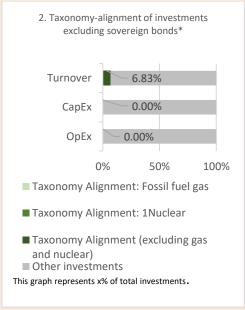

² Fossil gas and/or nuclear activities will only be compliant with the EU Taxonomy if they contribute to mitigating climate change ("climate change mitigation") and do not significantly undermine an objective of the EU Taxonomy - see explanatory note in the left margin. The full criteria for fossil gas and nuclear energy economic activities that are in line with the EU Taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

^{*} For the purpose of these graphs, "sovereign bonds" consist of all sovereign exposures.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and whose greenhouse gas emission levels correspond to the best achievable performance.

What was the share of investments made in transitional and enabling activities?

Transitional activities	Enabling activities
6.2482%	N/A

What was the percentage of investments aligned with the EU Taxonomy compared to previous reporting periods?

Not applicable

Are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

Based on the approach described below, the Sub-fund invested 62.56% of its portfolio in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy over the Reference Period.

Only two of the six environmental objectives defined by the EU Taxonomy are currently covered by the regulatory framework of the EU Taxonomy Technical Selection Criteria that determine alignment with the EU Taxonomy (adaptation and climate change mitigation). Similar criteria for the other four environmental objectives have yet to be developed. In the meantime, the Manager wishes to continue to make sustainable investments that contribute to environmental objectives not covered by the current EU Taxonomy Technical Selection Criteria, including key environmental objectives such as the sustainable use and protection of water and marine resources, the prevention and control of pollution and the protection and restoration of biodiversity and ecosystems.

To this end, the Manager has adopted and defined a specific framework for identifying the environmental objectives of these sustainable investments and assessing their contribution to these objectives. This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the UN Sustainable Development Goals (SDGs) that can be attributed to environmental objectives.

The Manager will review and reassess this framework when the EU Taxonomy Technical Selection Criteria have been implemented for the other four environmental objectives defined by the EU Taxonomy.

What was the share of socially sustainable investments?

Based on the approach described below, the Sub-fund invested 87.52% of its portfolio in sustainable investments with a social objective over the Reference Period. A European Taxonomy for social sustainability goals has yet to be developed. In the meantime, the Manager wishes to continue to make sustainable investments that contribute to the achievement of key social goals such as zero hunger, quality education and peace, justice and strong institutions.

To this end, the Manager has adopted and defined a specific framework for identifying the social objectives of these sustainable investments and assessing their contribution to these objectives. This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the UN Sustainable Development Goals (SDGs) that can be attributed to social objectives.

The Manager will review and reassess this framework when the EU Taxonomy Technical Selection Criteria have been implemented for the social objectives under the EU Taxonomy.

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding the:

- Liquid assets
- Derivative instruments
- Collective investment schemes

The Sub-fund may invest or hold these types of assets for the purpose of achieving investment objectives, portfolio diversification, liquidity management and risk hedging.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 2.44% cash. There are no minimum environmental or social guarantees on this allocation.

What actions have been taken to attain the sustainable investment objective during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e:

On a quarterly basis, a normative screening has been established based on compliance with Global Standards. Companies must comply with the founding principles of the Global Compact (human rights, labour law, protection of the environment, fight against corruption and environmental protection) and the UN Guiding Principles, ILO instruments, the OECD Guidelines for Multinational Enterprises and the underlying conventions and treaties. The Manager used specific ESG research from non-financial rating agencies to determine whether or not a company is in compliance with these standards.

Subsequently, companies meeting the thresholds as defined in the activities excluded by the Manager's controversial activities policy were excluded. The policy of excluding controversial activities defined by the Manager (available at www.dpamfunds.com (Controversial Activities Policy)) covers several sectors and economic activities that are subject to debate as to whether or not they are ethical and sustainable. For each of these sectors and economic activities, the exclusion policy for controversial activities defines the exclusion criteria and thresholds. Companies involved in these controversial sectors and activities and meeting the exclusion criteria set out in the policy were excluded from the investment portfolio.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

Then, on a semi-annual basis, the resulting universe was subject to a "best-in-class" ranking in order to retain only the best ESG profiles of companies on a list of securities eligible for management. The last quartile (10%) of the lowest scores in the ranking were removed from the eligible list by sector.

