Détails sur la SICAV

Candriam Sustainable (ci-après la SICAV) est une société d'investissement à capital variable de droit luxembourgeois. Elle a été constituée à Luxembourg le 30 juin 2015 pour une durée illimitée et conformément à la législation du Grand-Duché de Luxembourg. La SICAV est soumise aux dispositions de la loi du 10 août 1915 sur les sociétés commerciales telle que modifiée (ci-après la « Loi du 10 août 1915 ») pour autant qu'elle n'en n'est pas exemptée par la Loi. Son capital minimum est de 1.250.000. EUR

La SICAV est inscrite sur la liste officielle des organismes de placement collectif (ci-après « OPC ») conformément à la loi luxembourgeoise du 17 décembre 2010 relative aux organismes de placement collectif, telle que modifiée, et à ses dispositions d'application (ci-après la « Loi »). La SICAV remplit les conditions prévues par la Partie I de la Loi et par la directive européenne 2009/65/CE.

La SICAV publie un rapport annuel détaillé sur ses activités et les actifs sous gestion. Ce rapport inclut un état consolidé de l'actif net et un état consolidé des variations de l'actif net exprimés en EUR, le portefeuille d'investissements de chaque compartiment et le rapport du réviseur d'entreprises agréé. Ce rapport est disponible au siège de la SICAV ainsi qu'au siège des organismes chargés du service financier dans les pays où la SICAV est commercialisée.

En outre, après la fin de chaque semestre, elle publie un rapport comprenant notamment l'état de l'actif net, l'état des variations de l'actif net de la période, l'évolution du nombre d'actions en circulation pour la période, la composition du portefeuille, le nombre d'actions en circulation et la valeur liquidative par action.

L'Assemblée générale annuelle des Actionnaires de la SICAV se tient chaque année au siège social de la SICAV ou en tout autre lieu au Luxembourg tel que précisé dans l'avis de convocation. Elle se tiendra dans les six mois après la clôture de l'exercice.

Les avis de toutes les assemblées générales des actionnaires sont envoyés à tous les actionnaires nominatifs, à leur adresse figurant au registre des actionnaires, au moins huit jours avant l'assemblée générale. Ces avis indiquent l'heure et le lieu de l'assemblée générale et les conditions d'admission, l'ordre du jour et les exigences de la loi luxembourgeoise en matière de quorum et de majorité nécessaires.

Si la législation locale l'exige, ces avis sont également publiés au Luxembourg et dans les pays où les actions de la SICAV sont autorisées à la commercialisation publique, dans tout journal choisi par le Conseil d'Administration.

L'exercice commence le 1^{er} janvier et se termine le 31 décembre de chaque année.

La valeur liquidative par action de chaque compartiment, les prix de souscription, de rachat et de conversion de chaque catégorie d'actions de chaque compartiment sont disponibles auprès du siège social de la SICAV et des banques désignées pour fournir des services financiers dans les pays dans lesquels la SICAV est vendue.

Un état détaillé des mouvements du portefeuille peut être obtenu gratuitement sur simple demande au siège social de la SICAV.

Le prospectus, les Documents d'informations clés relatifs aux produits d'investissement packagés de détail et fondés sur l'assurance (PRIIPs KID), les statuts de la SICAV ainsi que ses rapports financiers sont tenus gratuitement à la disposition du public au siège social de la SICAV.

Rapport du Conseil d'Administration

Contexte économique et financier

Aux États-Unis, en janvier et février 2023, les indicateurs économiques sont restés en grande majorité (à l'exception de l'immobilier résidentiel) plutôt positifs, malgré les relèvements précédents de la Réserve fédérale (la Fed). Le 1 février, l'institution a relevé son taux directeur de 25 points à 4,75 %. Plus de 700.000 emplois ont été au cours de ces deux mois. L'indice ISM du secteur des services s'élevait à 55,1 en février. Ces éléments ont fait passer le taux à dix ans au-dessus des 4 % début mars.

Toutefois, la fermeture par les autorités de la 16e plus grande banque américaine (Silicon Valley Bank) le 10 mars (suite à des sorties excessives de dépôts) et celle, quelques jours plus tard, de Signature Bank, ont suscité des craintes de contagion à d'autres banques de taille moyenne. La FDIC, en consultation avec la Réserve fédérale et le Trésor américain, a pu invoquer une « exception de risque systémique », ce qui lui a permis d'assurer tous les dépôts de ces deux banques (dépôts assurés (< 250.000 USD) et non assurés). Afin d'éviter un problème de liquidité et de contagion, la Fed ouvre une nouvelle facilité d'emprunt (BTFP - Bank Term Funding Program), dont la spécificité est que les obligations gouvernementales utilisées comme garantie sont évaluées au pair et non au prix du marché. Grâce au contrôle exercé par les autorités, le risque de contagion diminue et les tensions sur les marchés financiers s'atténuent. D'autre part, sous l'effet d'une atténuation des tensions au sein des chaînes d'approvisionnement et d'une baisse des prix de l'énergie et des métaux industriels, l'inflation totale enregistre une baisse constante au cours des premiers mois de l'année 2023 (5 % en mars 2023). Quant à l'inflation sous-jacente, elle stagne autour de 5,5 %. En effet, si l'inflation des biens ralentit, ce n'est pas le cas de la composante immobilière de l'inflation (plus de 30 % de l'IPC) et de celle des services non immobiliers. Par ailleurs, la croissance des salaires reste sensible et représente un facteur important dans le prix des services. C'est ce qui explique que malgré les évolutions survenues en mars, la Réserve fédérale a relevé son taux directeur de 25 points de base supplémentaires, le portant à 5 % le 22 mars. Fin mars, le taux à dix ans (à 3,48 %) était de 35 points de base inférieur à celui de fin 2022. Le marché actions a progressé de 7 %.

Au deuxième trimestre, le secteur manufacturier a connu (à l'instar du reste du monde) une croissance timide, tandis que le secteur des services a enregistré une progression soutenue. Plus de 600 000 emplois ont été créés au cours du trimestre, et dans le même temps la croissance des salaires et l'inflation sous-jacente n'ont connu qu'un faible ralentissement. En juin, le taux de chômage s'élevait à 3,6 %. Au deuxième trimestre, la croissance du PIB a été de 0,5 % en glissement trimestriel, contre 0,6 % au premier trimestre. C'est la raison pour laquelle le 3 mai, la Fed a procédé à un nouveau relèvement de son taux directeur de 25 points de base, le portant à 5,25 %. Néanmoins, au cours de la réunion du FOMC du 14 juin, la Réserve fédérale a annoncé marquer une pause dans son cycle de resserrement monétaire. Cette situation vient soutenir la performance du marché boursier, qui a progressé (en particulier en juin) de 8,3 % au cours du trimestre, sous l'effet de l'engouement autour des entreprises du secteur de l'intelligence artificielle. Quant au taux à dix ans, il a progressé de 33 points de base, à 3,81 %. Au troisième trimestre, malgré un resserrement de 525 points de base (la dernière augmentation de 25 points de base a été décidée le 26 juillet) et la dégradation de la note de la dette américaine par Fitch au début du mois d'août, l'économie américaine a continué à créer plus de 650 000 emplois au cours du trimestre.

En septembre, le taux de chômage s'élevait à 3,8 %, l'indice ISM du secteur des services restait supérieur à 50 et, en règle générale, les autres indicateurs économiques étaient toujours positifs. Toutefois, en dépit de ces bons indicateurs, la Réserve fédérale a maintenu lors de sa réunion du 20 septembre son taux directeur à 5,5 %, l'estimant suffisamment restrictif. Ces évolutions incitent le marché à anticiper le fait que les États-Unis ne tomberont pas en récession, mais que la Fed maintiendra les taux à un niveau élevé plus longtemps, même si l'inflation sous-jacente est tombée à 4,1 % (en septembre). Sur le trimestre, le cours du pétrole, pris en étau entre l'absence de tout signe de récession aux États-Unis et les baisses de production de l'OPEP+, a continué à grimper. Le baril de Brent et le baril de WTI ont franchi la barre des 90 dollars à la fin du mois de septembre (contre 70 dollars environ début juillet). Tout cela a fait grimper le taux à dix ans à 4,57 % fin septembre, en hausse de 77 points de base par rapport à la fin du mois de juin. Pendant cette même période, le marché boursier a chuté de 3,6 %, en réaction à la forte hausse des taux d'intérêt.

Début octobre, le marché du travail et l'activité dans le secteur des services sont restés dynamiques. À la fin du mois d'octobre, la croissance du PIB au troisième trimestre a été annoncée à 1,2 % en glissement trimestriel (c'est le cinquième trimestre consécutif de croissance supérieure à 2 % en glissement trimestriel sur une base annualisée). Dans ce contexte, et avec une prime de risque sur les obligations en forte hausse, le rendement à dix ans est proche de 5 %. Pourtant, au début du mois de novembre, les marchés avaient été amenés à penser (en raison de créations d'emplois atteignant péniblement 100 000, de taux hypothécaires supérieurs à 8 % et de chiffres ISM un peu plus faibles) que l'activité pourrait ralentir plus fortement que prévu et que la Réserve fédérale pourrait baisser son taux directeur plus rapidement qu'elle ne l'avait envisagé. Le taux à dix ans a ainsi été tiré vers le bas. Ce mouvement s'est amplifié à la mi-décembre à l'occasion de la dernière réunion de la Réserve fédérale, lorsque son gouverneur a délivré un message plus « dovish » (accommodant) et que les projections concernant le taux des fonds fédéraux pour 2024 ont été revues à la baisse par rapport à celles du mois de septembre. Au bout du compte, après ce rebond des obligations, le rendement à dix ans termine l'année à 3,87 %, soit trois points de base de plus que fin 2022. L'indice S&P500 a terminé l'année 2023 à 4770, en hausse de 24,2 % sur l'année, notamment grâce à une hausse de 11,2 % au quatrième trimestre.

Rapport du Conseil d'Administration

Contexte économique et financier (suite)

Dans la **zone euro**, au premier trimestre 2023, tandis que l'inflation totale (qui s'élevait à 6,9 % en mars) baisse constamment depuis son pic d'octobre 2022, l'inflation sous-jacente augmente progressivement (de 5,7 % en mars), dans un contexte où le marché du travail est toujours tendu. Le taux de chômage est de 6,5 % et la croissance des salaires est forte. En outre, la baisse des prix du gaz se poursuit, les perspectives de croissance ont été réévaluées à la hausse, tout comme les anticipations de taux terminaux par la Banque centrale européenne (BCE). Le 2 février, l'institution a relevé son taux directeur de 50 points à 3 %. Malgré les évolutions observées au sein du système bancaire américain, la BCE a encore relevé son taux directeur de 50 points de base (à 3,5 %) lors de sa réunion du 16 mars.

Comme le souligne Christine Lagarde, le secteur bancaire européen est résilient, bien capitalisé et ne présente aucun problème de liquidité. L'autre raison est la dernière prévision macroéconomique de la BCE qui montre que l'inflation restera probablement trop élevée pendant trop longtemps. Au cours du week-end des 18 et 19 mars, la Banque nationale suisse et l'Autorité fédérale de surveillance des marchés financiers organisent la prise de contrôle du Crédit Suisse par UBS. Finalement, fin mars, le taux à dix ans allemand a baissé de 27 points de base par rapport à fin 2022, pour atteindre 2,3 %. Le marché actions a progressé de 11,9 %. Au cours du deuxième trimestre, bien que l'indice PMI du secteur manufacturier et celui des services se soient détériorés, ce dernier s'est maintenu au-dessus de 50. Par rapport au début de l'année, la confiance des consommateurs s'améliore, mais elle est plus hétérogène parmi les pays de la zone euro. Le marché du travail, quant à lui, reste dynamique. Avec une progression des salaires de l'ordre de 5 %, la hausse de la masse salariale permet d'envisager une hausse du pouvoir d'achat à mesure que l'inflation diminue. Même si le ralentissement de l'inflation totale se poursuit (5,5 % en juin), l'inflation sous-jacente affiche une plus grande rigidité à la baisse (5,5 % en juin). De ce fait, la BCE a relevé son taux directeur deux fois (le 4 mai et le 15 juin, respectivement), à hauteur de 25 points de base chaque fois. Fin juin, le taux directeur de la BCE s'élevait à 4 %, le taux à dix ans allemand était de 2,39 % et le marché boursier avait progressé de 1,0 % sur le trimestre.

Au cours du troisième trimestre, en dépit de différences de dynamiques nationales entre la zone euro et les États-Unis, les taux européens se sont alignés sur les taux américains tout au long du trimestre, mais avec une amplitude moindre. Certes, l'inflation diminue, mais elle reste élevée (4,3 % en septembre) et l'inflation sous-jacente ralentit encore plus lentement (4,5 %). Voilà pourquoi la BCE a encore relevé les taux à deux reprises ce trimestre (une première fois le 27 juillet, à 4,25 %, et la deuxième le 14 septembre, à 4,5 %). Dans cet environnement de taux d'intérêt plus élevés, l'activité économique est ralentie. Alors que dans la zone euro, l'indice PMI du secteur manufacturier est inférieur à 50 depuis quatorze mois, celui des services est également passé sous ce seuil au mois d'août. Il est de plus en plus clair que la croissance de la zone euro sera au mieux timide, d'autant que les réductions de production des pays de l'OPEP+ pèsent sur le prix du pétrole Brent. En effet, la croissance du PIB au troisième trimestre a enregistré une baisse de 0,1 % en glissement trimestriel. Au final, entre le troisième trimestre 2023 et le troisième trimestre 2022, le PIB de la zone euro a progressé de 0,1 % seulement. Même si elle a été partiellement compensée par des aides publiques, la principale raison de cette faible croissance est le choc énergétique, qui a lourdement pesé sur le pouvoir d'achat des ménages et sur l'activité des entreprises. Seul élément réellement positif de l'économie de la zone euro : un marché du travail qui reste dynamique. En effet, le taux de chômage reste faible (à 6,5 % en septembre) et la progression des salaires reste relativement élevée. Cela permet de préserver la consommation des ménages et de soutenir la croissance. Globalement, le taux à dix ans allemand a progressé de 42 points de base, à 2,81 %. La Bourse a cédé 4,6 % sur la même période.

Le quatrième trimestre a été marqué par des indices PMI qui se sont encore dégradés dans le secteur manufacturier comme dans celui des services (l'indice composite s'est établi à 47 en moyenne sur le trimestre). Mais la baisse de l'inflation et la hausse continue des salaires devraient permettre aux ménages de retrouver du pouvoir d'achat. Fin octobre, les rendements à dix ans allemands ont suivi la tendance des rendements américains, frôlant les 3 %. La faiblesse de la croissance suscite, comme aux États-Unis, une anticipation de baisse plus rapide des taux directeurs de la BCE, en particulier parce que les chiffres de l'inflation et de l'inflation sous-jacente du mois de novembre sont en baisse, à 2,4 % et 3,5 % respectivement. Lors de la dernière réunion de la BCE, sa Présidente a pourtant indiqué que ce n'était pas le moment de baisser les taux directeurs. En fait, le marché du travail reste dynamique et la croissance des salaires est toujours relativement élevée, ce qui se répercute sur les prix des services, notamment. Au bout du compte, après le rebond des obligations, le rendement à dix ans termine l'année à 2 %, soit 56 points de base de moins que fin 2022. Le marché boursier a terminé 2023 en hausse de 16 % sur l'année, grâce à une progression de 7,5 % au quatrième trimestre.

Candriam Sustainable Bond

Environnement de marché

Les marchés obligataires ont été très volatils en 2023, alternant entre une période « risk-off » (sans risque) au cours du premier trimestre (sous l'effet des turbulences du secteur bancaire) et la forte exubérance du quatrième trimestre (au moment même où les banques centrales laissaient entrevoir des baisses de taux potentielles). D'une manière générale, toutes les classes d'actifs à revenu fixe ont généré une performance positive, avec en tête les classes d'actifs spread (Investment Grade (IG), High Yield (HY) et Emerging Debt). Les données macroéconomiques semblent témoigner d'une certaine résilience aux États-Unis, mais sont moins positives au niveau de l'Union européenne. Au cours du premier semestre, les marchés ont subi de forts remous dans le secteur bancaire, avec la faillite de SVB et du Crédit Suisse. Malgré la gravité de l'événement, la réaction immédiate de la Banque centrale a permis d'éviter la propagation du risque à l'ensemble du secteur financier. Dans les pays émergents, la croissance a été modeste, celle de la Chine ayant été décevante tout au long de l'année. Le risque géopolitique reste omniprésent, que ce soit avec la guerre entre la Russie et l'Ukraine ou avec le conflit qui secoue le Moyen-Orient. Et malgré tout, les niveaux d'inflation ont continué à baisser (en particulier l'inflation sous-jacente), avec la stabilisation des perturbations de la chaîne d'approvisionnement. Les banques centrales ont continué à adopter un ton « hawkish » (restrictif) tout au long de l'année, mais face au recul de l'inflation, elles ont annoncé que des baisses de taux étaient envisageables en 2024. Les marchés du crédit ont continué à être soumis à une forte pression tout au long de l'année ; dans le même temps les fondamentaux ont été mitigés et la volatilité a été omniprésente, même si les marchés du crédit « Investment Grade » et du « High Yield » ont finalement affiché des rendements positifs importants. La dette émergente a par ailleurs considérablement augmenté durant les deux derniers mois de l'année. De plus, nous avons assisté à une dispersion croissante, la dette des pays émergents notée CCC ayant généré des rendements bien plus élevés que le reste des marchés.

Rapport du Conseil d'Administration

Candriam Sustainable Bond (suite)

Obligations d'État

L'année 2023 a commencé par un espoir pour les investisseurs : après une année 2022 éprouvante qui a vu des pertes quasiment sans précédent sur de nombreux marchés d'obligations souveraines, le pire était derrière eux. Des deux côtés de l'Atlantique, l'année a commencé par des taux d'inflation qui étaient certes en baisse par rapport aux sommets atteints mi-2022, mais qui restaient largement supérieurs aux seuils que les banques centrales pouvaient raisonnablement accepter. Finalement, la Réserve fédérale américaine (FED) a été obligée de remonter les taux quatre fois (de 4,5 % à 5,5 %), tandis que la Banque centrale européenne (BCE), qui a dû faire face à des taux d'inflation globale encore plus élevés, a augmenté les taux six fois pour un total cumulé de 2 %, ce qui a fait passer le taux principal de refinancement de 2,0 % à 4,0 %. La Bank of England (BoE), comme ses homologues d'Europe continentale et des États-Unis, a elle aussi relevé les taux à cinq reprises, ce qui a porté le taux de base de 3,5 % à 5,25 %. Sans surprise, le Japon a été la grande exception parmi les marchés du G4. En effet, la Bank of Japan (BoJ) a accueilli favorablement les chiffres plus élevés de l'indice IPC, qui ont permis au pays d'échapper à la spirale déflationniste grâce à la croissance des salaires. Avec un taux d'intérêt directeur qui reste obstinément bloqué à -0,10 % depuis 2015, les taux réels du Yen sont entrés en territoire très négatif. Pourtant, la BoJ n'est pas restée inactive et a commencé à assouplir en douceur sa politique YCC de contrôle de la courbe des rendements.

La trajectoire des rendements des obligations d'État est restée, comme il fallait s'y attendre, largement tributaire de l'inflation et d'autres données économiques, ainsi que des annonces et discours des banques centrales à ce sujet. Avec un taux à 10 ans américain de 3,74 % en début d'année, les relèvements successifs des taux de la FED ont apparemment eu l'effet escompté, car l'inflation globale a rapidement reculé pour se situer aux alentours de 3,5 % en milieu d'année. Après avoir été essentiellement compris entre 3,5 % et 4,0 % pendant la première moitié de l'année, le taux de référence à 10 ans a franchi cette limite et est resté constamment au-dessus de ce seuil jusqu'aux dernières semaines de décembre. Les taux ont notamment atteint leur sommet après l'annonce, par la Fed, de sa probable dernière hausse du cycle. La rhétorique restrictive de la Fed, son discours « à la hausse, pendant plus longtemps » et le maintien de résultats économiques étonnamment positifs ont fait bondir les rendements. En octobre, le seuil psychologiquement critique des 5 % a même failli être franchi, avant que les marchés ne prennent peur et ne fassent marche arrière. Ensuite, en novembre et décembre, une remontée impressionnante et rapide des taux a été observée. Le taux à 10 ans a terminé l'année à 3,88 % (soit à peine plus haut qu'en début d'année, mais cela reste un rendement positif grâce à des niveaux de portage décents).

L'évolution des taux en euros a été pratiquement similaire, même si, en l'absence d'une dynamique économique similaire à celle des États-Unis, les marchés ont réagi de manière plus directe à la dernière hausse de septembre, avec une chute des taux à 2 ans et à 10 ans peu de temps après. La Présidente de la BCE, Christine Lagarde, a clairement évoqué l'affaiblissement des perspectives de croissance dans la zone euro, ce que les marchés n'ont pas hésité à interpréter comme un signal « dovish ». L'inflation a poursuivi sa décélération au cours de l'année, avec l'estimation de novembre qui a surpris à la baisse, confortant ainsi les anticipations de réduction des taux pour 2024. Le taux à 10 ans allemand se situait à 2,44 % au début de l'année et à 2,97 % en octobre, avant d'enregistrer une remontée et une baisse rapides et de terminer l'année à 2,02 %. Parmi les émetteurs de la zone euro, les pays périphériques ont déjoué les craintes de voir des taux plus élevés peser trop lourdement sur les budgets. Bien qu'assez volatile, le spread BTP-Bund était à son plus haut niveau en début d'année, à environ 208 points de base, et a terminé l'année à 166 points de base.

Au Royaume-Uni, en décidant d'augmenter les taux de 25 points de base au-dessous de ceux de la BCE, la BoE s'est rangée dans le camp des « dovish », étant donné que l'inflation britannique a toujours été plus élevée que celle de la zone euro. La prudence relative des décideurs politiques s'explique toutefois, du moins en partie, par la faiblesse persistante de l'économie et par une répercussion plus directe des taux directeurs sur les ménages, à travers des prêts hypothécaires à plus court terme. En définitive, le Gilt de référence à 10 ans a suivi à peu près la même trajectoire que ses équivalents américains et européens. Au départ à 3,65 %, il a atteint un sommet peu après la dernière hausse de la BoE en août, à 4,74 %. Ensuite, nous avons assisté à un déclin progressif, puis assez rapide à partir d'octobre, pour clôturer l'année à 3,53 %.

Seule à l'avoir fait parmi les banques des grandes économies mondiales, la BoJ a maintenu son taux directeur à -0,10 %, ce qui vaut au Japon d'être la seule économie à continuer d'afficher un taux négatif. Elle a toutefois opéré un changement majeur pendant la réunion de juillet, en décidant d'assouplir sa politique YCC de contrôle de la courbe des rendements. Certes, elle a maintenu le rendement cible officiel de 0 % pour les obligations d'État à 10 ans japonaises ; en revanche, la fourchette dans laquelle la banque autorise désormais la négociation de ces instruments constitue le grand changement du programme : en effet, cette fourchette a été assouplie par le biais de plusieurs ajustements de politique. Et ce changement n'a pas manqué de produire l'effet escompté. Alors que le taux de référence à 10 ans s'est négocié dans la fourchette très étroite comprise entre 0,22 % et 0,5 % pendant les sept premiers mois de l'année, il a atteint un niveau record de 0,95 % en novembre, avant de suivre la tendance des taux américains et européens et de se redresser jusqu'à la fin de l'année, où il s'est établi à 0,61 %.

Obligations indexées sur l'inflation

Après avoir atteint en 2022 des niveaux record sur plusieurs décennies, les taux d'inflation aux États-Unis et dans la zone euro ont entamé une tendance à la baisse dès le début de l'année 2023, en particulier aux États-Unis. Fin 2022, l'IPC de base s'élevait à 9,2 % dans la zone euro et à 6,5 % aux États-Unis. En raison des résultats économiques plus solides aux États-Unis, l'IPC de la zone euro a terminé l'année à un niveau inférieur à celui des États-Unis, à savoir 2,9 % contre 3,4 %. Dans les deux économies, les hausses des prix de base (hors alimentation et énergie) ont été moins marquées. Les chiffres clés ont terminé l'année à des niveaux plus élevés que les indicateurs d'ensemble (bien qu'ils aient plafonné à un seuil inférieur), ce qui laisse supposer que l'économie a intégré un niveau considérable d'augmentation des prix par le biais, entre autres, des augmentations de salaires.

Rapport du Conseil d'Administration

Candriam Sustainable Bond (suite)

Obligations d'État

Les banques centrales auront probablement été confortées dans leur propre crédibilité, voyant les attentes du marché vis-à-vis de l'inflation se rapprocher de leurs propres objectifs pendant l'année. Les points morts d'inflation américains à 10 ans ont commencé l'année à 2,41 %, tandis que leurs équivalents dans la zone euro (Allemagne, France métropolitaine et Italie) étaient tous proches de 2,3 %. Sous l'effet conjugué de résultats économiques solides et de signes d'incertitude élevés, les marchés ont connu un pic initial à 3,08 % et environ 2,6 % en février/mars, respectivement, avant de retomber rapidement à leurs niveaux du début de l'année. Après des transactions relativement stables pendant la plus grande partie des deuxième et troisième trimestres, les points morts d'inflation ont suivi la tendance des taux nominaux entre octobre et la fin de l'année. Le point mort d'inflation américain à 10 ans a terminé l'année à 2,17 %, tandis que les niveaux de la zone euro se situaient entre 1,82 % (Italie) et 2,06 % (France métropolitaine). Cette évolution reflète et confirme le virage « dovish » des banques centrales vers la fin de l'année.

La convergence des points morts d'inflation à 5 ans et à 10 ans dans la zone euro vient renforcer ce constat. Alors que les points morts d'inflation à 5 ans avaient commencé l'année à des niveaux beaucoup plus élevés (traduisant un certain scepticisme sur la capacité de la BCE à contenir l'inflation à court et moyen terme), l'écart entre les deux s'est inversé à la fin de l'année (le point mort à 5 ans étant plus bas que le point mort à 10 ans, plus incertain).

Investment Grade Corporate

Dans l'ensemble, l'année 2023 a été très positive pour la classe d'actifs Euro Investment Grade, mais elle a aussi été marquée par une forte volatilité, en particulier au cours du premier semestre, au moment où les banques centrales relevaient leurs taux d'intérêt. Par ailleurs, des problèmes spécifiques sont intervenus dans le secteur bancaire, SVB et Crédit Suisse ayant provoqué une forte volatilité sur les marchés, même si les turbulences n'ont été que de courte durée. Au deuxième semestre, cependant, les banques centrales ont semblé marquer une pause (la FED en particulier) et ont déclaré que les niveaux d'inflation avaient atteint leur sommet. Dans ce contexte, les marchés « Investment grade » ont enregistré des performances positives (mais volatiles) et, après la volatilité du mois d'octobre (alimentée en partie par le contexte géopolitique au Moyen-Orient), ils se sont nettement redressés. En effet, les deux derniers mois ont été très positifs pour cette classe d'actifs, grâce à la surprenante attitude « dovish » de la FED, qui a conservé des taux constants, sans pour autant contrecarrer les attentes du marché concernant la fin des hausses de taux. Dans la zone euro, les marchés tablent sur des baisses de taux de la BCE de plus de 160 points de base en 2024 et sur une première baisse dès avril 2024. Les fondamentaux des émetteurs « Investment grade » ont résisté, même si certains bouleversements sont apparus et que la dispersion s'est matérialisée sur divers segments. L'émission est restée forte, avec une entrée importante de sociétés financières sur les marchés au premier semestre de l'année. Globalement, l'indice Euro investment grade Corporate a affiché une performance de +8,2 %, et des rendements ayant fortement baissé pour atteindre 3,5 % (contre 4,2 %) au cours de l'année. Les spreads ont été extrêmement volatils, atteignant 195 points de base en mars (contre 167 points de base au début de l'année), avant de retomber à des niveaux serrés d'environ 135 points de base à la fin de l'année.

La volatilité est restée une constante au cours de ce premier trimestre 2023 : en effet, le mois de janvier a bénéficié de l'exubérance du quatrième trimestre 2022, tandis que les mois de février et mars ont vu le retour des périodes de positionnement « risk-off » (sans risque). Vers la fin du mois de mars 2023, les marchés Investment Grade ont à nouveau connu un rebond à la suite d'un discours moins restrictif de la part des banques centrales. Dans l'ensemble, les spreads sont restés stables (à 168 points de base), mais la volatilité a été forte : en effet, le point le plus bas (début février, lorsque les spreads étaient à 140 points de base) contrastait avec le pic enregistré le 20 mars (à 195 points de base). Les rendements se sont comportés de façon similaire, passant de 3,6 % à 4,4 %, avant de s'établir à 4,2 % à la fin du trimestre. Le rebond de janvier a été motivé par la conjonction suivante : baisse de l'inflation aux États-Unis, réouverture inattendue de la Chine et recul des prix de l'énergie en Europe. En mars, les spreads de crédit se sont fortement élargis sous l'effet de la crise financière induite par la faillite de SVB et du Crédit suisse ; les taux sont remontés en mars, les investisseurs se tournant vers des actifs à faible risque. La BCE et la FED ont toutes deux annoncé qu'elles étaient prêtes à injecter des liquidités au moyen de guichets d'escompte, afin de préserver la stabilité financière, même si chacune d'entre elles a réaffirmé son intention de lutter contre l'inflation. Les résultats du quatrième trimestre ont été satisfaisants, alors que les attentes étaient faibles et que les analystes anticipaient déjà des baisses de bénéfices plus importantes pour les résultats suivants. Les entreprises ont pour la plupart réussi à dépasser les attentes, mais la surprise a été de faible ampleur. En revanche, certaines grandes entreprises comme Intel, Microsoft, 3M et Kimberly-Clark ont manqué leurs objectifs et émis des prévisions décevantes. Sur les deux premiers mois du trimestre, le marché primaire a été particulièrement actif : les entreprises ont commencé à concentrer leurs efforts sur la fixation des taux, notamment dans le secteur financier, où l'offre a été dominée par des sociétés financières qui profitait du resserrement, avec un volume total d'émissions supérieur de plus de 50 % au volume de janvier 2022. L'augmentation de l'offre a été bien absorbée par le marché, puisque la demande des investisseurs a dépassé l'offre et que les émissions à plusieurs tranches de plus courte durée ont été les plus sur souscrites.

Rapport du Conseil d'Administration

Candriam Sustainable Bond (suite)

Investment Grade Corporate (suite)

La volatilité s'est poursuivie sur les marchés « Investment Grade », qui ont réalisé un deuxième trimestre relativement positif (+0,45%) en dépit de la hausse des taux et d'une situation macroéconomique globalement fragile dans le secteur privé. Le mois de juin a été marqué par une forte contraction des spreads après la signature de l'accord sur le plafond de la dette aux États-Unis. Effectivement, le mois a connu un peu de répit, car la Fed a commencé par un « bond » restrictif, indiquant qu'elle pourrait avoir besoin d'augmenter à nouveau les taux lors de la prochaine réunion, tout en précisant qu'il était nécessaire d'attendre que les hausses précédentes produisent leurs effets. En Europe, la BCE a poursuivi ses hausses à un rythme similaire de 25 points de base, faisant passer les taux à 3,5 %. Dans ce contexte, les actifs à risque se sont bien comportés, aidés en cela par la baisse de la volatilité des taux et de l'inflation partout dans le monde, à l'exception du Royaume-Uni. Pour les banques centrales des marchés développés, le mois de juin a été extrêmement chargé. À Sintra, les dirigeants de la BCE, de la Fed et de la BoE ont partagé le même ton restrictif. À l'inverse, le gouverneur de la BoJ Kazuo Ueda a adopté un ton plus accommodant. Le Président de la Réserve fédérale, Jerome Powell, a déclaré que la Fed n'écartait pas le scénario de deux hausses consécutives et qu'il ne voyait pas les niveaux d'inflation aux États-Unis revenir à 2 % en 2023 ou en 2024. Par ailleurs, la Présidente de la BCE, Christine Lagarde, a ajouté que la Banque centrale avait encore beaucoup à faire et devrait très probablement augmenter les taux en juillet, tandis que Andrew Bailey, le Gouverneur de la BoE (qui avait déjà augmenté les taux de 0,5 % en juin) a expliqué que l'inflation au Royaume-Uni continuait de se faire durement sentir. Malgré le contexte macroéconomique incertain et la tourmente post-SVB/CSG en mars, la perception du marché s'est progressivement améliorée concernant les banques, comme en témoigne le mois de mai (qui est le deuxième mois le plus chargé de l'année après janvier) et la réouverture du marché AT1 en juin. Les résultats des banques ont été scrutés par le marché, avec une volatilité importante autour des communications actualisées sur leurs dépôts. Le secteur de la consommation a connu un bon trimestre : les hausses de prix des produits alimentaires et des boissons n'ont pas eu d'incidence majeure sur les volumes. D'un autre côté, les importantes lacunes et les prévisions décevantes de certaines grandes entreprises (Maersk, UPS et Estée Lauder) donnent à penser que les estimations de bénéfices des prochains trimestres pourraient être revues à la baisse. Au niveau de l'offre, les banques ont déjà répondu à environ deux tiers des besoins de financement pour 2023. En ce qui concerne les valeurs non financières, l'activité sur le marché primaire a été plus forte en glissement annuel au premier semestre 2023, tant sur le segment Investment Grade (IG) que sur le segment High Yield (HY), et notamment au deuxième trimestre, malgré un démarrage du trimestre en demi-teinte (surtout sur le segment senior EUR). Parallèlement, le marché hybride a de nouveau été dynamique aux mois de mai et juin, grâce aux secteurs des services aux collectivités et des TMT, après trois mois de faible activité. Dans l'ensemble, les spreads se sont un peu contractés (passant de 168 à 161 points de base), mais la volatilité a été importante : le point bas (à la mi-avril, où les spreads étaient de 154 points de base) contrastait fortement avec le pic observé à la mi-mai, à 172 points de base. Les rendements ont toutefois évolué à la hausse en règle générale (suivant en cela les hausses de taux), pour terminer le mois à 4,4 % .

Les marchés Euro Investment grade ont une fois de plus été ébranlés, parvenant difficilement à dégager un trimestre positif au T3 (+0,3 %) malgré la hausse des taux et la fragilité de la situation macroéconomique générale. Le début du trimestre a été dominé par une situation macroéconomique relativement résistante, en particulier aux États-Unis, avec un scénario d'atterrissement en douceur qui a commencé à prendre de l'importance. Les chiffres de l'inflation ont sensiblement baissé, bien qu'ils soient encore très éloignés des objectifs à long terme de la Banque centrale ; par conséquent, la politique monétaire est restée restrictive, et des hausses de taux ont eu lieu en juillet aux États-Unis et au sein de l'UE. La fin du trimestre a été marquée par une augmentation des taux (le taux américain à 10 ans atteignant 4,5 %) en raison de la hausse des cours des matières premières et du dynamisme du marché du travail aux États-Unis. Alors que les spreads et les taux sont restés relativement stables pendant les deux premiers mois du trimestre, le mois de septembre a connu une forte volatilité. Au départ, les spreads se sont d'abord fortement contractés pour atteindre 144 points de base (contre 154 points de base), en raison du recul de l'inflation et d'un climat généralement plus positif. Toutefois, la menace de paralysie du gouvernement américain et les prises de décisions restrictives des responsables politiques de la FED ont fait remonter les spreads à plus de 150 points de base. En termes de fondamentaux, les rapports montrent que certaines entreprises ont eu plus de mal que d'autres à répercuter la hausse des prix sur les consommateurs (c'est le cas d'Unilever, de LVMH, de Reckitt Benckiser, de Heineken, notamment). La pression sur les prix devrait s'atténuer d'ici la fin de l'année, mais il est probable que la dispersion augmente quand les marchés évalueront quelles sont les entreprises qui disposent réellement d'un pouvoir de fixation des prix et qui sont à même de maintenir leurs marges. Le marché primaire a été calme en raison de la période de blocage (lock-up period) imposée par la saison de publication des résultats, ainsi que par la saison estivale. Toutefois, quelques transactions ont été réalisées sur le marché aux alentours de fin août. Les marchés secondaires sont restés tendus, avec en général une faible liquidité pour les offres du marché monétaire et les offres à court terme. Le mois de septembre a été exceptionnellement actif, les banques et les pays ayant profité de la stabilité de ce contexte et des spreads serrés. Quelque 57 milliards d'Euros ont été émis sous forme de crédit IG, et les primes d'émission ont atteint en moyenne 15 points de base pour des carnets qui ont été souscrits plus de deux fois.

Rapport du Conseil d'Administration

Pendant le quatrième trimestre 2023 (en particulier en novembre et décembre), une forte exubérance a gagné les marchés financiers, car ils anticipaient un revirement « dovish » des banques centrales en raison du recul de l'inflation et des résultats du rapport NFP. Au mois d'octobre, les courbes de rendement des bons du Trésor ont poursuivi leur pentification aux États-Unis et en Europe, sous l'effet notamment des résultats économiques plus favorables que prévu aux États-Unis et de la résistance exceptionnelle de leur marché du travail. Les responsables de la FED ont pris note de la hausse constante des taux à long terme, estimant que le resserrement des conditions financières et la forte augmentation des rendements réels à long terme avaient fait une partie du dur labeur pour le compte de la Réserve fédérale. Dans le même ordre d'idées, de l'autre côté de l'Atlantique, alors que l'impact différé du resserrement des conditions financières se répercute de plus en plus sur l'économie et les marchés, la BCE a elle aussi décidé de ne pas modifier les taux et a affiché une attitude « dovish », Mme Lagarde ayant mentionné à plusieurs reprises et de manière explicite le net ralentissement de la croissance économique. Mais en novembre, la situation a brusquement évolué : les marchés ont commencé à anticiper de manière assez agressive les baisses de taux pour 2024. Une succession de données économiques a révélé que la diffusion de la politique monétaire restrictive restait forte de part et d'autre de l'Atlantique. Aux États-Unis, l'économie a montré certains signes de ralentissement, malgré une croissance supérieure aux prévisions au troisième trimestre (5,2 %). Les banques ont continué à limiter le crédit commercial, les ménages ont réduit leurs dépenses discrétionnaires et le marché du travail s'est progressivement refroidi. Au sein de l'UE, l'inflation globale a ralenti au-delà des attentes des décideurs politiques (à 2,4 %), même si l'inflation sous-jacente reste largement supérieure à l'objectif de la BCE, à savoir 3,6 %. Au troisième trimestre en Allemagne, l'économie s'est contractée, sous l'effet d'une baisse des dépenses des ménages. La BCE a toutefois laissé entendre qu'elle s'attendait à un rebond temporaire des chiffres de l'inflation en raison d'effets sous-jacents, étant donné que les prix élevés de l'énergie à partir de l'automne 2022 ne sont plus pris en compte dans les données. Elle a ajouté que la zone euro évitera probablement une récession, car l'amélioration du pouvoir d'achat des consommateurs pourra être à l'origine d'un rebond. Les marchés Euro Investment Grade ont enregistré un trimestre positif (+5,5 %), les spreads ayant diminué (passant de 151 points de base à 136 points de base), surtout en novembre et décembre. Les rendements ont subi une compression beaucoup plus forte, puisqu'ils sont passés de niveaux élevés (4,5 %) à 3,6 %, ce qui représente malgré tout un niveau supérieur à celui des 10 dernières années. La saison de publication des résultats s'est caractérisée par une grande dispersion, et une part importante de sociétés (à la fois sur les segments IG et HY) n'a pas répondu aux attentes en matière de résultats. Même si les marges d'exploitation de la majorité d'entre elles ont été supérieures aux attentes, les prévisions sont généralement plus prudentes et les entreprises ont avoué s'inquiéter de plus en plus de leur capacité à préserver leurs marges. Les marchés ont constaté que Walmart, Burberry, Nordstrom et BASF avaient émis des prévisions prudentes et des avertissements sérieux. Les marchés ont aussi constaté que les valeurs cycliques procédaient à des coupes dans les dépenses d'investissement et que les émetteurs des secteurs industriel et manufacturier diminuaient leurs coûts d'exploitation par le biais de licenciements.

High Yield Corporate

Dans l'ensemble, l'année 2023 a été très positive pour la classe d'actifs High Yield, mais elle a aussi été marquée par une forte volatilité, en particulier au cours du premier semestre, au moment où les banques centrales relevaient leurs taux. Par ailleurs, des problèmes spécifiques sont intervenus dans le secteur bancaire, SVB et Crédit Suisse ayant provoqué une forte volatilité sur les marchés, même si les turbulences n'ont été que de courte durée. Au deuxième semestre, cependant, les banques centrales ont semblé marquer une pause (la FED en particulier) et ont déclaré que les niveaux d'inflation avaient atteint leur sommet. Dans ce contexte, les marchés « High Yield » ont enregistré des performances stables et, après la volatilité du mois d'octobre (alimentée en partie par le contexte géopolitique au Moyen-Orient), ils se sont nettement redressés. En effet, les deux derniers mois ont été très positifs pour cette classe d'actifs, grâce à la surprenante attitude « dovish » de la FED, qui a conservé des taux constants, sans pour autant contrecarrer les attentes du marché concernant la fin des hausses de taux. Dans la zone euro, les marchés tablent sur des baisses de taux de la BCE de plus de 160 points de base en 2024 et sur une première baisse dès avril 2024. Les fondamentaux des émetteurs « High Yields » ont résisté, même si certains bouleversements sont apparus et que la dispersion s'est matérialisée sur divers segments. En effet, nous avons remarqué que sur un marché aux rendements positifs, le secteur de l'immobilier avait beaucoup souffert. Les valeurs techniques ont été plutôt positives, car la faiblesse de l'offre et des marchés primaires (qui constituent une source de soutien) a été renforcée par un grand nombre de valeurs montantes sur le segment Euro High Yield, alors que les fondamentaux ont été plus mitigés sur le segment USD High Yield. Dans l'ensemble, l'indice ICE BofA-Merrill Global High Yield BB/B 3 % Constrained (couvert), excluant les valeurs financières, a affiché une performance de +9,7 %, les rendements s'étendant largement à 7 % (contre 8,2%) au cours de l'année. Les spreads ont été extrêmement volatils, atteignant 472 points de base en mars, avant de retomber à des niveaux extrêmement serrés d'environ 316 points de base à la fin de l'année.