The Manager ensured that the products and/or services of the company contribute – as a proportion of its revenue – to the achievement of the 17 environmental or social Sustainable Development Goals (SDGs) defined by the United Nations (UN) such as health products and services, education services, water saving and access solutions, energy efficiency solutions, digitalisation services, sustainable mobility services, etc.

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector. In addition, this qualitative analysis also includes consideration of the sustainability theme and the issuer's total contribution to the UN Sustainable Development Goals.

Finally, the sustainable objective was measured by ensuring that:

- the net contribution at the level of the whole portfolio to the 17 SDGs is positive and
- a minimum of 50% of assets under management has been invested in companies making a net positive contribution to the 17 SDGs:

The stages of the investment process are outlined below:

ESG INTEGRATION	VOTE	BASELINE NEGATIVE SCREENING	NORMATIVE & NEGATIVE SCREENING	ADDITIONAL NEGATIVE SCREENING	BEST-IN-CLASS POSITIVE SCREENING	SUSTAINABILITY THEMES
Integration into the investment decision (PAIs)	Influencing behaviour	Exclusions based on the activity of the issuer	most controversial behaviour (safeguarding social and governance	Extension of exclusions based on the activity of the issuer	Best in class, best approach Scorecards (PAIs)	IMPACT INVESTING
			minimums)	\oslash	Q	W.

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852 establishing a list of environmentally sustainable economic activities. This regulation does not set out a list socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did	this fin	nancial product have a sustainable	e inve	stmer	nt objective?
••	×	Yes	••		No
X		ide sustainable investments with nvironmental objective: 56.80% in economic activities that qualify as environmentally sustainable under the EU Taxonomy		(E/S) althou invest	moted environmental and/or social characteristics and ugh it did not have a sustainable ment target, it had a sustainable ment ratio of%.
	x	in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy			with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify
					as environ mentally sustainable under the EU Taxonomy with a social objective
x		de sustainable investments with a objective: 77.48 %			moted E/S features, but did not make nable investments

Sustainability indicators assess how the environmental or social characteristics promoted by the financial product are achieved.

To what extent was the sustainable investment objective of this financial product met?

During the Reference Period (01/01/2022-31/12/2022), the Sub-fund invested in countries that are committed to respecting fundamental rights (human rights, labour rights, democratic rights, etc.), protecting their environmental capital and promoting the well-being of their present and future generations. By combining a rigorous selection of countries with a formal and systematic engagement policy and prioritising recognised impact bonds (green bonds and equivalents), the Sub-fund invested in the most committed or best performing countries in terms of sustainable development.

The objective of sustainable development was pursued via:

- rigorous ESG screening, based on a proprietary sustainability model of states aligned with the Sustainable Development Goals
- promoting best practices and best efforts by defining eligibility rules based on ESG ratings
- formal and systematic engagement with issuers and
- investment in impact securities (green bonds and similar).

The Sub-fund has not designated a benchmark to achieve its sustainable investment objective within the meaning of Article 9 of Regulation 2019/2088.

Derivative financial products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting the environmental and/or social characteristics of the Sub-fund.

How did the sustainability indicators perform?

During the Reference Period, the Sub-fund achieved the following sustainability indicators:

- The Sub-fund was not exposed to countries which do not meet a minimum standard of democracy in accordance with the Manager's controversial activities policy
- b. The Sub-fund invested a minimum of 40% of its assets in countries ranked in the top quartile according to the proprietary country sustainability model
- c. The Sub-fund invested a maximum of 10% of its assets in countries ranked in the last quartile according to the proprietary country sustainability model
- d. The Sub-fund engaged in a dialogue with the invested issuers according to the approach described in its Engagement Policy

Thus, over the Reference Period, the Sub-fund achieved:

- achieve a weighted average democratic score above the weighted average democratic score of the reference universe (consisting of emerging and developing countries as defined by the IMF): 65.3 vs 31.2
- a greenhouse gas emission intensity of the investee countries that is lower than the greenhouse gas emission intensity of its reference universe (consisting of emerging and developing countries as defined by the IMF) as defined by regulatory technical standards: 1050.34 tCO2e/\$ GDP bn (at 31/12/2022) versus 6466 tCO2e/*GDP bn.
 - ...and in comparison with previous periods?