Rapport du Conseil d'Administration

Candriam Sustainable Bond (suite)

High Yield Corporate (suite)

La volatilité est restée une constante au cours de ce premier trimestre 2023 : en effet, le mois de janvier a bénéficié de l'exubérance du quatrième trimestre 2022, tandis que les mois de février et mars ont vu le retour des périodes de positionnement « risk-off » (sans risque). Vers la fin du mois de mars 2023, les marchés High Yield ont à nouveau connu un rebond à la suite d'un discours moins restrictif de la part des banques centrales. Dans l'ensemble, les spreads ont connu une certaine contraction (de 442 points de base à 412 points de base), mais la volatilité a été forte : en effet, le point le plus bas (le 7 mars, lorsque les spreads étaient à 347 points de base) contrastait avec le pic enregistré le 20 mars (à 485 points de base). Les rendements se sont comportés de façon similaire, passant de 6,1% à 7,1%, avant de s'établir à 6,7% à la fin du trimestre. Le rebond de janvier a été motivé par la conjonction suivante : baisse de l'inflation aux États-Unis, réouverture inattendue de la Chine et recul des prix de l'énergie en Europe. En mars, les spreads de crédit se sont fortement élargis sous l'effet de la crise financière induite par la faillite de SVB et du Crédit suisse ; les taux sont remontés en mars, les investisseurs se tournant vers des actifs à faible risque. La BCE et la FED ont toutes deux annoncé qu'elles étaient prêtes à injecter des liquidités au moyen de guichets d'escompte, afin de préserver la stabilité financière, même si chacune d'entre elles a réaffirmé son intention de lutter contre l'inflation. . Sur le plan des fondamentaux, les chiffres du quatrième trimestre 2022 ont été meilleurs que ce que l'on pouvait craindre. Toutefois, des bouleversements apparaissent au niveau des notations les plus basses et les perspectives sont très incertaines. En ce qui concerne les valorisations, les rendements ont conservé une relative attractivité, bien que les spreads ne soient pas encore adéquats pour les risques en présence. Quant aux valeurs techniques, elles restent solides en Europe, où les flux sortants sont limités et l'offre très négative, tandis que la tendance se renverse aux États-Unis (avec des flux sortants importants et une offre qui se redresse lentement). Netflix a finalement été reclassé Investissement grade par Moody's au terme de deux années, avec des perspectives positives. Côté négatif, le secteur de l'immobilier est resté sous pression, puisque les investisseurs s'interrogent sur les valorisations et les profils de liquidité.

Après un début d'année volatile, les marchés Euro High Yield ont affiché un deuxième trimestre positif (+1,6 %) malgré la hausse des taux et une situation macro-économique globalement fragile dans le secteur privé. Les spreads et les taux sont restés relativement stables pendant les deux premiers mois du trimestre, mais juin a été marqué par une forte contraction des spreads après la signature de l'accord sur le plafond de la dette aux États-Unis. Ce mois a connu un peu de répit, car la Fed a commencé par un « bond » restrictif, indiquant qu'elle pourrait avoir besoin d'augmenter à nouveau les taux lors de la prochaine réunion, tout en précisant qu'il était nécessaire d'attendre que les hausses précédentes produisent leurs effets. En Europe, la BCE a poursuivi ses hausses à un rythme similaire de 25 points de base, faisant passer les taux à 3,5 %. Dans ce contexte, les actifs à risque se sont bien comportés, aidés en cela par la baisse de la volatilité des taux et de l'inflation partout dans le monde, à l'exception du Royaume-Uni. Dans l'ensemble, les spreads se sont un peu contractés (passant de 411 à 392 points de base), mais la volatilité a été importante : le point bas (à la mi-juin, où les spreads étaient de 367 points de base) contrastait fortement avec le pic observé à la mi-mai, à 429 points de base. La situation a été similaire pour les rendements, qui sont passés d'un point bas (6,6% fin mai) à 6,9 % à la fin du trimestre.

Les fondamentaux ont bien résisté au niveau de la plupart des chiffres du premier trimestre, conformément aux attentes, même si le degré de dispersion a continué d'augmenter. Par exemple, l'opérateur de télécommunications français SFR a affiché des résultats décevants, avec un effet de levier atteignant 6,2x, et a communiqué des prévisions très modestes pour les trimestres suivants. Résultat : les obligations se sont négociées sur un marché en difficulté, alors que la probabilité d'une restructuration de la dette augmentait de manière significative. Aux États-Unis, les taux de défaut ont commencé à augmenter, avec 10 émetteurs en défaut sur des obligations d'une valeur de 7,2 milliards d'USD en mai (ce qui correspond à un taux de défaut annualisé de 7,3 %, alors que le taux de défaut réel sur 12 mois était de 2,3 %). Un nombre croissant de bouleversements a commencé à apparaître sur les marchés High Yield, avec des avertissements répétés sur les bénéfices du secteur de la chimie, la plupart des entreprises étant confrontées à un déstockage incessant de la part de leurs clients. Côté positif, le secteur du divertissement a encore affiché de très bonnes performances, la majorité des croisiéristes publant des chiffres et des perspectives solides. Les valeurs techniques sont restées fortes, les flux entrants sont restés faibles et l'offre très limitée ; le volume des marchés Euro High Yield s'est contracté du fait de l'apparition de plusieurs nouvelles valeurs montantes.

Les marchés Euro High Yield ont une fois de plus dégagé un trimestre positif au T3 (+1,4 %) malgré la hausse des taux et la fragilité de la situation macroéconomique générale. Le début du trimestre a été dominé par une situation macroéconomique relativement résistante, en particulier aux États-Unis, avec un scénario d'atterrissement en douceur qui a commencé à prendre de l'importance. Les chiffres de l'inflation ont sensiblement baissé, bien qu'ils soient encore très éloignés des objectifs à long terme de la Banque centrale ; par conséquent, la politique monétaire est restée restrictive, et des hausses de taux ont eu lieu en juillet aux États-Unis et au sein de l'UE. La fin du trimestre a été marquée par un rebond des taux (le taux à 10 ans américain atteignant 4,5 %) en raison de la hausse des cours des matières premières et du dynamisme du marché du travail aux États-Unis. Alors que les spreads et les taux sont restés relativement stables pendant les deux premiers mois du trimestre, le mois de septembre a connu une forte volatilité. Au départ, les spreads se sont contractés, en raison du recul de l'inflation et d'un climat généralement plus positif. Toutefois, la menace de paralysie du gouvernement américain et les prises de décisions restrictives des responsables politiques de la FED ont fait remonter les spreads. Il faut souligner qu'au cours du trimestre, les spreads HY en EUR se sont constamment négociés à des niveaux plus élevés (plus de 50 points de base) que leurs équivalents américains. Sur le front microéconomique, et en l'absence de soutien des banques centrales, nous avons observé une forte disparité entre les secteurs bénéficiant de la réouverture et de la demande latente (tels que l'automobile et les voyages) et d'autres secteurs plus sensibles aux taux, notamment l'immobilier, la construction et les produits chimiques. Aux États-Unis, les taux de défaut ont continué à augmenter, et les prévisions laissent entrevoir un taux supérieur à 4 % (moyenne historique à long terme).

Rapport du Conseil d'Administration

Candriam Sustainable Bond (suite)

High Yield Corporate (suite)

Pendant le quatrième trimestre 2023 (en particulier en novembre et décembre), une forte exubérance a gagné les marchés financiers, car ils anticipaient un revirement « dovish » des banques centrales en raison du recul de l'inflation et des résultats du rapport NFP. Les marchés Euro High Yield ont réalisé un trimestre nettement positif (+5,74 %) avec un rebond de certaines des valeurs les plus faibles de cet univers d'investissement. Au mois d'octobre, les courbes de rendement des bons du Trésor ont poursuivi leur pentification aux États-Unis et en Europe, sous l'effet notamment des résultats économiques plus favorables que prévu aux États-Unis et de la résistance exceptionnelle de leur marché du travail. Les responsables de la FED ont pris note de la hausse constante des taux à long terme, estimant que le resserrement des conditions financières et la forte augmentation des rendements réels à long terme avaient fait une partie du dur labeur pour le compte de la Réserve fédérale. Dans le même ordre d'idées, de l'autre côté de l'Atlantique, alors que l'impact différé du resserrement des conditions financières se répercute de plus en plus sur l'économie et les marchés, la BCE a elle aussi décidé de ne pas modifier les taux et a affiché une attitude « dovish », Mme Lagarde ayant mentionné à plusieurs reprises et de manière explicite le net ralentissement de la croissance économique. Mais en novembre, la situation a brusquement évolué : les marchés ont commencé à anticiper de manière assez agressive les baisses de taux pour 2024. Une succession de données économiques a révélé que la diffusion de la politique monétaire restrictive restait forte de part et d'autre de l'Atlantique. Aux États-Unis, l'économie a montré certains signes de ralentissement, malgré une croissance supérieure aux prévisions au troisième trimestre (5,2 %). Les banques ont continué à limiter le crédit commercial, les ménages ont réduit leurs dépenses discrétionnaires et le marché du travail s'est progressivement refroidi. Au sein de l'UE, l'inflation globale a ralenti au-delà des attentes des décideurs politiques (à 2,4 %), même si l'inflation sous-jacente reste largement supérieure à l'objectif de la BCE, à savoir 3,6 %. Au troisième trimestre en Allemagne, l'économie s'est contractée, sous l'effet d'une baisse des dépenses des ménages. La BCE a toutefois laissé entendre qu'elle s'attendait à un rebond temporaire des chiffres de l'inflation en raison d'effets sous-jacents, étant donné que les prix élevés de l'énergie à partir de l'automne 2022 ne sont plus pris en compte dans les données. Elle a ajouté que la zone euro évitera probablement une récession, car l'amélioration du pouvoir d'achat des consommateurs pourra être à l'origine d'un rebond.

Du point de vue des fondamentaux, la dispersion est restée élevée entre les valeurs cycliques et non cycliques (et entre les sociétés qui ont le pouvoir de fixer les prix et celles qui ne l'ont pas), car les coûts de l'inflation continuent de réduire les marges. Sur le plan microéconomique, la saison de publication des résultats a été marquée par de fortes disparités et une part importante d'entreprises n'a pas réussi à répondre aux attentes en matière de résultats. Même si les marges d'exploitation de la majorité d'entre elles ont été supérieures aux attentes, les prévisions sont généralement plus prudentes et les entreprises ont avoué s'inquiéter de plus en plus de leur capacité à préserver leurs marges. Sur le plan des valeurs techniques, l'offre a de nouveau été assez réduite au cours du trimestre, alors que quelques émetteurs supplémentaires ont été reclasés en catégorie Investissement grade (Ellis, Lufthansa, Ford). En fait, Ford constitue la plus importante valeur montante de tous les temps et a apporté un soutien solide aux marchés High Yield jusqu'à la fin de l'année.

Obligations convertibles

Janvier s'est caractérisé par une forte hausse des marchés boursiers, et notamment des valeurs cycliques, alors que les craintes de récession s'atténuait sur fond de baisse du prix de l'essence et de fin des restrictions sanitaires en Chine. En mars, les craintes liées au secteur financier (SVB, Crédit suisse) ont conduit à une correction des marchés boursiers, mais de courte durée grâce aux interventions des autorités de régulation, qui ont permis de limiter la contagion. Grâce à une croissance économique robuste, les marchés ont été soutenus jusqu'au mois d'août. Mais le dynamisme des données macroéconomiques, en déplaçant les attentes sur la fin du cycle de hausse des taux, a pesé sur les principaux indices jusqu'à fin octobre. Début novembre, le discours de bienvenue de la Banque centrale américaine a rassuré les investisseurs sur la fin du cycle de hausse des taux, ce qui a déclenché un fort rebond des marchés boursiers, un assouplissement des taux d'intérêt et un resserrement des spreads de crédit.

Sur le plan sectoriel, les valeurs technologiques ont connu une forte progression cette année, stimulées par l'émergence de l'intelligence artificielle générative.

Notre classe d'actifs a surtout bénéficié du rebond des marchés boursiers et, à un degré moindre, de la baisse des taux d'intérêt et du resserrement des spreads de crédit. Par contre, la forte baisse de la volatilité implicite a pénalisé les obligations convertibles à l'échelle mondiale.

Au terme de l'année 2023, les niveaux des marchés boursiers et le sentiment des investisseurs s'inscrivent à nouveau dans un scénario idéal, caractérisé par des taux d'intérêt directeurs plus bas aux États-Unis et en Europe, une baisse de l'inflation et une croissance économique solide. Certes, un tel scénario est envisageable, mais en cas d'échec, la sanction pourrait être sévère. C'est pourquoi nous pensons que les obligations convertibles, avec leur profil intrinsèquement convexe, offrent un moyen particulièrement adapté d'aborder les marchés boursiers, d'autant que notre classe d'actifs bénéficie de deux atouts majeurs : un marché primaire durable et diversifié, et une valorisation particulièrement attractive, d'un niveau de volatilité implicite historiquement bas en Europe.

Rapport du Conseil d'Administration

Marchés émergents

Les marchés obligataires mondiaux ont traversé une année en forme de montagnes russes, mais l'ont clôturée sur une note résolument positive. La dette des pays émergents a aussi manifesté une forte volatilité, mais a terminé l'année sur une surperformance nette, avec +11,09 % en 2023 pour l'indice JPM EMBI Global Diversified. Pendant cette année, les principaux moteurs de performance du marché ont été la Fed (avec ses effets sur les taux américains), ainsi que la reprise de plusieurs émetteurs ayant rencontré des difficultés. De ce fait, les taux ont fini l'année pratiquement au même point, le portage et la contraction des spreads ayant joué un rôle prépondérant pour cette classe d'actifs.

Au T1, la classe d'actifs EMD HC (+1,9 %) a progressé principalement en raison des flux « refuges » vers les bons du Trésor américain, tandis que les spreads des pays émergents ont augmenté, donnant lieu à des rendements positifs pour les bons du Trésor (mais négatifs pour les spreads). Les spreads des pays émergents ont clôturé le trimestre sur une hausse de 32 points de base, tandis que les taux d'intérêt à 10 ans du Trésor américain ont reculé.

Chaque mois au cours du trimestre, les thèmes d'investissement ont évolué. Janvier aura été marqué par la réouverture du commerce chinois, ce qui a renforcé les secteurs des matières premières et les actifs risqués en général, et généré des flux dans les classes d'actifs. En février, les bons résultats des États-Unis et l'inflation persistante ont réveillé les craintes d'un resserrement monétaire durable de la part de la Fed. Mars s'est caractérisé par les difficultés financières des banques régionales américaines et du Crédit suisse, ce qui a déclenché une nouvelle réduction des positions optimistes sur les segments High Yield des marchés émergents (EM-HY) et des sorties de classes d'actifs. Mais les autorités ont réagi rapidement et de façon décisive mi-mars, stoppant ainsi la contagion aux marchés à risque.

En Équateur, un référendum constitutionnel proposé par le Président Lasso (favorable aux réformes) a échoué, déclenchant des motions de destitution et entraînant une nouvelle crise politique dans le pays. Les élections présidentielles au Nigéria se sont soldées par la victoire du candidat de l'Establishment (Tinubu).

Le T2 a dégagé une performance similaire à celle du T1 (+2,2 %), mais avec un renversement de tendance entre les taux et les spreads. En effet, les spreads des pays émergents ont diminué de 52 points de base, tandis que les bons du Trésor américain à 10 ans ont augmenté de 37 points de base. Au cours du trimestre, les thèmes d'investissement sont restés volatils d'un mois sur l'autre. La stabilisation du sentiment des marchés après la crise bancaire régionale de mars définit bien le mois d'avril. En mai, les rendements des bons du Trésor américain ont augmenté, car les chiffres du marché du travail restent étonnamment résistants malgré l'augmentation cumulée de 500 points de base du taux des fonds fédéraux. En juin, les taux de base ont continué à augmenter, mais ces mouvements ont été largement compensés par la performance des crédits en difficulté des pays émergents, grâce à l'optimisme suscité par la finalisation des restructurations de la dette des pays émergents et à l'augmentation de l'aide du FMI.

Les écarts de performance entre les pays de la zone euro se sont confirmés, les titres HY - High Yield (4,1 %) surperformant les titres IG - Investment Grade (0,5 %). Les crédits notés CCC ont enregistré une performance de 16,9 % en juin et de 21,2 % sur le trimestre ; le Pakistan, l'Ukraine et l'Argentine ont affiché les rendements les plus élevés, alors que le Koweït, la Pologne et l'Inde ont réalisé les rendements les plus faibles.

Les valorisations équatoriennes ont progressé en avril après l'annonce d'un accord d'échange de dette (dette-nature) destiné à soutenir les efforts de préservation des îles Galápagos. Le Gabon a été le deuxième pays émergent, après l'Équateur en 2023, à annoncer son intention de réaliser un échange de dette (dette-nature) à hauteur de 500 millions d'USD et de remplacer les euro-obligations par un financement concessionnel de l'organisation à but non lucratif The Nature Conservancy (TNC), implantée aux États-Unis, en échange d'un engagement en faveur de la préservation de l'environnement marin.

En Turquie, l'opposition a perdu face au Président Erdogan et à son parti AK (défaite qui a provoqué une correction des actifs et de la livre turque, puisque certains acteurs du marché s'attendaient à un changement de gouvernement). Les spreads de crédit turcs se sont stabilisés avec la nomination d'un Ministre des Finances et d'un Gouverneur de la Banque Centrale pragmatiques, chargés d'inverser les politiques monétaire et fiscale, qui étaient d'une souplesse insoutenable.

Rapport du Conseil d'Administration

Candriam Sustainable Bond (suite)

Marchés émergents (suite)

Alors que le FMI a approuvé en mai un mécanisme renforcé de crédit destiné au Ghana, d'un montant de 3 milliards d'USD et d'une durée de 3 ans (levant les incertitudes liées à un accord anticipé de restructuration de la dette), la Zambie a conclu un accord avec ses créanciers du secteur public en juin. D'autres pays en difficulté, qui avaient des restructurations de dette en attente (comme le Sri Lanka) ou qui attendaient l'approbation du Conseil d'administration du FMI (comme le Pakistan et la Tunisie) se sont également redressés à la suite de cette nouvelle.

Les obligations argentines ont rebondi en juin suite au choix surprise du candidat aux élections présidentielles pour le parti péroniste en place, Sergio Massa, homme politique expérimenté et Ministre de l'économie depuis juillet 2022. Il n'était pas parvenu à stabiliser l'inflation ou le taux de change depuis sa nomination au poste de Ministre, mais il était perçu comme un homme politique moins idéologique que les Kirchner.

Le T3 est le seul trimestre durant lequel cette classe d'actifs a enregistré une performance négative, à -2,2 %. La performance positive des spreads, comme au deuxième trimestre, a été insuffisante pour compenser l'effondrement massif des rendements du Trésor américain. La Fed a relevé le taux des fonds fédéraux de 25 points de base en juillet et l'a laissé inchangé en septembre, mais a annoncé une nouvelle hausse d'ici la fin de l'année, ainsi qu'un nombre plus limité de réductions l'année prochaine ; elle a par ailleurs indiqué qu'elle adopterait une approche plus restrictive, avec une extrême dépendance aux données. En septembre, une correction importante des taux de fin de cycle s'est produite sous l'effet conjugué de l'attitude résolument restrictive de la Fed, de la position vendeuse du marché du Trésor américain et des préoccupations concernant l'impact des lourds déficits budgétaires et du resserrement quantitatif sur les conditions de l'offre et de la demande, au niveau des bons du Trésor américain à long terme.

Les investissements souverains en devises fortes ont été globalement plus fragiles en raison de la progression des rendements, à quelques exceptions près. Le Gabon a été le pays le plus vulnérable en raison du coup d'État militaire qui s'est déroulé peu de temps après des élections entachées d'irrégularités. Ce coup d'État a entraîné dans son sillage d'autres pays africains, tandis qu'en Amérique latine, l'Équateur s'est redressé après le premier tour des élections, qui a débouché sur un second tour opposant un candidat de droite à Luisa González (ce qui a atténué le risque d'un retour à un gouvernement dirigé de facto par Rafael Correa). Parmi les autres exceptions, citons le Salvador, qui a poursuivi sa progression grâce à une discipline budgétaire stricte et à une forte baisse de la criminalité, ou le Venezuela, qui s'est rassasié à la suite de rumeurs sur un éventuel assouplissement des sanctions en contrepartie de la participation de candidats de l'opposition aux prochaines élections, ou encore le Liban, où le Vice-gouverneur de la Banque centrale a repris la direction de la Banque centrale par intérim. L'Argentine a enregistré des baisses de prix en août après la victoire du candidat libertarien Javier Milei lors des primaires.

Les pays où des restructurations sont imminentées (comme le Ghana et la Zambie) ont réussi à préserver leurs récentes avancées, les scénarios de relance étant orientés à la hausse.

Au T4, la dette des pays émergents (EMD) a enregistré des résultats exceptionnels (+9,2 %). C'est le produit de l'effet combiné des taux positifs et des rendements des spreads. La Fed a maintenu le taux des fonds fédéraux en septembre, novembre et décembre, consciente des risques équilibrés en matière de croissance et d'inflation et compte tenu du resserrement des conditions financières au troisième trimestre. Les propos du Président Powell en novembre et décembre ont témoigné d'une position peu à peu plus « dovish » et d'un FOMC en suspens, en l'absence de résilience du marché du travail américain et sur la base d'une persistance des tensions inflationnistes. Au-delà de cette bonne performance, la dette des pays émergents a fait la une de l'actualité pendant ce trimestre.

En Argentine, le premier tour des élections présidentielles du 22 octobre n'a pas désigné de vainqueur. Le 19 novembre, un second tour contesté a eu lieu, remporté à la surprise générale par Javier Milei, populiste libertaire indépendant peu soutenu par le Congrès. Investi le 10 décembre, le Président élu Javier Milei a promis un ajustement macroéconomique rapide et une rupture nette avec les politiques péronistes des quatre années précédentes. Depuis la fin du mois d'octobre, les obligations argentines ont fait un bond de près de 38 %. Nous pensons que les risques de mise en œuvre sont élevés, car le pays n'a jamais réussi à imposer l'austérité budgétaire nécessaire pour sortir de son cycle de croissance en dents de scie, de ses erreurs en matière de gestion budgétaire, de son inflation galopante et de son historique en matière de défaut.

Après plusieurs années d'une politique étrangère très restrictive à l'égard du Venezuela, l'administration américaine a conclu un accord avec le pays en échange d'un assouplissement des sanctions américaines sur la production et les exportations de pétrole vénézuélien (pour une durée de six mois) et de la levée de toutes les restrictions concernant la négociation sur le marché secondaire des obligations souveraines et de l'entreprise publique PDVSA, avec l'assurance donnée par le régime de Maduro que les élections générales de 2024 permettraient aux partis d'opposition d'être représentés. Le jour même de l'annonce, la valeur des obligations vénézuéliennes et de PDVSA a doublé, partant de niveaux très bas. Quelques semaines plus tard, JP Morgan ajoutait la dette du Venezuela et de PDVSA à son indice de surveillance, dans l'optique d'une éventuelle réintégration dans l'indice de référence relatif à la dette souveraine. En novembre, le gouvernement vénézuélien actuel a accordé de nouvelles garanties aux dirigeants de l'opposition, témoignant ainsi de son engagement en faveur de l'accord conclu.

En octobre, la Zambie, après être parvenue en juin à un accord de restructuration de sa dette à hauteur de 6,3 milliards de dollars avec ses créanciers officiels, a conclu avec un important groupe de créanciers privés un accord de principe sur la restructuration de 3 milliards de dollars d'obligations internationales. Nous pensons que la Zambie a déjà fait une grande partie du travail avec ces deux groupes de créanciers et espérons que l'accord sera finalisé au cours du premier semestre 2024.

Le Sri Lanka est parvenu à conclure un accord de restructuration avec la Chine (son principal créancier bilatéral) et avec d'autres créanciers officiels représentés par l'OCC (Official Creditor Committee), dirigé par le Japon, l'Inde et le Club de Paris. Ce sont là des étapes importantes dans la résolution du défaut du Sri Lanka. Parallèlement, les créanciers privés ont eux aussi progressé dans la restructuration des euro-obligations : ils ont présenté une première proposition au gouvernement sri-lankais en octobre. Elle n'a pas été acceptée par le gouvernement, mais elle constitue une première étape importante dans la résolution du problème de défaut.

Candriam Sustainable

Rapport du Conseil d'Administration

Candriam Sustainable Balanced Asset Allocation - Candriam Sustainable Defensive Asset Allocation

En 2023, nous avons commencé l'année par une prise de risque à contre-courant, en capitalisant sur la hausse des marchés actions d'octobre 2022 à février 2023. Notre surpondération en actions, notamment en Europe et dans les pays émergents, a été favorisée par les bonnes surprises économiques et par la baisse des prix de l'énergie en Europe. En février, nous avons sécurisé nos profits, en réorientant la stratégie vers un positionnement neutre actions/obligations, tout en ménageant certaines nuances régionales.

Du côté des obligations, notre stratégie s'est focalisée sur une augmentation du rendement grâce à une forte confiance dans le crédit de qualité, principalement européen, et à une diversification à travers la dette émergente et les obligations à haut rendement. Une augmentation progressive de la sensibilité aux taux du portefeuille a contribué à relever de manière significative le rendement à échéance du portefeuille obligataire. Des prises de bénéfices ont commencé vers la fin de la période, en particulier aux États-Unis.

En mars et avril, le resserrement monétaire a conduit à des tensions sur les marchés financiers, en particulier dans le secteur bancaire. Le portefeuille est resté neutre en termes d'actions, privilégiant les secteurs défensifs (tels que la santé et la consommation non cyclique).

Fin mai, nous avons réduit notre allocation en actions de la zone euro, du fait de la surperformance dans la région, anticipant une vulnérabilité économique et des tensions géopolitiques. Les marchés boursiers sont restés résistants jusqu'en juillet, mais à la suite du discours de Jerome Powell à Jackson Hole en août, la prudence s'est installée, signalant un souhait de poursuite de la politique restrictive de la Réserve fédérale. Au niveau mondial, les actions ont atteint leur niveau le plus bas à la fin du mois d'octobre.

Un répit est intervenu lorsque plusieurs risques extrêmes se sont rapidement dissipés. Malgré le conflit entre le Hamas et Israël, les cours du pétrole ont baissé, tandis que les rendements obligataires et le dollar américain sont restés stables. Les réactions positives aux annonces moins restrictives des banques centrales américaine et européenne sont venues ponctuer la fin de l'année 2023, avec des performances satisfaisantes pour la plupart des classes d'actifs.

Dans la mesure où les actions sont devenues un peu moins attractives, nous avons privilégié des thèmes spécifiques et préservé une plus grande sensibilité aux taux que l'indice de référence. Nous avons continué à mettre l'accent sur le crédit générateur de rendement (Investment Grade et dette des marchés émergents, notamment). La préférence pour les secteurs de la santé et de la consommation non cyclique s'est maintenue, compte tenu du ralentissement économique mondial et de la fin du resserrement monétaire, qui approche. L'exposition aux actions de la zone euro est restée sous-pondérée, tandis que les allocations aux marchés japonais, émergents et américains sont restées neutres. Nous sommes attentifs à certains segments délaissés tels que l'énergie propre, et nous avons commencé à les intégrer à la stratégie. Pendant une grande partie de la période, le portefeuille avait une allocation en yens japonais ; la devise a commencé à prendre de la plus-value vers la fin de la période.

L'année 2024 devrait offrir une meilleure visibilité, puisque le choc inflation/taux d'intérêt va progressivement s'estomper sous l'effet des données économiques, des politiques monétaires des pays développés (en particulier du Japon) et des politiques fiscales américaine et européenne.

L'incertitude porte désormais davantage sur la date et les conditions des premières baisses de taux qui interviendront.

L'allocation d'actifs continuera à privilégier le rendement, au travers d'actifs à long terme, de crédits de qualité, de la dette émergente, et restera sélective sur les actions.

Candriam Sustainable Equity

Candriam Sustainable Equity Circular Economy - Candriam Sustainable Equity Climate Action - Candriam Sustainable Equity Emerging Markets - Candriam Sustainable Equity EMU - Candriam Sustainable Equity Europe - Candriam Sustainable Equity Europe Children - Candriam Sustainable Equity Europe Small & Mid Caps - Candriam Sustainable Equity Future Mobility

Échelle mondiale

Les marchés actions du monde entier ont commencé l'année sur une note positive. Après une année 2022 terriblement difficile, les investisseurs ont commencé à percevoir un environnement inflationniste plus clément en janvier, favorisant les secteurs sensibles aux taux d'intérêt, notamment les secteurs de la consommation discrétionnaire et des technologies de l'information. La tendance à la hausse du marché a été temporairement interrompue par l'effondrement de la Silicon Valley Bank et par les difficultés du Crédit suisse, mais les investisseurs ont globalement pris acte des chiffres de croissance économique plus favorables que prévu, de l'atténuation des tensions inflationnistes et de la première perspective d'un resserrement monétaire moins prononcé. Les technologies de l'information ont enregistré un bond au cours du trimestre, de même que les services de communication et la consommation discrétionnaire, contrairement aux secteurs défensifs des produits de consommation de base et des soins de santé, qui ont sous-performé.

La forte tendance à la hausse du premier trimestre a persisté au deuxième trimestre. Les secteurs de croissance ont fortement surperformé les actions de valeur en raison d'une croissance économique faible mais raisonnable, d'une plus visibilité accrue sur le resserrement monétaire des banques centrales et du plafonnement des taux d'intérêt à long terme. Le secteur des technologies de l'information a été le plus performant au cours du trimestre, principalement grâce au climat positif entourant le développement de solutions d'intelligence artificielle. Le secteur de la consommation discrétionnaire a également continué à surperformer le marché en général, de manière assez nette. Le secteur financier a quant à lui commencé à se relever de la crise bancaire américaine et de l'incertitude liée au Crédit Suisse, même s'il reste moins performant que l'ensemble du marché boursier. La performance la plus remarquable au cours du trimestre est néanmoins à imputer aux « Magnificent Seven », qui ont encore progressé de 30 %, ce qui a porté leur rendement semestriel à près de 85 %.

Rapport du Conseil d'Administration

Candriam Sustainable Equity (suite)

Échelle mondiale (suite)

Après avoir connu deux trimestres successifs de forte hausse, les marchés boursiers mondiaux ont perdu un peu de terrain au troisième trimestre de l'année. Cette fois-ci, les actions de croissance ont sous-performé, tandis que les actions de valeur ont bien résisté. Cette correction des marchés boursiers s'explique principalement par une forte liquidation des marchés obligataires en raison de la hausse des taux d'intérêt. Les investisseurs ont par ailleurs été effrayés par la forte hausse des prix de l'énergie, consécutive à la baisse de production pétrolière prolongée de la Russie et de l'Arabie saoudite. Sans surprise, le secteur de l'énergie a nettement surperformé au cours du trimestre, progressant même de plus de 10 %. Les secteurs sensibles aux taux d'intérêt (tels que les technologies de l'information et les services aux collectivités) ont été les principaux secteurs sous-performants, tandis que le secteur défensif des soins de santé a surperformé. Les petites entreprises ont continué à sous-performer les grandes capitalisations.

Le dernier trimestre de l'année a commencé sur une fausse note. Après avoir touché le sommet de l'année au troisième trimestre, les investisseurs ont été préoccupés par la hausse des prix du pétrole, par une économie chinoise affaiblie et surtout par un marché du travail américain étonnamment fort. Les investisseurs redoutaient que la bonne tenue du marché du travail ne mette un terme à l'apaisement des pressions inflationnistes, alors que la Réserve fédérale avait déclaré qu'elle relèverait les taux d'intérêt aussi longtemps que nécessaire pour ramener l'inflation vers le niveau recherché. En octobre, la vigueur du dollar américain et la montée en flèche des taux d'intérêt à long terme ont fortement pénalisé les marchés boursiers. Heureusement, le bout du tunnel semblait se dessiner. Il a suffi d'une série d'indices d'inflation plus faible aux États-Unis (et en Europe) pour apaiser les craintes et convaincre les investisseurs que les banques centrales allaient procéder à des baisses préventives des taux. Cette vision a ensuite été confirmée lors de la réunion de décembre du Federal Open Market Committee (FOMC), où les projections les plus récentes laissaient entrevoir au moins trois baisses de taux d'ici 2024. Enfin, les investisseurs ont reçu leur cadeau de fin d'année, les marchés boursiers ayant réalisé un gain de plus de 10 % au cours du dernier trimestre.

Pour résumer l'année 2023, on peut dire qu'elle a été impressionnante pour les marchés boursiers. L'indice MSCI World All Countries Net Return USD a clôturé l'année avec un gain de 22 %. Les marchés développés ont surperformé les marchés émergents de plus de 10 %, ceux-ci ayant été pénalisés avant tout par la baisse marquée du marché boursier chinois. Le secteur des technologies de l'information a été le plus performant tout au long de l'année, porté par la révolution de l'intelligence artificielle et par Magnificent Seven ; il est suivi par le secteur des services de communication et par celui de la consommation discrétionnaire. Le secteur défensif des services aux collectivités, ainsi que ceux des produits de consommation de base et des soins de santé ont sous-performé.

Rapport du Conseil d'Administration

Candriam Sustainable Equity (suite)

Candriam Sustainable Equity Circular Economy - Candriam Sustainable Equity Climate Action - Candriam Sustainable Equity Emerging Markets - Candriam Sustainable Equity EMU - Candriam Sustainable Equity Europe - Candriam Sustainable Equity Europe Children - Candriam Sustainable Equity Europe Small & Mid Caps - Candriam Sustainable Equity Future Mobility (suite)

Europe

Les actions européennes ont terminé le premier trimestre 2023 en hausse sensible, malgré la poursuite des tensions inflationnistes, l'augmentation rapide des taux d'intérêt à long terme et l'agitation au sein du secteur bancaire. Les investisseurs ont accueilli favorablement des chiffres économiques meilleurs que prévu grâce à l'affaiblissement des prix de l'énergie et à la forte résilience du secteur des services. La Banque centrale européenne a dans le même temps mis à jour ses prévisions macroéconomiques : une croissance plus élevée et une inflation moins forte. Dans ce contexte, les actions européennes ont affiché un gain de plus de 10 % au cours du trimestre. Les secteurs des technologies de l'information, de la consommation discrétionnaire et des services de communication ont surperformé l'ensemble du marché européen durant le trimestre. Les secteurs de l'énergie et de l'immobilier ont été les seuls à avoir enregistré une performance trimestrielle négative.

Le marché boursier européen a poursuivi sa tendance à la hausse au deuxième trimestre. Les investisseurs ont continué à porter leur attention sur les chiffres de l'inflation et de l'économie. Ces derniers semblaient résilients de prime abord, mais les perspectives du secteur manufacturier se sont nettement obscurcies. L'inflation sous-jacente est restée supérieure à 5 %, ce qui a incité la Banque centrale européenne à augmenter à nouveau les taux. Le marché européen a progressé d'environ 2,3 %, grâce à la vigueur persistante du secteur des technologies de l'information et au rebond du secteur financier. Les secteurs des services de communication et de l'immobilier ont affiché des résultats particulièrement faibles au cours du trimestre.

Le troisième trimestre a constitué une sorte de rappel à la réalité pour les investisseurs, avec une perte d'environ 2 % sur le marché des actions européennes. Après le fort rebond du premier semestre, la détérioration des chiffres de croissance de la région et la persistance des tensions inflationnistes ont découragé les investisseurs. Les indices PMI sont tombés sous la barre des 50 et l'IPC est resté largement supérieur à l'objectif de la BCE, en raison de la hausse des prix du pétrole et du gaz. Dans ce contexte, le fait que le secteur de l'énergie ait été le plus performant (il a même gagné près de 14 % sur le trimestre) n'a rien de surprenant. Le secteur de l'immobilier s'est lui aussi bien comporté, tandis que les secteurs de la consommation discrétionnaire et des technologies de l'information ont fait l'objet de prises de bénéfices après leur progression impressionnante au cours des six premiers mois de l'année. Le secteur défensif des soins de santé, quant à lui, a aussi surperformé pendant cette période.

Après le rappel à la réalité du troisième trimestre et un mois d'octobre atone (sur fond de rendements galopants et d'incertitude géopolitique accrue), les investisseurs ont reçu leur cadeau de fin d'année. Les actions européennes ont gagné plus de 6,5 % au cours des trois derniers mois de l'année, compensant la totalité des pertes subies lors de la correction de l'été. Les marchés ont salué le ralentissement des chiffres de l'inflation, associé à une économie mondiale certes ralenti, mais résistante, ce qui a renforcé la probabilité d'un assouplissement de la politique des banques centrales dans les pays en voie de développement. Dans ce contexte, le rendement à 10 ans allemand a chuté de près de 90 points de base, soutenant les secteurs sensibles aux taux d'intérêt tels que l'immobilier, les technologies de l'information, les services publics et la consommation discrétionnaire. Le secteur de l'énergie a pris beaucoup de retard, chutant d'environ 4 %, tandis que la performance du secteur de la santé est restée stable au cours du dernier trimestre.

États-Unis

Les actions américaines ont entamé l'année sur une note positive : les indicateurs d'activité (PMI) ont réservé de bonnes surprises, les données du marché du travail sont restées robustes et le rapport sur l'indice des prix à la consommation a mis en évidence l'atténuation des tensions inflationnistes. Le seul risque qui ait temporairement fait son apparition portait sur le secteur bancaire régional des États-Unis. La faillite de la Silicon Valley Bank a été la deuxième plus grande faillite bancaire de l'histoire des États-Unis ; elle a provoqué une liquidation dans ce secteur. Pourtant, la Réserve fédérale a relevé son taux directeur de 25 points de base en mars. Dans ce contexte, les actions américaines ont gagné plus de 7 % au cours du trimestre, grâce notamment aux solides performances des secteurs des technologies de l'information, des services de communication et de la consommation discrétionnaire. Le secteur défensif de la santé a été, avec ceux de la finance et de l'énergie, l'un des principaux secteurs sous-performants.

Le deuxième trimestre a été encore plus dynamique que le premier, grâce notamment aux principales valeurs de croissance (et en particulier aux valeurs liées à la technologie, stimulées par la révolution de l'intelligence artificielle). Les « Magnificent Seven » ont encore accru leur performance de 30 %, ce qui leur a permis d'atteindre une performance semestrielle de près de 85 %. Parallèlement, l'inflation américaine a fortement baissé pour s'établir à environ 4 %, grâce aux effets induits par les cours du pétrole, qui ont fortement baissé. À la fin du deuxième trimestre, les marchés américains ont affiché un gain de 8,6 %. Trois secteurs ont surperformé l'ensemble du marché, à savoir les technologies de l'information, la consommation discrétionnaire et les services de communication. Les secteurs de l'énergie et des services aux collectivités ont été les seuls à avoir enregistré une performance trimestrielle négative.

Après deux trimestres consécutifs positifs, les marchés ont été confrontés à un rappel à la réalité. Les investisseurs se sont inquiétés des chiffres économiques plus faibles que prévu, des craintes concernant des taux « plus élevés, pendant plus longtemps » afin de maîtriser l'inflation galopante et du déficit budgétaire américain, qui est considérable. Cette situation a conduit à une liquidation des marchés obligataires et a donné lieu à des prises de bénéfices sur les actions de croissance les plus chères. Dans ce contexte, les secteurs des services aux collectivités, de l'immobilier, des produits de consommation de base et des technologies de l'information ont été durement pénalisés. Le secteur de l'énergie a nettement surperformé au cours du trimestre, grâce à la hausse des prix de l'énergie qui a suivi la prolongation de la baisse de production pétrolière de la Russie et de l'Arabie saoudite.

Rapport du Conseil d'Administration

Candriam Sustainable Equity (suite)

Candriam Sustainable Equity Circular Economy - Candriam Sustainable Equity Climate Action - Candriam Sustainable Equity Emerging Markets - Candriam Sustainable Equity EMU - Candriam Sustainable Equity Europe - Candriam Sustainable Equity Europe Children - Candriam Sustainable Equity Europe Small & Mid Caps - Candriam Sustainable Equity Future Mobility (suite)

Même s'il avait commencé sur une fausse note, le dernier trimestre de l'année a été le plus performant, avec une progression de près de 12 % de l'indice S&P 500. Les craintes concernant des taux « plus élevés pendant plus longtemps » se sont apaisées lorsque les chiffres de l'inflation ont fléchi. Le marché a commencé à envisager des diminutions de taux d'intérêt en 2024, ce que la banque centrale a confirmé. Au cours de la dernière réunion de l'année, trois baisses de taux ont été envisagées pour 2024 et les valeurs de croissance ont été fortement soutenues. Au-delà du rebond de l'immobilier, qui anticipe des baisses de taux d'intérêt en 2024, le secteur des technologies de l'information a été encore une fois le plus performant, suivi des secteurs de la finance, de l'industrie, de la consommation discrétionnaire et des services de communication. Un seul secteur a terminé l'année avec un rendement trimestriel négatif : celui de l'énergie.

En résumé, l'année a été excellente pour les actions américaines, mais avec beaucoup de dispersion en termes de performance.

Marchés émergents

En 2023, les marchés émergents ont dû en permanence relever de nouveaux défis et faire face à une volatilité persistante. Compte tenu des conditions de liquidité à l'échelle mondiale, la Fed a maintenu une politique de resserrement constante pendant toute l'année, ponctuée de multiples hausses de taux. Confrontées aux conséquences des retraits de dépôts, les banques régionales américaines ont été les premières victimes de la hausse des taux et du resserrement des conditions de liquidité. Ces événements ont eu des retombées sur le secteur financier des pays émergents, dont la plupart ont fini par se relever, car les fondamentaux sont restés intacts.

La Chine a clôturé l'année avec des valorisations historiquement basses, venant contredire les prévisions des investisseurs quant à une reprise vigoureuse après la crise du Covid. Au lieu de cela, le pays a été confronté à de nombreux risques endogènes, et notamment à une crise immobilière généralisée qui a pesé sur la capacité de refinancement des grandes sociétés immobilières (telles qu'Evergrande et Country Garden). De surcroît, le secteur bancaire parallèle sous-réglementé a représenté un autre obstacle à la croissance économique de la Chine. Le gouvernement a commencé à adopter un ensemble de mesures de relance au deuxième semestre, mais ces politiques cumulées n'ont pas été suffisamment concluantes pour raviver l'enthousiasme des investisseurs. Les conflits géopolitiques ont également pesé sur la balance, mais la Chine a tenu un discours plus conciliant à l'égard des États-Unis, apaisant ainsi les tensions. De son côté, l'Inde s'est imposée comme un acteur de premier plan à l'échelle mondiale. Ce pays a réussi à atteindre une croissance économique robuste et à se positionner comme centre de production compétitif sur la chaîne d'approvisionnement mondiale. La trajectoire de développement favorable de l'Inde a été attestée à la fois par sa banque centrale et par des organisations internationales telles que la Banque mondiale, qui ont relevé les prévisions de progression du PIB du pays.

Sur le plan des thématiques, l'intelligence artificielle (IA) s'est affirmée comme la dernière tendance technologique, et la plus influente. Ce phénomène a été particulièrement bénéfique pour Taiwan et pour la Corée du Sud, deux pays fortement exportateurs, qui ont ainsi pu retrouver un certain dynamisme en dépit de la faiblesse de la demande mondiale. En effet, la région Asie-Pacifique couvre largement la chaîne d'approvisionnement en semi-conducteurs et compte plusieurs leaders mondiaux du secteur des puces électroniques. La fin de l'année a aussi donné des signes de reprise face au cycle de ralentissement, avec une production industrielle qui s'est redressée dans la région.

Dans les autres pays de la zone euro, les banques centrales ont démontré leur efficacité à juguler l'inflation. De nombreux pays émergents, notamment en Amérique latine, ont amorcé des cycles de réduction des taux et d'assouplissement plus rapidement que les marchés développés. L'économie brésilienne est restée résiliente malgré les inquiétudes suscitées par la tenue des élections ; quant au Mexique, il a pu profiter de l'effet de délocalisation à proximité des États-Unis. Dans les pays émergents d'Europe, une reprise a aussi été observée en Pologne et en Grèce.

Le chapitre final, en décembre, a apporté une nouvelle dimension au scénario observé. Après une période de hausse et de stagnation, la Fed a finalement adopté une position plus accommodante en matière de politique des taux, annonçant un pic attendu du cycle de hausse et une baisse potentielle des taux en 2024. Ce revirement bienvenu a stimulé les performances des marchés de toutes les zones géographiques. Certaines questions subsistent toutefois, notamment celle du déficit persistant de la dette des États-Unis. La volatilité a été renforcée par les conflits regrettables qui ont éclaté autour de la mer Rouge. Les poches de matières premières ont donc connu des mouvements importants et la chaîne d'approvisionnement mondiale, déjà sous pression, a traversé une période délicate.

Globalement, l'année 2023 restera marquée par des écarts importants en termes de performance de marché dans les pays émergents. Les marchés des pays émergents (hors Chine) ont fait preuve d'une grande résilience en suivant les gains des marchés mondiaux, alors que les inquiétudes liées au ralentissement en Chine ont pesé sur les rendements des actions chinoises.

Candriam Sustainable Equity Japan

Ce premier trimestre a commencé sur fond de spéculations autour de la succession du gouverneur de la BoJ, d'espoirs de nouveaux changements de politique et d'une réouverture de la Chine plus rapide que ce qui était prévu. À ce moment-là, les valeurs financières se sont renforcées, les investisseurs se positionnant par rapport à un éventuel changement de la politique de contrôle de la courbe des rendements (YCC). Ensuite, le mois de mars a connu un changement d'orientation, les négociations salariales et l'IPC témoignant d'une accélération de l'inflation, ce qui a renforcé la confiance des investisseurs dans le changement de cap opéré par le Japon. Mais l'impact des valeurs financières américaines et européennes a créé un environnement plus agité, entraînant un scepticisme à l'égard d'un changement de politique monétaire, ainsi que des mises en garde à l'égard de certains investissements de sociétés financières visant à accroître les rendements (en particulier les assureurs).

Rapport du Conseil d'Administration

Candriam Sustainable Equity Japan (suite)

Le deuxième trimestre a débuté et terminé en hausse, le NKY clôturant à un niveau dépassant Y33k pour la première fois depuis plus de 20 ans. La performance de ce trimestre a été alimentée par l'effet de levier de la consommation intérieure, de l'augmentation des entrées et des hausses de salaires en cours, ainsi que par les attentes d'un affaiblissement prolongé de l'USDJPY, les espoirs continus de changements dans la politique de la BoJ, l'ajustement/la suppression de la politique YCC et, enfin, les réformes de la Bourse de Tokyo (le TSE). Le Japon a été le marché boursier le plus performant en devise locale, à la fois au deuxième trimestre (+ 14 %) et au premier semestre (+ 23 %). Le Yen s'est affaibli par rapport aux autres grands partenaires commerciaux, car les taux d'intérêt sont restés bas au Japon ; par ailleurs, la Bank of Japan (BoJ) a maintenu sa politique de contrôle de la courbe des rendements afin d'ancrer les rendements des obligations d'État, alors que les taux d'intérêt ont augmenté dans la plupart des autres pays. Cette faiblesse du Yen a favorisé les actions japonaises, qui réalisent pour bon nombre d'entre elles une part importante de leurs bénéfices à l'étranger.

La performance a été manifeste au troisième trimestre, où la valeur a surpassé la croissance (MSCI Japan Value : +14 % de surperformance par rapport à la croissance). La hausse des cours du pétrole et de l'USDJPY ont été des facteurs clés, pendant que le « thème du changement de la politique de la BoJ » occupait toujours le devant de la scène pour les investisseurs japonais. La politique YCC de la BoJ a été modifiée en juillet, ce qui a porté la limite supérieure du taux à 10 ans à 100 points de base. L'IPC de base de la BoJ a atteint 3,8 % en septembre (12e mois consécutif au-dessus de 2 %) et l'USDJPY s'est rapproché de 150 (contre 144 à la fin du 2e trimestre), tandis que des hausses de taux de la Fed restent envisagées et que la BoJ maintient sa position « dovish ». Enfin, le PIB du 2e trimestre (+4,8 % sur une base annualisée) a été dynamisé par les exportations nettes, tandis que la consommation et les dépenses d'investissement ont légèrement ralenti.

Bien que la BoJ ait modifié sa politique YCC à la fin du mois d'octobre, en y introduisant une plus grande « flexibilité » (jusqu'à 1 %) comme limite supérieure pour le taux à 10 ans, ce changement a constitué un pic pour les rendements et a mis fin à l'opération « Value ». La Fed tenait les rênes avec un message plus « dovish » de la part de Jerome Powell début novembre, soulignant des « progrès assez conséquents » en matière de baisse de l'inflation, suivi d'une série d'autres données (UR d'octobre, IPC, ventes de logements existants, etc.). Début décembre, la BoJ a envoyé des messages contradictoires aux médias : d'un côté, le député Himino a déclaré que la normalisation de la politique aurait un impact négatif modéré sur l'économie, et d'un autre le Gouverneur Ueda a annoncé une « fin d'année encore plus difficile »... mais en définitive, aucun changement n'a été apporté aux paramètres de la politique ou à la déclaration de décembre, laissant ainsi apparaître un biais d'assouplissement et le maintien de la stratégie de croissance/défensive.

En 2023, le fonds a réalisé une performance brute de 24,08 % (en JPY), sous-performant son indice de référence de 448 points de base. Le MSCI Japan NR a progressé de 28,56 %*.

La hausse du marché boursier japonais a été largement alimentée par les grandes capitalisations. Cette situation s'explique principalement par le fait que les investisseurs étrangers ont acheté des indices de contrats à terme et des actions liquides de grandes capitalisations. L'abandon des tendances d'investissement découlant de la pandémie a également joué un rôle. En effet, l'incertitude suscitée par la pandémie a poussé les investisseurs en actions à se replier sur les valeurs plus sûres des grandes entreprises.

En moyenne, le portefeuille était légèrement sous-pondéré en ce qui concerne les grandes valeurs et légèrement surpondéré en ce qui concerne les plus petites. Plusieurs raisons expliquent cette orientation. Tout d'abord, nous nous efforçons d'offrir une exposition diversifiée aux actions sans toutefois focaliser le portefeuille sur un nombre limité d'actions de sociétés à forte capitalisation. Deuxièmement, certaines grandes capitalisations (telles que Mitsubishi UFJ Financial Group, Keyence Corporation et Shin-Etsu Chemical) ont été exclues du portefeuille, du fait de leur faible score dans l'analyse ESG réalisée par Candriam. Troisièmement, les petites entreprises sont en général moins bien évaluées et offrent un meilleur potentiel de surperformance à long terme.

Cette orientation vers les petites valeurs, ainsi que l'exclusion de certaines grandes capitalisations en raison de leur faible performance ESG, représentent l'essentiel des différences de performance du portefeuille par rapport à l'indice de référence.

*Les informations sur la performance brute présentées ne tiennent pas compte de la déduction des commissions et des frais associés aux fonds ou comptes sous-jacents ; les résultats d'investissement nets de commissions et de frais sont donc inférieurs aux résultats bruts présentés. Le paiement de commissions et de frais réels diminue les rendements. L'effet composé de ces commissions et frais doit être pris en compte dans l'examen des rendements.

Rapport du Conseil d'Administration

Candriam Sustainable Equity Quant Europe

En Europe, malgré l'accroissement rapide des taux d'intérêt et l'agitation dans le secteur bancaire en mars, l'activité économique a également surpris à la hausse, soutenue tout au long du premier trimestre par la chute des prix de l'énergie et par la résilience de l'activité des services. Sur le plan de l'inflation, bien que l'IPC global ait continué à diminuer tout au long du trimestre (tombant de 9,2 % en glissement annuel en décembre à 8,5 % en février), l'inflation sous-jacente a augmenté (passant de 5,2 % à 5,6 %) au cours de la même période. Avec une croissance plus résiliente que prévu et une inflation sous-jacente obstinément élevée, la Banque centrale européenne (BCE) a augmenté son taux de dépôt de 50 points de base en mars, malgré les turbulences bancaires causées par l'effondrement de la Silicon Valley Bank aux États-Unis et les problèmes qui en ont découlé pour le Crédit suisse en Europe. Malgré l'impact sur les actions bancaires en mars, les actions européennes ont surperformé au cours du premier trimestre, affichant une performance légèrement supérieure à 10 %. L'économie britannique a elle aussi été plus performante que prévu depuis le début de l'année. Les actions britanniques ont sous-performé les actions mondiales au cours du trimestre, mais ont néanmoins généré un peu plus de 3 %. La Bank of England (BoE) a relevé son taux directeur de 25 points de base en mars, le portant à 4,25 %. Et elle n'exclut pas un nouveau resserrement en cas de besoin, pour faire baisser l'inflation.

Au cours du second semestre, la Bank of England a rapidement relevé les taux d'intérêt à 5 %. La banque a maintenu ses prévisions, soulignant que « si des signes de tensions plus persistantes apparaissaient, un nouveau resserrement de la politique monétaire deviendrait indispensable ». Une inflation sous-jacente supérieure à 5 % a conduit la Banque centrale européenne à relever les taux à 3,5 % et à souligner que le chemin à parcourir était encore long.

Au troisième trimestre, l'économie européenne semble de plus en plus exposée à la stagflation, car les données relatives à la croissance dans cette zone géographique se détériorent, tandis que les niveaux d'inflation globaux restent élevés. Le marché britannique a été le deuxième plus performant au niveau géographique avec un rendement de 1,9 %, dû en partie à son orientation relativement importante en faveur du secteur de l'énergie, conforté par une forte hausse des cours du pétrole. Les rendements ont été négatifs dans toutes les autres zones géographiques, ce qui a conduit à des rendements de 13,1 % et 10,0 % respectivement depuis le début de l'année pour les États-Unis et l'Europe (hors Royaume-Uni).

Les actions européennes ont enregistré des rendements élevés de 6,7 % au cours du dernier trimestre, le principal facteur de sous-performance par rapport aux États-Unis ayant été la composition de l'indice plutôt que la sous-performance au niveau de chaque secteur pris séparément. Le marché britannique des actions a accusé un retard en raison d'une exposition plus importante aux valeurs énergétiques peu performantes et à la force de la livre sterling, pour terminer le trimestre sur une hausse de 3,2 %. La BCE a maintenu les taux au même niveau et a annoncé une diminution des réinvestissements PEPP au deuxième semestre 2024. Les commentaires de Christine Lagarde lors de la réunion de décembre étaient « hawkish » (restrictifs) concernant les taux, nourris en cela par des prévisions révisant à la hausse les salaires, les coûts unitaires de main d'œuvre et l'inflation sous-jacente. La question de la baisse des taux n'a pas été évoquée et Christine Lagarde a insisté sur le fait que la BCE ne pouvait pas encore relâcher sa vigilance.

En 2023, le fonds a réalisé une performance de 16,91 % (brute, en EUR), surperformant son indice de référence de 107 points de base. Le MSCI Europe NR a terminé la période en hausse de 15,84 %.

Le portefeuille a bénéficié de l'excellente performance de plusieurs entreprises présentant des critères ESG et financiers convaincants. Parmi les noms qui ont le plus contribué au résultat excédentaire, on retrouve 3i Group, un investisseur international spécialisé dans le capital-investissement, les infrastructures et la gestion de la dette ; Stellantis, une société néerlandaise active dans la conception, la fabrication et la vente de véhicules ; et Novo Nordisk, une société pharmaceutique danoise qui a enregistré une augmentation des ventes de ses médicaments contre le diabète et l'obésité en 2023.

En revanche, les sociétés Diageo et British American Tobacco n'ont pas été retenues dans le portefeuille compte tenu de leur implication dans des activités controversées. Néanmoins, elles ont nettement sous-performé l'indice MSCI Europe, contribuant ainsi positivement au résultat excédentaire du portefeuille.

*Les informations sur la performance brute présentées ne tiennent pas compte de la déduction des commissions et des frais associés aux fonds ou comptes sous-jacents ; les résultats d'investissement nets de commissions et de frais sont donc inférieurs aux résultats bruts présentés. Le paiement de commissions et de frais réels diminue les rendements. L'effet composé de ces commissions et frais doit être pris en compte dans l'examen des rendements.

Rapport du Conseil d'Administration

Candriam Sustainable Equity US

Compte tenu du ralentissement de l'inflation et de l'agitation autour de la Silicon Valley Bank, le Federal Open Market Committee (FOMC) a voté à l'unanimité une augmentation du taux des fonds fédéraux de seulement 25 points de base en mars, pour atteindre une plage cible de 4,75 % à 5,00 %. Malgré l'impact sur les actions bancaires, le S&P 500 a progressé en mars, à la faveur des rendements élevés des valeurs de croissance qui ont été stimulées par la baisse des rendements obligataires. Au cours du premier trimestre, le S&P 500 a enregistré une augmentation de 7,5 %. Les bons du Trésor américain ont affiché un rendement de 3 % au cours du trimestre.

Les actions américaines ont représenté le deuxième marché le plus performant en devise locale, avec une hausse de 9 % au deuxième trimestre. Ce gain est presque entièrement dû aux grandes valeurs de croissance, telles que les « méga-capitalisations technologiques » que l'on rencontre de manière disproportionnée aux États-Unis (le reste du marché affichant des rendements beaucoup plus modestes depuis le début de l'année). L'inflation américaine a nettement diminué, passant d'un pic de 9 % à 4 %, principalement en raison des effets de base favorables des cours du pétrole (qui ont atteint un sommet en juin dernier puis sont redescendus nettement depuis).

Les données économiques du troisième trimestre ont révélé une détérioration des perspectives de croissance. Bien que les principales banques aient maintenu leurs taux (Fed, BoE et SNB) ou annoncé des hausses attendues (BCE) pendant la réunion de politique générale de septembre, les messages étaient plutôt « hawkish », les principales banques centrales ayant toutes rappelé que le travail n'était pas terminé et que les taux resteraient élevés jusqu'à ce que des signes clairs démontrent que l'inflation est sous contrôle.

Le S&P 500, qui privilégie la croissance, a été l'indice boursier le plus performant au dernier trimestre 2023, avec un rendement total de 11,7 %, soit sa meilleure performance trimestrielle depuis trois ans. Les rendements de l'ensemble de l'année ont été dominés par les « Magnificent Seven » (valeurs technologiques et d'intelligence artificielle) qui ont contribué à hauteur d'environ 80 % aux rendements de l'indice. À l'approche du dernier trimestre de 2023, le marché était persuadé que les banques centrales avaient arrêté de relever les taux d'intérêt, mais il restait prudent quant à la durée pendant laquelle ces taux demeuraient à des niveaux restrictifs. Il a suffi d'une série d'indices d'inflation plus faible aux États-Unis et en Europe pour apaiser les craintes ; les investisseurs ont commencé à s'attendre à des baisses préventives de la part des banques centrales. Cette vision a ensuite été confirmée lors de la réunion de décembre du Federal Open Market Committee (FOMC), où les projections les plus récentes laissaient entrevoir trois baisses pour 2024. Le sentiment du marché a été encore plus fluctuant que d'habitude en 2023, alternant entre craintes de récession au début de l'année, résilience de la croissance pendant l'été, hausse prolongée à l'automne, pour terminer l'année en mettant l'accent sur les futures baisses de taux d'intérêt. La baisse de l'inflation et les messages « dovish » de la Réserve fédérale ont dissipé les inquiétudes du trimestre précédent. La corrélation positive entre actions et obligations a joué en faveur des investisseurs, les actions et les obligations évoluant en parallèle. Mais comme le marché a estimé qu'il y aurait environ deux fois plus de réductions que ne l'indique le graphique à points de la Réserve fédérale, et qu'un atterrissage en douceur fait désormais consensus, de nombreux secteurs du marché entament l'année 2024 sur des bases idéales. Les investisseurs suivront de près l'évolution de cette situation au cours de cette nouvelle année.

En 2023, le fonds a réalisé une performance brute de 23,50 % (en USD), sous-performant son indice de référence de 218 points de base. Le S&P 500 NR a terminé la période en hausse de 25,68 %.

Les hausses de l'ensemble du marché ont été largement portées par les sociétés appelées les « Magnificent Seven », qui englobent Apple, Microsoft, Alphabet, Amazon, Nvidia, Meta Platforms et Tesla. En 2023, elles ont représenté environ deux tiers des gains du S&P 500. Nvidia se place en tête du groupe, avec un gain d'environ 239 %. Les actions des « Magnificent Seven » ont largement profité de l'essor de l'intelligence artificielle et des grands modèles de langage tels que Chat GPT. Ces sociétés pèsent au total 28 % de l'indice S&P500. En raison de cette concentration très importante et de la surperformance de ce groupe d'actions, seules 26 % des actions de l'indice ont surperformé le S&P500 en 2023. Le portefeuille était exposé à la plupart des actions des « Magnificent Seven », à l'exception d'Amazon et de Meta. Amazon présente un score ESG faible, car l'entreprise est confrontée à des enjeux importants en matière de droits de l'homme, de droits du travail et de gouvernance. Meta Platforms, de son côté, est confrontée à plusieurs problèmes relatifs à la gestion controversée des données des consommateurs ; la société a également fait l'objet de nombreux scandales et pourrait être impliquée dans d'autres controverses en matière de contenu à l'avenir. Les absences d'Amazon et de Meta ont contribué négativement au résultat excédentaire de la stratégie.

Les plus grandes entreprises du secteur de l'énergie (telles qu'Exxon Mobil et Chevron) ont été exclues du portefeuille en raison de leurs faibles scores en matière de climat. Ces actions accusent un retard important par rapport au marché en 2023. Cet écart a eu un effet positif sur le résultat excédentaire du portefeuille.

*Les informations sur la performance brute présentées ne tiennent pas compte de la déduction des commissions et des frais associés aux fonds ou comptes sous-jacents ; les résultats d'investissement nets de commissions et de frais sont donc inférieurs aux résultats bruts présentés. Le paiement de commissions et de frais réels diminue les rendements. L'effet composé de ces commissions et frais doit être pris en compte dans l'examen des rendements.

Rapport du Conseil d'Administration

Candriam Sustainable Equity World

De manière générale, la croissance mondiale a surpris positivement au cours du premier trimestre 2023. Cette croissance plus soutenue est sans doute bien illustrée par le rebond des enquêtes de conjoncture de l'indice composite PMI (Purchasing Managers' Index) aux États-Unis et en Europe depuis le début de l'année. La baisse des cours de l'énergie et du pétrole a probablement joué un rôle important dans l'amélioration du climat des affaires, ainsi que la réouverture de la Chine. Dans ce contexte, les actions des marchés développés ont enregistré une performance de près de 8 % au cours du premier trimestre.

Après une année 2022 difficile, le premier semestre 2023 a été plus clément pour les portefeuilles équilibrés. Les actions des marchés développés ont enregistré une performance de 15 % depuis le début de l'année et de 7 % sur le deuxième trimestre. Sur les marchés boursiers, les grandes valeurs de croissance ont fortement progressé, affichant un rendement de 27 % depuis le début de l'année et de 11 % au cours du deuxième trimestre. La bonne performance des actions depuis le début de l'année a été facilitée par le fait que la hausse anticipée du chômage dans les pays développés ne s'était pas encore concrétisée, et par un certain optimisme quant à la possibilité d'une forte baisse de l'inflation américaine, sans augmentation du taux de chômage.

Après une reprise vigoureuse des actions au premier semestre 2023, le troisième trimestre a en quelque sorte été un rappel à la réalité. Les actions des marchés développés ont chuté de 3,4 % sur le trimestre, ce qui a ramené les rendements depuis le début de l'année à un niveau (encore élevé) de 11,6 %. Les tensions sur les actifs à risque sont en partie imputables au repli des marchés obligataires mondiaux, l'indice de référence global des obligations ayant reculé de 3,6 % au troisième trimestre. Les obligations et les actions ont chuté simultanément, et ce sont les matières premières qui ont enregistré la meilleure performance, avec un rendement de 4,7 % au cours du troisième trimestre, reflétant ainsi la dynamique de marché de 2022. En résumé, la période de prospérité des actifs à risque au cours du premier semestre de l'année ne devrait pas se poursuivre indéfiniment dans un contexte de ralentissement de l'économie mondiale. Malgré la résilience de l'activité économique observée depuis le début de l'année, les risques de récession restent élevés et tous les segments du marché ne semblent pas correctement positionnés pour un tel scénario.

Le dernier trimestre 2023 a été un véritable cadeau de Noël pour les investisseurs. Après un léger rappel à la réalité au troisième trimestre, les trois derniers mois de l'année ont été caractérisés par des rendements élevés dans la plupart des grandes catégories d'actifs. L'enthousiasme croissant suscité par la perspective que les banques centrales réduisent les taux d'intérêt plus tôt que prévu en 2024 s'est traduit par un « rebond de tout ou presque ». Les actions des marchés développés ont généré un rendement total de 11,5 %, et les obligations mondiales un rendement de 8,1 %. En effet, les marchés boursiers mondiaux se sont inversés au troisième trimestre. Les marchés des titres à revenu fixe ont affiché des résultats positifs dans l'ensemble. Les perspectives de baisses anticipées de la part des banques centrales, le resserrement des spreads et l'affaiblissement du dollar ont favorisé les rendements positifs. Enfin, les indices mondiaux ont profité d'un effet de levier supplémentaire : l'affaiblissement du dollar a stimulé les rendements en USD du crédit Investment Grade et des obligations indexées sur l'inflation.

En 2023, le fonds a réalisé une performance brute de 18,24 % (en EUR), sous-performant son indice de référence de 136 points de base. Le MSCI World NR a terminé la période en hausse de 19,60 %.

Les hausses de l'ensemble du marché ont été largement portées par les sociétés appelées les « Magnificent Seven », qui englobent Apple, Microsoft, Alphabet, Amazon, Nvidia, Meta Platforms et Tesla. Nvidia se place en tête du groupe, avec un gain d'environ 239 %. Les actions des « Magnificent Seven » ont largement profité de l'essor de l'intelligence artificielle et des grands modèles de langage tels que Chat GPT. Ces sociétés pèsent au total 19 % environ de l'indice MSCI World. En raison de cette concentration très importante et de la surperformance de ce groupe d'actions, seul un tiers des actions de l'indice ont surperformé le MSCI World en 2023. Le portefeuille était exposé à la plupart des actions des « Magnificent Seven », à l'exception d'Amazon et de Meta. Amazon présente un score ESG faible, car l'entreprise est confrontée à des enjeux importants en matière de droits de l'homme, de droits du travail et de gouvernance. Meta Platforms, de son côté, est confrontée à plusieurs problèmes relatifs à la gestion controversée des données des consommateurs ; la société a également fait l'objet de nombreux scandales et pourrait être impliquée dans d'autres controverses en matière de contenu à l'avenir. Les absences d'Amazon et de Meta ont contribué négativement au résultat excédentaire de la stratégie.

Les plus grandes entreprises du secteur de l'énergie (telles qu'Exxon Mobil et Chevron) ont été exclues du portefeuille en raison de leurs faibles scores en matière de climat. Ces actions accusent un retard important par rapport au marché en 2023. Cet écart a eu un effet positif sur le résultat excédentaire du portefeuille.

*Les informations sur la performance brute présentées ne tiennent pas compte de la déduction des commissions et des frais associés aux fonds ou comptes sous-jacents ; les résultats d'investissement nets de commissions et de frais sont donc inférieurs aux résultats bruts présentés. Le paiement de commissions et de frais réels diminue les rendements. L'effet composé de ces commissions et frais doit être pris en compte dans l'examen des rendements.

Rapport du Conseil d'Administration

Candriam Sustainable Money Market Euro

Contexte de marché

1^{er} trimestre

L'année a commencé sur un sentiment de risque positif favorisé par l'amélioration des perspectives économiques mondiales, dans un contexte marqué par la résilience de l'Europe pendant la crise énergétique, la réouverture de la Chine et l'atténuation des pressions inflationnistes. Les anticipations du marché, qui tablaient sur un net ralentissement de l'inflation, s'inscrivaient à l'exact opposé des perspectives de la Banque centrale européenne (BCE), qui estimait que le pic de l'inflation n'avait peut-être pas encore été atteint, tandis que la Réserve fédérale américaine (Fed) jugeait de son côté que les taux devaient dépasser 5 % et rester à ce niveau pendant un certain temps.

Au cours de leurs réunions de février, aucune des deux banques centrales n'a fait d'effort convaincant pour dissiper ces attentes de marché accommodantes. Au lieu de cela, les marchés ont assisté à un déferlement de données économiques indiquant une économie résiliente aux États-Unis (mais également dans l'Union européenne (UE)) et l'inflation sous-jacente est restée obstinément élevée des deux côtés de l'Atlantique et s'est accompagnée d'un renforcement de la rhétorique restrictive des banques centrales.

La Fed et la BCE ont toutes deux relevé leurs taux lors de leurs réunions de mars, malgré les turbulences sur les marchés financiers. Les courbes de taux se sont fortement inversées, et les courbes du trésor américain et allemand se sont négociées en dessous de leurs taux de dépôt respectif, les investisseurs ayant intégré la possibilité d'une crise qui forcerait la main des banques centrales.

Dans ce contexte, les marchés des taux sont restés hautement volatils pendant le trimestre et l'Euribor 3 mois et 12 mois a terminé respectivement la période à 3,04 % (+91 pb) et 3,62 % (+33 pb).

2^e trimestre

L'inflation globale a fortement diminué aux États-Unis et au sein de l'UE en raison des effets de base forts dans l'énergie, tandis que l'inflation sous-jacente est restée élevée et, dans certains cas, s'est accélérée. Au cours du trimestre, les dirigeants de la BCE, de la Fed et de la Banque d'Angleterre (BoE) ont partagé le même ton restrictif. À l'inverse, le gouverneur de la Banque du Japon (BoJ) Kazuo Ueda a maintenu un ton plus accommodant. Au lieu de cela, les marchés ont assisté à un déferlement de données économiques indiquant une économie résiliente aux États-Unis et un ralentissement relatif dans l'UE. En Chine, les données sur la croissance de l'activité devraient témoigner des difficultés rencontrées par la Chine pour maintenir son économie sur la bonne voie dans l'optique d'une reprise après le rebond initial constaté dans le sillage de la réouverture post-Covid au premier trimestre.

La Fed et la BCE ont toutes deux relevé leurs taux lors de leurs réunions, malgré les turbulences sur les marchés financiers. Les courbes de taux se sont fortement inversées, et les courbes du trésor américain et allemand se sont négociées en dessous de leurs taux de dépôt respectif, les investisseurs ayant intégré la possibilité d'une crise qui forcerait la main des banques centrales.

Malgré le contexte macroéconomique incertain et la tourmente post-SVB/CSG en mars, la perception du marché s'est progressivement améliorée concernant les banques, comme en témoigne le mois de mai qui est le deuxième mois le plus chargé de l'année après janvier. En ce qui concerne les valeurs non financières, l'activité sur le marché primaire a été plus forte en glissement annuel au premier semestre 2023, tant dans le segment Investment Grade (IG) que dans le segment du haut rendement (High Yield, HY), notamment au deuxième trimestre malgré un démarrage du trimestre en demi-teinte.

Dans ce contexte, les marchés des taux sont restés hautement volatils pendant le trimestre et l'Euribor 3 mois et 12 mois a terminé respectivement la période à 3,57 % et 4,13 %.

3^e trimestre

Sur le trimestre, les données économiques ont continué à présenter un tableau contrasté. Les marchés sont repartis avec des attentes renouvelées autour d'une réorientation de la politique monétaire, attentes qui ont été réduites à néant au cours des mois suivants. La FED a relevé les taux en juillet, ce qui a fait passer le plancher à 5,25 %, niveau le plus élevé depuis 2007. Au mois de septembre, la BCE a augmenté les taux, amenant le taux de dépôt à 4 %, le plus haut niveau jamais atteint depuis le début de son mandat. Le cycle de resserrement a été sans précédent, non seulement en termes de niveau absolu, mais aussi de rythme de relèvement des taux par les deux banques centrales sur une période courte d'environ 16 mois.

A-t-on atteint le sommet ? C'est probable, mais la priorité est désormais moins le niveau des taux que la durée pendant laquelle ils resteront élevés. En revanche, c'est bien connu, le diable se cache dans les détails : car tout dérapage de l'inflation remettant en cause l'objectif d'inflation ramènerait les hausses de taux à l'ordre du jour. Les courbes de taux se sont pentivées à l'échelle mondiale, les marchés se résignant au fait que les banques centrales puissent continuer à appliquer une politique monétaire restrictive en reportant les baisses de taux dans le temps.

Les résultats financiers ont été bien accueillis, puisque les entreprises ont, pour la plupart, dépassé les attentes. Cependant, les entreprises ont eu plus de mal à répercuter la hausse des prix sur les consommateurs : en effet, l'élasticité des prix a atteint des niveaux moyens historiques. La pression sur les prix devrait s'atténuer d'ici la fin de l'année, mais il est probable que la dispersion augmente quand nous découvrons quelles entreprises disposent réellement d'un pouvoir de fixation des prix et sont à même défendre les leurs marges.

Dans ce contexte, les marchés des taux sont restés hautement volatils pendant le trimestre et l'Euribor 3 mois et 12 mois a terminé la période à 3,95 % et 4,23 %, respectivement.

Candriam Sustainable

Rapport du Conseil d'Administration

Candriam Sustainable Money Market Euro (suite)

Contexte de marché (suite)

Au début du trimestre, les courbes de taux ont continué à se pentifier, avant que les responsables de la FED ne fassent remarquer que le resserrement des conditions financières et la forte augmentation des rendements réels à long terme leur avaient permis de faire une partie du travail. Au cours du trimestre, une succession de données économiques a révélé que la diffusion de la politique monétaire restrictive restait forte de part et d'autre de l'Atlantique. Les banques ont continué à resserrer le crédit commercial, les ménages ont réduit leurs dépenses discrétionnaires et le marché du travail s'est progressivement refroidi. Les banques centrales préfèrent rester en mode attentiste et laisser le resserrement des conditions de crédit continuer de refroidir l'activité économique et l'inflation, tout en avertissant que même en cas de baisse de l'inflation, il faudra du temps pour que les objectifs soient atteints. D'un autre côté, les investisseurs ont déjà entendu maintes fois le refrain « des taux plus haut, pendant plus longtemps » et les marchés financiers du monde développé se sont fortement ressaisis au cours des derniers mois de 2023, stimulés par la perspective d'une politique monétaire plus souple à mesure que les inquiétudes liées à l'inflation s'évanouissent.

La saison de publication des résultats s'est caractérisée par une grande dispersion, et environ la moitié des entreprises n'a pas répondu aux attentes en matière de résultats. Même si les marges d'exploitation de la majorité d'entre elles ont été supérieures aux attentes, les prévisions sont généralement plus prudentes et les entreprises ont avoué s'inquiéter de plus en plus de leur capacité à préserver leurs marges.

Les marchés des taux sont restés hautement volatils pendant le trimestre et l'Euribor 3 mois et 12 mois a terminé la période à 3,91 % et 3,51 %, respectivement.

Stratégie du compartiment

La structure générale du fonds reste la même : nous maintenons une position neutre sur le crédit et une position défensive sur les taux. Nous continuons à préférer les échéances plus courtes et à privilégier la qualité et la liquidité.

Perspectives du marché

Nous étudions attentivement l'évolution de l'activité économique, les tensions inflationnistes et les répercussions diverses et différées des cycles de hausse des taux sans précédent observés dans le monde entier. Les données économiques et la stabilité financière détermineront probablement les mécanismes de réaction des banques centrales. Et cela alors même que des risques demeurent pour les chaînes d'approvisionnement mondiales : du dérèglement climatique à la géopolitique (Ukraine/Russie, Israël/Palestine, en passant par les risques pour le transport maritime dans la mer Rouge et autres tensions grandissantes. Tous ces facteurs resteront probablement les principaux moteurs des marchés financiers en 2024, et l'incertitude qui les entoure favorisera sans doute une certaine volatilité, les marchés réagissant vivement et dans les deux sens aux nouvelles qui leur parviennent. Nous resterons par conséquent attentifs aux risques de baisse et privilégierons les actifs liquides de grande qualité, tout en continuant à faire preuve de sélectivité dans nos investissements. Nous nous basons toujours sur l'analyse « bottom up » rigoureuse que nous avons développée en interne et nous gardons notre préférence pour les sociétés bien notées et peu endettées

Le Conseil d'administration

Luxembourg, le 28 mars 2024.

Rapport d'audit

Aux Actionnaires de
Candriam Sustainable

Notre opinion

A notre avis, les états financiers ci-joints donnent une image fidèle et sincère de la situation financière Candriam Sustainable et de chacun de ses compartiments (le « Fonds ») au 31 décembre 2023, ainsi que du résultat de leurs opérations et des variations de leurs actifs nets pour l'exercice clôturé à cette même date, conformément aux prescriptions légales et réglementaires du Luxembourg relatives à la préparation et à la présentation des états financiers.

Champ de l'audit

Les états financiers du Fonds comprennent :

- l'état des actifs nets au 31 décembre 2023 ;
- les états des investissements et autres actifs nets au 31 décembre 2023 ;
- l'état des opérations et des variations des actifs nets pour l'exercice clôturé à cette date ; et
- les notes relatives aux états financiers, qui incluent un résumé des principales méthodes comptables.

Fondement de notre opinion

Nous avons effectué notre audit en conformité avec la Loi du 23 juillet 2016 relative à la profession de l'audit (Loi du 23 juillet 2016) et les normes internationales d'audit (ISA) telles qu'adoptées pour le Luxembourg par la Commission de Surveillance du Secteur Financier (CSSF). Les responsabilités qui nous incombent en vertu de la Loi du 23 juillet 2016 et des ISA telles qu'adoptées pour le Luxembourg par la CSSF sont plus amplement décrites dans la section « Responsabilités du Réviseur d'entreprises agréé pour l'audit des états financiers » du présent rapport.

Nous considérons que les éléments probants que nous avons obtenus dans le cadre de notre audit constituent une base suffisante et appropriée pour fonder notre opinion.

Nous sommes indépendants du Fonds conformément au Code de déontologie des professionnels comptables, y compris les normes internationales d'indépendance, publié par le Conseil des normes internationales de déontologie comptable (Code IESBA), tel qu'adopté pour le Luxembourg par la CSSF, ainsi qu'aux exigences éthiques pertinentes dans le cadre de notre audit des états financiers. Nous avons satisfait à nos responsabilités éthiques en vertu de ces exigences.

Autres informations

Le Conseil d'administration du Fond est responsable des autres informations. Les autres informations se composent des renseignements repris dans le rapport annuel, à l'exclusion des états financiers et de notre rapport d'audit y afférent.

Notre opinion vis-à-vis des états financiers ne couvre pas les autres informations, à l'égard desquelles nous n'exprimons aucune forme de conclusion d'assurance.

S'agissant de l'audit des états financiers, notre responsabilité consiste à lire les autres informations mentionnées ci-dessus et, ce faisant, à déterminer si celles-ci sont substantiellement incompatibles avec les états financiers ou avec les connaissances que nous avons obtenues dans le cadre de notre audit, ou si elles semblent autrement comporter des anomalies significatives. Si, au terme de notre travail, nous arrivons à la conclusion que les autres informations comportent des anomalies significatives, nous sommes tenus d'en faire part. Nous n'avons rien à signaler à cet égard.

Responsabilité du Conseil d'administration du Fond à l'égard des états financiers

Le Conseil d'administration du Fonds est responsable de la préparation et de la présentation fidèle des états financiers, conformément aux exigences légales et réglementaires du Luxembourg dans ce domaine. Il lui incombe également de procéder au contrôle interne qu'il juge approprié afin de permettre la préparation d'états financiers exempts de toute anomalie significative, qu'elle provienne d'une fraude ou d'une erreur.

Dans le cadre de l'établissement des états financiers, il incombe au Conseil d'administration du Fonds d'évaluer la capacité du Fonds et de chacun de ses compartiments à poursuivre leurs activités, de communiquer, s'il y a lieu, des informations liées à la continuité des activités et d'appliquer le principe comptable de continuité d'exploitation, à moins qu'il n'ait l'intention de liquider le Fonds, de fermer l'un quelconque de ses compartiments ou de mettre un terme à ses activités, ou qu'il ne puisse objectivement faire autrement.

Responsabilités du réviseur d'entreprises agréé à l'égard de l'audit des états financiers

Notre audit a pour objectif d'obtenir une assurance raisonnable que les états financiers dans leur ensemble ne comportent pas d'anomalies significatives, que celles-ci résultent de fraudes ou d'erreurs, et d'établir un rapport d'audit dans lequel nous faisons part de notre opinion. L'assurance raisonnable est un niveau d'assurance élevé, mais non une garantie qu'un audit effectué conformément à la Loi du 23 juillet 2016 et aux NIA, telles qu'adoptées pour le Luxembourg par la CSSF, permettra toujours de déceler une anomalie significative, le cas échéant. Les anomalies peuvent résulter d'une fraude ou d'une erreur, et elles sont considérées comme significatives si, individuellement ou collectivement, elles sont raisonnablement susceptibles d'influer sur les décisions économiques prises par les utilisateurs sur la base de ces états financiers.

Dans le cadre d'un audit effectué conformément à la Loi du 23 juillet 2016 et aux NIA, telles qu'adoptées pour le Luxembourg par la CSSF, nous exerçons un jugement professionnel et faisons preuve d'esprit critique tout au long de l'audit. En outre, nous :

- identifions et évaluons les risques d'anomalies significatives dans les états financiers, qu'elles résultent de fraudes ou d'erreurs, définissons et appliquons des procédures d'audit adaptées à ces risques et recueillons des éléments probants suffisants et appropriés pour étayer notre opinion. Le risque de ne pas détecter une anomalie significative résultant d'une fraude est plus élevé que dans le cas d'une anomalie due à une erreur, car la fraude peut impliquer une collusion, une falsification, des omissions intentionnelles, de fausses déclarations ou le contournement du contrôle interne ;

- appréhendons les aspects du contrôle interne pertinents dans le cadre de l'audit afin de concevoir des procédures d'audit appropriées, mais non dans le but d'exprimer une opinion sur l'efficacité du contrôle interne du Fonds ;
- évaluons la pertinence des politiques comptables utilisées et le caractère raisonnable des estimations comptables et des informations connexes fournies par le Conseil d'administration du Fonds ;
- formulons une conclusion quant à savoir si l'application du principe comptable de continuité d'exploitation par le Conseil d'administration du Fonds est pertinente et, à la lumière des éléments probants recueillis, s'il existe une incertitude importante quant aux évènements ou aux conditions susceptibles de remettre en cause la capacité du Fonds ou de l'un de ses compartiments à poursuivre leurs activités. Si nous arrivons à la conclusion qu'il existe une incertitude importante, nous sommes tenus d'attirer l'attention, dans notre rapport d'audit, sur les informations correspondantes figurant dans les états financiers ou, si ces informations ne sont pas pertinentes, de modifier notre opinion. Nos conclusions sont fondées sur les éléments probants recueillis jusqu'à la date du rapport d'audit. Cependant, des conditions ou évènements futurs peuvent amener le Fonds ou l'un de ses compartiments à cesser leurs activités;
- évaluons la présentation générale, la structure et le contenu des états financiers, y compris les informations fournies, et déterminons si les états financiers reflètent les opérations et les événements sous-jacents dans le sens d'une présentation fidèle.

Nous communiquons avec les personnes en charge de la gouvernance en ce qui concerne, entre autres, la portée et le calendrier prévus de l'audit ainsi que les constatations importantes en découlant, s'agissant notamment de tout dysfonctionnement important dans le contrôle interne.

PricewaterhouseCoopers, Société coopérative

Luxembourg, le 5 avril 2024

Autres notes aux états financiers

Note 1 - Généralité

Candriam Sustainable (ci-après la « SICAV ») est constituée en société anonyme de droit luxembourgeois et peut être qualifiée de société d'investissement à capital variable au sens de la Loi. La SICAV est soumise aux dispositions de la partie I de la loi modifiée du 17 décembre 2010 relatives aux Organismes de placement collectif (« OPC »), telle que modifiée, et de la loi du 10 août 1915 sur les sociétés commerciales.

Elle est immatriculée au Registre de Commerce et des Sociétés de Luxembourg sous le numéro B-202950.

La SICAV a été constituée pour une durée illimitée le 21 décembre 2015 par un acte de Me Henri Hellinckx (notaire résidant à Luxembourg), publié dans le « Mémorial C, Recueil des Sociétés et Associations (le « Mémorial ») le 22 janvier 2016. Les Statuts ont été modifiés en dernier lieu le 7 décembre 2020 et les modifications correspondantes ont été publiées dans le Recueil Électronique des Sociétés et Associations (« RESA »). Une version des Statuts coordonnés a été déposée au Registre de Commerce et des Sociétés de Luxembourg.

Le capital de la SICAV est égal, à tout moment, à la valeur de son actif net. Son capital minimum est le minimum légal prévu par la loi (c'est-à-dire 1.250.000 EUR), représenté par des Actions sans valeur nominale et entièrement libérées.