Not applicable

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The Manager ensured that the Sub-fund's sustainable investments during the Reference Period did not materially undermine an environmentally or socially sustainable investment objective by:

- excluding issuers that do not meet a democratic minimum
- sustainability analysis of countries to identify those that show the greatest commitment to sustainable development on governance, environmental and social issues but also those that show a willingness to make progress on these issues; the resulting country rankings form the basis of the investment rules i.e. min. 40% of assets in countries ranked in the top quartile and max. 10% in countries ranked in the bottom quartile.
- an engagement process with investee countries, in accordance with its Engagement Policy, which can be accessed at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006835/DPAM policy engagement.pd f. The commitments made by DPAM are also the subject of an annual report available at (https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006835/DPAM report engagement a ctivity.pdf).
- How were the indicators for adverse impacts on sustainability factors taken into account?

During the Reference Period, the sub-fund has taken into consideration all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288 that are applicable to investments in sovereign or supranational issuers.

The PAIs are intrinsically linked to the Manager's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

The first PAI relates to environmental issues and focuses on the greenhouse gas emission intensity of the investee countries. The indicator is an integral component of the country sustainability model that the Manager developed for its sovereign bond strategies. Consequently, it is included in the country's sustainability score and can influence it positively or negatively depending on its level and development compared to other issuer countries.

The second PAI relates to social issues and focuses on issues of social breaches. Our country sustainability model monitors a number of indicators on this issue, such as respect for civil liberties and political rights, respect for human rights and the level of violence within the country, commitment to key labour law conventions, the issue of equal opportunities and distribution of wealth, etc. These different indicators are included in the country's sustainability score and can influence it positively or negatively depending on its level and evolution compared to other emitting countries.

Were the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable to sovereign bonds

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

How has this financial product considered principal adverse impacts on sustainability factors?

During the Reference Period, the sub-fund has taken into consideration all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288 that are applicable to investments in sovereign or supranational issuers.

The PAIs are intrinsically linked to the Manager's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

The first PAI relates to environmental issues and focuses on the greenhouse gas emission intensity of the investee countries. The indicator is an integral component of the country sustainability model that the Manager developed for its sovereign bond strategies. Consequently, it is included in the country's sustainability score and can influence it positively or negatively depending on its level and development compared to other issuer countries.

The second PAI relates to social issues and focuses on issues of social breaches. Our country sustainability model monitors a number of indicators on this issue, such as respect for civil liberties and political rights, respect for human rights and the level of violence within the country, commitment to key labour law conventions, the issue of equal opportunities and distribution of wealth, etc. These different indicators are included in the country's sustainability score and can influence it positively or negatively depending on its level and evolution compared to other emitting countries.

What were the main investments of this financial product?

The list includes the investments that constitute the largest share of the financial product's investments during the reference period, namely: 31/12/2022

Largest investments	Sector	% of assets	Country
Chile (republic of) 0.555% 21-jan-	Public administration and defence;	5.86%	Chile
2029	compulsory social security

What was the ratio of sustainability-related investments?

What was the asset allocation?

In the Reference Period, the Sub-fund invested at least 82.64% of its assets in sustainable investments with environmental or social objectives. These sustainable investments (in the table below referred to as "#1 Sustainable") are:

- countries that are committed to respecting fundamental rights (human rights, labour rights, democratic rights, etc.), protecting their environmental capital and promoting the well-being of their present and future generations.
- that have an environmental objective not aligned with the European Taxonomy, due to their more advanced positioning on energy efficiency, climate change, biodiversity and emissions or
- which have a social objective, due to their more advanced positioning on issues related to wealth distribution, population and welfare, health care, education and innovation.

The percentage of the portfolio invested in sustainable investments that meet an environmental and/or social objective (#1A Sustainable) is calculated using the following cascade methodology:

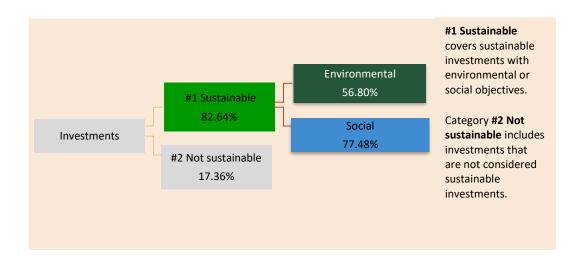

- impact instruments such as green and sustainable emissions (9.72%)
- bonds issued by a government whose environmental score is in the top three quartiles of the benchmark universe (environmental objective)
- bonds issued by a government whose social score is in the top three quartiles of the ranking of countries in the reference universe (social objective).

In contrast, the percentages of the two sub-categories of sustainable investments (#1A Sustainable) in the portfolio invested in environmental investments other than

Asset allocation

describes the share of investments in specific assets.

those aligned with the taxonomy and social investments may involve some double counting. All countries in the portfolio are analysed against both (i) the environmental aspect and (ii) the social aspect (and therefore may fall into the subcategory "social investments" even if they are also considered environmental investments).