La SICAV se présente sous la forme d'une SICAV à compartiments multiples, ce qui permet aux investisseurs de choisir entre une ou plusieurs stratégies d'investissement en investissant dans un ou plusieurs des compartiments distincts proposés par la SICAV, avec la possibilité de passer d'un compartiment à l'autre. La SICAV est à capital variable, ce qui signifie que, sur demande, les actionnaires peuvent racheter leurs actions aux prix basés sur la valeur nette d'inventaire applicable, comme décrit dans le Prospectus.

Le compartiment Candriam Sustainable Money Market Euro est qualifié de Fonds Monétaire (Money Market Fund ou MMF) et a été approuvé par la CSSF conformément aux dispositions du MMFR et est inscrit sur la liste officielle des OPC en tant que MMF.

Un MMF désigne un OPC ou un de ses compartiments qui sont considérés comme des fonds monétaires selon le règlement européen sur les fonds monétaires.

Le règlement européen sur les fonds monétaires est le règlement (UE) 2017/1131 du Parlement européen et du Conseil du 14 juin 2017 sur les fonds monétaires.

Depuis le 21 janvier 2019, le compartiment Candriam Sustainable Money Market Euro se conforme aux nouvelles exigences du règlement (UE) 2017/1131 (le « Règlement ») du Parlement européen et du Conseil du 14 juin 2017 sur le MMF.

Conformément au Règlement, les informations suivantes sont déjà mises à la disposition des investisseurs au moins une fois par semaine sur le site Internet de la Société de Gestion, www.candriam.com :

- i) la ventilation par échéance du portefeuille-titres du compartiment ;
- ii) le profil de crédit du compartiment ;
- iii) l'échéance moyenne pondérée et la durée de vie moyenne pondérée du compartiment ;
- iv) le détail des 10 principales participations du compartiment ;
- V) la valeur totale des actifs du compartiment ;
- vi) le rendement net du compartiment.

Autres notes aux états financiers

Note 1 - Informations générales (suite)

Les classes qui sont émises sont les suivantes :

- La classe **BF** est réservée aux OPC nourriciers de droit belge approuvés par la Société de Gestion et gérés par une entité du groupe Candriam.
- La **classe C** s'adresse aux personnes physiques et morales.
- La classe **I** est réservée exclusivement aux investisseurs institutionnels.
- La classe **N** est réservée à des distributeurs spécialement approuvés par la Société de Gestion.
- La **classe PI** est réservée aux investisseurs institutionnels qui souscrivent des actions avant que le compartiment ait atteint une taille critique en termes d'actifs sous gestion. La souscription initiale minimale est de 1.000.000 USD, ou l'équivalent en devises pour les classes libellées en devises étrangères. Ce minimum peut être modifié à la discréTION du Conseil d'Administration, pourvu que le traitement égalitaire des actionnaires soit assuré un même Jour d'évaluation. La Classe d'actions reste ouverte aux souscriptions jusqu'à ce que l'un des événements suivants se produise :
 - une certaine période fixée par le Conseil d'Administration s'est écoulée ;
 - le compartiment a atteint une taille critique en termes d'actifs sous gestion, selon ce qu'a décidé le Conseil d'Administration ; ou
 - le Conseil d'Administration prend la décision motivée d'arrêter d'offrir la Classe d'actions.
- La **classe R** réservée aux intermédiaires financiers (notamment les distributeurs et fournisseurs de plateformes) qui :
 - ont conclu des accords distincts avec leurs clients pour la fourniture de services d'investissement en rapport avec le compartiment, et
 - ne sont pas en droit d'accepter de la société de gestion et de retenir, en raison de leurs lois et règlements applicables, ou d'accords conclus avec leurs clients, des honoraires, commissions ou avantages monétaires, dans le cadre des services d'investissement - susmentionnés.
- La **classe R2** est réservée :
 - aux distributeurs et/ou intermédiaires approuvés par la Société de Gestion qui ne percevront, pour les investissements dans cette classe, aucune forme de rémunération d'une entité du groupe Candriam, lorsque les investissements finaux dans les actions ont lieu dans le cadre d'un mandat.
 - aux OPC approuvés par la Société de Gestion.
- La **classe S** est réservée exclusivement à des investisseurs institutionnels spécialement approuvés par la Société de Gestion.
- La classe **V** est réservée exclusivement aux investisseurs institutionnels. Sa souscription initiale minimale est de 15.000.000 EUR ou l'équivalent dans des devises pour les classes libellées en devises ou l'équivalent dans toute autre devise définie par le Conseil d'Administration (ce minimum peut être modifié à la discréTION du Conseil, pourvu que le traitement égalitaire des actionnaires soit assuré un même Jour d'évaluation).
- La **classe VP** est exclusivement réservée aux investisseurs institutionnels et facture des commissions de performance. Sa souscription initiale minimale est de 15.000.000 EUR ou l'équivalent dans des devises pour les classes libellées en devises ou l'équivalent dans toute autre devise définie par le Conseil d'Administration (ce minimum peut être modifié à la discréTION du Conseil, pourvu que le traitement égalitaire des actionnaires soit assuré un même Jour d'évaluation).
- La **classe Y** est une classe d'actions réservée exclusivement aux investisseurs institutionnels spécialement agréés par la Société de Gestion.
- La **classe Z** est réservée :
 - aux investisseurs institutionnels/professionnels spécialement agréés par la Société de Gestion. L'activité de gestion de portefeuille pour cette classe étant directement rémunérée via le contrat conclu avec l'investisseur, aucune commission de gestion de portefeuille ne sera prélevée sur les actifs de cette classe.
 - aux OPC approuvés par la Société de Gestion et gérés par une entité du groupe Candriam.

Les actifs des différentes classes sont fondus dans une seule en masse. Les actifs des différentes classes d'actions sont fondus dans une masse unique.

En outre, un processus de couverture de change peut être appliqué aux classes d'actions :

- Classes d'actions couvertes en devises de référence :
Ces classes d'actions visent à réduire l'effet des fluctuations de taux de change entre la devise de référence du compartiment et la devise dans laquelle est libellée la classe d'actions couverte.
Ce type de couverture a pour but de garantir que la performance de la classe d'actions couverte est raisonnablement comparable (après ajustement pour tenir compte de la différence de taux d'intérêt entre les deux devises) à celle d'une classe d'actions libellée dans la devise de référence du compartiment. Ce type de couverture est identifié au moyen du suffixe H ajouté dans la dénomination de la classe d'actions.
- Classes d'actions couvertes contre les fluctuations des actifs :
Ces classes d'actions visent à réduire l'effet des fluctuations de taux de change entre les devises dans lesquelles sont détenus les actifs d'un compartiment et la devise de la classe d'actions couverte. Ce type de couverture est identifié au moyen du suffixe AH ajouté dans la dénomination de la classe d'actions.

Les actions émises sont décrites en détail dans la section « Évolution du nombre d'actions en circulation durant la période » des différents compartiments.

Autres notes aux états financiers

Dans le cadre du Règlement sur la publication d'informations en matière de durabilité dans le secteur des services financiers (SFDR), des informations sur les caractéristiques environnementales et/ou sociales et/ou les investissements durables sont disponibles dans les annexes pertinentes sous la section (non auditee) du Règlement sur la publication d'informations en matière de durabilité dans le secteur des services financiers.

Note 2 - Principales méthodes comptables

Les états financiers de la SICAV sont préparés conformément à la réglementation en vigueur au Luxembourg concernant les Organismes de Placement Collectif. Des petits écarts peuvent apparaître dans certains totaux ou sous-totaux des états financiers en raison des règles d'arrondi.

Les valeurs nettes d'inventaire utilisées aux fins des états financiers sont datées comme suit :

Compartiment Candriam Sustainable Equity Japan : la valeur nette d'inventaire a été calculée le 31 décembre 2023 sur la base des cours de Bourse de clôture en date du 29 décembre 2023 ;

Compartiment Candriam Sustainable Equity Emerging Markets : la valeur nette d'inventaire a été calculée le 31 décembre 2023 sur la base des cours de Bourse en date du 29 décembre 2023 pour les marchés asiatiques ouverts à cette date et sur la base des cours de Bourse en date du 28 décembre 2023 ;

Pour les autres compartiments de la SICAV, les valeurs nettes d'inventaire en date du 31 décembre 2023 ont été calculées le 2 janvier 2024 sur la base des derniers cours connus au moment de la valorisation.

Le présent rapport annuel est préparé sur la base des dernières valeurs nettes d'inventaire techniques non officielles, calculées pour les besoins des états financiers au 31 décembre 2023.

a) Évaluation du portefeuille-titres de chaque compartiment

L'évaluation de toute valeur admise à une cote officielle ou sur tout autre marché réglementé, en fonctionnement régulier, reconnu et ouvert au public est basée sur le dernier cours connu à Luxembourg, le jour d'évaluation, ou, si cette valeur est traitée sur plusieurs marchés, sur le dernier cours connu du marché principal de cette valeur. Si le dernier cours connu n'est pas représentatif, l'évaluation se basera sur la valeur probable de réalisation que le Conseil d'Administration estimera avec prudence et bonne foi. Les valeurs mobilières qui ne sont ni cotées ni négociées sur un marché d'actions ou tout autre marché en fonctionnement régulier, reconnu et ouvert au public seront évaluées sur la base de la valeur probable de réalisation estimée avec prudence et bonne foi. Tous les autres avoirs seront évalués par les administrateurs sur base de la valeur probable de réalisation, laquelle doit être estimée de bonne foi et selon des principes et procédures généralement admis.

Conformément à la politique d'évaluation de la SICAV, 48,93 % des actifs ont été évalués sur la base d'un modèle au 29 décembre 2023 pour le compartiment Candriam Sustainable Money Market Euro.

b) Bénéfices ou pertes net(te)s réalisé(e)s sur ventes d'investissements

Les bénéfices ou pertes réalisées sur les ventes d'investissements de chaque compartiment sont calculées sur la base du coût moyen des investissements vendus.

c) Différence de change

Les valeurs exprimées dans une devise autre que la devise de référence de chaque compartiment sont converties dans cette devise au taux de change en vigueur à la date de clôture.

Les produits et charges dans une devise autre que la devise de référence de chaque compartiment sont convertis dans cette devise aux taux de change en vigueur à la date de transaction.

Le coût d'acquisition des titres de chaque compartiment exprimé dans une devise autre que la devise de référence du compartiment est converti dans cette devise aux taux de change en vigueur au jour de l'achat.

Pour les compartiments Candriam Sustainable Bond Emerging Markets, Candriam Sustainable Bond Euro, Candriam Sustainable Bond Euro Corporate, Candriam Sustainable Bond Euro Short Term, Candriam Sustainable Bond Global, Candriam Sustainable Bond Global High Yield, Candriam Sustainable Bond Impact, Candriam Sustainable Defensive Asset Allocation, Candriam Sustainable Equity Children, Candriam Sustainable Equity Circular Economy, Candriam Sustainable Equity Climate Action, Candriam Sustainable Equity EMU, Candriam Sustainable Equity Europe, Candriam Sustainable Equity Europe Small & Mid Caps, Candriam Sustainable Equity Future Mobility, Candriam Sustainable Equity US, Candriam Sustainable Equity World, Candriam Sustainable Money Market Euro, Candriam Sustainable Balanced Asset Allocation, Candriam Sustainable Bond Global Convertible, Candriam Sustainable Equity Emerging Markets, Candriam Sustainable Equity Japan, Candriam Sustainable Equity Quant Europe, Candriam Sustainable Money Market Euro, les taux de change utilisés au 31 décembre 2023 sont les suivants :

d) États financiers combinés de la SICAV

L'état combiné des actifs nets de la SICAV ainsi que l'état combiné des variations des actifs nets qui sont exprimés en EUR correspondent à la somme de l'état des actifs nets, de l'état variations des actifs nets de chacun des compartiments convertis dans la devise de la SICAV sur la base des taux de change en vigueur à la date de clôture.

Les investissements effectués par certains compartiments de la SICAV dans d'autres compartiments de la SICAV n'ont pas été éliminés des états combinés des actifs nets au 31 décembre 2023. Au 31 décembre 2023, le total des investissements intra-SICAV s'élevait à EUR 269.264.763,00. Dès lors, les actifs nets combinés à la clôture s'élèveraient à EUR 19.560.211.588,00 si on ne tenait pas compte de ces investissements intra-SICAV.

e) Évaluation des options et futures

L'évaluation des options et futures admis à une cote officielle ou sur tout autre marché organisé est basée sur le dernier cours connu ou, si cette option est traitée sur plusieurs marchés, sur le dernier cours connu du marché sur lequel le contrat a été conclu par la SICAV.

Les options et futures non négociés sur un marché boursier ou tout autre marché organisé seront évalués sur la base de la valeur probable de réalisation estimée avec prudence et bonne foi. La valeur d'évaluation des options est incluse dans l'état des actifs nets sous la rubrique « Options (position longue) / (position courte) à la valeur d'évaluation ».

Les bénéfices / (pertes) réalisés et la variation de la plus-value / moins-value non réalisée sur options sont présentées dans l'état des variations des actifs nets respectivement sous les postes « Bénéfice / (Perte) net(te) réalisé(e) sur options » et « Variation de la plus-value / (moins-value) nette non réalisée sur options ».

La plus-value / (moins-value) non réalisée sur futures est présentée dans l'état des actifs nets, au poste « Plus-value / (moins-value) nette non réalisée sur futures ». Les variations de valeur d'évaluation des futures sont comptabilisées en tant que plus-value / moins-value non réalisée à l'état des variations des actifs nets, au poste « Variation de la plus-value / moins-value nette non réalisée sur futures ».

Autres notes aux états financiers

Note 2 - Principales méthodes comptables (suite)

Les plus-values ou moins-values réalisées, représentant la différence entre la valeur du contrat au moment de son ouverture et sa valeur au moment de sa clôture, sont comptabilisés à la clôture ou à l'expiration des futures dans l'état des variations des actifs nets, au poste « Bénéfice / (Perte) net(te) réalisé(e) sur futures ».

Pour les détails concernant les options ou contrats à terme financiers en cours, le cas échéant, veuillez vous référer à la section « Notes aux états financiers – Tableau des instruments dérivés ».

f) Évaluation des contrats de change à terme

Les contrats de change à terme sont évalués aux cours de change à terme à la date de clôture applicables pour la période restante jusqu'à l'échéance. La plus-value / (moins-value) non réalisée sur contrats de change à terme est présentée dans l'état des actifs nets, au poste « Plus-value / (moins-value) nette non réalisée sur contrats de change à terme ».

Les bénéfices / (pertes) réalisés et la variation de plus-value / (moins-value) nette non réalisée en découlant figurent à l'état des variations des actifs nets respectivement, sous les postes « Bénéfice / (Perte) net(te) réalisé(e) sur contrats de change à terme » et « Variation de la plus-value / (moins-value) nette non réalisée sur contrats de change à terme ».

Pour les détails concernant les contrats de change à terme en cours, le cas échéant, veuillez vous référer à la section « Notes aux états financiers – Tableau des instruments dérivés ».

g) Évaluation des Non-Deliverable Forwards contracts (« NDF »)

Les « Non-Deliverable Forwards » (« NDF ») sont des contrats à court terme portant sur des devises étrangères peu liquides ou non convertibles. Ces contrats sont évalués sur la base des taux de change à terme prévalant à la date de clôture et applicables à la période résiduelle jusqu'à la date d'échéance. Les bénéfices ou les pertes non réalisées découlant des NDF sont incluses dans l'état des actifs nets sous la rubrique « Plus-value / (moins-value) nette non réalisée sur contrats de change à terme ».

Les NDF sont généralement cotés et liquidés en USD. Les bénéfices / (pertes) réalisés et la variation de plus-value / (moins-value) nette non réalisée en découlant figurent à l'état des variations des actifs nets respectivement, sous les postes « Bénéfice / (Perte) net(te) réalisé(e) sur contrats de change à terme » et « Variation de la plus-value / (moins-value) nette non réalisée sur contrats de change à terme ».

Pour les détails concernant les contrats à terme non livrables en cours, le cas échéant, veuillez vous référer à la section « Notes aux états financiers – Tableau des instruments dérivés ».

h) Coûts de transaction

Pour l'exercice se terminant le 31 décembre 2023, la SICAV a encouru des frais de transaction et des frais de courtage liés à l'achat et à la vente de valeurs mobilières, instruments du marché monétaire, autres actifs éligibles et instruments dérivés. Ces charges sont présentées dans l'état des variations des actifs nets au poste « Coûts de transaction ».

En outre, conformément aux pratiques des marchés obligataires, un « bid-offer spread » est appliqué lors des transactions d'achats ou de ventes de titres. Selon ce principe, les prix de vente et d'achat appliqués par le broker lors d'une transaction donnée ne sont pas identiques et leur différence constitue la rémunération du broker.

i) Revenus

Les produits d'intérêts sont comptabilisés conformément aux conditions de l'investissement sous-jacent. Les produits sont enregistrés nets des retenues à la source respectives, le cas échéant. Les dividendes sont comptabilisés à l'ex-date.

j) Abréviations utilisées dans les portefeuilles-titres

A : Annuel

FL.R : Floating Rate Notes

Q : Trimestriel

S : Semestriel

XX : Obligations perpétuelles

ZCP ou U : Zéro coupon

Autres notes aux états financiers

Note 3 - Commissions de gestion

Candriam, société en commandite par actions de droit luxembourgeois ayant son siège social au SERENITY - Bloc B, 19-21, Route d'Arlon à L-8009 Strassen, a été désignée comme Société de Gestion. À cet effet, un contrat a été signé pour une durée indéterminée. Une dénonciation du contrat par l'une ou l'autre des parties peut intervenir à tout moment et sera faite par lettre recommandée avec accusé de réception adressée à l'autre partie, moyennant un préavis de 90 jours.

Candriam est une filiale de Candriam Group, une entité du Groupe New York Life Insurance Company.

Elle a reçu l'agrément de Société de Gestion au sens du chapitre 15 de la loi du 17 décembre 2010 concernant les OPCVM et est autorisée à exercer les activités de gestion collective de portefeuilles, de gestion de portefeuilles d'investissement et de conseil en investissements.

La Société de Gestion est investie des pouvoirs les plus étendus pour accomplir, dans le cadre de son objet, tous actes de gestion et d'administration de la SICAV. Elle est responsable des activités de gestion de portefeuille, d'administration (Agent Administratif, Agent de Transfert, y compris les activités de Teneur de Registre) et des activités de commercialisation (distribution).

La fonction de gestion de portefeuille est assurée directement par Candriam et/ou une ou plusieurs de ses succursales : Candriam - Belgian Branch, Candriam - Succursale française, Candriam - UK Establishment.

La Société de Gestion reçoit, en rémunération de ses services, des commissions de gestion exprimées en pourcentage annuel de la valeur nette d'inventaire moyenne. Ces commissions sont payables par la SICAV à la fin de chaque mois.

Les taux en vigueur au 31 décembre 2023 sont les suivants :

Note 4 - Commissions de distribution

Le compartiment Candriam Sustainable Equity World paie, pour la classe Y uniquement, une commission de distribution. Cette commission est actuellement fixée à 1,38 % de la classe Y du compartiment Sustainable Equity World et s'il s'agit d'un pourcentage annuel de la valeur nette d'inventaire moyenne de la classe d'actions, proportionnellement à l'actif net apporté dans cette classe par le Distributeur, et payable par la SICAV à la fin de chaque trimestre. Cette classe d'actions est en sommeil depuis le 1er avril 2021.

Compartiments	Classe d'actions	Type d'action	ISIN	Taux annuel
Candriam Sustainable Equity World	Y	Capitalisation	LU1434528755	0.0138

Note 5 - Charges opérationnelles et administratives

La SICAV supporte les charges opérationnelles et administratives courantes engagées pour couvrir tous les frais fixes et variables, charges, commissions et autres dépenses, telles que définies ci-après (les « Charges Opérationnelles et Administratives »).

Les Charges Opérationnelles et Administratives couvrent les frais suivants, sans que cette liste soit limitative :

a) les dépenses directement engagées par la SICAV, y compris, entre autres, les commissions et charges de la Banque Dépositaire, les commissions et frais des réviseurs d'entreprises agréés, les frais de couverture des actions (« share class hedging »), y compris ceux facturés par la Société de Gestion, les honoraires versés aux Administrateurs ainsi que les frais et débours raisonnables encourus par ou pour les Administrateurs ;

b) une « commission de service » versée à la Société de Gestion comprenant la somme restante des Charges Opérationnelles et Administratives après déduction des dépenses détaillées à la section (a) ci-dessus, soit, entre autres, les commissions et frais de l'Agent Domiciliataire, de l'Agent Administratif, de l'Agent de Transfert et Teneur de Registre, de l'agent payeur principal, les coûts liés à l'enregistrement et au maintien dudit enregistrement dans toutes les juridictions (tels que les commissions prélevées par les autorités de surveillance concernées, les frais de traduction et la rémunération des Représentants à l'étranger et des agents payeurs locaux), les frais d'inscription et de maintien en Bourse, les coûts de publication des prix d'actions, les frais postaux, les frais de télécommunication, les frais de préparation, d'impression, de traduction et de distribution des prospectus, des documents d'informations clés pour l'investisseur, des avis aux actionnaires, des rapports financiers ou de tout autre document destiné aux actionnaires, les honoraires et frais juridiques, les charges et frais liés à la souscription de tout abonnement/toute licence ou tout autre recours à des informations ou des données payantes, les frais engendrés par l'utilisation d'une marque déposée par la SICAV, les frais et commissions revenant à la Société de Gestion et/ou à ses délégataires et/ou à tout autre agent nommé par la SICAV elle-même et/ou aux experts indépendants.

Les Charges Opérationnelles et Administratives sont exprimées en pourcentage annuel de la valeur nette d'inventaire moyenne de chaque classe d'actions et sont payables mensuellement.

À la fin d'une période donnée, si les charges et dépenses réelles devaient être supérieures au pourcentage de Charges Opérationnelles et Administratives fixé pour une classe d'actions, alors, la Société de Gestion prendrait la différence à sa charge. Inversement, si les charges et dépenses réelles s'avéraient inférieures au pourcentage de Charges Opérationnelles et Administratives fixé pour une classe d'Actions, alors la Société de Gestion conserverait la différence.

La Société de Gestion pourra donner instruction à la SICAV de procéder au règlement de tout ou partie des dépenses telles qu'énumérées ci-dessous directement sur ses actifs.

Dans pareil cas, le montant des Charges Opérationnelles et Administratives serait réduit en conséquence.

Autres notes aux états financiers

Note 6 - Taxe d'abonnement

La SICAV est régie par les lois fiscales luxembourgeoises.

En vertu de la législation et des règlements en vigueur actuellement, la SICAV est soumise au Luxembourg à une taxe annuelle de 0,05 % de la valeur de l'actif net de la SICAV ; ce taux est réduit à 0,01 % pour les classes réservées aux investisseurs institutionnels. Cette taxe est payable trimestriellement sur la base des actifs nets de la SICAV calculés à la fin du trimestre auquel la taxe se rapporte.

Le gouvernement belge a promulgué une loi visant à imposer une fois par an la valeur nette d'inventaire des fonds d'investissements étrangers enregistrés en Belgique. Cette taxe annuelle est calculée sur les montants nets placés en Belgique par des intermédiaires financiers belges. En l'absence de déclaration suffisante relative à ces chiffres, l'administration fiscale pourra calculer la taxe sur la totalité des actifs de ces compartiments. La loi belge du 17 juin 2013 portant des dispositions fiscales et financières et des dispositions relatives au développement durable porte le taux de la taxe annuelle pour les Organismes de Placement Collectif à 0,0925 % avec effet au 1 janvier 2014.

À titre conservatoire, la Sicav a introduit une réclamation en restitution de la taxe auprès de l'administration fiscale belge et auprès du tribunal de Première Instance de Bruxelles. À ce stade, il ne peut être préjugé de l'issue du litige ou d'un quelconque remboursement au bénéfice de la Sicav. Dans le cadre d'une affaire similaire, l'État belge s'est pourvu en Cassation contre les arrêts de la Cour d'Appel faisant droit au plaignant.

. La société de gestion a été informée que la Cour de cassation s'était prononcée contre le plaignant le 25 mars 2022. La Cour de cassation (chambre francophone) estime que la Cour d'appel de Bruxelles a qualifié à tort la taxe d'abonnement belge d'impôt sur la fortune couvert par la convention préventive de la double imposition conclue entre la Belgique et le Luxembourg (laquelle convention attribue le droit d'imposer des SICAV luxembourgeoises uniquement au Luxembourg et pas à la Belgique, ce qui justifie la réclamation en restitution de la taxe d'abonnement belge).

L'affaire a été renvoyée à la Cour d'appel de Liège, qui sera tenue par la conclusion de la Cour de cassation.

Un autre arrêt de la Cour de cassation (chambre néerlandophone) du 21 avril 2022 ne conteste pas le fait que la taxe d'abonnement belge constitue un impôt sur la fortune, mais considère que la convention préventive de la double imposition conclue entre la Belgique et le Luxembourg (contrairement à celle signée avec les Pays-Bas) ne couvre pas dans son champ d'application un impôt sur la fortune prélevé en Belgique.

La perspective d'un remboursement est donc limitée et celui-ci ne sera en tout état de cause pas possible à court terme.

Note 7 - Taxe sur les plus-values en capital

Certains revenus de la SICAV provenant de plus-values réalisées sur des titres d'actifs de sources extérieures au Luxembourg peuvent être assujettis à des impôts dans le pays d'origine, d'un taux variable. Ces impôts sont en général perçus sous forme de retenues à la source ou payés au moment du dépôt d'une déclaration fiscale dans le pays étranger.

Plus particulièrement, pour le compartiment Candriam Sustainable Equity Emerging Markets, selon la législation indienne actuelle les plus-values en capital à court terme sont taxées à 15 %, tandis que les plus-values en capital à long terme sont taxées à 10 % si la plus-value dépasse 100.000 roupies indiennes.

En raison de l'impact potentiel de la taxe indienne au titre des plus-values en capital sur l'actif net, la SICAV la comptabilise, y compris les plus-values non réalisées sur les valeurs négociées à la Bourse indienne.

Au Luxembourg, aucun impôt n'est dû au titre des plus-values en capital (réalisées ou non réalisées) sur les actifs de la SICAV, conformément à la loi et selon la pratique courante.

Note 8 - Dividendes

La SICAV a distribué les dividendes suivants durant l'exercice clôturé au 31 décembre 2023 :

Compartiments	Classe d'actions	Devise	Dividende	Ex-date

Note 9 - Swing Pricing

Pour certains des compartiments de la SICAV, il est prévu la disposition suivante :

Les jours d'évaluation où la différence entre le montant de souscriptions et le montant de rachats d'un compartiment (soit les transactions nettes) excède un seuil fixé au préalable par le Conseil d'Administration (Swing partiel), le Conseil d'Administration se réserve le droit :

- de déterminer la valeur nette d'inventaire en ajoutant aux actifs (en cas de souscriptions nettes) ou en déduisant des actifs (en cas de rachats nets) un certain pourcentage de frais et coûts correspondant aux pratiques du marché en matière d'achat ou de vente de titres pour Candriam Sustainable Equity Climate Action, Candriam Sustainable Equity Emerging Markets, Candriam Sustainable Equity EMU, Candriam Sustainable Equity Europe, Candriam Sustainable Equity Europe Small & Mid Caps, Candriam Sustainable Equity Japan, Candriam Sustainable Equity World, Candriam Sustainable Equity Circular Economy, Candriam Sustainable Equity Children, Candriam Sustainable Equity Future Mobility, Candriam Sustainable Equity US et Candriam Sustainable Equity Quant Europe. ;

- d'évaluer le portefeuille-titres du compartiment sur la base des prix d'achat ou de vente ou en fixant des spreads à un niveau représentatif du marché concerné (respectivement en cas d'entrées ou sorties nettes) pour Candriam Sustainable Bond Emerging Markets, Candriam Sustainable Bond Euro, Candriam Sustainable Bond Euro Corporate, Candriam Sustainable Bond Euro Short Term, Candriam Sustainable Bond Impact, Candriam Sustainable Bond Global et Candriam Sustainable Bond Global Convertible ;

Candriam Sustainable

Autres notes aux états financiers

- d'évaluer la valeur nette d'inventaire du compartiment ou de la partie du portefeuille composée de titres à haut rendement en ajoutant aux actifs (pour les souscriptions nettes) ou en déduisant de l'actif (pour les rachats nets) un écart acheteur-vendeur pour Candriam Sustainable Bond Global High Yield.

Au cours de l'exercice, les dispositions en matière de swing pricing ont été appliquées aux valeurs nettes d'inventaire des compartiments suivants : Candriam Sustainable Bond Emerging Markets, Candriam Sustainable Bond Euro, Candriam Sustainable Bond Euro Corporate, Candriam Sustainable Bond Euro Short Term, Candriam Sustainable Bond Global, Candriam Sustainable Bond Global High Yield, Candriam Sustainable Bond Impact, Candriam Sustainable Equity Children, Candriam Sustainable Equity Circular Economy, Candriam Sustainable Equity Climate Action, Candriam Sustainable Equity Emerging Markets, Candriam Sustainable Equity EMU, Candriam Sustainable Equity Europe, Candriam Sustainable Equity Europe Small & Mid Caps, Candriam Sustainable Equity Future Mobility, Candriam Sustainable Equity Japan, Candriam Sustainable Equity Quant Europe, Candriam Sustainable Equity US et Candriam Sustainable Equity World.

Au 31 décembre 2023, aucun ajustement (« swing ») n'a été effectué.

Le facteur de swing (d'ajustement) correspond au montant d'ajustement de la valeur nette d'inventaire lorsque le mécanisme de Swing Pricing est activé après que les souscriptions nettes ou rachats nets dépassent le seuil d'ajustement. Les facteurs à considérer lors de la fixation du facteur d'ajustement sont les suivants :

Pour la méthode des actions :

- commissions nettes du courtier payées par le compartiment ;
- charges fiscales (p. Ex. : droit de timbre et taxe de vente).

Pour la méthode à haut rendement

- Écart cours acheteur-cours vendeur

Pour la méthode des titres à revenus fixe :

- politique de Swing Pricing ;
- en lien avec l'écart cours acheteur/cours vendeur.

Compartiments	Flux entrant maximum du facteur de swing (en %)	Flux sortant maximum du facteur de swing (en %)
Candriam Sustainable Bond Global High Yield	0.60	0.60
Candriam Sustainable Equity Children	0.13	0.04
Candriam Sustainable Equity Circular Economy	0.07	0.04

Gestion des risques – calcul du risque global

Comme l'exige la circulaire CSSF 11/512, le Conseil d'Administration de la SICAV doit déterminer le mode de gestion des risques de la SICAV, en utilisant soit l'approche par l'engagement soit l'approche VaR.

Le Conseil d'Administration de la SICAV a choisi d'adopter l'approche par l'engagement comme méthode de détermination du risque global pour tous les compartiments de la SICAV.

Politique d'engagement et de vote, utilisation des droits de vote

Candriam exerce des droits de vote pour les fonds considérés.

Pour toutes les questions de sensibilisation, veuillez consulter la politique de sensibilisation et les rapports associés, lesquels sont disponibles sur le site Internet de Candriam à l'adresse suivante :

<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>

Vote par procuration

Depuis le 1^{er} janvier 2004, Candriam a décidé d'exercer activement les droits de vote attachés aux actions des sociétés européennes de premier plan qu'elle gère pour le compte de ses clients. Cette décision souligne la détermination de Candriam d'assumer ses responsabilités dans le cadre de la gouvernance d'entreprise, et de pleinement exercer ses droits de vote dans les sociétés dans lesquelles elle investit. Les détails concernant les droits de vote sont disponibles sur le site Web :<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>

Les réunions non votées résultent de contraintes opérationnelles / techniques définies dans notre politique de vote (pour plus de détails, veuillez vous référer à la politique de vote de Candriam) ou d'autres contraintes rencontrées au niveau de nos tiers et pour lesquelles des mesures correctives ont été définies.

Pour la SICAV actuelle, Candriam a exercé des droits de vote pour les compartiments suivants :

- Candriam Sustainable Defensive Asset Allocation
- Candriam Sustainable Equity Children
- Candriam Sustainable Equity Circular Economy
- Candriam Sustainable Equity Climate Action
- Candriam Sustainable Equity Emerging Markets
- Candriam Sustainable Equity EMU
- Candriam Sustainable Equity Europe
- Candriam Sustainable Equity Europe Small & Mid Caps
- Candriam Sustainable Equity Future Mobility
- Candriam Sustainable Equity Japan
- Candriam Sustainable Equity Quant Europe
- Candriam Sustainable Equity US
- Candriam Sustainable Equity World
- Candriam Sustainable Balanced Asset Allocation

Comme expliqué ci-dessus, les détails concernant les droits de vote sont disponibles sur le site Web :<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>. Toutes les Assemblées Générales auxquelles la Société de Gestion a participé ou auxquelles elle était représentée sont détaillées, ainsi que les résolutions votées, les votes effectifs et les justifications associées lors de l'enregistrement des votes contre la direction.

Lors de l'AGA de SAP SE, qui s'est tenue le 11 mai 2023, notre choix de vote relatif aux points 8.3 et 9 ne s'est pas reflété dans le vote effectif pour le Fonds. Les justifications des votes ont été adaptées pour refléter les préoccupations (pour plus d'informations, veuillez vous référer aux détails du vote sur <https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>). Les procédures internes ont été adaptées pour que ce type de situation ne puisse plus se produire.

Lors de l'AGA de L'Oréal SA, qui s'est tenue le 21 avril 2023, notre choix de vote relatif au point 4 ne s'est pas reflété dans le vote effectif pour le Fonds. Les justifications du vote ont été adaptées pour refléter les préoccupations (pour plus d'informations, veuillez vous référer aux détails du vote sur <https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>). Les procédures internes ont été adaptées pour que ce type de situation ne puisse plus se produire.

D'autres réunions n'ont pas été votées en raison du changement du périmètre de vote défini (pour plus de détails, merci de consulter la politique de vote de Candriam) ou de retards dans la réception des procurations nécessaires.

Candriam a formulé et mis en œuvre une politique de vote fondée sur quatre principes de gouvernance d'entreprise. Les décisions de vote sont prises conformément à ces principes :

1. Protection de tous les droits des actionnaires selon la règle : « une action – un vote – un dividende ».
2. Garantie d'égalité de traitement des actionnaires, y compris les actionnaires minoritaires et étrangers.
3. Communication d'informations financières correctes et transparentes.
4. Obligation redditionnelle et indépendance du Conseil d'Administration et des réviseurs d'entreprises externes.

Dans le cadre de ses décisions de vote, Candriam s'assure d'avoir obtenu toutes les informations requises pour prendre ces décisions. Les analystes financiers et ESG de Candriam examinent les résolutions présentées aux actionnaires, en tenant compte des recommandations de vote émises par les conseillers externes en matière de gouvernance d'entreprise. Candriam conserve toutefois une entière indépendance concernant ses votes.

Candriam Sustainable

Informations supplémentaires non auditées

Cette politique de vote est disponible sur le site Internet de Candriam (*) et précise notamment :

- la définition du périmètre de vote,
- la manière dont les conflits d'intérêt sont identifiés et gérés,
- le rôle des conseillers mandataires.

En outre, un Comité de Vote par Procuration a été créé au sein de Candriam, et a pour rôle d'évaluer la politique de vote ainsi que de la modifier lorsqu'il le juge nécessaire.

Ce comité est composé de représentants internes issus des équipes Management, Operations, Risk et ESG Research & Stewardship. Des représentants du service Legal peuvent, sur demande, assister aux réunions.

Il n'y a pas de programmes de prêt de titres pour les fonds qui font partie de la SICAV actuelle.

Informations supplémentaires non auditées

Informations relatives à la politique de rémunération

La directive européenne 2014/91/UE modifiant la directive 2009/65/CE concernant les organismes de placement collectif en valeurs mobilières, applicable à la SICAV, est entrée en vigueur le 18 mars 2016. Elle est transposée en droit national par la loi luxembourgeoise du 10 mai 2016 transposant la directive 2014/91/UE. En raison de cette nouvelle réglementation, la SICAV est tenue de publier les informations relatives à la rémunération des salariés identifiés au sens de la Loi dans le rapport annuel.

Candriam détient une double licence, d'une part, en tant que société de gestion conformément à l'article 15 de la loi du 17 décembre 2010 relative aux organismes de placement collectif et, d'autre part, en tant que gestionnaire de fonds d'investissement alternatifs conformément à la loi du 12 juillet 2013 relative aux gestionnaires de fonds d'investissement alternatifs. Les responsabilités incombaient à Candriam en vertu de ces deux lois sont relativement similaires et Candriam considère que son personnel est rémunéré de la même manière pour les tâches relatives à l'administration des OPCVM et des fonds d'investissement alternatifs.

Au cours de son exercice clos le 31 décembre 2023, Candriam a versé les sommes suivantes à son personnel :

- Montant brut total des rémunérations fixes versées (hors paiements ou avantages pouvant être considérés comme faisant partie d'une politique générale et non discrétionnaire et n'ayant pas d'effet incitatif sur la gestion des risques) : 17.425.254 euros.
- Montant brut total des rémunérations variables versées : 6.348.617 euros.
- Nombre de bénéficiaires : 146.

Montant agrégé des rémunérations, ventilé entre la direction générale et les membres du personnel du gestionnaire d'investissement dont les activités ont un impact significatif sur le profil de risque du fonds. Les systèmes de Candriam ne permettent pas une telle identification pour chaque fonds sous gestion. Les chiffres ci-dessous montrent également le montant agrégé des rémunérations globales chez Candriam.

- Montant agrégé des rémunérations de la haute direction : 5.155.684 euros.
- Montant agrégé des rémunérations des membres du personnel de Candriam dont les activités ont un impact significatif sur le profil de risque des fonds dont elle est la Société de Gestion (hors direction générale) : 2.015.066 euros.

Rémunérations versées par Candriam au personnel de sa succursale belge (Candriam - Belgian Branch), agissant en tant que gestionnaire d'investissement, durant l'exercice clos le 31 décembre 2023 :

- Montant brut total des rémunérations fixes versées (hors paiements ou avantages pouvant être considérés comme faisant partie d'une politique générale et non discrétionnaire et n'ayant pas d'effet incitatif sur la gestion des risques) : 25.071.403 euros.
- Montant brut total des rémunérations variables versées : 8.188.525 euros.
- Nombre de bénéficiaires : 245.

Montant agrégé des rémunérations, ventilé entre la direction générale et les membres du personnel du gestionnaire d'investissement dont les activités ont un impact significatif sur le profil de risque du fonds. Les systèmes du gestionnaire d'investissement ne permettent pas une telle identification pour chaque fonds sous gestion. Les chiffres ci-dessous indiquent également le montant agrégé des rémunérations globales au niveau du gestionnaire d'investissement.

- Montant agrégé des rémunérations de la haute direction : EUR : 6.214.566
- Montant agrégé des rémunérations des membres du personnel du gestionnaire d'investissement dont les activités ont un impact significatif sur le profil de risque des fonds dont il est le gestionnaire d'investissement (hors haute direction) : 4.602.623 euros.

Rémunérations versées par Candriam au personnel de sa succursale française (Candriam - Succursale française), agissant en tant que gestionnaire d'investissement, durant l'exercice clos le 31 décembre 2023 :

- Montant brut total des rémunérations fixes versées (hors paiements ou avantages pouvant être considérés comme faisant partie d'une politique générale et non discrétionnaire et n'ayant pas d'effet incitatif sur la gestion des risques) : 19.094.936 euros.
- Montant brut total des rémunérations variables versées : 6.255.350 euros.
- Nombre de bénéficiaires : 202.

Montant agrégé des rémunérations, ventilé entre la direction générale et les membres du personnel du gestionnaire d'investissement dont les activités ont un impact significatif sur le profil de risque du fonds. Les systèmes du gestionnaire d'investissement ne permettent pas une telle identification pour chaque fonds sous gestion. Les chiffres ci-dessous indiquent également le montant agrégé des rémunérations globales au niveau du gestionnaire d'investissement.

- Montant agrégé des rémunérations de la haute direction : 4.298.365 euros.
- Montant agrégé des rémunérations des membres du personnel du gestionnaire d'investissement dont les activités ont un impact significatif sur le profil de risque des fonds dont il est le gestionnaire d'investissement (hors haute direction) : 3.422.966 euros.

La politique de rémunération a été révisée pour la dernière fois par le comité de rémunération de Candriam le 29 janvier 2021 et a été adoptée par le Conseil d'Administration de Candriam.

Sustainable Finance Disclosure Regulation (SFDR)

Tous les compartiments de la SICAV relèvent de l'article 9 du SFDR.

Candriam Sustainable Balanced Asset Allocation

549300BR7KE8KDJ14045

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?

YES

NO

- It made **sustainable investments with an environmental objective**: 43.97%
 - in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: 50.77%

- It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investment
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The attainment of the sustainable investment objectives was measured through the following sustainability indicator:

- Carbon footprint: the Sub-fund aimed to have a carbon footprint that is at least 25% lower than the carbon footprint of the fund's reference benchmark.

Moreover, the following indicator were monitored either directly for the direct lines investments or indirectly in the underlying UCITS/UCI managed by Candriam :

- to assure that there are no investments in issuers that are in violation with the OECD Guidelines for Multinational Enterprises or the UN Global Compact.

How did the sustainability indicators perform?

The Sub-Fund has been managed in accordance with its sustainability indicators as defined below.

For the selection of sustainable investments, the portfolio manager has taken into account ESG assessments of issuers, produced by Candriam's ESG analyst team.

For companies, these assessments are based on the analysis of the company's interactions with its key stakeholders and the analysis of its business activities and their impact, positive or negative, on key sustainability challenges such as climate change and resource depletion. In addition, Candriam's ESG analysis includes exclusion filters based on compliance with international standards and involvement in controversial activities.

Candriam's ESG research and analysis for sustainable investments also assesses the compliance of investments with the "do no harm" principle to a sustainable investment objective and with good governance practices.

This integration of Candriam's ESG research methodology has enabled the Fund to meet the minimum proportion of sustainable investments defined in the prospectus (minimum 80%). The proportion of sustainable investments in the Fund was therefore above this minimum threshold, as detailed in the section "What was the proportion of sustainability-related investments?"

The Sub-Fund's reference benchmark has not been designated for the purpose of attaining the sustainable investment objective of the Sub-Fund.

'The Sub-Fund's reference benchmark does not qualify as an EU Climate Transition Benchmark or an EU Paris-Aligned Benchmark under Title III, Chapter 3a, of Regulation (EU) 2016/1011.

However, the Sub-Fund aimed to have a carbon footprint that is at least 25% lower than the carbon footprint of the Sub-Fund's reference benchmark.

The Sub-Fund aimed to reduce greenhouse gas emissions versus its benchmark is a first step towards the objectives of the Paris agreement. On a later stage, other steps will be set in order to ensure carbon emissions reduction in view of achieving the Paris Agreement

Sustainability KPI Name	Portfolio	Benchmark	New indicator
Carbon Footprint - Corporate - Scope 1&2 - 25% reduction vs bench	29.11	75.16	

... And Compared to Previous Periods?

The sub-fund has also been managed in line with its sustainability indicators.

Sustainability KPI Name	Year	Portfolio	Benchmark
Carbon Footprint - Corporate - Scope 1&2 - 25% reduction vs bench	2022	25.56	77.32

The asset allocation of the financial product has evolved over the years.

Investment Category	Proportion of Investments	Proportion of Investments
	2023	2022
#1 Sustainable	94.74%	93.06%
#2 Not sustainable	5.26%	6.64%
Environmental	43.97%	42.64%
Social	50.77%	50.42%
Taxonomy-aligned	0.00%	0.00%
Other	43.97%	42.64%

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

Candriam ensured that its sustainable investments did not cause significant harm to any environmental and/or social sustainable investment objective by means of its ESG research and analysis of corporate and sovereign issuers. Based on its proprietary ESG Ratings and Scorings, Candriam's ESG methodology set clear requirements and minimum thresholds to identify those issuers that qualify as 'sustainable investment' and, in particular, do not cause significant harm to any environmental and/or social sustainable investment objective.

The 'Do not significant harm' principle, in particular, was assessed for corporates through:

- the consideration of "principal adverse impacts"
- the alignment with the OECD Guidelines for Multinational Enterprises and the UN Global Compact to ensure minimum environmental & social safeguards.

How were the indicators for adverse impacts on sustainability factors taken into account?

The consideration of adverse impacts is central to Candriam's sustainable investment approach. Principal adverse impacts were taken into account throughout the entire ESG research and analysis process and through a wide range of methods:

For the analysis of corporate issuers, these methods include:

1. ESG rating of corporates: the ESG research and screening methodology considers and assesses the principal adverse impact on sustainability from two distinct, but interlinked, angles:

- the company's issuers' business activities and how they impact, either positively or negatively, key sustainable challenges such as climate change and resource depletion;
- company's interactions with key stakeholders.

2. Negative screening of companies, which includes a norms-based exclusion and an exclusion of companies involved in controversial activities.

3. Engagement activities with companies, through dialogue and voting activities, which contribute to avoiding or reducing the extent of the adverse impacts. The ESG analysis framework and its results feed our engagement process, and vice versa.

For the analysis of sovereign issuers, these methods include:

1. Country ESG Scores: the ESG research and screening methodology considers and assesses key negative sustainability impacts around four sustainability dimensions: Natural capital, Human capital, Social capital, and Economic capital.

2. Negative Country Screening, which includes the following:

- Candriam's list of highly oppressive regimes -States with serious human rights violations;
- Freedom House's World Freedom Index - states considered "not free".

The integration of the principal adverse impacts on sustainability factors has been based on the materiality or likely materiality of each indicator for each specific industry / sector/ to which the company belongs and for each country to ensure that a country's score adequately reflects the short, medium and long-term problems, challenges and/or opportunities that matter for that country's future development. This materiality depends on several elements, such as the type of information, quality and extent of data, applicability, relevance and geographical coverage.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-fund's investments were subject to a norms-based controversy analysis that considered the compliance with the international social, human, environmental and anti-corruption standards, as defined by the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises. The International Labour Organisation and International Bill of Human Rights are part of the many international references integrated into our norms-based analysis and ESG model.

This analysis aimed to exclude companies that have significantly and repeatedly breached any of these principles.

How did this financial product consider principal adverse impacts on sustainability factors?

At Financial Product level, the principal adverse impacts (PAI) on sustainability factors were considered through one or several means: voting, dialogue, exclusions and/or monitoring (cfr. Candriam's PAI statement: <https://www.candriam.com/en/private/sfdr/>)

ENGAGEMENT

As the current financial product is only investing in funds, for any information on related engagement, we invite you to refer to the annual reports of the invested funds. Candriam engagement policy is available on Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>]. Our engagement policy is available on Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

EXCLUSIONS

PAI3

In addition to companies involved in the thermal coal, oil and gas activities (PAI 4), electricity-generating companies with a carbon intensity greater than 354 gCO₂/kWh (PAI 3), are considered risky for inclusion in sustainable investments, even if they are not universally controversial. Given that emissions vary according to electricity generation sources, it is important to assess the carbon footprint per kilowatt-hour (kWh) to determine how closely companies are aligned with the 2 degrees Celsius trajectory.

This is why Candriam includes the carbon intensity of energy producers in our sustainability assessment. Where carbon intensity data is not available, Candriam's ESG analysts use other indicators to assess alignment with the Paris Agreement, such as progress in the energy transition in line with Paris Agreement targets and integration of a 1.5D limit scenario, taking into account investment plans and the credibility of carbon neutrality targets. These indicators are forward-looking and evolve over time to reflect the progress made by companies in their transition.

The carbon intensity (PAI 3) threshold for the product in 2023 was established at 354 gCO₂/kWh. Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding this threshold, in addition to those previously excluded.

PAI4

Exposure to fossil fuels (PAI 4) undergoes stringent exclusions across all Candriam sustainable funds. Thermal coal, recognized for its detrimental impact and serious financial and sustainability implications, poses systemic and reputational risks that financial benefits cannot outweigh.

Companies deriving more than 5% of their sales from coal mining, coal-fired power generation, and coal-related operations such as exploration, processing, transport, and distribution are automatically excluded.

Additionally, companies exceeding a 5% threshold of revenue from conventional oil and gas activities, including exploration, extraction, refining, and transportation, are ineligible for investment. Similarly, entities with over 5% exposure to unconventional oil and gas activities are also excluded.

Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding the 5% threshold of exposure to thermal coal activities, supplementing the previously excluded entities.

Furthermore, no additional issuer(s) lost their eligibility due to surpassing the 5% threshold of exposure to conventional oil and gas activities, while no additional issuer(s) lost their eligibility for exceeding the 5% threshold of exposure to unconventional oil and gas activities.

PAI10

In accordance with PAI10 Candriam's normative analysis determines whether a company complies with the 10 principles of the United Nations Global Compact for each of the main categories: Human Rights (HR), Labor Rights (LR), Environment (ENV) and Anti-Corruption (AC). Our norms based analysis incorporates various international references, including the United Nations Declaration of Human Rights, ILO Fundamental Conventions, and OECD Guidelines for Multinational Enterprises, ensuring comprehensive coverage of human rights, labor standards, corruption, and discrimination.

In Candriam's "Level 3" SRI exclusion policy, companies with severe to very severe violations of the UN Global Compact principles are excluded. This list focuses on a strict interpretation of violations of the UN Global Compact, as assessed by Candriam's ESG analysts.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, for significant and repeated breaches of international social, human, environmental and anti-corruption standards, as defined by the UN Global Compact and the OECD Guidelines for Multinational Enterprises.

PAI14

Candriam is firmly committed to excluding from all its investments companies directly involved in the development, production, testing, maintenance and sale of controversial weapons (anti-personnel landmines, cluster bombs, depleted uranium weapons and armor, chemical weapons, biological weapons and white phosphorus weapons). We consider these damaging activities to present systemic and reputational risks.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, due to their involvement in these activities.

PAI16

Our list of repressive regimes is made up of countries in which human rights are regularly violated, fundamental freedoms are systematically denied and personal safety is not guaranteed due to government failure and systematic ethical violations. We are also extremely vigilant with regard to totalitarian states or countries whose governments are involved in a war against their own people. To compile the list of repressive regimes, we rely on data provided by external sources, such as Freedom House's Index of Freedom in the World, the World Bank's Governance Indicators and the Economist Intelligence Unit's Democracy Index, which guide our qualitative examination of non-democratic countries.

For this list of countries, Candriam's analysts have developed processes that apply to both sovereign and corporate investments, including exclusion, mitigation and engagement processes based on our risk assessment. Candriam considers debt issued by sovereign or quasi-sovereign entities on the list of repressive regimes to be ineligible for investment.

Over the reference period, no additional sovereign issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded.

MONITORING: calculation and evaluation of the principal adverse impact indicators

Some of these indicators may have explicit targets and can be used to measure the attainment of the sustainable investment objective of the Financial Product. See below the results of the indicators of this Financial Product

PAI indicators	Value	Coverage (% rated / total assets)	Eligible assets (% eligible assets / total assets)
Scope 1 GHG Emissions	126.92	69.06%	70.06%
Scope 2 GHG Emissions	65.84	69.06%	70.06%
Total GHG Emissions	192.76	69.06%	69.98%
2 - Carbon Footprint	29.11	69.06%	69.98%
3 - GHG intensity of investee companies	88.55	69.04%	69.98%
4 - Exposure to companies active in fossil fuel sector	1.74%	68.75%	69.99%
10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.00%	74.90%	74.94%
13 - Board gender diversity	36.55%	66.39%	74.95%
14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0.00%	74.89%	74.94%
15 - GHG intensity	233.28	12.14%	12.66%
16 - Investee countries subject to social violations	0.00%	14.19%	14.27%

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
01/01/2023 - 31/12/2023.

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the "Investment portfolio" section of the annual report.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

● ***In which economic sectors were the investments made?***

Top sector	% of Assets
Investments Funds	99.51%
Bonds of States, Provinces and municipalities	0.49%

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the "Investment portfolio" section of the annual report.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

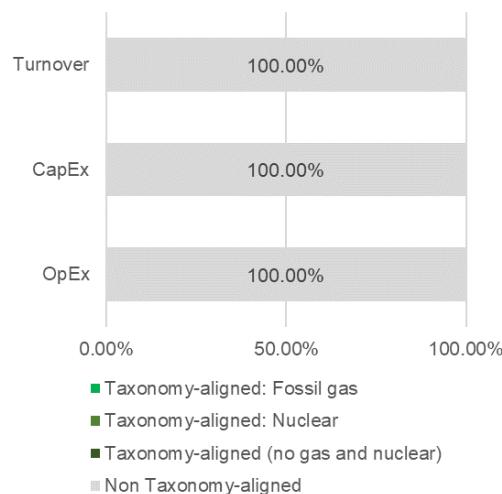

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy? ¹

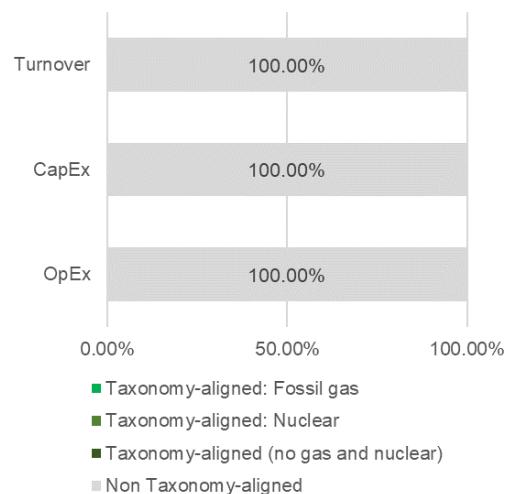

- Yes
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100.00% of the total investments.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

● **What was the share of investments made in transitional and enabling activities?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, nor on the transitional and enabling activities, as very few companies at global level provide the data necessary for a rigorous assessment their alignment with the Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Year	% EU Taxonomy Aligned
2023	0.00%
2022	0.00%

● **What is the breakdown of the proportion of the investments per each of the EU Taxonomy to which those investments contributed?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, as very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

Therefore, this percentage is considered as nul.

 **What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?**

The Sub-Fund had a share of 43.97% in sustainable investments with an environmental objective not aligned with the EU taxonomy.

Indeed to date, only two of the six objectives have entered into force in 2023 and very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

What was the share of socially sustainable investments?

The Sub-Fund had a share of investments with a social objective of 50.77%

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The investments included under "Not sustainable" are present in the Sub-fund for 5.26% of the total net assets.

These investments include one or more of the following assets:

- Cash: Cash at sight, cash deposit, reverse repo needed to manage the liquidity of the Sub-fund following subscriptions/redemptions and/or being the result of the market exposure decision of the Sub-fund.
- Investments with issuers considered as sustainable investments at the moment of the investment and that are not fully aligned anymore with the Candriam sustainable investment criteria. These investments have been sold during the period.
- Non single name derivatives used for exposition and hedging purposes.

These investments do not affect the delivery of the sustainable investment objectives of the Sub-Fund as they represent a minor proportion of its assets.

What actions have been taken to attain the sustainable investment objective during the reference period?

The financial product aims to achieve a carbon footprint that is at least 25% lower than the carbon footprint of the Benchmark.

Over the reference period, the financial product emitted 29.11 Tons CO2eq per million € invested, 61.27% lower than the benchmark.

The financial product has achieved its objective by favouring issuers with lower carbon footprint.

How did this financial product perform compared to the reference sustainable benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

No specific index is designated as a reference sustainable benchmark to meet the sustainable investment objectives.

Candriam Sustainable Bond Emerging Markets

549300BW76OSRMX5VN77

CANDRIAM 
A NEW YORK LIFE INVESTMENTS COMPANY

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

 YES

- It made **sustainable investments with an environmental objective**: 47.47%
 - in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: 47.77%

 NO

- It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ____ % of sustainable investment
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The attainment of the sustainable investment objectives was measured through the following sustainability indicators:

- Freedom House: a weighted average Freedom House Total Score higher than the Sub-Fund's reference benchmark.
- CO2 intensity country score: a CO2 intensity country score 30% lower than the Sub-Fund's reference benchmark.
- ESG score: a weighted average country ESG score higher than the weighted average ESG score of the Sub-Fund's reference benchmark. The ESG Score is computed employing Candriam's proprietary ESG analysis methodology.

Moreover, the following indicators were monitored:

- to assure that there are no investments in issuers that are in violation with the OECD Guidelines for Multinational Enterprises or the UN Global Compact.
- to assure that there are no investments in issuers that are on the Candriam's SRI Level 3 exclusion list as a result of the application of the Candriam's Exclusion Policy.
- to ensure that there were no sovereign investments in countries that are on Candriam's Oppressive regime list
- to ensure that there were no sovereign investments in countries considered "Not free" by Freedom House.

How did the sustainability indicators perform?

The Sub-Fund has been managed in accordance with its sustainability indicators as defined below.

For the selection of sustainable investments, the portfolio manager has taken into account ESG assessments of issuers, produced by Candriam's ESG analyst team.

For companies, these assessments are based on the analysis of the company's interactions with its key stakeholders and the analysis of its business activities and their impact, positive or negative, on key sustainability challenges such as climate change and resource depletion. In addition, Candriam's ESG analysis includes exclusion filters based on compliance with international standards and involvement in controversial activities.

For sovereign issuers, these assessments are based on the analysis of the countries' management of their natural, human, social and economic capital. In addition, exclusion filters are used to screen out issuers that do not meet democratic and governance standards.

Candriam's ESG research and analysis for sustainable investments also assesses the compliance of investments with the "do no harm" principle to a sustainable investment objective and with good governance practices for the corporates.

This integration of Candriam's ESG research methodology has enabled the Fund to meet the minimum proportion of sustainable investments defined in the prospectus (minimum 80%). The proportion of sustainable investments in the Fund was therefore above this minimum threshold, as detailed in the section "What was the proportion of sustainability-related investments?"

The Sub-Fund's reference benchmark has not been designated for the purpose of attaining the sustainable investment objective of the Sub-Fund.

'The Sub-Fund's reference benchmark does not qualify as an EU Climate Transition Benchmark or an EU Paris-Aligned Benchmark under Title III, Chapter 3a, of Regulation (EU) 2016/1011.

However, the Sub-Fund aimed to have a CO2 Intensity Country level that is at least 30% lower than the Sub-Fund's reference benchmark.

Moreover, Candriam being part of the Net Zero Asset Management initiative, the Sub-Fund aimed to reduce greenhouse gas emissions.

Sustainability KPI Name	Portfolio	Benchmark	New indicator
Freedom House Index - Country - Higher than bench	72.81	52.01	
Carbon Intensity - Country - 30% reduction vs bench	176.18	257.15	
ESG Score - Country - Higher than bench	35.02	30.00	

... And Compared to Previous Periods?

The sub-fund has also been managed in line with its sustainability indicators.

Sustainability KPI Name	Year	Portfolio	Benchmark
Freedom House Index - Country - Higher than bench	2022	72.27	51.49
Carbon Intensity - Country - 3% reduction vs bench	2022	198.28	258.85
ESG Score - Country - Higher than bench	2022	34.27	30.02

The asset allocation of the financial product has evolved over the years.

Investment Category	Proportion of Investments	Proportion of Investments
	2023	2022
#1 Sustainable	95.24%	96.96%
#2 Not sustainable	4.76%	2.96%
Environmental	47.47%	50.52%
Social	47.77%	46.43%
Taxonomy-aligned	0.00%	0.00%
Other	47.47%	50.52%

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

Candriam ensured that its sustainable investments did not cause significant harm to any environmental and/or social sustainable investment objective by means of its ESG research and analysis of corporate and sovereign issuers. Based on its proprietary ESG Ratings and Scorings, Candriam's ESG methodology set clear requirements and minimum thresholds to identify those issuers that qualify as 'sustainable investment' and, in particular, do not cause significant harm to any environmental and/or social sustainable investment objective.

The 'Do not significant harm' principle, in particular, was assessed for corporates through:

- the consideration of "principal adverse impacts"
- the alignment with the OECD Guidelines for Multinational Enterprises and the UN Global Compact to ensure minimum environmental & social safeguards.

For more details, refer to the section below on the consideration of principal adverse impacts on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

The consideration of adverse impacts is central to Candriam's sustainable investment approach. Principal adverse impacts were taken into account throughout the entire ESG research and analysis process and through a wide range of methods:

For the analysis of corporate issuers, these methods include:

1. ESG rating of corporates: the ESG research and screening methodology considers and assesses the principal adverse impact on sustainability from two distinct, but interlinked, angles:

- the company's issuers' business activities and how they impact, either positively or negatively, key sustainable challenges such as climate change and resource depletion;
- company's interactions with key stakeholders.

2. Negative screening of companies, which includes a norms-based exclusion and an exclusion of companies involved in controversial activities.

3. Engagement activities with companies , through dialogue and voting activities, which contribute to avoiding or reducing the extent of the adverse impacts. The ESG analysis framework and its results feed our engagement process, and vice versa.

For the analysis of sovereign issuers, these methods include:

1. Country ESG Scores: the ESG research and screening methodology considers and assesses key negative sustainability impacts around four sustainability dimensions: Natural capital, Human capital, Social capital, and Economic capital.

2. Negative Country Screening, which includes the following:

- Candriam's list of highly oppressive regimes -States with serious human rights violations;
- Freedom House's World Freedom Index - states considered "not free".

The integration of the principal adverse impacts on sustainability factors has been based on the materiality or likely materiality of each indicator for each specific industry / sector/ to which the company belongs and for each country to ensure that a country's score adequately reflects the short, medium and long-term problems, challenges and/or opportunities that matter for that country's future development. This materiality depends on several elements, such as the type of information, quality and extent of data, applicability, relevance and geographical coverage.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-fund's investments were subject to a norms-based controversy analysis that considered the compliance with the international social, human, environmental and anti-corruption standards, as defined by the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises. The International Labour Organisation and International Bill of Human Rights are part of the many international references integrated into our norms-based analysis and ESG model.

This analysis aimed to exclude companies that have significantly and repeatedly breached any of these principles.

How did this financial product consider principal adverse impacts on sustainability factors?

At Financial Product level, the principal adverse impacts (PAI) on sustainability factors were considered through one or several means: voting, dialogue, exclusions and/or monitoring (cfr. Candriam's PAI statement: <https://www.candriam.com/en/private/sfdr/>)

ENGAGEMENT

Our engagement policy is available on Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

DIALOGUE with non corporate issuers

This financial product is invested in non corporate issuers we engage with. For non-corporate issuers, such as sovereigns, agencies or supranationals, large majority of our engagement is done through collaborative dialogues and statements. Climate (PAI1 to PAI6) and biodiversity (PAI7) are the topics we predominantly engage on with them. For more information, please refer

to Candriam Engagement Annual review under Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

DIALOGUE with corporate issuers

This financial product is invested in corporate issuers. Below statistics refer to engagement activities we have performed with these corporate issuers.

Climate (PAI1 to PAI6) is obviously central in our exchanges with companies. Priorities of Climate-engagement on the corporate side are identified taking into account :

- issuers presenting a weak transition profile (proprietary risk transition model), and/or still highly carbon intensive (Scope 1-2) or with large Scope 3 emissions,
- issuers from financial sectors still largely exposed to fossil fuel and with a key role in financing the transition
- relative exposure of managed portfolios to the above issuers.

Candriam has joined in November 2021 the Net Zero Asset Management Initiative [<https://www.netzeroassetmanagers.org/signatories/candriam/>]. Through engagement, our objective is to encourage companies to publicly report on how they align with a 1.5D trajectory and to encourage such an alignment. We expect issuers in particular to explain how their strategy and capital expenditures plan serve their decarbonisation commitment. We usually combine individual and collaborative dialogue.

In addition, we continue to actively support CDP Climate [<https://www.cdp.net/en>], a large transparency survey feeding our investment processes : out of the 5 financial product's issuers targeted, 80% have properly filled the last survey. Filled surveys give us access to updated and more accurate Scope 1-2-3 emissions' data.

Candriam also actively participate to several collaborative initiatives such as Climate Action 100+ or IIGCC & ShareAction Climate initiatives on Financials. These initiatives contribute not only to increase the level of transparency on Greenhouse gas emissions and related strategy, but also to gain fundamental leverage for supporting strategic changes. Outcomes of these engagements are detailed in our annual engagement & voting report, available on our public website (Publications | Candriam) [<https://www.candriam.com/en/professional/insight-overview/publications/#sri-publications>].

Given the geopolitical context and observed increase in inequalities, 4 issuer(s) with presence in the financial product have also been contacted in relation to the protection of fundamental human rights at direct or indirect workforce level (supply chain due diligence) (PAI10 PAI11).

Inclusion is not to be outdone, with 2 issuers, of the portfolio having been more specifically engaged on topics related to PAI 12 (Unadjusted gender pay gap) or PAI 13 (Board gender diversity).

While above mentioned PAI are prevalent when considering engagement performed for this financial product in 2023, other PAI such as biodiversity-related ones may also have been addressed in our dialogues with issuers. For more information, please refer to Candriam Engagement Annual review under Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

EXCLUSIONS

PAI3

In addition to companies involved in the thermal coal, oil and gas activities (PAI 4), electricity-generating companies with a carbon intensity greater than 354 gCO2/kWh (PAI 3), are considered risky for inclusion in sustainable investments, even if they are not universally controversial. Given that emissions vary according to electricity generation sources, it is important to assess the carbon footprint per kilowatt-hour (kWh) to determine how closely companies are aligned with the 2 degrees Celsius trajectory.

This is why Candriam includes the carbon intensity of energy producers in our sustainability assessment. Where carbon intensity data is not available, Candriam's ESG analysts use other indicators to assess alignment with the Paris Agreement, such as progress in the energy transition in line with Paris Agreement targets and integration of a 1.5D limit scenario, taking into account investment plans and the credibility of carbon neutrality targets. These indicators are forward-looking and evolve over time to reflect the progress made by companies in their transition.

The carbon intensity (PAI 3) threshold for the product in 2023 was established at 354 gCO2/kWh. Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding this threshold, in addition to those previously excluded.

PAI4

Exposure to fossil fuels (PAI 4) undergoes stringent exclusions across all Candriam sustainable funds. Thermal coal, recognized for its detrimental impact and serious financial and sustainability implications, poses systemic and reputational risks that financial benefits cannot outweigh.

Companies deriving more than 5% of their sales from coal mining, coal-fired power generation, and coal-related operations such as exploration, processing, transport, and distribution are automatically excluded.

Additionally, companies exceeding a 5% threshold of revenue from conventional oil and gas activities, including exploration, extraction, refining, and transportation, are ineligible for investment. Similarly, entities with over 5% exposure to unconventional oil and gas activities are also excluded.

Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding the 5% threshold of exposure to thermal coal activities, supplementing the previously excluded entities.

Furthermore, no additional issuer(s) lost their eligibility due to surpassing the 5% threshold of exposure to conventional oil and gas activities, while no additional issuer(s) lost their eligibility for exceeding the 5% threshold of exposure to unconventional oil and gas activities.

PAI10

In accordance with PAI10 Candriam's normative analysis determines whether a company complies with the 10 principles of the United Nations Global Compact for each of the main categories: Human Rights (HR), Labor Rights (LR), Environment (ENV) and Anti-Corruption (AC). Our norms based analysis incorporates various international references, including the United Nations Declaration of Human Rights, ILO Fundamental Conventions, and OECD Guidelines for Multinational Enterprises, ensuring comprehensive coverage of human rights, labor standards, corruption, and discrimination.

In Candriam's "Level 3" SRI exclusion policy, companies with severe to very severe violations of the UN Global Compact principles are excluded. This list focuses on a strict interpretation of violations of the UN Global Compact, as assessed by Candriam's ESG analysts.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, for significant and repeated breaches of international social, human, environmental and anti-corruption standards, as defined by the UN Global Compact and the OECD Guidelines for Multinational Enterprises.

PAI14

Candriam is firmly committed to excluding from all its investments companies directly involved in the development, production, testing, maintenance and sale of controversial weapons (anti-personnel landmines, cluster bombs, depleted uranium weapons and armor, chemical weapons, biological weapons and white phosphorus weapons). We consider these damaging activities to present systemic and reputational risks.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, due to their involvement in these activities.

PAI16

Our list of repressive regimes is made up of countries in which human rights are regularly violated, fundamental freedoms are systematically denied and personal safety is not guaranteed due to government failure and systematic ethical violations. We are also extremely vigilant with regard to totalitarian states or countries whose governments are involved in a war against their own people. To compile the list of repressive regimes, we rely on data provided by external sources, such as Freedom House's Index of Freedom in the World, the World Bank's Governance Indicators and the Economist Intelligence Unit's Democracy Index, which guide our qualitative examination of non-democratic countries.

For this list of countries, Candriam's analysts have developed processes that apply to both sovereign and corporate investments, including exclusion, mitigation and engagement processes based on our risk assessment. Candriam considers debt issued by sovereign or quasi-sovereign entities on the list of repressive regimes to be ineligible for investment.

Over the reference period, no additional sovereign issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded.

MONITORING: calculation and evaluation of the principal adverse impact indicators

Some of these indicators may have explicit targets and can be used to measure the attainment of the sustainable investment objective of the Financial Product. See below the results of the indicators of this Financial Product

PAI indicators	Value	Coverage (% rated / total assets)	Eligible assets (% eligible assets / total assets)
Scope 1 GHG Emissions	4,164.59	4.35%	6.27%
Scope 2 GHG Emissions	2,538.73	4.35%	6.27%
Total GHG Emissions	6,703.32	4.35%	6.27%
2 - Carbon Footprint	125.42	4.35%	6.27%
3 - GHG intensity of investee companies	272.59	4.35%	6.27%
4 - Exposure to companies active in fossil fuel sector	1.10%	4.35%	6.27%
10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.00%	7.30%	7.74%
13 - Board gender diversity	25.99%	2.92%	7.90%
14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0.00%	7.30%	7.74%
15 - GHG intensity	317.58	80.78%	83.51%
16 - Investee countries subject to social violations	0.00%	83.15%	85.77%

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
01/01/2023 - 31/12/2023.

Largest investments	Sector	% of Assets	Country
POLAND 3.875 23-33 14/02A	Bonds of States, Provinces and municipalities	1.43%	POL
NAMIBIA 5.25 15-25 29/10S	Bonds of States, Provinces and municipalities	1.34%	NAM
ROMANIA 5.25 22-27 25/05S	Bonds of States, Provinces and municipalities	1.29%	ROU
PANAMA 6.4 22-35 14/02S	Bonds of States, Provinces and municipalities	1.24%	PAN
COSTA RICA 4.375 13-25 30/04S	Bonds of States, Provinces and municipalities	1.23%	CRI
ROMANIA 6 22-34 25/05A	Bonds of States, Provinces and municipalities	1.23%	ROU
POLAND 4.25 23-43 14/02A	Bonds of States, Provinces and municipalities	1.20%	POL
COLOMBIA 8 22-33 20/04S	Bonds of States, Provinces and municipalities	1.11%	COL
COSTA RICA 6.55 23-34 03/04S	Bonds of States, Provinces and municipalities	1.11%	CRI
CHILE 4.125 23-34 05/07A	Bonds of States, Provinces and municipalities	1.11%	CHL
CHILE 4.34 22-42 07/03S	Bonds of States, Provinces and municipalities	1.09%	CHL
DOMINICAN REPUBLIC 5.50 15-25 27/01S	Bonds of States, Provinces and municipalities	1.08%	DOM
COLOMBIA 7.5 23-34 02/02S	Bonds of States, Provinces and municipalities	1.07%	COL
PERU 1.95 21-36 17/11A	Bonds of States, Provinces and municipalities	1.04%	PER
MEXICO 4.28 21-41 14/08S	Bonds of States, Provinces and municipalities	1.03%	MEX

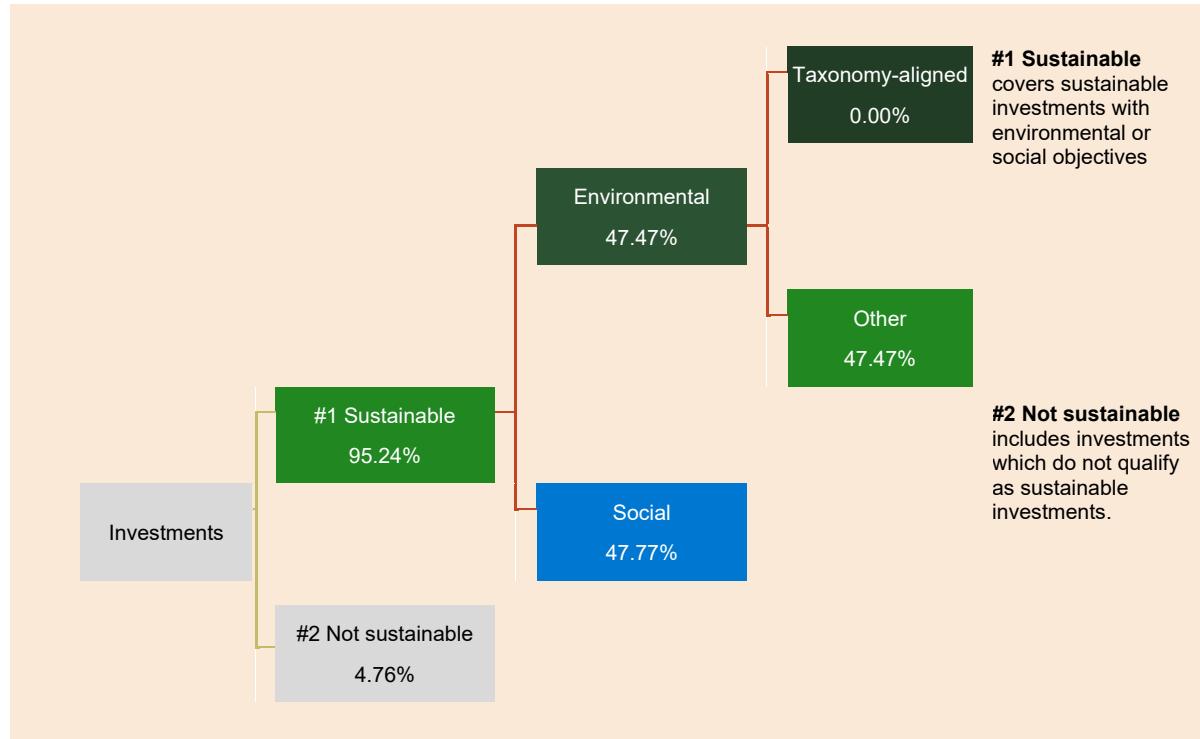

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the "Investment portfolio" section of the annual report.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

● ***In which economic sectors were the investments made?***

Top sector	% of Assets
Bonds of States, Provinces and municipalities	83.86%
Banks and other financial institutions	10.61%
Communication	1.47%
Non Classifiable Institutions	0.97%
Utilities	0.88%
Transportation	0.83%
Paper and forest products	0.71%
Investments funds	0.36%
Real estate	0.17%
Foods and non alcoholic drinks	0.11%
Healthcare	0.03%

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the "Investment portfolio" section of the annual report.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

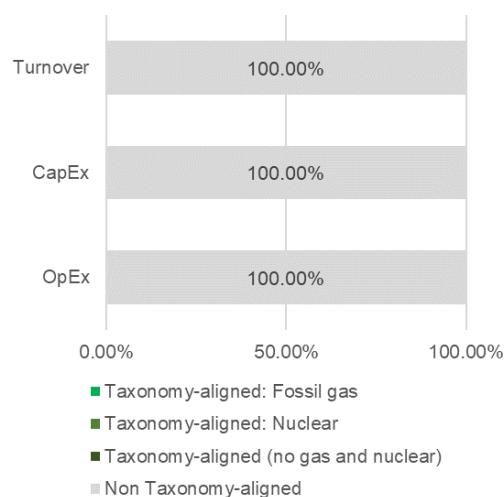

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy? ¹

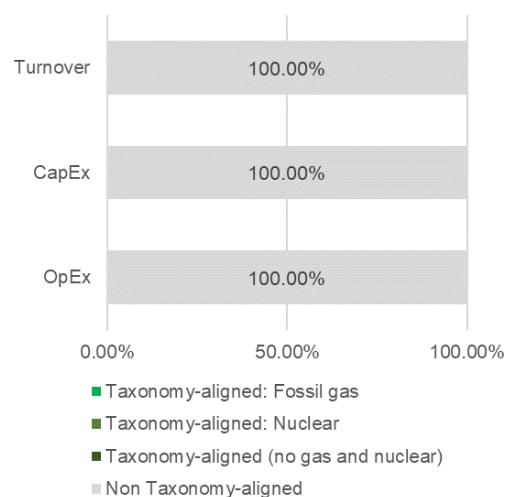

- Yes
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100.00% of the total investments.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

● **What was the share of investments made in transitional and enabling activities?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, nor on the transitional and enabling activities, as very few companies at global level provide the data necessary for a rigorous assessment their alignment with the Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Year	% EU Taxonomy Aligned
2023	0.00%
2022	0.00%

● **What is the breakdown of the proportion of the investments per each of the EU Taxonomy to which those investments contributed?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, as very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

Therefore, this percentage is considered as nul.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

The Sub-Fund had a share of 47.47% in sustainable investments with an environmental objective not aligned with the EU taxonomy.

Indeed to date, only two of the six objectives have entered into force in 2023 and very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

What was the share of socially sustainable investments?

The Sub-Fund had a share of investments with a social objective of 47.77%

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The investments included under "Not sustainable" are present in the Sub-fund for 4.76% of the total net assets.

These investments include one or more of the following assets:

- Cash: Cash at sight, cash deposit, reverse repo needed to manage the liquidity of the Sub-fund following subscriptions/redemptions and/or being the result of the market exposure decision of the Sub-fund.
- Investments with issuers considered as sustainable investments at the moment of the investment and that are not fully aligned anymore with the Candriam sustainable investment criteria. These investments have been sold during the period.
- Non single name derivatives used for exposition and hedging purposes.

These investments do not affect the delivery of the sustainable investment objectives of the Sub-Fund as they represent a minor proportion of its assets.

What actions have been taken to attain the sustainable investment objective during the reference period?

The financial product aims to achieve an average issuer country Freedom House score higher than that of the benchmark.

Over the reference period, the financial product displayed a score of 72.81, 39.97% higher compared to its benchmark.

In comparison to the previous year, the financial product overall Freedom House index is flat.

The financial product has achieved its objective by selectively favouring countries with stronger Freedom House scores.

The financial product aims to achieve a country carbon intensity score at least 30% lower than that of its benchmark.

Over the reference period, the financial product displayed a country carbon intensity of 176.18, 31.49% lower compared to its benchmark.

In comparison to the previous year, the financial product overall Country Carbon Intensity is lower by 11.14%.

The financial product has achieved its objective by favouring issuers with lower carbon intensity.

The financial product aims to achieve an ESG score, based on Candriam's proprietary ESG methodology, higher than its benchmark.

Over the reference period, the financial product displayed an ESG score of 35.02, 16.74% higher compared to its benchmark.

In comparison to the previous year, the financial product overall ESG score is higher by 2.2%.

The financial product has achieved its objective by selectively favouring issuers that display a stronger ESG profile. More precisely, the financial product invested in 2 issuer(s) in Agencies and Utilities with improving ESG score while it divested from 1 issuer(s) in Multi-Sector Holdings with deteriorating ESG score.

How did this financial product perform compared to the reference sustainable benchmark?

No specific index is designated as a reference sustainable benchmark to meet the sustainable investment objectives.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

 YES

- It made **sustainable investments with an environmental objective**: 60.16%
 - in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: 39.77%

 NO

- It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___ % of sustainable investment
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The attainment of the sustainable investment objectives was measured through the following sustainability indicators:

- carbon footprint : a carbon footprint at least 30% lower than the carbon footprint of the Sub-Fund's reference Benchmark.
- Green bonds : investment of at least 10% of the Sub-Fund's total net assets into Green Bonds. The Sub-Fund aimed to increase the proportion of Green Bonds to 20% by the end of 2025.
- ESG score : a weighted average ESG score that is higher than the weighted average ESG score of the Sub-Fund's reference benchmark. The ESG Score is computed employing Candriam's proprietary ESG analysis methodology.

Moreover, the following indicators were monitored:

- OECD Guidelines for Multinational Enterprises, UN Global Compact: to ensure that there were no investments in companies that are in violation with the these principles.
- Candriam's Exclusion Policy: to ensure that there were no investments in companies that are on the Candriam's SRI Level 3 exclusion list as a result of the application of Candriam's Exclusion Policy.
- Candriam's Oppressive regime list: to ensure that there were no sovereign investments in countries that are on Candriam's Oppressive regime list
- Countries considered "Not free" by Freedom House: to ensure that there were no sovereign investments in countries considered "Not free" by Freedom House.

How did the sustainability indicators perform?

The Sub-Fund has been managed in accordance with its sustainability indicators as defined below.

For the selection of sustainable investments, the portfolio manager has taken into account ESG assessments of issuers, produced by Candriam's ESG analyst team.

For companies, these assessments are based on the analysis of the company's interactions with its key stakeholders and the analysis of its business activities and their impact, positive or negative, on key sustainability challenges such as climate change

and resource depletion. In addition, Candriam's ESG analysis includes exclusion filters based on compliance with international standards and involvement in controversial activities.

For sovereign issuers, these assessments are based on the analysis of the countries' management of their natural, human, social and economic capital. In addition, exclusion filters are used to screen out issuers that do not meet democratic and governance standards.

Candriam's ESG research and analysis for sustainable investments also assesses the compliance of investments with the "do no harm" principle to a sustainable investment objective and with good governance practices for the corporates.

This integration of Candriam's ESG research methodology has enabled the Fund to meet the minimum proportion of sustainable investments defined in the prospectus (minimum 80%). The proportion of sustainable investments in the Fund was therefore above this minimum threshold, as detailed in the section "What was the proportion of sustainability-related investments?"

The Sub-Fund's reference benchmark has not been designated for the purpose of attaining the sustainable investment objective of the Sub-Fund.

'The Sub-Fund's reference benchmark does not qualify as an EU Climate Transition Benchmark or an EU Paris-Aligned Benchmark under Title III, Chapter 3a, of Regulation (EU) 2016/1011.

However, the Sub-Fund aimed to have a carbon footprint that is at least 30% lower than the carbon footprint of the Sub-Fund's reference benchmark.

Moreover, Candriam being part of the Net Zero Asset Management initiative, the Sub-Fund aimed to reduce greenhouse gas emissions.

Sustainability KPI Name	Portfolio	Benchmark	New indicator
Carbon Footprint - Corporate - Scope 1&2 - 30% reduction vs bench	28.98	67.95	
ESG Score - Country and Corporate - Higher than bench	57.70	56.28	
Green Bonds - Country and Corporate - Min 10% / Min 20% 2025	22.83%		

... And Compared to Previous Periods?

The sub-fund has also been managed in line with its sustainability indicators.

Sustainability KPI Name	Year	Portfolio	Benchmark
Carbon Footprint - Corporate - Scope 1&2 - 30% reduction vs bench	2022	31.62	70.12
ESG Score - Country and Corporate - Higher than bench	2022	57.73	56.21
Green Bonds - Min 1% / Min 2% 225	2022	18.50%	

The asset allocation of the financial product has evolved over the years.

Investment Category	Proportion of Investments	Proportion of Investments
	2023	2022
#1 Sustainable	99.93%	98.65%
#2 Not sustainable	0.07%	0.97%
Environmental	60.16%	57.16%
Social	39.77%	41.49%
Taxonomy-aligned	0.00%	0.00%
Other	60.16%	57.16%

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

Candriam ensured that its sustainable investments did not cause significant harm to any environmental and/or social sustainable investment objective by means of its ESG research and analysis of corporate and sovereign issuers. Based on its proprietary ESG Ratings and Scorings, Candriam's ESG methodology set clear requirements and minimum thresholds to identify those issuers that qualify as 'sustainable investment' and, in particular, do not cause significant harm to any environmental and/or social sustainable investment objective.

The 'Do not significant harm' principle, in particular, was assessed for corporates through:

- the consideration of "principal adverse impacts"
- the alignment with the OECD Guidelines for Multinational Enterprises and the UN Global Compact to ensure minimum environmental & social safeguards.

For more details, refer to the section below on the consideration of principal adverse impacts on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

The consideration of adverse impacts is central to Candriam's sustainable investment approach. Principal adverse impacts were taken into account throughout the entire ESG research and analysis process and through a wide range of methods:

For the analysis of corporate issuers, these methods include:

1. ESG rating of corporates: the ESG research and screening methodology considers and assesses the principal adverse impact on sustainability from two distinct, but interlinked, angles:

- the company's issuers' business activities and how they impact, either positively or negatively, key sustainable challenges such as climate change and resource depletion;
- company's interactions with key stakeholders.