In which economic sectors were investments made?

Sub-sector	% of	
	assets	
Public administration and defence; compulsory social security	85.88	%
Financial service activities, except insurance and pension funding	5.34	%
Telecommunications	2.60	%
Cash	6.19	%
	Public administration and defence; compulsory social security Financial service activities, except insurance and pension funding Telecommunications	Public administration and defence; compulsory social security 85.88 Financial service activities, except insurance and pension funding 5.34 Telecommunications 2.60

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

To date, the EU Taxonomy does not provide a methodology for determining the alignment of sovereign bonds with the EU Taxonomy. These bonds are therefore not covered by the EU Taxonomy or its eligibility and technical selection criteria.

Has the financial product invested in fossil gas and/or nuclear energy activities in line with the EU Taxonomy¹?

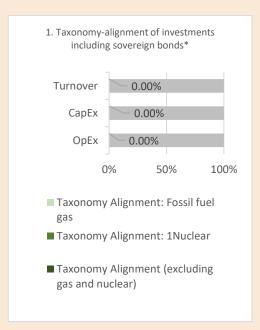

Yes:
In fossil gas
In nuclear energy

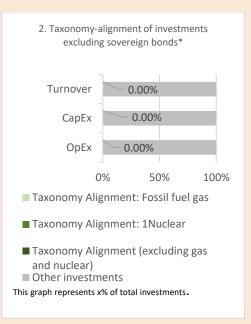

x No

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, "sovereign bonds" consist of all sovereign exposures.

¹ Fossil gas and/or nuclear activities will only be compliant with the EU Taxonomy if they contribute to mitigating climate change ("climate change mitigation") and do not significantly undermine an objective of the EU Taxonomy - see explanatory note in the left margin. The full criteria for fossil gas and nuclear energy economic activities that are in line with the EU Taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and whose greenhouse gas emission levels correspond to the best achievable performance.

What was the share of investments made in transitional and enabling activities?

Not applicable

What was the percentage of investments aligned with the EU Taxonomy compared to previous reporting periods?

Not applicable

Are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

Based on the approach described below, the Sub-fund invested 56.80% of its portfolio in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy over the Reference Period.

The proprietary sustainability model is based on environmental, social and governmental aspects. In the environmental aspect, the proprietary model takes into account energy efficiency, climate change, biodiversity and country emissions. Investing in the highest ranked countries in this aspect therefore means that the Sub-fund has an environmental objective. The scores of the Environment component of the EM Manager country model make it possible to rank the member states in descending order. Countries in the bottom quartile of the ranking (rounding up the number of eligible countries) do not have an environmental target. Further information on methodology and data resources is available in the information on this Sub-fund via www.dpamfunds.com (in particular in the sections "Methodologies" and "Data Sources and Data Processing").

What was the share of socially sustainable investments?

Based on the approach described below, the Sub-fund invested 77.48% of its portfolio in sustainable investments with a social objective over the Reference Period.

The proprietary sustainability model is based on environmental, social and governmental aspects. In the social aspect, the proprietary model of sustainability of countries takes into account both current generations (wealth distribution, population, health care) and future generations (education and innovation). Investing in the highest ranked countries in this aspect therefore means that the Subfund has a social objective. Similarly, the scores for the Social component (i.e. present

and future generations of the proprietary model) allow the member states to be ranked in descending order. Countries in the bottom quartile of the ranking do not have a social target. Further information on methodology and data resources is available in the information on this Sub-fund via www.dpamfunds.com (in particular in the sections "Methodologies" and "Data Sources and Data Processing").

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding the:

- Liquid assets
- Derivative instruments
- Collective investment schemes

The Sub-fund may invest or hold these types of assets for the purpose of achieving investment objectives, portfolio diversification, liquidity management and risk hedging.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 6.19% cash. There are no minimum environmental or social guarantees on this allocation.

What actions have been taken to attain the sustainable investment objective during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e:

On a half-yearly basis, a normative screening has been established on the basis of compliance with democratic minimums by excluding countries that do not meet a democratic minimum as defined by the manager's controversial activities policy.

On a semi-annual basis, the eligible universe was subject to a best-in-class ranking based on the country sustainability model so as to invest a minimum of 40% of assets under management in top quartile countries and a maximum of 10% of assets under management in bottom quartile countries.