2. Negative screening of companies, which includes a norms-based exclusion and an exclusion of companies involved in controversial activities.

3. Engagement activities with companies , through dialogue and voting activities, which contribute to avoiding or reducing the extent of the adverse impacts. The ESG analysis framework and its results feed our engagement process, and vice versa.

For the analysis of sovereign issuers, these methods include:

1. Country ESG Scores: the ESG research and screening methodology considers and assesses key negative sustainability impacts around four sustainability dimensions: Natural capital, Human capital, Social capital, and Economic capital.

2. Negative Country Screening, which includes the following:

- Candriam's list of highly oppressive regimes -States with serious human rights violations;
- Freedom House's World Freedom Index - states considered "not free".

The integration of the principal adverse impacts on sustainability factors has been based on the materiality or likely materiality of each indicator for each specific industry / sector/ to which the company belongs and for each country to ensure that a country's score adequately reflects the short, medium and long-term problems, challenges and/or opportunities that matter for that country's future development. This materiality depends on several elements, such as the type of information, quality and extent of data, applicability, relevance and geographical coverage.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-fund's investments were subject to a norms-based controversy analysis that considered the compliance with the international social, human, environmental and anti-corruption standards, as defined by the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises. The International Labour Organisation and International Bill of Human Rights are part of the many international references integrated into our norms-based analysis and ESG model.

This analysis aimed to exclude companies that have significantly and repeatedly breached any of these principles.

How did this financial product consider principal adverse impacts on sustainability factors?

At Financial Product level, the principal adverse impacts (PAI) on sustainability factors were considered through one or several means: voting, dialogue, exclusions and/or monitoring (cfr. Candriam's PAI statement: <https://www.candriam.com/en/private/sfdr/>)

ENGAGEMENT

Our engagement policy is available on Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

DIALOGUE with non corporate issuers

This financial product is invested in non corporate issuers we engage with. For non-corporate issuers, such as sovereigns, agencies or supranationals, large majority of our engagement is done through collaborative dialogues and statements. Climate (PAI1 to PAI6) and biodiversity (PAI7) are the topics we predominantly engage on with them. For more information, please refer

to Candriam Engagement Annual review under Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

DIALOGUE with corporate issuers

This financial product is invested in corporate issuers. Below statistics refer to engagement activities we have performed with these corporate issuers.

Climate (PAI1 to PAI6) is obviously central in our exchanges with companies. Priorities of Climate-engagement on the corporate side are identified taking into account :

- issuers presenting a weak transition profile (proprietary risk transition model), and/or still highly carbon intensive (Scope 1-2) or with large Scope 3 emissions
- issuers from financial sectors still largely exposed to fossil fuel and with a key role in financing the transition
- relative exposure of managed portfolios to the above issuers.

Candriam has joined in November 2021 the Net Zero Asset Management Initiative [<https://www.netzeroassetmanagers.org/signatories/candriam/>]. Through engagement, our objective is to encourage companies to publicly report on how they align with a 1.5D trajectory and to encourage such an alignment. We expect issuers in particular to explain how their strategy and capital expenditures plan serve their decarbonisation commitment. We usually combine individual and collaborative dialogue.

23 issuers in the financial product are actually part of the priority targets of Candriam Net Zero Engagement campaign.

In addition, we continue to actively support CDP Climate [<https://www.cdp.net/en>], a large transparency survey feeding our investment processes : out of the 100 financial product's issuers targeted, 98% have properly filled the last survey. Filled surveys give us access to updated and more accurate Scope 1-2-3 emissions' data.

Candriam also actively participate to several collaborative initiatives such as Climate Action 100+ or IIGCC & ShareAction Climate initiatives on Financials. Such initiatives targeted 29 issuer(s) of the financial product. These initiatives contribute not only to increase the level of transparency on Greenhouse gas emissions and related strategy, but also to gain fundamental leverage for supporting strategic changes. Outcomes of these engagements are detailed in our annual engagement & voting report, available on our public website (Publications | Candriam) [<https://www.candriam.com/en/professional/insight-overview/publications/#sri-publications>].

Given the geopolitical context and observed increase in inequalities, 62 issuer(s) with presence in the financial product have also been contacted in relation to the protection of fundamental human rights at direct or indirect workforce level (supply chain due diligence) (PAI10 PAI11).

Inclusion is not to be outdone, with 87 issuers, of the portfolio having been more specifically engaged on topics related to PAI 12 (Unadjusted gender pay gap) or PAI 13 (Board gender diversity).

While above mentioned PAI are prevalent when considering engagement performed for this financial product in 2023, other PAI such as biodiversity-related ones may also have been addressed in our dialogues with issuers. For more information, please refer to Candriam Engagement Annual review under Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

EXCLUSIONS

PAI3

In addition to companies involved in the thermal coal, oil and gas activities (PAI 4), electricity-generating companies with a carbon intensity greater than 354 gCO2/kWh (PAI 3), are considered risky for inclusion in sustainable investments, even if they are not universally controversial. Given that emissions vary according to electricity generation sources, it is important to assess the carbon footprint per kilowatt-hour (kWh) to determine how closely companies are aligned with the 2 degrees Celsius trajectory.

This is why Candriam includes the carbon intensity of energy producers in our sustainability assessment. Where carbon intensity data is not available, Candriam's ESG analysts use other indicators to assess alignment with the Paris Agreement, such as progress in the energy transition in line with Paris Agreement targets and integration of a 1.5D limit scenario, taking into account investment plans and the credibility of carbon neutrality targets. These indicators are forward-looking and evolve over time to reflect the progress made by companies in their transition.

The carbon intensity (PAI 3) threshold for the product in 2023 was established at 354 gCO2/kWh. Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding this threshold, in addition to those previously excluded.

PAI4

Exposure to fossil fuels (PAI 4) undergoes stringent exclusions across all Candriam sustainable funds. Thermal coal, recognized for its detrimental impact and serious financial and sustainability implications, poses systemic and reputational risks that financial benefits cannot outweigh.

Companies deriving more than 5% of their sales from coal mining, coal-fired power generation, and coal-related operations such as exploration, processing, transport, and distribution are automatically excluded.

Additionally, companies exceeding a 5% threshold of revenue from conventional oil and gas activities, including exploration, extraction, refining, and transportation, are ineligible for investment. Similarly, entities with over 5% exposure to unconventional oil and gas activities are also excluded.

Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding the 5% threshold of exposure to thermal coal activities, supplementing the previously excluded entities.

Furthermore, no additional issuer(s) lost their eligibility due to surpassing the 5% threshold of exposure to conventional oil and gas activities, while no additional issuer(s) lost their eligibility for exceeding the 5% threshold of exposure to unconventional oil and gas activities.

PAI10

In accordance with PAI10 Candriam's normative analysis determines whether a company complies with the 10 principles of the United Nations Global Compact for each of the main categories: Human Rights (HR), Labor Rights (LR), Environment (ENV) and Anti-Corruption (AC). Our norms based analysis incorporates various international references, including the United Nations Declaration of Human Rights, ILO Fundamental Conventions, and OECD Guidelines for Multinational Enterprises, ensuring comprehensive coverage of human rights, labor standards, corruption, and discrimination.

In Candriam's "Level 3" SRI exclusion policy, companies with severe to very severe violations of the UN Global Compact principles are excluded. This list focuses on a strict interpretation of violations of the UN Global Compact, as assessed by Candriam's ESG analysts.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, for significant and repeated breaches of international social, human, environmental and anti-corruption standards, as defined by the UN Global Compact and the OECD Guidelines for Multinational Enterprises.

PAI14

Candriam is firmly committed to excluding from all its investments companies directly involved in the development, production, testing, maintenance and sale of controversial weapons (anti-personnel landmines, cluster bombs, depleted uranium weapons and armor, chemical weapons, biological weapons and white phosphorus weapons). We consider these damaging activities to present systemic and reputational risks.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, due to their involvement in these activities.

PAI16

Our list of repressive regimes is made up of countries in which human rights are regularly violated, fundamental freedoms are systematically denied and personal safety is not guaranteed due to government failure and systematic ethical violations. We are also extremely vigilant with regard to totalitarian states or countries whose governments are involved in a war against their own people. To compile the list of repressive regimes, we rely on data provided by external sources, such as Freedom House's Index of Freedom in the World, the World Bank's Governance Indicators and the Economist Intelligence Unit's Democracy Index, which guide our qualitative examination of non-democratic countries.

For this list of countries, Candriam's analysts have developed processes that apply to both sovereign and corporate investments, including exclusion, mitigation and engagement processes based on our risk assessment. Candriam considers debt issued by sovereign or quasi-sovereign entities on the list of repressive regimes to be ineligible for investment.

Over the reference period, no additional sovereign issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded.

MONITORING: calculation and evaluation of the principal adverse impact indicators

Some of these indicators may have explicit targets and can be used to measure the attainment of the sustainable investment objective of the Financial Product. See below the results of the indicators of this Financial Product

PAI indicators	Value	Coverage (% rated / total assets)	Eligible assets (% eligible assets / total assets)
Scope 1 GHG Emissions	5,855.42	30.82%	31.36%
Scope 2 GHG Emissions	2,481.87	30.82%	31.36%
Total GHG Emissions	8,337.29	30.82%	31.26%
2 - Carbon Footprint	28.98	30.82%	31.26%
3 - GHG intensity of investee companies	78.29	30.82%	31.26%
4 - Exposure to companies active in fossil fuel sector	0.42%	30.64%	31.26%
10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.00%	41.29%	41.29%
13 - Board gender diversity	40.23%	35.61%	41.31%
14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0.00%	41.29%	41.29%
15 - GHG intensity	191.39	29.78%	33.20%
16 - Investee countries subject to social violations	0.00%	42.79%	42.89%

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
01/01/2023 - 31/12/2023.

Largest investments	Sector	% of Assets	Country
AUSTRIA 0.9 22-32 20/02A	Bonds of States, Provinces and municipalities	1.91%	AUT
GERMANY 0.00 20-35 15/05A	Bonds of States, Provinces and municipalities	1.61%	DEU
EUROPEAN UNION 2.0 22-27 04/10A	Supranational Organisations	1.33%	BEL
ITALY 0.85 19-27 15/01S	Bonds of States, Provinces and municipalities	1.27%	ITA
FRANCE 0.7500 22-28 25/02A	Bonds of States, Provinces and municipalities	1.26%	FRA
SPAIN 0.80 20-27 30/07A	Bonds of States, Provinces and municipalities	1.23%	ESP
FRANCE 1.75 16-39 25/06A	Bonds of States, Provinces and municipalities	1.23%	FRA
SPAIN 2.55 22-32 31/10A	Bonds of States, Provinces and municipalities	1.19%	ESP
ITALY 2.00 18-28 01/02S	Bonds of States, Provinces and municipalities	1.06%	ITA
ITALY 2.45 16-33 01/09S	Bonds of States, Provinces and municipalities	1.01%	ITA
BELGIUM 1.25 18-33 22/04A	Bonds of States, Provinces and municipalities	0.97%	BEL
NETHERLANDS 0.50 19-40 15/01A	Bonds of States, Provinces and municipalities	0.95%	NLD
IRELAND 1.35 18-31 18/03A	Bonds of States, Provinces and municipalities	0.93%	IRL
FRANCE 0.5 20-44 25/06A	Bonds of States, Provinces and municipalities	0.90%	FRA
FRANCE 0.5 18-29 25/05A	Bonds of States, Provinces and municipalities	0.88%	FRA

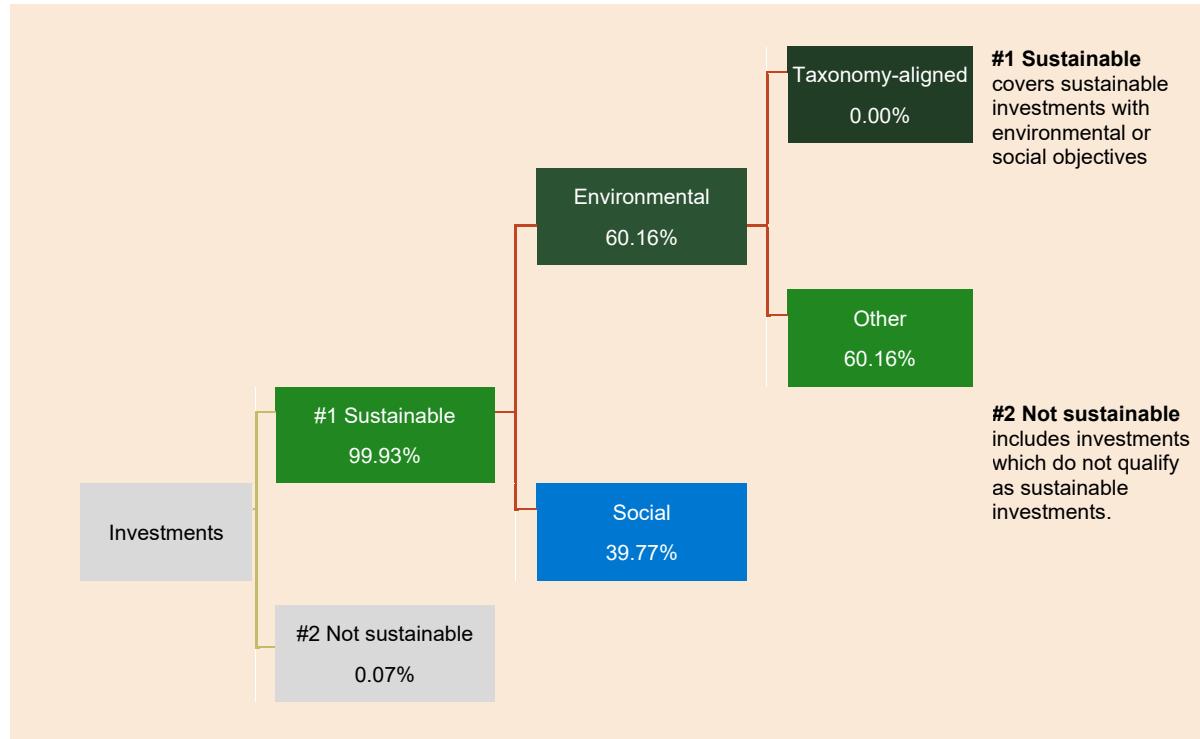

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the "Investment portfolio" section of the annual report.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

● ***In which economic sectors were the investments made?***

Top sector	% of Assets
Bonds of States, Provinces and municipalities	42.70%
Banks and other financial institutions	31.19%
Supranational Organisations	9.28%
Communication	2.32%
Pharmaceuticals	1.52%
Utilities	1.28%
Miscellaneous services	1.17%
Insurance	1.09%
Foods and non alcoholic drinks	1.05%
Miscellaneous consumer goods	1.02%
Electrical engineering	0.96%
Real estate	0.94%
Office supplies and computing	0.94%
Electronics and semiconductors	0.85%
Transportation	0.65%

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the "Investment portfolio" section of the annual report.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy? ¹

Yes

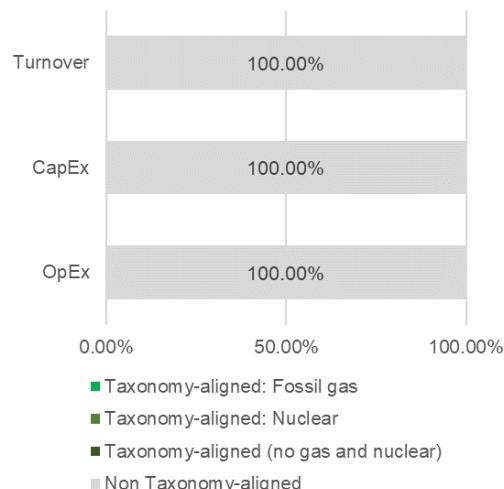

In fossil gas

In nuclear energy

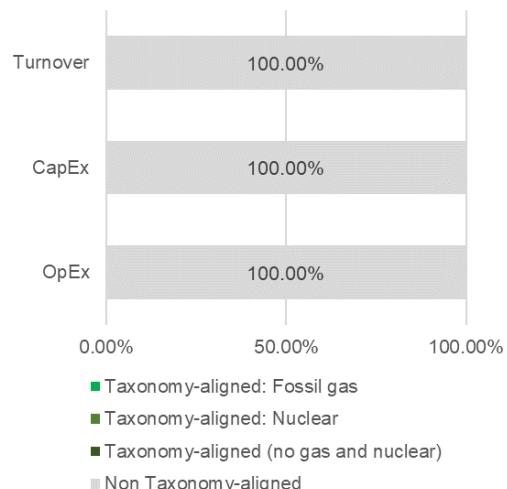

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

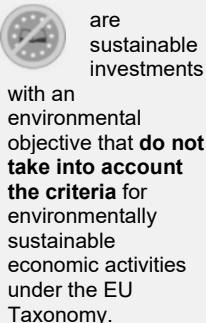

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100.00% of the total investments.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, nor on the transitional and enabling activities, as very few companies at global level provide the data necessary for a rigorous assessment their alignment with the Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Year	% EU Taxonomy Aligned
2023	0.00%
2022	0.00%

● **What is the breakdown of the proportion of the investments per each of the EU Taxonomy to which those investments contributed?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, as very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

Therefore, this percentage is considered as nul.

● **What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?**

The Sub-Fund had a share of 60.16% in sustainable investments with an environmental objective not aligned with the EU taxonomy.

Indeed to date, only two of the six objectives have entered into force in 2023 and very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

● **What was the share of socially sustainable investments?**

The Sub-Fund had a share of investments with a social objective of 39.77%

● **What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?**

The investments included under "Not sustainable" are present in the Sub-fund for 0.07% of the total net assets.

These investments include one or more of the following assets:

- Cash: Cash at sight, cash deposit, reverse repo needed to manage the liquidity of the Sub-fund following subscriptions/redemptions and/or being the result of the market exposure decision of the Sub-fund.
- Investments with issuers considered as sustainable investments at the moment of the investment and that are not fully aligned anymore with the Candriam sustainable investment criteria. These investments have been sold during the period.
- Non single name derivatives used for exposition and hedging purposes.

These investments do not affect the delivery of the sustainable investment objectives of the Sub-Fund as they represent a minor proportion of its assets.

● **What actions have been taken to attain the sustainable investment objective during the reference period?**

The financial product aims to achieve a carbon footprint that is at least 30% lower than the carbon footprint of the Benchmark.

Over the reference period, the financial product emitted 28.98 Tons CO2eq per million € invested, 57.35% lower than the benchmark.

Compared to the previous year, the financial product's carbon footprint has decreased by 8.36%.

The financial product has achieved its objective by favouring issuers with lower carbon footprint.

The financial product aims to achieve an ESG score, based on Candriam's proprietary ESG methodology, higher than its benchmark.

Over the reference period, the financial product displayed an ESG score of 57.7, 2.52% higher compared to its benchmark.

The financial product has achieved its objective by selectively favouring issuers that display a stronger ESG profile. The financial product invested in 1 issuer(s) in Health Care with improving ESG profiles and divested from 4 issuer(s) in Banks and Personal & Household Goods with deteriorating ESG profiles.

The financial product aims to invest at least 10% of net assets in green bonds.

Over the reference period, the financial product invested in 22.83% of its net assets in green bonds.

In comparison the previous year, the proportion of net assets invested green bonds is higher.

The financial product has achieved its objective by continued active participation in green bond markets. Notably, the financial product invested in green bonds issued by Automobiles & Parts, Banks, Basic Resources, Diversified Banks and Utilities or Agencies, European Investment Bank and Local Governments.

How did this financial product perform compared to the reference sustainable benchmark?

No specific index is designated as a reference sustainable benchmark to meet the sustainable investment objectives.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Candriam Sustainable Bond Euro Corporate

549300EWLO6W8JWYN626

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

● ● YES

- It made **sustainable investments with an environmental objective**: 64.50%
 - in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: 33.39%

● ● NO

- It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ____ % of sustainable investment
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The attainment of the sustainable investment objectives was measured through the following sustainability indicators:

- Carbon footprint : a carbon footprint at least 30% lower than the carbon footprint of the Sub-Fund's reference Benchmark.
- Green bonds : at least 10% of the Sub-Fund's total net assets invested in Green Bonds. The Sub-Fund aimed to increase the proportion of Green Bonds to 20% by the end of 2025.
- ESG score : a weighted average ESG score higher than the weighted average ESG score of the Sub-Fund's reference benchmark. The ESG Score is computed employing Candriam's proprietary ESG analysis methodology.

Moreover, the following indicators were monitored:

- OECD Guidelines for Multinational Enterprises, UN Global Compact: to ensure that there were no investments in companies that are in violation with the these principles.
- Candriam's Exclusion Policy: to ensure that there were no investments in companies that are on the Candriam's SRI Level 3 exclusion list as a result of the application of Candriam's Exclusion Policy.

How did the sustainability indicators perform?

The Sub-Fund has been managed in accordance with its sustainability indicators as defined below.

For the selection of sustainable investments, the portfolio manager has taken into account ESG assessments of issuers, produced by Candriam's ESG analyst team.

For companies, these assessments are based on the analysis of the company's interactions with its key stakeholders and the analysis of its business activities and their impact, positive or negative, on key sustainability challenges such as climate change and resource depletion. In addition, Candriam's ESG analysis includes exclusion filters based on compliance with international standards and involvement in controversial activities.

Candriam's ESG research and analysis for sustainable investments also assesses the compliance of investments with the "do no harm" principle to a sustainable investment objective and with good governance practices.

This integration of Candriam's ESG research methodology has enabled the Fund to meet the minimum proportion of sustainable investments defined in the prospectus (minimum 80%). The proportion of sustainable investments in the Fund was therefore above this minimum threshold, as detailed in the section "What was the proportion of sustainability-related investments?"

The Sub-Fund's reference benchmark has not been designated for the purpose of attaining the sustainable investment objective of the Sub-Fund.

'The Sub-Fund's reference benchmark does not qualify as an EU Climate Transition Benchmark or an EU Paris-Aligned Benchmark under Title III, Chapter 3a, of Regulation (EU) 2016/1011.

However, the Sub-Fund aimed to have a carbon footprint that is at least 30% lower than the carbon footprint of the Sub-Fund's reference benchmark.

Moreover, Candriam being part of the Net Zero Asset Management initiative, the Sub-Fund aimed to reduce greenhouse gas emissions.

Sustainability KPI Name	Portfolio	Benchmark	New indicator
Carbon Footprint - Corporate - Scope 1&2 - 30% reduction vs bench	47.54	88.89	
ESG Score - Corporate - Higher than bench	56.07	52.51	
Green Bonds - Country and Corporate - Min 10% / Min 20% 2025	15.02%		

... And Compared to Previous Periods?

The sub-fund has also been managed in line with its sustainability indicators.

Sustainability KPI Name	Year	Portfolio	Benchmark
Carbon Footprint - Corporate - Scope 1&2 - 30% reduction vs bench	2022	25.37	92.06
ESG Score - Corporate - Higher than bench	2022	56.57	51.95
Green Bonds - Min 1% / Min 2% 225	2022	13.80%	

The asset allocation of the financial product has evolved over the years.

Investment Category	Proportion of Investments	Proportion of Investments
	2023	2022
#1 Sustainable	97.89%	91.83%
#2 Not sustainable	2.11%	8.22%
Environmental	64.50%	56.37%
Social	33.39%	35.46%
Taxonomy-aligned	0.00%	0.00%
Other	64.50%	56.37%

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

Candriam ensured that its sustainable investments did not cause significant harm to any environmental and/or social sustainable investment objective by means of its ESG research and analysis of corporate and sovereign issuers. Based on its proprietary ESG Ratings and Scorings, Candriam's ESG methodology set clear requirements and minimum thresholds to identify those issuers that qualify as 'sustainable investment' and, in particular, do not cause significant harm to any environmental and/or social sustainable investment objective.

The 'Do not significant harm' principle, in particular, was assessed for corporates through:

- the consideration of "principal adverse impacts"
- the alignment with the OECD Guidelines for Multinational Enterprises and the UN Global Compact to ensure minimum environmental & social safeguards.

For more details, refer to the section below on the consideration of principal adverse impacts on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

The consideration of adverse impacts is central to Candriam's sustainable investment approach. Principal adverse impacts were taken into account throughout the entire ESG research and analysis process and through a wide range of methods:

1. ESG rating of corporates: the ESG research and screening methodology considers and assesses the principal adverse impact on sustainability from two distinct, but interlinked, angles:

- the company's issuers' business activities and how they impact, either positively or negatively, key sustainable challenges such as climate change and resource depletion;
- company's interactions with key stakeholders.

2. Negative screening of companies, which includes a norms-based exclusion and an exclusion of companies involved in controversial activities.

3. Engagement activities with companies , through dialogue and voting activities, which contribute to avoiding or reducing the extent of the adverse impacts. The ESG analysis framework and its results feed our engagement process, and vice versa.

The integration of the principal adverse impacts on sustainability factors has been based on the materiality or likely materiality of each indicator for each specific industry / sector to which the company belongs. The materiality is dependent on several factors, such as: type of information, data quality and breadth, applicability, relevance, and geographical coverage.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-fund's investments were subject to a norms-based controversy analysis that considered the compliance with the international social, human, environmental and anti-corruption standards, as defined by the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises. The International Labour Organisation and International Bill of Human Rights are part of the many international references integrated into our norms-based analysis and ESG model.

This analysis aimed to exclude companies that have significantly and repeatedly breached any of these principles.

How did this financial product consider principal adverse impacts on sustainability factors?

At Financial Product level, the principal adverse impacts (PAI) on sustainability factors were considered through one or several means: voting, dialogue, exclusions and/or monitoring (cfr. Candriam's PAI statement: <https://www.candriam.com/en/private/sfdr/>)

ENGAGEMENT

Our engagement policy is available on Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

DIALOGUE with corporate issuers

This financial product is invested in corporate issuers. Below statistics refer to engagement activities we have performed with these corporate issuers.

Climate (PAI1 to PAI6) is obviously central in our exchanges with companies. Priorities of Climate-engagement on the corporate side are identified taking into account :

- issuers presenting a weak transition profile (proprietary risk transition model), and/or still highly carbon intensive (Scope 1-2) or with large Scope 3 emissions
- issuers from financial sectors still largely exposed to fossil fuel and with a key role in financing the transition
- relative exposure of managed portfolios to the above issuers.

Candriam has joined in November 2021 the Net Zero Asset Management Initiative [<https://www.netzeroassetmanagers.org/signatories/candriam/>]. Through engagement, our objective is to encourage companies to publicly report on how they align with a 1.5D trajectory and to encourage such an alignment. We expect issuers in particular

to explain how their strategy and capital expenditures plan serve their decarbonisation commitment. We usually combine individual and collaborative dialogue.

13 issuers in the financial product are actually part of the priority targets of Candriam Net Zero Engagement campaign.

In addition, we continue to actively support CDP Climate [<https://www.cdp.net/en>], a large transparency survey feeding our investment processes : out of the 100 financial product's issuers targeted, 95% have properly filled the last survey. Filled surveys give us access to updated and more accurate Scope 1-2-3 emissions' data.

Candriam also actively participate to several collaborative initiatives such as Climate Action 100+ or IIGCC & ShareAction Climate initiatives on Financials. Such initiatives targeted 30 issuer(s) of the financial product. These initiatives contribute not only to increase the level of transparency on Greenhouse gas emissions and related strategy, but also to gain fundamental leverage for supporting strategic changes. Outcomes of these engagements are detailed in our annual engagement & voting report, available on our public website (Publications | Candriam) [<https://www.candriam.com/en/professional/insight-overview/publications/#sri-publications>].

Given the geopolitical context and observed increase in inequalities, 56 issuer(s) with presence in the financial product have also been contacted in relation to the protection of fundamental human rights at direct or indirect workforce level (supply chain due diligence) (PAI10 PAI11).

Inclusion is not to be outdone, with 74 issuers, of the portfolio having been more specifically engaged on topics related to PAI 12 (Unadjusted gender pay gap) or PAI 13 (Board gender diversity).

While above mentioned PAI are prevalent when considering engagement performed for this financial product in 2023, other PAI such as biodiversity-related ones may also have been addressed in our dialogues with issuers. For more information, please refer to Candriam Engagement Annual review under Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

EXCLUSIONS

PAI3

In addition to companies involved in the thermal coal, oil and gas activities (PAI 4), electricity-generating companies with a carbon intensity greater than 354 gCO2/kWh (PAI 3), are considered risky for inclusion in sustainable investments, even if they are not universally controversial. Given that emissions vary according to electricity generation sources, it is important to assess the carbon footprint per kilowatt-hour (kWh) to determine how closely companies are aligned with the 2 degrees Celsius trajectory.

This is why Candriam includes the carbon intensity of energy producers in our sustainability assessment. Where carbon intensity data is not available, Candriam's ESG analysts use other indicators to assess alignment with the Paris Agreement, such as progress in the energy transition in line with Paris Agreement targets and integration of a 1.5D limit scenario, taking into account investment plans and the credibility of carbon neutrality targets. These indicators are forward-looking and evolve over time to reflect the progress made by companies in their transition.

The carbon intensity (PAI 3) threshold for the product in 2023 was established at 354 gCO2/kWh. Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding this threshold, in addition to those previously excluded.

PAI4

Exposure to fossil fuels (PAI 4) undergoes stringent exclusions across all Candriam sustainable funds. Thermal coal, recognized for its detrimental impact and serious financial and sustainability implications, poses systemic and reputational risks that financial benefits cannot outweigh.

Companies deriving more than 5% of their sales from coal mining, coal-fired power generation, and coal-related operations such as exploration, processing, transport, and distribution are automatically excluded.

Additionally, companies exceeding a 5% threshold of revenue from conventional oil and gas activities, including exploration, extraction, refining, and transportation, are ineligible for investment. Similarly, entities with over 5% exposure to unconventional oil and gas activities are also excluded.

Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding the 5% threshold of exposure to thermal coal activities, supplementing the previously excluded entities.

Furthermore, no additional issuer(s) lost their eligibility due to surpassing the 5% threshold of exposure to conventional oil and gas activities, while no additional issuer(s) lost their eligibility for exceeding the 5% threshold of exposure to unconventional oil and gas activities.

PAI10

In accordance with PAI10 Candriam's normative analysis determines whether a company complies with the 10 principles of the United Nations Global Compact for each of the main categories: Human Rights (HR), Labor Rights (LR), Environment (ENV) and Anti-Corruption (AC). Our norms based analysis incorporates various international references, including the United Nations Declaration of Human Rights, ILO Fundamental Conventions, and OECD Guidelines for Multinational Enterprises, ensuring comprehensive coverage of human rights, labor standards, corruption, and discrimination.

In Candriam's "Level 3" SRI exclusion policy, companies with severe to very severe violations of the UN Global Compact principles are excluded. This list focuses on a strict interpretation of violations of the UN Global Compact, as assessed by Candriam's ESG analysts.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, for significant and repeated breaches of international social, human, environmental and anti-corruption standards, as defined by the UN Global Compact and the OECD Guidelines for Multinational Enterprises.

PAI14

Candriam is firmly committed to excluding from all its investments companies directly involved in the development, production, testing, maintenance and sale of controversial weapons (anti-personnel landmines, cluster bombs, depleted uranium weapons and armor, chemical weapons, biological weapons and white phosphorus weapons). We consider these damaging activities to present systemic and reputational risks.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, due to their involvement in these activities.

MONITORING: calculation and evaluation of the principal adverse impact indicators

Some of these indicators may have explicit targets and can be used to measure the attainment of the sustainable investment objective of the Financial Product. See below the results of the indicators of this Financial Product

PAI indicators	Value	Coverage (% rated / total assets)	Eligible assets (% eligible assets / total assets)
Scope 1 GHG Emissions	54,767.06	74.97%	79.65%
Scope 2 GHG Emissions	13,611.41	74.97%	79.65%
Total GHG Emissions	68,378.46	74.97%	79.18%
2 - Carbon Footprint	47.54	74.97%	79.18%
3 - GHG intensity of investee companies	97.10	74.96%	79.18%
4 - Exposure to companies active in fossil fuel sector	2.80%	75.66%	79.09%
10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.00%	93.59%	93.59%
13 - Board gender diversity	38.83%	73.58%	93.57%
14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0.00%	93.58%	93.59%

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
01/01/2023 - 31/12/2023.

Largest investments	Sector	% of Assets	Country
CANDRIAM SUS MONEY MARKET EURO Z EUR C	Banks and other financial institutions	3.04%	LUX

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the "Investment portfolio" section of the annual report.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

#1 Sustainable
covers sustainable investments with environmental or social objectives

#2 Not sustainable
includes investments which do not qualify as sustainable investments.

● ***In which economic sectors were the investments made?***

Top sector	% of Assets
Banks and other financial institutions	61.88%
Real estate	4.86%
Utilities	4.04%
Pharmaceuticals	3.51%
Communication	3.23%
Miscellaneous services	3.02%
Insurance	2.73%
Road vehicles	2.36%
Transportation	2.13%
Chemicals	1.92%
Miscellaneous consumer goods	1.85%
Building materials	1.77%
Bonds of States, Provinces and municipalities	1.10%
Office supplies and computing	1.04%
Electronics and semiconductors	1.00%

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the "Investment portfolio" section of the annual report.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

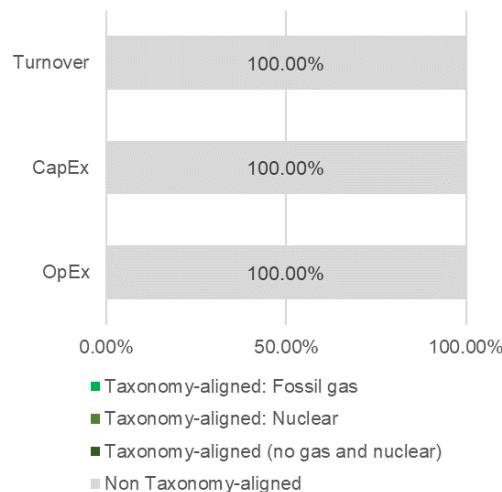

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy? ¹

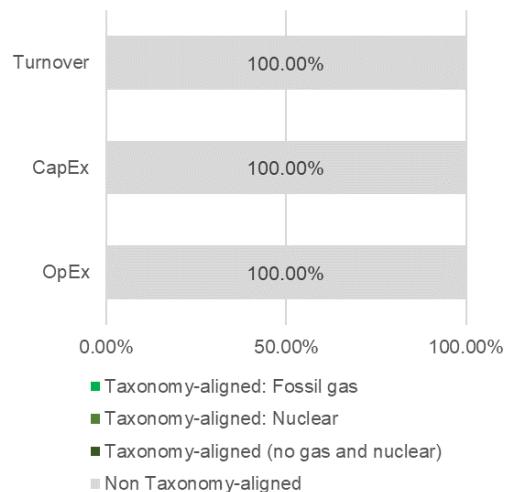

- Yes
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100.00% of the total investments.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

● **What was the share of investments made in transitional and enabling activities?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, nor on the transitional and enabling activities, as very few companies at global level provide the data necessary for a rigorous assessment their alignment with the Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Year	% EU Taxonomy Aligned
2023	0.00%
2022	0.00%

● **What is the breakdown of the proportion of the investments per each of the EU Taxonomy to which those investments contributed?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, as very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

Therefore, this percentage is considered as nul.

 **What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?**

The Sub-Fund had a share of 64.5% in sustainable investments with an environmental objective not aligned with the EU taxonomy.

Indeed to date, only two of the six objectives have entered into force in 2023 and very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

What was the share of socially sustainable investments?

The Sub-Fund had a share of investments with a social objective of 33.39%

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The investments included under "Not sustainable" are present in the Sub-fund for 2.11% of the total net assets.

These investments include one or more of the following assets:

- Cash: Cash at sight, cash deposit, reverse repo needed to manage the liquidity of the Sub-fund following subscriptions/redemptions and/or being the result of the market exposure decision of the Sub-fund.
- Investments with issuers considered as sustainable investments at the moment of the investment and that are not fully aligned anymore with the Candriam sustainable investment criteria. These investments have been sold during the period.
- Non single name derivatives used for exposition and hedging purposes.

These investments do not affect the delivery of the sustainable investment objectives of the Sub-Fund as they represent a minor proportion of its assets.

What actions have been taken to attain the sustainable investment objective during the reference period?

The financial product aims to achieve a carbon footprint that is at least 30% lower than the carbon footprint of the Benchmark.

Over the reference period, the financial product emitted 47.54 Tons CO2eq per million € invested, 46.51% lower than the benchmark.

The financial product has achieved its objective by favouring issuers with lower carbon footprint.

The financial product aims to achieve an ESG score, based on Candriam's proprietary ESG methodology, higher than its benchmark.

Over the reference period, the financial product displayed an ESG score of 56.07, 6.77% higher compared to its benchmark.

The financial product has achieved its objective by selectively favouring issuers that display a stronger ESG profile. The financial product invested in 2 issuer(s) in Telecommunications and Utilities with improving ESG profiles and divested from 10 issuer(s) in Banks, Industrial Goods & Services and Personal & Household Goods with deteriorating ESG profiles.

The financial product aims to invest at least 10% of net assets in green bonds.

Over the reference period, the financial product invested in 15.02% of its net assets in green bonds.

In comparison the previous year, the proportion of net assets invested green bonds is higher.

The financial product has achieved its objective by continued active participation in green bond markets. Notably, the financial product invested in green bonds issued by Banks, Basic Resources, Chemicals, Industrial Goods & Services, Insurance, Oil & Gas, Real Estate, Telecommunications, Travel & Leisure and Utilities.

How did this financial product perform compared to the reference sustainable benchmark?

No specific index is designated as a reference sustainable benchmark to meet the sustainable investment objectives.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Candriam Sustainable Bond Euro Short Term

549300XMO6ROCYLIXU45

CANDRIAM 
A NEW YORK LIFE INVESTMENTS COMPANY

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

 YES

- It made **sustainable investments with an environmental objective**: 57.46%
 - in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: 41.76%

 NO

- It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___ % of sustainable investment
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The attainment of the sustainable investment objectives was measured through the following sustainability indicators:

- carbon footprint : a carbon footprint at least 30% lower than the carbon footprint of the Sub-Fund's reference Benchmark.
- Green bonds : investment of at least 10% of the Sub-Fund's total net assets into Green Bonds. The Sub-Fund aimed to increase the proportion of Green Bonds to 20% by the end of 2025.
- ESG score : a weighted average ESG score that is higher than the weighted average ESG score of the Sub-Fund's reference benchmark. The ESG Score is computed employing Candriam's proprietary ESG analysis methodology.

Moreover, the following indicators were monitored:

- OECD Guidelines for Multinational Enterprises, UN Global Compact: to ensure that there were no investments in companies that are in violation with the these principles.
- Candriam's Exclusion Policy: to ensure that there were no investments in companies that are on the Candriam's SRI Level 3 exclusion list as a result of the application of Candriam's Exclusion Policy.
- Candriam's Oppressive regime list: to ensure that there were no sovereign investments in countries that are on Candriam's Oppressive regime list
- Countries considered "Not free" by Freedom House: to ensure that there were no sovereign investments in countries considered "Not free" by Freedom House.

How did the sustainability indicators perform?

The Sub-Fund has been managed in accordance with its sustainability indicators as defined below.

For the selection of sustainable investments, the portfolio manager has taken into account ESG assessments of issuers, produced by Candriam's ESG analyst team.

For companies, these assessments are based on the analysis of the company's interactions with its key stakeholders and the analysis of its business activities and their impact, positive or negative, on key sustainability challenges such as climate change

and resource depletion. In addition, Candriam's ESG analysis includes exclusion filters based on compliance with international standards and involvement in controversial activities.

For sovereign issuers, these assessments are based on the analysis of the countries' management of their natural, human, social and economic capital. In addition, exclusion filters are used to screen out issuers that do not meet democratic and governance standards.

Candriam's ESG research and analysis for sustainable investments also assesses the compliance of investments with the "do no harm" principle to a sustainable investment objective and with good governance practices for the corporates.

This integration of Candriam's ESG research methodology has enabled the Fund to meet the minimum proportion of sustainable investments defined in the prospectus (minimum 80%). The proportion of sustainable investments in the Fund was therefore above this minimum threshold, as detailed in the section "What was the proportion of sustainability-related investments?"

The Sub-Fund's reference benchmark has not been designated for the purpose of attaining the sustainable investment objective of the Sub-Fund.

'The Sub-Fund's reference benchmark does not qualify as an EU Climate Transition Benchmark or an EU Paris-Aligned Benchmark under Title III, Chapter 3a, of Regulation (EU) 2016/1011.

However, the Sub-Fund aimed to have a carbon footprint that is at least 30% lower than the carbon footprint of the Sub-Fund's reference benchmark.

Moreover, Candriam being part of the Net Zero Asset Management initiative, the Sub-Fund aimed to reduce greenhouse gas emissions.

Sustainability KPI Name	Portfolio	Benchmark	New indicator
Carbon Footprint - Corporate - Scope 1&2 - 30% reduction vs bench	19.41	65.84	
ESG Score - Country and Corporate - Higher than bench	57.03	55.68	
Green Bonds - Country and Corporate - Min 10% / Min 20% 2025	15.45%		

... And Compared to Previous Periods?

The sub-fund has also been managed in line with its sustainability indicators.

Sustainability KPI Name	Year	Portfolio	Benchmark
Carbon Footprint - Corporate - Scope 1&2 - 30% reduction vs bench	2022	21.39	69.83
ESG Score - Country and Corporate - Higher than bench	2022	57.06	55.73
Green Bonds - Min 5% / Min 2% 225	2022	7.16%	

The asset allocation of the financial product has evolved over the years.

Investment Category	Proportion of Investments	Proportion of Investments
	2023	2022
#1 Sustainable	99.22%	98.64%
#2 Not sustainable	0.78%	1.16%
Environmental	57.46%	54.05%
Social	41.76%	44.59%
Taxonomy-aligned	0.00%	0.00%
Other	57.46%	54.05%

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

Candriam ensured that its sustainable investments did not cause significant harm to any environmental and/or social sustainable investment objective by means of its ESG research and analysis of corporate and sovereign issuers. Based on its proprietary ESG Ratings and Scorings, Candriam's ESG methodology set clear requirements and minimum thresholds to identify those issuers that qualify as 'sustainable investment' and, in particular, do not cause significant harm to any environmental and/or social sustainable investment objective.

The 'Do not significant harm' principle, in particular, was assessed for corporates through:

- the consideration of "principal adverse impacts"
- the alignment with the OECD Guidelines for Multinational Enterprises and the UN Global Compact to ensure minimum environmental & social safeguards.

How were the indicators for adverse impacts on sustainability factors taken into account?

The consideration of adverse impacts is central to Candriam's sustainable investment approach. Principal adverse impacts were taken into account throughout the entire ESG research and analysis process and through a wide range of methods:

For the analysis of corporate issuers, these methods include:

1. ESG rating of corporates: the ESG research and screening methodology considers and assesses the principal adverse impact on sustainability from two distinct, but interlinked, angles:

- the company's issuers' business activities and how they impact, either positively or negatively, key sustainable challenges such as climate change and resource depletion;
- company's interactions with key stakeholders.

2. Negative screening of companies, which includes a norms-based exclusion and an exclusion of companies involved in controversial activities.

3. Engagement activities with companies, through dialogue and voting activities, which contribute to avoiding or reducing the extent of the adverse impacts. The ESG analysis framework and its results feed our engagement process, and vice versa.

For the analysis of sovereign issuers, these methods include:

1. Country ESG Scores: the ESG research and screening methodology considers and assesses key negative sustainability impacts around four sustainability dimensions: Natural capital, Human capital, Social capital, and Economic capital.

2. Negative Country Screening, which includes the following:

- Candriam's list of highly oppressive regimes -States with serious human rights violations;
- Freedom House's World Freedom Index - states considered "not free".

The integration of the principal adverse impacts on sustainability factors has been based on the materiality or likely materiality of each indicator for each specific industry / sector/ to which the company belongs and for each country to ensure that a country's score adequately reflects the short, medium and long-term problems, challenges and/or opportunities that matter for that country's future development. This materiality depends on several elements, such as the type of information, quality and extent of data, applicability, relevance and geographical coverage.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-fund's investments were subject to a norms-based controversy analysis that considered the compliance with the international social, human, environmental and anti-corruption standards, as defined by the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises. The International Labour Organisation and International Bill of Human Rights are part of the many international references integrated into our norms-based analysis and ESG model.

This analysis aimed to exclude companies that have significantly and repeatedly breached any of these principles.

How did this financial product consider principal adverse impacts on sustainability factors?

At Financial Product level, the principal adverse impacts (PAI) on sustainability factors were considered through one or several means: voting, dialogue, exclusions and/or monitoring (cfr. Candriam's PAI statement: <https://www.candriam.com/en/private/sfdr/>)

ENGAGEMENT

Our engagement policy is available on Candriam website <https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>.

DIALOGUE with non corporate issuers

This financial product is invested in non corporate issuers we engage with. For non-corporate issuers, such as sovereigns, agencies or supranationals, large majority of our engagement is done through collaborative dialogues and statements. Climate (PAI1 to PAI6) and biodiversity (PAI7) are the topics we predominantly engage on with them. For more information, please refer

to Candriam Engagement Annual review under Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

DIALOGUE with corporate issuers

This financial product is invested in corporate issuers. Below statistics refer to engagement activities we have performed with these corporate issuers.

Climate (PAI1 to PAI6) is obviously central in our exchanges with companies. Priorities of Climate-engagement on the corporate side are identified taking into account :

- issuers presenting a weak transition profile (proprietary risk transition model), and/or still highly carbon intensive (Scope 1-2) or with large Scope 3 emissions
- issuers from financial sectors still largely exposed to fossil fuel and with a key role in financing the transition
- relative exposure of managed portfolios to the above issuers.

Candriam has joined in November 2021 the Net Zero Asset Management Initiative [<https://www.netzeroassetmanagers.org/signatories/candriam/>]. Through engagement, our objective is to encourage companies to publicly report on how they align with a 1.5D trajectory and to encourage such an alignment. We expect issuers in particular to explain how their strategy and capital expenditures plan serve their decarbonisation commitment. We usually combine individual and collaborative dialogue.

19 issuers in the financial product are actually part of the priority targets of Candriam Net Zero Engagement campaign.

In addition, we continue to actively support CDP Climate [<https://www.cdp.net/en>], a large transparency survey feeding our investment processes : out of the 101 financial product's issuers targeted, 99.01% have properly filled the last survey. Filled surveys give us access to updated and more accurate Scope 1-2-3 emissions' data.

Candriam also actively participate to several collaborative initiatives such as Climate Action 100+ or IIGCC & ShareAction Climate initiatives on Financials. Such initiatives targeted 31 issuer(s) of the financial product. These initiatives contribute not only to increase the level of transparency on Greenhouse gas emissions and related strategy, but also to gain fundamental leverage for supporting strategic changes. Outcomes of these engagements are detailed in our annual engagement & voting report, available on our public website (Publications | Candriam) [<https://www.candriam.com/en/professional/insight-overview/publications/#sri-publications>].

Given the geopolitical context and observed increase in inequalities, 59 issuer(s) with presence in the financial product have also been contacted in relation to the protection of fundamental human rights at direct or indirect workforce level (supply chain due diligence) (PAI10 PAI11).

Inclusion is not to be outdone, with 86 issuers, of the portfolio having been more specifically engaged on topics related to PAI 12 (Unadjusted gender pay gap) or PAI 13 (Board gender diversity).

While above mentioned PAI are prevalent when considering engagement performed for this financial product in 2023, other PAI such as biodiversity-related ones may also have been addressed in our dialogues with issuers. For more information, please refer to Candriam Engagement Annual review under Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

EXCLUSIONS

PAI3

In addition to companies involved in the thermal coal, oil and gas activities (PAI 4), electricity-generating companies with a carbon intensity greater than 354 gCO2/kWh (PAI 3), are considered risky for inclusion in sustainable investments, even if they are not universally controversial. Given that emissions vary according to electricity generation sources, it is important to assess the carbon footprint per kilowatt-hour (kWh) to determine how closely companies are aligned with the 2 degrees Celsius trajectory.

This is why Candriam includes the carbon intensity of energy producers in our sustainability assessment. Where carbon intensity data is not available, Candriam's ESG analysts use other indicators to assess alignment with the Paris Agreement, such as progress in the energy transition in line with Paris Agreement targets and integration of a 1.5D limit scenario, taking into account investment plans and the credibility of carbon neutrality targets. These indicators are forward-looking and evolve over time to reflect the progress made by companies in their transition.

The carbon intensity (PAI 3) threshold for the product in 2023 was established at 354 gCO2/kWh. Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding this threshold, in addition to those previously excluded.

PAI4

Exposure to fossil fuels (PAI 4) undergoes stringent exclusions across all Candriam sustainable funds. Thermal coal, recognized for its detrimental impact and serious financial and sustainability implications, poses systemic and reputational risks that financial benefits cannot outweigh.

Companies deriving more than 5% of their sales from coal mining, coal-fired power generation, and coal-related operations such as exploration, processing, transport, and distribution are automatically excluded.

Additionally, companies exceeding a 5% threshold of revenue from conventional oil and gas activities, including exploration, extraction, refining, and transportation, are ineligible for investment. Similarly, entities with over 5% exposure to unconventional oil and gas activities are also excluded.

Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding the 5% threshold of exposure to thermal coal activities, supplementing the previously excluded entities.

Furthermore, no additional issuer(s) lost their eligibility due to surpassing the 5% threshold of exposure to conventional oil and gas activities, while no additional issuer(s) lost their eligibility for exceeding the 5% threshold of exposure to unconventional oil and gas activities.

PAI10

In accordance with PAI10 Candriam's normative analysis determines whether a company complies with the 10 principles of the United Nations Global Compact for each of the main categories: Human Rights (HR), Labor Rights (LR), Environment (ENV) and Anti-Corruption (AC). Our norms based analysis incorporates various international references, including the United Nations Declaration of Human Rights, ILO Fundamental Conventions, and OECD Guidelines for Multinational Enterprises, ensuring comprehensive coverage of human rights, labor standards, corruption, and discrimination.

In Candriam's "Level 3" SRI exclusion policy, companies with severe to very severe violations of the UN Global Compact principles are excluded. This list focuses on a strict interpretation of violations of the UN Global Compact, as assessed by Candriam's ESG analysts.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, for significant and repeated breaches of international social, human, environmental and anti-corruption standards, as defined by the UN Global Compact and the OECD Guidelines for Multinational Enterprises.

PAI14

Candriam is firmly committed to excluding from all its investments companies directly involved in the development, production, testing, maintenance and sale of controversial weapons (anti-personnel landmines, cluster bombs, depleted uranium weapons and armor, chemical weapons, biological weapons and white phosphorus weapons). We consider these damaging activities to present systemic and reputational risks.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, due to their involvement in these activities.

PAI16

Our list of repressive regimes is made up of countries in which human rights are regularly violated, fundamental freedoms are systematically denied and personal safety is not guaranteed due to government failure and systematic ethical violations. We are also extremely vigilant with regard to totalitarian states or countries whose governments are involved in a war against their own people. To compile the list of repressive regimes, we rely on data provided by external sources, such as Freedom House's Index of Freedom in the World, the World Bank's Governance Indicators and the Economist Intelligence Unit's Democracy Index, which guide our qualitative examination of non-democratic countries.

For this list of countries, Candriam's analysts have developed processes that apply to both sovereign and corporate investments, including exclusion, mitigation and engagement processes based on our risk assessment. Candriam considers debt issued by sovereign or quasi-sovereign entities on the list of repressive regimes to be ineligible for investment.

Over the reference period, no additional sovereign issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded.

MONITORING: calculation and evaluation of the principal adverse impact indicators

Some of these indicators may have explicit targets and can be used to measure the attainment of the sustainable investment objective of the Financial Product. See below the results of the indicators of this Financial Product

PAI indicators	Value	Coverage (% rated / total assets)	Eligible assets (% eligible assets / total assets)
Scope 1 GHG Emissions	11,056.71	55.28%	55.93%
Scope 2 GHG Emissions	6,839.58	55.28%	55.93%
Total GHG Emissions	17,896.29	55.28%	55.80%
2 - Carbon Footprint	19.41	55.28%	55.80%
3 - GHG intensity of investee companies	53.69	55.28%	55.80%
4 - Exposure to companies active in fossil fuel sector	0.68%	54.83%	55.75%
10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.00%	70.67%	70.67%
13 - Board gender diversity	40.14%	62.30%	70.66%
14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0.00%	70.67%	70.67%
15 - GHG intensity	190.92	23.32%	23.41%
16 - Investee countries subject to social violations	0.00%	23.96%	23.96%

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
01/01/2023 - 31/12/2023.

Largest investments	Sector	% of Assets	Country
SPAIN 0.00 20-25 31/01	Bonds of States, Provinces and municipalities	2.32%	ESP

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the "Investment portfolio" section of the annual report.

What was the proportion of sustainability-related investments?

Asset allocation
describes the share
of investments in
specific assets.

What was the asset allocation?

● ***In which economic sectors were the investments made?***

Top sector	% of Assets
Banks and other financial institutions	46.84%
Bonds of States, Provinces and municipalities	23.94%
Communication	4.11%
Electronics and semiconductors	2.39%
Pharmaceuticals	2.33%
Electrical engineering	2.03%
Utilities	1.78%
Supranational Organisations	1.78%
Real estate	1.76%
Insurance	1.69%
Internet and internet services	1.57%
Office supplies and computing	1.26%
Miscellaneous consumer goods	1.22%
Foods and non alcoholic drinks	1.10%
Building materials	0.91%

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the "Investment portfolio" section of the annual report.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy? ¹

Yes

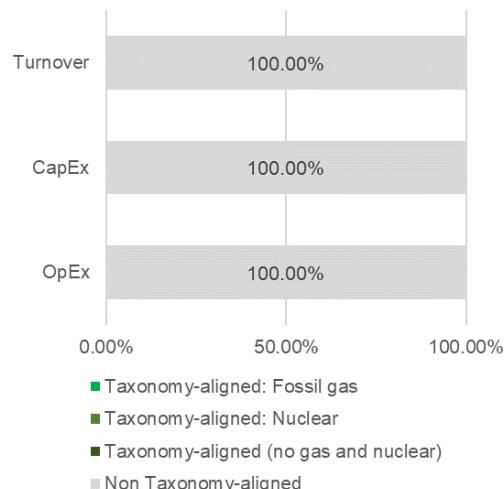

In fossil gas

In nuclear energy

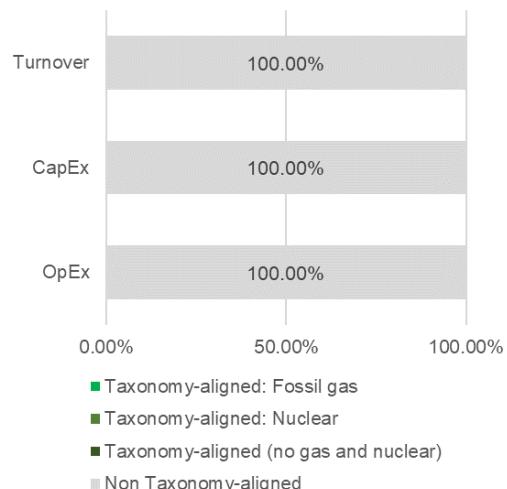

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100.00% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

● **What was the share of investments made in transitional and enabling activities?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, nor on the transitional and enabling activities, as very few companies at global level provide the data necessary for a rigorous assessment their alignment with the Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Year	% EU Taxonomy Aligned
2023	0.00%
2022	0.00%

● **What is the breakdown of the proportion of the investments per each of the EU Taxonomy to which those investments contributed?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, as very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

Therefore, this percentage is considered as nul.

 **What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?**

The Sub-Fund had a share of 57.46% in sustainable investments with an environmental objective not aligned with the EU taxonomy.

Indeed to date, only two of the six objectives have entered into force in 2023 and very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

What was the share of socially sustainable investments?

The Sub-Fund had a share of investments with a social objective of 41.76%

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The investments included under "Not sustainable" are present in the Sub-fund for 0.78% of the total net assets.

These investments include one or more of the following assets:

- Cash: Cash at sight, cash deposit, reverse repo needed to manage the liquidity of the Sub-fund following subscriptions/redemptions and/or being the result of the market exposure decision of the Sub-fund.
- Investments with issuers considered as sustainable investments at the moment of the investment and that are not fully aligned anymore with the Candriam sustainable investment criteria. These investments have been sold during the period.
- Non single name derivatives used for exposition and hedging purposes.

These investments do not affect the delivery of the sustainable investment objectives of the Sub-Fund as they represent a minor proportion of its assets.

What actions have been taken to attain the sustainable investment objective during the reference period?

The financial product aims to achieve a carbon footprint that is at least 30% lower than the carbon footprint of the Benchmark.

Over the reference period, the financial product emitted 19.41 Tons CO2eq per million € invested, 70.52% lower than the benchmark.

Compared to the previous year, the financial product's carbon footprint has decreased by 9.25%.

The financial product has achieved its objective by favouring issuers with lower carbon footprint.

The financial product aims to achieve an ESG score, based on Candriam's proprietary ESG methodology, higher than its benchmark.

Over the reference period, the financial product displayed an ESG score of 57.03, 2.44% higher compared to its benchmark.

The financial product has achieved its objective by selectively favouring issuers that display a stronger ESG profile. The financial product invested in 3 issuer(s) in Chemicals, Health Care and Integrated Telecommunication Services with improving ESG profiles and divested from 8 issuer(s) in Banks, Industrial Goods & Services and Personal & Household Goods with deteriorating ESG profiles.

The financial product aims to invest at least 10% of net assets in green bonds.

Over the reference period, the financial product invested in 15.45% of its net assets in green bonds.

In comparison the previous year, the proportion of net assets invested green bonds is higher.

The financial product has achieved its objective by continued active participation in green bond markets. Notably, the financial product invested in green bonds issued by Automobiles & Parts, Banks, Basic Resources, Covered - Other, Diversified Banks, Utilities and Wireless Telecommunication Services.

How did this financial product perform compared to the reference sustainable benchmark?

No specific index is designated as a reference sustainable benchmark to meet the sustainable investment objectives.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

 YES

- It made **sustainable investments with an environmental objective**: 53.95%
 - in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: 42.31%

 NO

- It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___ % of sustainable investment
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The attainment of the sustainable investment objectives was measured through the following sustainability indicators:

- carbon footprint : a carbon footprint at least 30% lower than the carbon footprint of the Sub-Fund's reference Benchmark.
- Green bonds : investment of at least 10% of the Sub-Fund's total net assets into Green Bonds. The Sub-Fund aimed to increase the proportion of Green Bonds to 20% by the end of 2025.
- ESG score : a weighted average ESG score that is higher than the weighted average ESG score of the Sub-Fund's reference benchmark. The ESG Score is computed employing Candriam's proprietary ESG analysis methodology.

Moreover, the following indicators were monitored:

- OECD Guidelines for Multinational Enterprises, UN Global Compact: to ensure that there were no investments in companies that are in violation with the these principles.
- Candriam's Exclusion Policy: to ensure that there were no investments in companies that are on the Candriam's SRI Level 3 exclusion list as a result of the application of Candriam's Exclusion Policy.
- Candriam's Oppressive regime list: to ensure that there were no sovereign investments in countries that are on Candriam's Oppressive regime list
- Countries considered "Not free" by Freedom House: to ensure that there were no sovereign investments in countries considered "Not free" by Freedom House.

How did the sustainability indicators perform?

The Sub-Fund has been managed in accordance with its sustainability indicators as defined below.

For the selection of sustainable investments, the portfolio manager has taken into account ESG assessments of issuers, produced by Candriam's ESG analyst team.

For companies, these assessments are based on the analysis of the company's interactions with its key stakeholders and the analysis of its business activities and their impact, positive or negative, on key sustainability challenges such as climate change

and resource depletion. In addition, Candriam's ESG analysis includes exclusion filters based on compliance with international standards and involvement in controversial activities.

For sovereign issuers, these assessments are based on the analysis of the countries' management of their natural, human, social and economic capital. In addition, exclusion filters are used to screen out issuers that do not meet democratic and governance standards.

Candriam's ESG research and analysis for sustainable investments also assesses the compliance of investments with the "do no harm" principle to a sustainable investment objective and with good governance practices for the corporates.

This integration of Candriam's ESG research methodology has enabled the Fund to meet the minimum proportion of sustainable investments defined in the prospectus (minimum 80%). The proportion of sustainable investments in the Fund was therefore above this minimum threshold, as detailed in the section "What was the proportion of sustainability-related investments?"

The Sub-Fund's reference benchmark has not been designated for the purpose of attaining the sustainable investment objective of the Sub-Fund.

'The Sub-Fund's reference benchmark does not qualify as an EU Climate Transition Benchmark or an EU Paris-Aligned Benchmark under Title III, Chapter 3a, of Regulation (EU) 2016/1011.

However, the Sub-Fund aimed to have a carbon footprint that is at least 30% lower than the carbon footprint of the Sub-Fund's reference benchmark.

Moreover, Candriam being part of the Net Zero Asset Management initiative, the Sub-Fund aimed to reduce greenhouse gas emissions.

Sustainability KPI Name	Portfolio	Benchmark	New indicator
Carbon Footprint - Corporate - Scope 1&2 - 30% reduction vs bench	22.23	122.30	
ESG Score - Country and Corporate - Higher than bench	54.20	49.63	
Green Bonds - Country and Corporate - Min 10% / Min 20% 2025	17.86%		

... And Compared to Previous Periods?

The sub-fund has also been managed in line with its sustainability indicators.

Sustainability KPI Name	Year	Portfolio	Benchmark
Carbon Footprint - Corporate - Scope 1&2 - 30% reduction vs bench	2022	14.20	122.98
ESG Score - Country and Corporate - Higher than bench	2022	54.89	49.63
Green Bonds - Min 1% / Min 2% 225	2022	17.03%	

The asset allocation of the financial product has evolved over the years.

Investment Category	Proportion of Investments	Proportion of Investments
	2023	2022
#1 Sustainable	96.25%	95.17%
#2 Not sustainable	3.75%	4.05%
Environmental	53.95%	53.76%
Social	42.31%	41.41%
Taxonomy-aligned	0.00%	0.00%
Other	53.95%	53.76%

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

Candriam ensured that its sustainable investments did not cause significant harm to any environmental and/or social sustainable investment objective by means of its ESG research and analysis of corporate and sovereign issuers. Based on its proprietary ESG Ratings and Scorings, Candriam's ESG methodology set clear requirements and minimum thresholds to identify those issuers that qualify as 'sustainable investment' and, in particular, do not cause significant harm to any environmental and/or social sustainable investment objective.

The 'Do not significant harm' principle, in particular, was assessed for corporates through:

- the consideration of "principal adverse impacts"
- the alignment with the OECD Guidelines for Multinational Enterprises and the UN Global Compact to ensure minimum environmental & social safeguards.

For more details, refer to the section below on the consideration of principal adverse impacts on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

The consideration of adverse impacts is central to Candriam's sustainable investment approach. Principal adverse impacts were taken into account throughout the entire ESG research and analysis process and through a wide range of methods:

For the analysis of corporate issuers, these methods include:

1. ESG rating of corporates: the ESG research and screening methodology considers and assesses the principal adverse impact on sustainability from two distinct, but interlinked, angles:

- the company's issuers' business activities and how they impact, either positively or negatively, key sustainable challenges such as climate change and resource depletion;
- company's interactions with key stakeholders.

2. Negative screening of companies, which includes a norms-based exclusion and an exclusion of companies involved in controversial activities.

3. Engagement activities with companies , through dialogue and voting activities, which contribute to avoiding or reducing the extent of the adverse impacts. The ESG analysis framework and its results feed our engagement process, and vice versa.

For the analysis of sovereign issuers, these methods include:

1. Country ESG Scores: the ESG research and screening methodology considers and assesses key negative sustainability impacts around four sustainability dimensions: Natural capital, Human capital, Social capital, and Economic capital.

2. Negative Country Screening, which includes the following:

- Candriam's list of highly oppressive regimes -States with serious human rights violations;
- Freedom House's World Freedom Index - states considered "not free".

The integration of the principal adverse impacts on sustainability factors has been based on the materiality or likely materiality of each indicator for each specific industry / sector/ to which the company belongs and for each country to ensure that a country's score adequately reflects the short, medium and long-term problems, challenges and/or opportunities that matter for that country's future development. This materiality depends on several elements, such as the type of information, quality and extent of data, applicability, relevance and geographical coverage.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-fund's investments were subject to a norms-based controversy analysis that considered the compliance with the international social, human, environmental and anti-corruption standards, as defined by the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises. The International Labour Organisation and International Bill of Human Rights are part of the many international references integrated into our norms-based analysis and ESG model.

This analysis aimed to exclude companies that have significantly and repeatedly breached any of these principles.

How did this financial product consider principal adverse impacts on sustainability factors?

At Financial Product level, the principal adverse impacts (PAI) on sustainability factors were considered through one or several means: voting, dialogue, exclusions and/or monitoring (cfr. Candriam's PAI statement: <https://www.candriam.com/en/private/sfdr/>)

ENGAGEMENT

Our engagement policy is available on Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

DIALOGUE with non corporate issuers

This financial product is invested in non corporate issuers we engage with. For non-corporate issuers, such as sovereigns, agencies or supranationals, large majority of our engagement is done through collaborative dialogues and statements. Climate (PAI1 to PAI6) and biodiversity (PAI7) are the topics we predominantly engage on with them. For more information, please refer

to Candriam Engagement Annual review under Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

DIALOGUE with corporate issuers

This financial product is invested in corporate issuers. Below statistics refer to engagement activities we have performed with these corporate issuers.

Climate (PAI1 to PAI6) is obviously central in our exchanges with companies. Priorities of Climate-engagement on the corporate side are identified taking into account :

- issuers presenting a weak transition profile (proprietary risk transition model), and/or still highly carbon intensive (Scope 1-2) or with large Scope 3 emissions
- issuers from financial sectors still largely exposed to fossil fuel and with a key role in financing the transition
- relative exposure of managed portfolios to the above issuers.

Candriam has joined in November 2021 the Net Zero Asset Management Initiative [<https://www.netzeroassetmanagers.org/signatories/candriam/>]. Through engagement, our objective is to encourage companies to publicly report on how they align with a 1.5D trajectory and to encourage such an alignment. We expect issuers in particular to explain how their strategy and capital expenditures plan serve their decarbonisation commitment. We usually combine individual and collaborative dialogue.

17 issuers in the financial product are actually part of the priority targets of Candriam Net Zero Engagement campaign.

In addition, we continue to actively support CDP Climate [<https://www.cdp.net/en>], a large transparency survey feeding our investment processes : out of the 81 financial product's issuers targeted, 98.77% have properly filled the last survey. Filled surveys give us access to updated and more accurate Scope 1-2-3 emissions' data.

Candriam also actively participate to several collaborative initiatives such as Climate Action 100+ or IIGCC & ShareAction Climate initiatives on Financials. Such initiatives targeted 20 issuer(s) of the financial product. These initiatives contribute not only to increase the level of transparency on Greenhouse gas emissions and related strategy, but also to gain fundamental leverage for supporting strategic changes. Outcomes of these engagements are detailed in our annual engagement & voting report, available on our public website (Publications | Candriam) [<https://www.candriam.com/en/professional/insight-overview/publications/#sri-publications>].

Given the geopolitical context and observed increase in inequalities, 52 issuer(s) with presence in the financial product have also been contacted in relation to the protection of fundamental human rights at direct or indirect workforce level (supply chain due diligence) (PAI10 PAI11).

Inclusion is not to be outdone, with 70 issuers, of the portfolio having been more specifically engaged on topics related to PAI 12 (Unadjusted gender pay gap) or PAI 13 (Board gender diversity).

While above mentioned PAI are prevalent when considering engagement performed for this financial product in 2023, other PAI such as biodiversity-related ones may also have been addressed in our dialogues with issuers. For more information, please refer to Candriam Engagement Annual review under Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

EXCLUSIONS

PAI3

In addition to companies involved in the thermal coal, oil and gas activities (PAI 4), electricity-generating companies with a carbon intensity greater than 354 gCO2/kWh (PAI 3), are considered risky for inclusion in sustainable investments, even if they are not universally controversial. Given that emissions vary according to electricity generation sources, it is important to assess the carbon footprint per kilowatt-hour (kWh) to determine how closely companies are aligned with the 2 degrees Celsius trajectory.

This is why Candriam includes the carbon intensity of energy producers in our sustainability assessment. Where carbon intensity data is not available, Candriam's ESG analysts use other indicators to assess alignment with the Paris Agreement, such as progress in the energy transition in line with Paris Agreement targets and integration of a 1.5D limit scenario, taking into account investment plans and the credibility of carbon neutrality targets. These indicators are forward-looking and evolve over time to reflect the progress made by companies in their transition.

The carbon intensity (PAI 3) threshold for the product in 2023 was established at 354 gCO2/kWh. Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding this threshold, in addition to those previously excluded.

PAI4

Exposure to fossil fuels (PAI 4) undergoes stringent exclusions across all Candriam sustainable funds. Thermal coal, recognized for its detrimental impact and serious financial and sustainability implications, poses systemic and reputational risks that financial benefits cannot outweigh.

Companies deriving more than 5% of their sales from coal mining, coal-fired power generation, and coal-related operations such as exploration, processing, transport, and distribution are automatically excluded.

Additionally, companies exceeding a 5% threshold of revenue from conventional oil and gas activities, including exploration, extraction, refining, and transportation, are ineligible for investment. Similarly, entities with over 5% exposure to unconventional oil and gas activities are also excluded.

Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding the 5% threshold of exposure to thermal coal activities, supplementing the previously excluded entities.

Furthermore, no additional issuer(s) lost their eligibility due to surpassing the 5% threshold of exposure to conventional oil and gas activities, while no additional issuer(s) lost their eligibility for exceeding the 5% threshold of exposure to unconventional oil and gas activities.

PAI10

In accordance with PAI10 Candriam's normative analysis determines whether a company complies with the 10 principles of the United Nations Global Compact for each of the main categories: Human Rights (HR), Labor Rights (LR), Environment (ENV) and Anti-Corruption (AC). Our norms based analysis incorporates various international references, including the United Nations Declaration of Human Rights, ILO Fundamental Conventions, and OECD Guidelines for Multinational Enterprises, ensuring comprehensive coverage of human rights, labor standards, corruption, and discrimination.

In Candriam's "Level 3" SRI exclusion policy, companies with severe to very severe violations of the UN Global Compact principles are excluded. This list focuses on a strict interpretation of violations of the UN Global Compact, as assessed by Candriam's ESG analysts.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, for significant and repeated breaches of international social, human, environmental and anti-corruption standards, as defined by the UN Global Compact and the OECD Guidelines for Multinational Enterprises.

PAI14

Candriam is firmly committed to excluding from all its investments companies directly involved in the development, production, testing, maintenance and sale of controversial weapons (anti-personnel landmines, cluster bombs, depleted uranium weapons and armor, chemical weapons, biological weapons and white phosphorus weapons). We consider these damaging activities to present systemic and reputational risks.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, due to their involvement in these activities.

PAI16

Our list of repressive regimes is made up of countries in which human rights are regularly violated, fundamental freedoms are systematically denied and personal safety is not guaranteed due to government failure and systematic ethical violations. We are also extremely vigilant with regard to totalitarian states or countries whose governments are involved in a war against their own people. To compile the list of repressive regimes, we rely on data provided by external sources, such as Freedom House's Index of Freedom in the World, the World Bank's Governance Indicators and the Economist Intelligence Unit's Democracy Index, which guide our qualitative examination of non-democratic countries.

For this list of countries, Candriam's analysts have developed processes that apply to both sovereign and corporate investments, including exclusion, mitigation and engagement processes based on our risk assessment. Candriam considers debt issued by sovereign or quasi-sovereign entities on the list of repressive regimes to be ineligible for investment.

Over the reference period, no additional sovereign issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded.

MONITORING: calculation and evaluation of the principal adverse impact indicators

Some of these indicators may have explicit targets and can be used to measure the attainment of the sustainable investment objective of the Financial Product. See below the results of the indicators of this Financial Product

PAI indicators	Value	Coverage (% rated / total assets)	Eligible assets (% eligible assets / total assets)
Scope 1 GHG Emissions	1,420.40	28.22%	28.87%
Scope 2 GHG Emissions	737.63	28.22%	28.87%
Total GHG Emissions	2,158.03	28.22%	28.87%
2 - Carbon Footprint	22.23	28.22%	28.87%
3 - GHG intensity of investee companies	60.11	28.22%	28.87%
4 - Exposure to companies active in fossil fuel sector	0.57%	28.16%	28.89%
10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.00%	35.34%	35.34%
13 - Board gender diversity	38.38%	30.64%	35.40%
14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0.00%	35.34%	35.34%
15 - GHG intensity	275.43	36.81%	37.72%
16 - Investee countries subject to social violations	0.00%	43.99%	44.04%

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
01/01/2023 - 31/12/2023.

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the "Investment portfolio" section of the annual report.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

● ***In which economic sectors were the investments made?***

Top sector	% of Assets
Bonds of States, Provinces and municipalities	43.25%
Banks and other financial institutions	31.35%
Supranational Organisations	9.79%
Pharmaceuticals	1.72%
Communication	1.57%
Real estate	1.43%
Miscellaneous consumer goods	1.22%
Foods and non alcoholic drinks	1.14%
Electronics and semiconductors	0.91%
Retail trade and department stores	0.91%
Insurance	0.86%
Internet and internet services	0.73%
Miscellaneous services	0.63%
Transportation	0.59%
Electrical engineering	0.53%

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the "Investment portfolio" section of the annual report.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

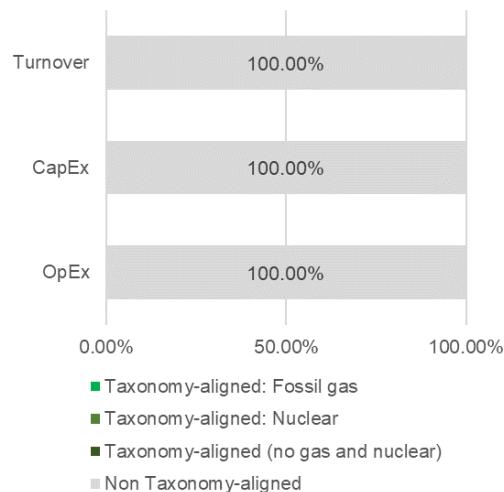

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy? ¹

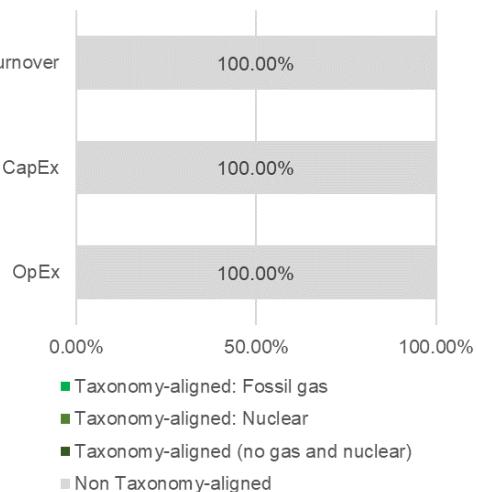

- Yes
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100.00% of the total investments.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

● **What was the share of investments made in transitional and enabling activities?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, nor on the transitional and enabling activities, as very few companies at global level provide the data necessary for a rigorous assessment their alignment with the Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Year	% EU Taxonomy Aligned
2023	0.00%
2022	0.00%

● **What is the breakdown of the proportion of the investments per each of the EU Taxonomy to which those investments contributed?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, as very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

Therefore, this percentage is considered as nul.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

The Sub-Fund had a share of 53.95% in sustainable investments with an environmental objective not aligned with the EU taxonomy.

Indeed to date, only two of the six objectives have entered into force in 2023 and very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

What was the share of socially sustainable investments?

The Sub-Fund had a share of investments with a social objective of 42.31%

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The investments included under "Not sustainable" are present in the Sub-fund for 3.75% of the total net assets.

These investments include one or more of the following assets:

- Cash: Cash at sight, cash deposit, reverse repo needed to manage the liquidity of the Sub-fund following subscriptions/redemptions and/or being the result of the market exposure decision of the Sub-fund.
- Investments with issuers considered as sustainable investments at the moment of the investment and that are not fully aligned anymore with the Candriam sustainable investment criteria. These investments have been sold during the period.
- Non single name derivatives used for exposition and hedging purposes.

These investments do not affect the delivery of the sustainable investment objectives of the Sub-Fund as they represent a minor proportion of its assets.

What actions have been taken to attain the sustainable investment objective during the reference period?

The financial product aims to achieve a carbon footprint that is at least 30% lower than the carbon footprint of the Benchmark.

Over the reference period, the financial product emitted 22.23 Tons CO2eq per million € invested, 81.83% lower than the benchmark.

The financial product has achieved its objective by favouring issuers with lower carbon footprint.

The financial product aims to achieve an ESG score, based on Candriam's proprietary ESG methodology, higher than its benchmark.

Over the reference period, the financial product displayed an ESG score of 54.2, 9.2% higher compared to its benchmark.

The financial product has achieved its objective by selectively favouring issuers that display a stronger ESG profile. The financial product invested in 1 issuer(s) in Health Care with improving ESG profiles and divested from 7 issuer(s) in Banks, Diversified Banks, Industrial Goods & Services and Personal & Household Goods with deteriorating ESG profiles.

The financial product aims to invest at least 10% of net assets in green bonds.

Over the reference period, the financial product invested in 17.86% of its net assets in green bonds.

In comparison the previous year, the proportion of net assets invested green bonds is higher.

The financial product has achieved its objective by continued active participation in green bond markets. Notably, the financial product invested in green bonds issued by Diversified Banks.

How did this financial product perform compared to the reference sustainable benchmark?

No specific index is designated as a reference sustainable benchmark to meet the sustainable investment objectives.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Candriam Sustainable Bond Global Convertible

549300BE0RG4TR6JMR36

CANDRIAM 
A NEW YORK LIFE INVESTMENTS COMPANY

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

 YES

- It made **sustainable investments with an environmental objective**: 34.26%
 - in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: 61.91%

 NO

- It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ____ % of sustainable investment
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The attainment of the sustainable investment objectives is measured through the following sustainability indicators:

- Carbon footprint : the Sub-fund aimed to have a carbon footprint that is at least 30% lower than the carbon footprint of the Sub-Fund's reference Benchmark.
- ESG score : the Sub-fund aimed to have a weighted average ESG score that is higher than the weighted average ESG score of the Sub-Fund's reference benchmark. The ESG Score is computed employing Candriam's proprietary ESG analysis methodology.

Moreover, the following indicators were monitored:

- OECD Guidelines for Multinational Enterprises, UN Global Compact: to ensure that there were no investments in companies that are in violation with the these principles.
- Candriam's Exclusion Policy: to ensure that there were no investments in companies that are on the Candriam's SRI Level 3 exclusion list as a result of the application of Candriam's Exclusion Policy.

How did the sustainability indicators perform?

The Sub-Fund has been managed in accordance with its sustainability indicators as defined below.

For the selection of sustainable investments, the portfolio manager has taken into account ESG assessments of issuers, produced by Candriam's ESG analyst team.

For companies, these assessments are based on the analysis of the company's interactions with its key stakeholders and the analysis of its business activities and their impact, positive or negative, on key sustainability challenges such as climate change and resource depletion. In addition, Candriam's ESG analysis includes exclusion filters based on compliance with international standards and involvement in controversial activities.

Candriam's ESG research and analysis for sustainable investments also assesses the compliance of investments with the "do no harm" principle to a sustainable investment objective and with good governance practices.

This integration of Candriam's ESG research methodology has enabled the Fund to meet the minimum proportion of sustainable investments defined in the prospectus (minimum 80%). The proportion of sustainable investments in the Fund was therefore above this minimum threshold, as detailed in the section "What was the proportion of sustainability-related investments?"

The Sub-Fund's reference benchmark has not been designated for the purpose of attaining the sustainable investment objective of the Sub-Fund.

'The Sub-Fund's reference benchmark does not qualify as an EU Climate Transition Benchmark or an EU Paris-Aligned Benchmark under Title III, Chapter 3a, of Regulation (EU) 2016/1011.

However, the Sub-Fund aimed to have a carbon footprint that is at least 30% lower than the carbon footprint of the Sub-Fund's reference benchmark.

Moreover, Candriam being part of the Net Zero Asset Management initiative, the Sub-Fund aimed to reduce greenhouse gas emissions.

Sustainability KPI Name	Portfolio	Benchmark	New indicator
Carbon Footprint - Corporate - Scope 1&2 - 30% reduction vs bench	38.39	176.03	
ESG Score - Corporate - Higher than bench	57.30	50.10	

... And Compared to Previous Periods?

The sub-fund has also been managed in line with its sustainability indicators.

Sustainability KPI Name	Year	Portfolio	Benchmark
Carbon Footprint - Corporate - Scope 1&2 - 30% reduction vs bench	2022	28.22	176.98
ESG Score - Corporate - Higher than bench	2022	56.47	48.44

The asset allocation of the financial product has evolved over the years.

Investment Category	Proportion of Investments	Proportion of Investments
	2023	2022
#1 Sustainable	96.16%	93.60%
#2 Not sustainable	3.84%	1.59%
Environmental	34.26%	32.75%
Social	61.91%	60.85%
Taxonomy-aligned	0.00%	0.00%
Other	34.26%	32.75%

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

Candriam ensured that its sustainable investments did not cause significant harm to any environmental and/or social sustainable investment objective by means of its ESG research and analysis of corporate and sovereign issuers. Based on its proprietary ESG Ratings and Scorings, Candriam's ESG methodology set clear requirements and minimum thresholds to identify those issuers that qualify as 'sustainable investment' and, in particular, do not cause significant harm to any environmental and/or social sustainable investment objective.

The 'Do not significant harm' principle, in particular, was assessed for corporates through:

- the consideration of "principal adverse impacts"
- the alignment with the OECD Guidelines for Multinational Enterprises and the UN Global Compact to ensure minimum environmental & social safeguards.

For more details, refer to the section below on the consideration of principal adverse impacts on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

The consideration of adverse impacts is central to Candriam's sustainable investment approach. Principal adverse impacts were taken into account throughout the entire ESG research and analysis process and through a wide range of methods:

1. ESG rating of corporates: the ESG research and screening methodology considers and assesses the principal adverse impact on sustainability from two distinct, but interlinked, angles:

- the company's issuers' business activities and how they impact, either positively or negatively, key sustainable challenges such as climate change and resource depletion;
- company's interactions with key stakeholders.

2. Negative screening of companies, which includes a norms-based exclusion and an exclusion of companies involved in controversial activities.

3. Engagement activities with companies, through dialogue and voting activities, which contribute to avoiding or reducing the extent of the adverse impacts. The ESG analysis framework and its results feed our engagement process, and vice versa.

The integration of the principal adverse impacts on sustainability factors has been based on the materiality or likely materiality of each indicator for each specific industry / sector to which the company belongs. The materiality is dependent on several factors, such as: type of information, data quality and breadth, applicability, relevance, and geographical coverage.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-fund's investments were subject to a norms-based controversy analysis that considered the compliance with the international social, human, environmental and anti-corruption standards, as defined by the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises. The International Labour Organisation and International Bill of Human Rights are part of the many international references integrated into our norms-based analysis and ESG model.

This analysis aimed to exclude companies that have significantly and repeatedly breached any of these principles.

How did this financial product consider principal adverse impacts on sustainability factors?

At Financial Product level, the principal adverse impacts (PAI) on sustainability factors were considered through one or several means: voting, dialogue, exclusions and/or monitoring (cfr. Candriam's PAI statement: <https://www.candriam.com/en/private/sfdr/>)

ENGAGEMENT

Our engagement policy is available on Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

DIALOGUE with corporate issuers

This financial product is invested in corporate issuers. Below statistics refer to engagement activities we have performed with these corporate issuers.

Climate (PAI1 to PAI6) is obviously central in our exchanges with companies. Priorities of Climate-engagement on the corporate side are identified taking into account :

- issuers presenting a weak transition profile (proprietary risk transition model), and/or still highly carbon intensive (Scope 1-2) or with large Scope 3 emissions
- issuers from financial sectors still largely exposed to fossil fuel and with a key role in financing the transition
- relative exposure of managed portfolios to the above issuers.

Candriam has joined in November 2021 the Net Zero Asset Management Initiative [<https://www.netzeroassetmanagers.org/signatories/candriam/>]. Through engagement, our objective is to encourage companies to publicly report on how they align with a 1.5D trajectory and to encourage such an alignment. We expect issuers in particular

to explain how their strategy and capital expenditures plan serve their decarbonisation commitment. We usually combine individual and collaborative dialogue.

4 issuers in the financial product are actually part of the priority targets of Candriam Net Zero Engagement campaign.

In addition, we continue to actively support CDP Climate [<https://www.cdp.net/en>], a large transparency survey feeding our investment processes : out of the 68 financial product's issuers targeted, 80.88% have properly filled the last survey. Filled surveys give us access to updated and more accurate Scope 1-2-3 emissions' data.

Candriam also actively participate to several collaborative initiatives such as Climate Action 100+ or IIGCC & ShareAction Climate initiatives on Financials. Such initiatives targeted 1 issuer(s) of the financial product. These initiatives contribute not only to increase the level of transparency on Greenhouse gas emissions and related strategy, but also to gain fundamental leverage for supporting strategic changes. Outcomes of these engagements are detailed in our annual engagement & voting report, available on our public website (Publications | Candriam) [<https://www.candriam.com/en/professional/insight-overview/publications/#sri-publications>].

Given the geopolitical context and observed increase in inequalities, 36 issuer(s) with presence in the financial product have also been contacted in relation to the protection of fundamental human rights at direct or indirect workforce level (supply chain due diligence) (PAI10 PAI11).

Inclusion is not to be outdone, with 25 issuers, of the portfolio having been more specifically engaged on topics related to PAI 12 (Unadjusted gender pay gap) or PAI 13 (Board gender diversity).

While above mentioned PAI are prevalent when considering engagement performed for this financial product in 2023, other PAI such as biodiversity-related ones may also have been addressed in our dialogues with issuers. For more information, please refer to Candriam Engagement Annual review under Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

EXCLUSIONS

PAI3

In addition to companies involved in the thermal coal, oil and gas activities (PAI 4), electricity-generating companies with a carbon intensity greater than 354 gCO2/kWh (PAI 3), are considered risky for inclusion in sustainable investments, even if they are not universally controversial. Given that emissions vary according to electricity generation sources, it is important to assess the carbon footprint per kilowatt-hour (kWh) to determine how closely companies are aligned with the 2 degrees Celsius trajectory.

This is why Candriam includes the carbon intensity of energy producers in our sustainability assessment. Where carbon intensity data is not available, Candriam's ESG analysts use other indicators to assess alignment with the Paris Agreement, such as progress in the energy transition in line with Paris Agreement targets and integration of a 1.5D limit scenario, taking into account investment plans and the credibility of carbon neutrality targets. These indicators are forward-looking and evolve over time to reflect the progress made by companies in their transition.

The carbon intensity (PAI 3) threshold for the product in 2023 was established at 354 gCO2/kWh. Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding this threshold, in addition to those previously excluded.

PAI4

Exposure to fossil fuels (PAI 4) undergoes stringent exclusions across all Candriam sustainable funds. Thermal coal, recognized for its detrimental impact and serious financial and sustainability implications, poses systemic and reputational risks that financial benefits cannot outweigh.

Companies deriving more than 5% of their sales from coal mining, coal-fired power generation, and coal-related operations such as exploration, processing, transport, and distribution are automatically excluded.

Additionally, companies exceeding a 5% threshold of revenue from conventional oil and gas activities, including exploration, extraction, refining, and transportation, are ineligible for investment. Similarly, entities with over 5% exposure to unconventional oil and gas activities are also excluded.

Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding the 5% threshold of exposure to thermal coal activities, supplementing the previously excluded entities.

Furthermore, no additional issuer(s) lost their eligibility due to surpassing the 5% threshold of exposure to conventional oil and gas activities, while no additional issuer(s) lost their eligibility for exceeding the 5% threshold of exposure to unconventional oil and gas activities.

PAI10

In accordance with PAI10 Candriam's normative analysis determines whether a company complies with the 10 principles of the United Nations Global Compact for each of the main categories: Human Rights (HR), Labor Rights (LR), Environment (ENV) and Anti-Corruption (AC). Our norms based analysis incorporates various international references, including the United Nations Declaration of Human Rights, ILO Fundamental Conventions, and OECD Guidelines for Multinational Enterprises, ensuring comprehensive coverage of human rights, labor standards, corruption, and discrimination.

In Candriam's "Level 3" SRI exclusion policy, companies with severe to very severe violations of the UN Global Compact principles are excluded. This list focuses on a strict interpretation of violations of the UN Global Compact, as assessed by Candriam's ESG analysts.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, for significant and repeated breaches of international social, human, environmental and anti-corruption standards, as defined by the UN Global Compact and the OECD Guidelines for Multinational Enterprises.

PAI14

Candriam is firmly committed to excluding from all its investments companies directly involved in the development, production, testing, maintenance and sale of controversial weapons (anti-personnel landmines, cluster bombs, depleted uranium weapons and armor, chemical weapons, biological weapons and white phosphorus weapons). We consider these damaging activities to present systemic and reputational risks.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, due to their involvement in these activities.

MONITORING: calculation and evaluation of the principal adverse impact indicators

Some of these indicators may have explicit targets and can be used to measure the attainment of the sustainable investment objective of the Financial Product. See below the results of the indicators of this Financial Product

PAI indicators	Value	Coverage (% rated / total assets)	Eligible assets (% eligible assets / total assets)
Scope 1 GHG Emissions	423.31	90.42%	90.87%
Scope 2 GHG Emissions	371.52	90.42%	90.87%
Total GHG Emissions	794.83	90.42%	90.87%
2 - Carbon Footprint	38.39	90.42%	90.87%
3 - GHG intensity of investee companies	113.66	90.42%	90.87%
4 - Exposure to companies active in fossil fuel sector	2.59%	89.20%	90.90%
10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.00%	96.16%	96.16%
13 - Board gender diversity	35.49%	88.64%	96.14%
14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0.00%	96.16%	96.16%

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
01/01/2023 - 31/12/2023.

Largest investments	Sector	% of Assets	Country

CANDRIAM 
A NEW YORK LIFE INVESTMENTS COMPANY

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

 YES

- It made **sustainable investments with an environmental objective**: 37.72%
 - in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: 49.38%

 NO

- It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ____ % of sustainable investment
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The attainment of the sustainable investment objectives is measured through the following sustainability indicators:

- Carbon footprint : the Sub-fund aimed to have a carbon footprint that is at least 30% lower than the carbon footprint of the Sub-Fund's reference Benchmark.
- ESG score : the Sub-fund aimed to have a weighted average ESG score that is higher than the weighted average ESG score of the Sub-Fund's reference benchmark. The ESG Score is computed employing Candriam's proprietary ESG analysis methodology.

Moreover, the following indicators were monitored:

- OECD Guidelines for Multinational Enterprises, UN Global Compact: to ensure that there were no investments in companies that are in violation with the these principles.
- Candriam's Exclusion Policy: to ensure that there were no investments in companies that are on the Candriam's SRI Level 3 exclusion list as a result of the application of Candriam's Exclusion Policy.

How did the sustainability indicators perform?

The Sub-Fund has been managed in accordance with its sustainability indicators as defined below.

For the selection of sustainable investments, the portfolio manager has taken into account ESG assessments of issuers, produced by Candriam's ESG analyst team.

For companies, these assessments are based on the analysis of the company's interactions with its key stakeholders and the analysis of its business activities and their impact, positive or negative, on key sustainability challenges such as climate change and resource depletion. In addition, Candriam's ESG analysis includes exclusion filters based on compliance with international standards and involvement in controversial activities.

Candriam's ESG research and analysis for sustainable investments also assesses the compliance of investments with the "do no harm" principle to a sustainable investment objective and with good governance practices.

This integration of Candriam's ESG research methodology has enabled the Fund to meet the minimum proportion of sustainable investments defined in the prospectus (minimum 80%). The proportion of sustainable investments in the Fund was therefore above this minimum threshold, as detailed in the section "What was the proportion of sustainability-related investments?"

The Sub-Fund's reference benchmark has not been designated for the purpose of attaining the sustainable investment objective of the Sub-Fund.

'The Sub-Fund's reference benchmark does not qualify as an EU Climate Transition Benchmark or an EU Paris-Aligned Benchmark under Title III, Chapter 3a, of Regulation (EU) 2016/1011.

However, the Sub-Fund aimed to have a carbon footprint that is at least 30% lower than the carbon footprint of the Sub-Fund's reference benchmark.

Moreover, Candriam being part of the Net Zero Asset Management initiative, the Sub-Fund aimed to reduce greenhouse gas emissions.

Sustainability KPI Name	Portfolio	Benchmark	New indicator
Carbon Footprint - Corporate - Scope 1&2 - 30% reduction vs bench	95.94	223.79	
ESG Score - Corporate - Higher than bench	53.12	46.03	

... And Compared to Previous Periods?

The sub-fund has also been managed in line with its sustainability indicators.

Sustainability KPI Name	Year	Portfolio	Benchmark
Carbon Footprint - Corporate - Scope 1&2 - 30% reduction vs bench	2022	81.14	223.95
ESG Score - Corporate - Higher than bench	2022	51.89	45.50

The asset allocation of the financial product has evolved over the years.

Investment Category	Proportion of Investments	Proportion of Investments
	2023	2022
#1 Sustainable	87.10%	82.83%
#2 Not sustainable	12.90%	15.78%
Environmental	37.72%	33.09%
Social	49.38%	49.74%
Taxonomy-aligned	0.00%	0.00%
Other	37.72%	33.09%

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

Candriam ensured that its sustainable investments did not cause significant harm to any environmental and/or social sustainable investment objective by means of its ESG research and analysis of corporate and sovereign issuers. Based on its proprietary ESG Ratings and Scorings, Candriam's ESG methodology set clear requirements and minimum thresholds to identify those issuers that qualify as 'sustainable investment' and, in particular, do not cause significant harm to any environmental and/or social sustainable investment objective.

The 'Do not significant harm' principle, in particular, was assessed for corporates through:

- the consideration of "principal adverse impacts"
- the alignment with the OECD Guidelines for Multinational Enterprises and the UN Global Compact to ensure minimum environmental & social safeguards.

For more details, refer to the section below on the consideration of principal adverse impacts on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

The consideration of adverse impacts is central to Candriam's sustainable investment approach. Principal adverse impacts were taken into account throughout the entire ESG research and analysis process and through a wide range of methods:

1. ESG rating of corporates: the ESG research and screening methodology considers and assesses the principal adverse impact on sustainability from two distinct, but interlinked, angles:

- the company's issuers' business activities and how they impact, either positively or negatively, key sustainable challenges such as climate change and resource depletion;
- company's interactions with key stakeholders.

2. Negative screening of companies, which includes a norms-based exclusion and an exclusion of companies involved in controversial activities.

3. Engagement activities with companies, through dialogue and voting activities, which contribute to avoiding or reducing the extent of the adverse impacts. The ESG analysis framework and its results feed our engagement process, and vice versa.

The integration of the principal adverse impacts on sustainability factors has been based on the materiality or likely materiality of each indicator for each specific industry / sector to which the company belongs. The materiality is dependent on several factors, such as: type of information, data quality and breadth, applicability, relevance, and geographical coverage.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-fund's investments were subject to a norms-based controversy analysis that considered the compliance with the international social, human, environmental and anti-corruption standards, as defined by the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises. The International Labour Organisation and International Bill of Human Rights are part of the many international references integrated into our norms-based analysis and ESG model.

This analysis aimed to exclude companies that have significantly and repeatedly breached any of these principles.

How did this financial product consider principal adverse impacts on sustainability factors?

At Financial Product level, the principal adverse impacts (PAI) on sustainability factors were considered through one or several means: voting, dialogue, exclusions and/or monitoring (cfr. Candriam's PAI statement: <https://www.candriam.com/en/private/sfdr/>)

ENGAGEMENT

Our engagement policy is available on Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

DIALOGUE with corporate issuers

This financial product is invested in corporate issuers. Below statistics refer to engagement activities we have performed with these corporate issuers.

Climate (PAI1 to PAI6) is obviously central in our exchanges with companies. Priorities of Climate-engagement on the corporate side are identified taking into account :

- issuers presenting a weak transition profile (proprietary risk transition model), and/or still highly carbon intensive (Scope 1-2) or with large Scope 3 emissions
- issuers from financial sectors still largely exposed to fossil fuel and with a key role in financing the transition
- relative exposure of managed portfolios to the above issuers.

Candriam has joined in November 2021 the Net Zero Asset Management Initiative [<https://www.netzeroassetmanagers.org/signatories/candriam/>]. Through engagement, our objective is to encourage companies to publicly report on how they align with a 1.5D trajectory and to encourage such an alignment. We expect issuers in particular

to explain how their strategy and capital expenditures plan serve their decarbonisation commitment. We usually combine individual and collaborative dialogue.

8 issuers in the financial product are actually part of the priority targets of Candriam Net Zero Engagement campaign.

In addition, we continue to actively support CDP Climate [<https://www.cdp.net/en>], a large transparency survey feeding our investment processes : out of the 41 financial product's issuers targeted, 78.05% have properly filled the last survey. Filled surveys give us access to updated and more accurate Scope 1-2-3 emissions' data.

Candriam also actively participate to several collaborative initiatives such as Climate Action 100+ or IIGCC & ShareAction Climate initiatives on Financials. Such initiatives targeted 2 issuer(s) of the financial product. These initiatives contribute not only to increase the level of transparency on Greenhouse gas emissions and related strategy, but also to gain fundamental leverage for supporting strategic changes. Outcomes of these engagements are detailed in our annual engagement & voting report, available on our public website (Publications | Candriam) [<https://www.candriam.com/en/professional/insight-overview/publications/#sri-publications>].

Given the geopolitical context and observed increase in inequalities, 31 issuer(s) with presence in the financial product have also been contacted in relation to the protection of fundamental human rights at direct or indirect workforce level (supply chain due diligence) (PAI10 PAI11).

Inclusion is not to be outdone, with 13 issuers, of the portfolio having been more specifically engaged on topics related to PAI 12 (Unadjusted gender pay gap) or PAI 13 (Board gender diversity).

While above mentioned PAI are prevalent when considering engagement performed for this financial product in 2023, other PAI such as biodiversity-related ones may also have been addressed in our dialogues with issuers. For more information, please refer to Candriam Engagement Annual review under Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

EXCLUSIONS

PAI3

In addition to companies involved in the thermal coal, oil and gas activities (PAI 4), electricity-generating companies with a carbon intensity greater than 354 gCO2/kWh (PAI 3), are considered risky for inclusion in sustainable investments, even if they are not universally controversial. Given that emissions vary according to electricity generation sources, it is important to assess the carbon footprint per kilowatt-hour (kWh) to determine how closely companies are aligned with the 2 degrees Celsius trajectory.

This is why Candriam includes the carbon intensity of energy producers in our sustainability assessment. Where carbon intensity data is not available, Candriam's ESG analysts use other indicators to assess alignment with the Paris Agreement, such as progress in the energy transition in line with Paris Agreement targets and integration of a 1.5D limit scenario, taking into account investment plans and the credibility of carbon neutrality targets. These indicators are forward-looking and evolve over time to reflect the progress made by companies in their transition.

The carbon intensity (PAI 3) threshold for the product in 2023 was established at 354 gCO2/kWh. Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding this threshold, in addition to those previously excluded.

PAI4

Exposure to fossil fuels (PAI 4) undergoes stringent exclusions across all Candriam sustainable funds. Thermal coal, recognized for its detrimental impact and serious financial and sustainability implications, poses systemic and reputational risks that financial benefits cannot outweigh.

Companies deriving more than 5% of their sales from coal mining, coal-fired power generation, and coal-related operations such as exploration, processing, transport, and distribution are automatically excluded.

Additionally, companies exceeding a 5% threshold of revenue from conventional oil and gas activities, including exploration, extraction, refining, and transportation, are ineligible for investment. Similarly, entities with over 5% exposure to unconventional oil and gas activities are also excluded.

Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding the 5% threshold of exposure to thermal coal activities, supplementing the previously excluded entities.

Furthermore, no additional issuer(s) lost their eligibility due to surpassing the 5% threshold of exposure to conventional oil and gas activities, while no additional issuer(s) lost their eligibility for exceeding the 5% threshold of exposure to unconventional oil and gas activities.

PAI10

In accordance with PAI10 Candriam's normative analysis determines whether a company complies with the 10 principles of the United Nations Global Compact for each of the main categories: Human Rights (HR), Labor Rights (LR), Environment (ENV) and Anti-Corruption (AC). Our norms based analysis incorporates various international references, including the United Nations Declaration of Human Rights, ILO Fundamental Conventions, and OECD Guidelines for Multinational Enterprises, ensuring comprehensive coverage of human rights, labor standards, corruption, and discrimination.

In Candriam's "Level 3" SRI exclusion policy, companies with severe to very severe violations of the UN Global Compact principles are excluded. This list focuses on a strict interpretation of violations of the UN Global Compact, as assessed by Candriam's ESG analysts.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, for significant and repeated breaches of international social, human, environmental and anti-corruption standards, as defined by the UN Global Compact and the OECD Guidelines for Multinational Enterprises.

PAI14

Candriam is firmly committed to excluding from all its investments companies directly involved in the development, production, testing, maintenance and sale of controversial weapons (anti-personnel landmines, cluster bombs, depleted uranium weapons and armor, chemical weapons, biological weapons and white phosphorus weapons). We consider these damaging activities to present systemic and reputational risks.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, due to their involvement in these activities.

MONITORING: calculation and evaluation of the principal adverse impact indicators

Some of these indicators may have explicit targets and can be used to measure the attainment of the sustainable investment objective of the Financial Product. See below the results of the indicators of this Financial Product

PAI indicators	Value	Coverage (% rated / total assets)	Eligible assets (% eligible assets / total assets)
Scope 1 GHG Emissions	79,670.56	71.37%	76.37%
Scope 2 GHG Emissions	25,670.60	71.37%	76.37%
Total GHG Emissions	105,341.16	71.37%	76.05%
2 - Carbon Footprint	95.94	71.37%	76.05%
3 - GHG intensity of investee companies	186.25	70.72%	76.06%
4 - Exposure to companies active in fossil fuel sector	3.47%	67.36%	76.05%
10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.00%	89.74%	90.15%
13 - Board gender diversity	34.02%	74.51%	90.02%
14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0.00%	89.09%	90.14%

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
01/01/2023 - 31/12/2023.

Largest investments	Sector	% of Assets	Country

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the "Investment portfolio" section of the annual report.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

● ***In which economic sectors were the investments made?***

Top sector	% of Assets
Banks and other financial institutions	36.24%
Communication	13.69%
Healthcare	10.76%
Utilities	9.89%
Internet and internet services	3.87%
Miscellaneous services	3.78%
Packaging industries	3.34%
Electrical engineering	2.01%
Biotechnology	1.96%
Machine and apparatus construction	1.89%
Pharmaceuticals	1.66%
Building materials	1.54%
Real estate	1.29%
Foods and non alcoholic drinks	1.15%
Textiles and garments	1.12%

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the "Investment portfolio" section of the annual report.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

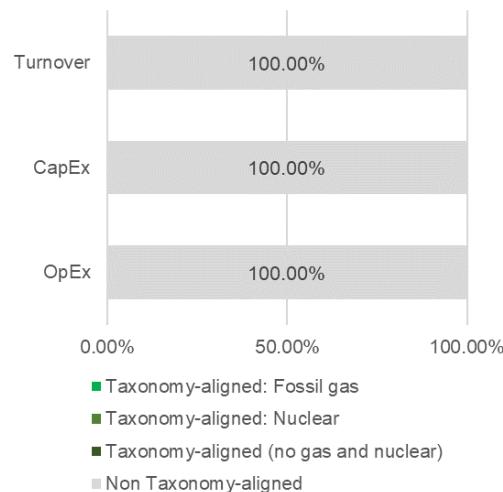

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy? ¹

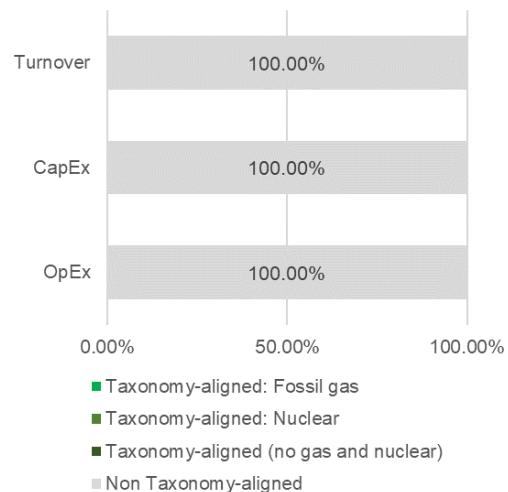

- Yes
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100.00% of the total investments.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

● **What was the share of investments made in transitional and enabling activities?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, nor on the transitional and enabling activities, as very few companies at global level provide the data necessary for a rigorous assessment their alignment with the Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Year	% EU Taxonomy Aligned
2023	0.00%
2022	0.00%

● **What is the breakdown of the proportion of the investments per each of the EU Taxonomy to which those investments contributed?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, as very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

Therefore, this percentage is considered as nul.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

The Sub-Fund had a share of 37.72% in sustainable investments with an environmental objective not aligned with the EU taxonomy.

Indeed to date, only two of the six objectives have entered into force in 2023 and very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

What was the share of socially sustainable investments?

The Sub-Fund had a share of investments with a social objective of 49.38%

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The investments included under "Not sustainable" are present in the Sub-fund for 12.9% of the total net assets.

These investments include one or more of the following assets:

- Cash: Cash at sight, cash deposit, reverse repo needed to manage the liquidity of the Sub-fund following subscriptions/redemptions and/or being the result of the market exposure decision of the Sub-fund.
- Investments with issuers considered as sustainable investments at the moment of the investment and that are not fully aligned anymore with the Candriam sustainable investment criteria. These investments have been sold during the period.
- Non single name derivatives used for exposition and hedging purposes.

These investments do not affect the delivery of the sustainable investment objectives of the Sub-Fund as they represent a minor proportion of its assets.

What actions have been taken to attain the sustainable investment objective during the reference period?

The financial product aims to achieve a carbon footprint that is at least 30% lower than the carbon footprint of the Benchmark.

Over the reference period, the financial product emitted 95.94 Tons CO2eq per million € invested, 57.13% lower than the benchmark.

The financial product has achieved its objective by favouring issuers with lower carbon footprint.

The financial product aims to achieve an ESG score, based on Candriam's proprietary ESG methodology, higher than its benchmark.

Over the reference period, the financial product displayed an ESG score of 53.12, 15.39% higher compared to its benchmark.

In comparison to the previous year, the financial product overall ESG score is higher by 2.37%.

The financial product has achieved its objective by selectively favouring issuers that display a stronger ESG profile. The financial product invested in 1 issuer(s) in Health Care with improving ESG profiles and divested from 2 issuer(s) in Automobiles & Parts and Retail with deteriorating ESG profiles.

How did this financial product perform compared to the reference sustainable benchmark?

No specific index is designated as a reference sustainable benchmark to meet the sustainable investment objectives.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Sustainable investment objective

Did this financial product have a sustainable investment objective?	
● <input checked="" type="checkbox"/> YES	● <input type="checkbox"/> NO
<p><input checked="" type="checkbox"/> It made sustainable investments with an environmental objective: 70.05%</p> <p><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p><input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p><input checked="" type="checkbox"/> It made sustainable investments with a social objective: 27.94%</p>	<p><input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___ % of sustainable investment</p> <p><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> with a social objective</p> <p><input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments</p>

To what extent was the sustainable investment objective of this financial product met?

The attainment of the sustainable investment objectives was measured through the following sustainability indicators:

- Positive contribution to the UN SDGs : the Sub-Fund aimed to invest at least 75% of its total net assets into Green, Social or Sustainability Bonds as defined by international standards such as, for example the Green Bond Principles maintained by the International Capital Market Association (ICMA), the EU Green Bond Standards or Social Bond Principles also developed by the ICMA.

Moreover, the following indicators were monitored:

- to assure that there are no investments in issuers that are in violation with the OECD Guidelines for Multinational Enterprises or the UN Global Compact.
- to assure that there are no investments in issuers that are on the Candriam's SRI Level 3 exclusion list as a result of the application of the Candriam's Exclusion Policy.
- to assure that there are no sovereign investments in countries that are on Candriam's Oppressive regime list
- to assure that there are no sovereign investments in countries considered "Not free" by Freedom House.

How did the sustainability indicators perform?

The Sub-Fund has been managed in accordance with its sustainability indicators as defined below.

For the selection of sustainable investments, the portfolio manager has taken into account ESG assessments of issuers, produced by Candriam's ESG analyst team.

For companies, these assessments are based on the analysis of the company's interactions with its key stakeholders and the analysis of its business activities and their impact, positive or negative, on key sustainability challenges such as climate change and resource depletion. In addition, Candriam's ESG analysis includes exclusion filters based on compliance with international standards and involvement in controversial activities.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

For sovereign issuers, these assessments are based on the analysis of the countries' management of their natural, human, social and economic capital. In addition, exclusion filters are used to screen out issuers that do not meet democratic and governance standards.

Candriam's ESG research and analysis for sustainable investments also assesses the compliance of investments with the "do no harm" principle to a sustainable investment objective and with good governance practices for the corporates.

This integration of Candriam's ESG research methodology has enabled the Fund to meet the minimum proportion of sustainable investments defined in the prospectus (minimum 80%). The proportion of sustainable investments in the Fund was therefore above this minimum threshold, as detailed in the section "What was the proportion of sustainability-related investments?"

The Sub-Fund's reference benchmark has not been designated for the purpose of attaining the sustainable investment objective of the Sub-Fund.

'The Sub-Fund's reference benchmark does not qualify as an EU Climate Transition Benchmark or an EU Paris-Aligned Benchmark under Title III, Chapter 3a, of Regulation (EU) 2016/1011.

By investing primarily into bonds for which the use of proceeds contributes to one or several Sustainable Development Goals (SDG) targets - of which SDG 13 Climate Action -, the Sub-Fund thereby delivered a positive impact on the United Nations Sustainable Developments Goals. On a later stage, other steps will be set in order to ensure carbon emissions reduction.

Sustainability KPI Name	Portfolio	Benchmark	New indicator
Investments in Green, Social, Sustainable Bonds - Country and Corporate - Minimum 75% of AuM	89.93%		

... And Compared to Previous Periods?

The sub-fund has also been managed in line with its sustainability indicators.

Sustainability KPI Name	Portfolio	Benchmark	New indicator
Investments in Green, Social, Sustainable Bonds - Minimum 75% of AuM	87.68%		

The asset allocation of the financial product has evolved over the years.

Investment Category	Proportion of Investments	Proportion of Investments
	2023	2022
#1 Sustainable	97.99%	94.62%
#2 Not sustainable	2.01%	5.09%
Environmental	70.05%	68.89%
Social	27.94%	25.73%
Taxonomy-aligned	0.00%	0.00%
Other	70.05%	68.89%

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

Candriam ensured that its sustainable investments did not cause significant harm to any environmental and/or social sustainable investment objective by means of its ESG research and analysis of corporate and sovereign issuers. Based on its proprietary ESG Ratings and Scorings, Candriam's ESG methodology set clear requirements and minimum thresholds to identify those issuers that qualify as 'sustainable investment' and, in particular, do not cause significant harm to any environmental and/or social sustainable investment objective.

The 'Do not significant harm' principle, in particular, was assessed for corporates through:

- the consideration of "principal adverse impacts"
- the alignment with the OECD Guidelines for Multinational Enterprises and the UN Global Compact to ensure minimum environmental & social safeguards.

For more details, refer to the section below on the consideration of principal adverse impacts on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

The consideration of adverse impacts is central to Candriam's sustainable investment approach. Principal adverse impacts were taken into account throughout the entire ESG research and analysis process and through a wide range of methods:

For the analysis of corporate issuers, these methods include:

1. ESG rating of corporates: the ESG research and screening methodology considers and assesses the principal adverse impact on sustainability from two distinct, but interlinked, angles:

- the company's issuers' business activities and how they impact, either positively or negatively, key sustainable challenges such as climate change and resource depletion;
- company's interactions with key stakeholders.

2. Negative screening of companies, which includes a norms-based exclusion and an exclusion of companies involved in controversial activities.

3. Engagement activities with companies, through dialogue and voting activities, which contribute to avoiding or reducing the extent of the adverse impacts. The ESG analysis framework and its results feed our engagement process, and vice versa.

For the analysis of sovereign issuers, these methods include:

1. Country ESG Scores: the ESG research and screening methodology considers and assesses key negative sustainability impacts around four sustainability dimensions: Natural capital, Human capital, Social capital, and Economic capital.

2. Negative Country Screening, which includes the following:

- Candriam's list of highly oppressive regimes -States with serious human rights violations;
- Freedom House's World Freedom Index - states considered "not free".

The integration of the principal adverse impacts on sustainability factors has been based on the materiality or likely materiality of each indicator for each specific industry / sector/ to which the company belongs and for each country to ensure that a country's score adequately reflects the short, medium and long-term problems, challenges and/or opportunities that matter for that country's future development. This materiality depends on several elements, such as the type of information, quality and extent of data, applicability, relevance and geographical coverage.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-fund's investments were subject to a norms-based controversy analysis that considered the compliance with the international social, human, environmental and anti-corruption standards, as defined by the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises. The International Labour Organisation and International Bill of Human Rights are part of the many international references integrated into our norms-based analysis and ESG model.

This analysis aimed to exclude companies that have significantly and repeatedly breached any of these principles.

How did this financial product consider principal adverse impacts on sustainability factors?

At Financial Product level, the principal adverse impacts (PAI) on sustainability factors were considered through one or several means: voting, dialogue, exclusions and/or monitoring (cfr. Candriam's PAI statement: <https://www.candriam.com/en/private/sfdr/>)

ENGAGEMENT

Our engagement policy is available on Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

DIALOGUE with non corporate issuers

This financial product is invested in non corporate issuers we engage with. For non-corporate issuers, such as sovereigns, agencies or supranationals, large majority of our engagement is done through collaborative dialogues and statements. Climate (PAI1 to PAI6) and biodiversity (PAI7) are the topics we predominantly engage on with them. For more information, please refer

to Candriam Engagement Annual review under Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

DIALOGUE with corporate issuers

This financial product is invested in corporate issuers. Below statistics refer to engagement activities we have performed with these corporate issuers.

Climate (PAI1 to PAI6) is obviously central in our exchanges with companies. Priorities of Climate-engagement on the corporate side are identified taking into account :

- issuers presenting a weak transition profile (proprietary risk transition model), and/or still highly carbon intensive (Scope 1-2) or with large Scope 3 emissions
- issuers from financial sectors still largely exposed to fossil fuel and with a key role in financing the transition
- relative exposure of managed portfolios to the above issuers.

Candriam has joined in November 2021 the Net Zero Asset Management Initiative [<https://www.netzeroassetmanagers.org/signatories/candriam/>]. Through engagement, our objective is to encourage companies to publicly report on how they align with a 1.5D trajectory and to encourage such an alignment. We expect issuers in particular to explain how their strategy and capital expenditures plan serve their decarbonisation commitment. We usually combine individual and collaborative dialogue.

14 issuers in the financial product are actually part of the priority targets of Candriam Net Zero Engagement campaign.

In addition, we continue to actively support CDP Climate [<https://www.cdp.net/en>], a large transparency survey feeding our investment processes : out of the 58 financial product's issuers targeted, 96.55% have properly filled the last survey. Filled surveys give us access to updated and more accurate Scope 1-2-3 emissions' data.

Candriam also actively participate to several collaborative initiatives such as Climate Action 100+ or IIGCC & ShareAction Climate initiatives on Financials. Such initiatives targeted 19 issuer(s) of the financial product. These initiatives contribute not only to increase the level of transparency on Greenhouse gas emissions and related strategy, but also to gain fundamental leverage for supporting strategic changes. Outcomes of these engagements are detailed in our annual engagement & voting report, available on our public website (Publications | Candriam) [<https://www.candriam.com/en/professional/insight-overview/publications/#sri-publications>].

Given the geopolitical context and observed increase in inequalities, 36 issuer(s) with presence in the financial product have also been contacted in relation to the protection of fundamental human rights at direct or indirect workforce level (supply chain due diligence) (PAI10 PAI11).

Inclusion is not to be outdone, with 46 issuers, of the portfolio having been more specifically engaged on topics related to PAI 12 (Unadjusted gender pay gap) or PAI 13 (Board gender diversity).

While above mentioned PAI are prevalent when considering engagement performed for this financial product in 2023, other PAI such as biodiversity-related ones may also have been addressed in our dialogues with issuers. For more information, please refer to Candriam Engagement Annual review under Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

EXCLUSIONS

PAI3

In addition to companies involved in the thermal coal, oil and gas activities (PAI 4), electricity-generating companies with a carbon intensity greater than 354 gCO2/kWh (PAI 3), are considered risky for inclusion in sustainable investments, even if they are not universally controversial. Given that emissions vary according to electricity generation sources, it is important to assess the carbon footprint per kilowatt-hour (kWh) to determine how closely companies are aligned with the 2 degrees Celsius trajectory.

This is why Candriam includes the carbon intensity of energy producers in our sustainability assessment. Where carbon intensity data is not available, Candriam's ESG analysts use other indicators to assess alignment with the Paris Agreement, such as progress in the energy transition in line with Paris Agreement targets and integration of a 1.5D limit scenario, taking into account investment plans and the credibility of carbon neutrality targets. These indicators are forward-looking and evolve over time to reflect the progress made by companies in their transition.

The carbon intensity (PAI 3) threshold for the product in 2023 was established at 354 gCO2/kWh. Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding this threshold, in addition to those previously excluded.

PAI4

Exposure to fossil fuels (PAI 4) undergoes stringent exclusions across all Candriam sustainable funds. Thermal coal, recognized for its detrimental impact and serious financial and sustainability implications, poses systemic and reputational risks that financial benefits cannot outweigh.

Companies deriving more than 5% of their sales from coal mining, coal-fired power generation, and coal-related operations such as exploration, processing, transport, and distribution are automatically excluded.

Additionally, companies exceeding a 5% threshold of revenue from conventional oil and gas activities, including exploration, extraction, refining, and transportation, are ineligible for investment. Similarly, entities with over 5% exposure to unconventional oil and gas activities are also excluded.

Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding the 5% threshold of exposure to thermal coal activities, supplementing the previously excluded entities.

Furthermore, no additional issuer(s) lost their eligibility due to surpassing the 5% threshold of exposure to conventional oil and gas activities, while no additional issuer(s) lost their eligibility for exceeding the 5% threshold of exposure to unconventional oil and gas activities.

PAI10

In accordance with PAI10 Candriam's normative analysis determines whether a company complies with the 10 principles of the United Nations Global Compact for each of the main categories: Human Rights (HR), Labor Rights (LR), Environment (ENV) and Anti-Corruption (AC). Our norms based analysis incorporates various international references, including the United Nations Declaration of Human Rights, ILO Fundamental Conventions, and OECD Guidelines for Multinational Enterprises, ensuring comprehensive coverage of human rights, labor standards, corruption, and discrimination.

In Candriam's "Level 3" SRI exclusion policy, companies with severe to very severe violations of the UN Global Compact principles are excluded. This list focuses on a strict interpretation of violations of the UN Global Compact, as assessed by Candriam's ESG analysts.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, for significant and repeated breaches of international social, human, environmental and anti-corruption standards, as defined by the UN Global Compact and the OECD Guidelines for Multinational Enterprises.

PAI14

Candriam is firmly committed to excluding from all its investments companies directly involved in the development, production, testing, maintenance and sale of controversial weapons (anti-personnel landmines, cluster bombs, depleted uranium weapons and armor, chemical weapons, biological weapons and white phosphorus weapons). We consider these damaging activities to present systemic and reputational risks.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, due to their involvement in these activities.

PAI16

Our list of repressive regimes is made up of countries in which human rights are regularly violated, fundamental freedoms are systematically denied and personal safety is not guaranteed due to government failure and systematic ethical violations. We are also extremely vigilant with regard to totalitarian states or countries whose governments are involved in a war against their own people. To compile the list of repressive regimes, we rely on data provided by external sources, such as Freedom House's Index of Freedom in the World, the World Bank's Governance Indicators and the Economist Intelligence Unit's Democracy Index, which guide our qualitative examination of non-democratic countries.

For this list of countries, Candriam's analysts have developed processes that apply to both sovereign and corporate investments, including exclusion, mitigation and engagement processes based on our risk assessment. Candriam considers debt issued by sovereign or quasi-sovereign entities on the list of repressive regimes to be ineligible for investment.

Over the reference period, no additional sovereign issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded.

MONITORING: calculation and evaluation of the principal adverse impact indicators

Some of these indicators may have explicit targets and can be used to measure the attainment of the sustainable investment objective of the Financial Product. See below the results of the indicators of this Financial Product

PAI indicators	Value	Coverage (% rated / total assets)	Eligible assets (% eligible assets / total assets)
Scope 1 GHG Emissions	247.84	21.84%	23.34%
Scope 2 GHG Emissions	55.75	21.84%	23.34%
Total GHG Emissions	303.58	21.84%	23.34%
2 - Carbon Footprint	34.47	21.84%	23.34%
3 - GHG intensity of investee companies	73.94	21.84%	23.34%
4 - Exposure to companies active in fossil fuel sector	0.99%	22.72%	23.35%
10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.00%	59.02%	59.01%
13 - Board gender diversity	39.00%	47.56%	59.07%
14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0.00%	59.02%	59.01%
15 - GHG intensity	269.79	4.57%	7.20%
16 - Investee countries subject to social violations	0.00%	30.44%	30.44%

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
01/01/2023 - 31/12/2023.

Largest investments	Sector	% of Assets	Country
IRELAND 1.35 18-31 18/03A	Bonds of States, Provinces and municipalities	3.28%	IRL
BELGIUM 1.25 18-33 22/04A	Bonds of States, Provinces and municipalities	3.11%	BEL
NETHERLANDS 0.50 19-40 15/01A	Bonds of States, Provinces and municipalities	3.10%	NLD
SPAIN 1 21-42 30/07A	Bonds of States, Provinces and municipalities	2.54%	ESP
BUONI POLIENNAL 1.50 21-45 30/04S	Bonds of States, Provinces and municipalities	2.47%	ITA
GERMANY 0.00 21-50 15/08A	Bonds of States, Provinces and municipalities	2.26%	DEU
GERMANY 1.3 22-27 15/10A	Bonds of States, Provinces and municipalities	1.98%	DEU
CASSA DEPOSITI E PREST 2.0 20-27 20/04A	Banks and other financial institutions	1.87%	ITA
CREDIT AGRICOLE 0.125 20-27 09/12A	Banks and other financial institutions	1.71%	FRA
AIR LIQUIDE FINANCE 0.375 21-31 27/05A	Banks and other financial institutions	1.62%	FRA
LEGRAND SA 0.375 21-31 06/10A	Electrical engineering	1.60%	FRA
BNP PARIBAS SA FL.R 20-27 14/10A	Banks and other financial institutions	1.56%	FRA
FRANCE 1.75 16-39 25/06A	Bonds of States, Provinces and municipalities	1.43%	FRA
MORGAN STANLEY 0.8640 20-25 21/10S	Banks and other financial institutions	1.41%	USA
EUROPEAN UNION 0.4 21-37 04/02A	Supranational Organisations	1.31%	BEL

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the "Investment portfolio" section of the annual report.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

● ***In which economic sectors were the investments made?***

Top sector	% of Assets
Banks and other financial institutions	38.18%
Bonds of States, Provinces and municipalities	30.46%
Real estate	4.84%
Communication	4.12%
Insurance	3.02%
Pharmaceuticals	2.99%
Miscellaneous services	2.64%
Utilities	2.59%
Electrical engineering	2.12%
Supranational Organisations	1.92%
Foods and non alcoholic drinks	1.83%
Road vehicles	1.13%
Miscellaneous consumer goods	1.06%
Transportation	0.99%
Other	0.66%

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the "Investment portfolio" section of the annual report.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

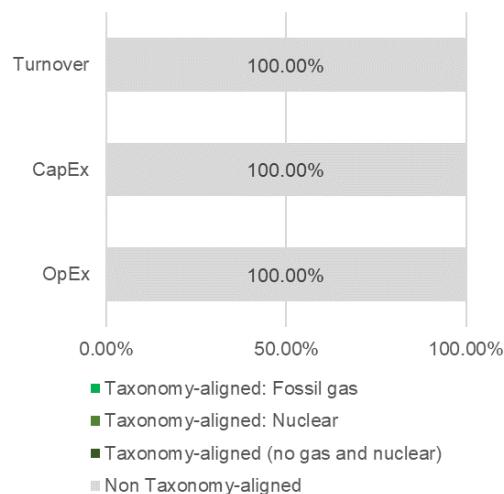

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy? ¹

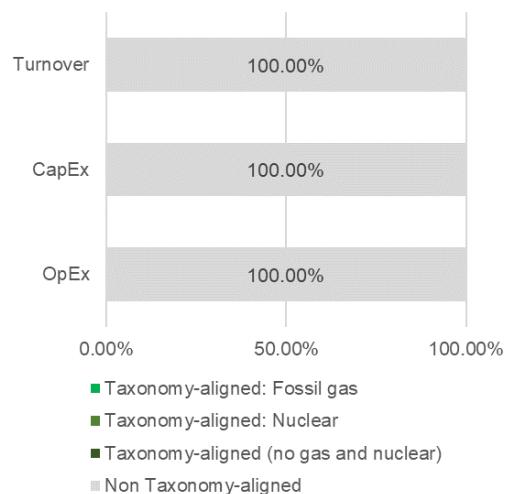

- Yes
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100.00% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

● **What was the share of investments made in transitional and enabling activities?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, nor on the transitional and enabling activities, as very few companies at global level provide the data necessary for a rigorous assessment their alignment with the Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Year	% EU Taxonomy Aligned
2023	0.00%
2022	0.00%

● **What is the breakdown of the proportion of the investments per each of the EU Taxonomy to which those investments contributed?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, as very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

Therefore, this percentage is considered as nul.

 **What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?**

The Sub-Fund had a share of 70.05% in sustainable investments with an environmental objective not aligned with the EU taxonomy.

Indeed to date, only two of the six objectives have entered into force in 2023 and very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

What was the share of socially sustainable investments?

The Sub-Fund had a share of investments with a social objective of 27.94%

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The investments included under "Not sustainable" are present in the Sub-fund for 2.01% of the total net assets.

These investments include one or more of the following assets:

- Cash: Cash at sight, cash deposit, reverse repo needed to manage the liquidity of the Sub-fund following subscriptions/redemptions and/or being the result of the market exposure decision of the Sub-fund.
- Investments with issuers considered as sustainable investments at the moment of the investment and that are not fully aligned anymore with the Candriam sustainable investment criteria. These investments have been sold during the period.
- Non single name derivatives used for exposition and hedging purposes.

These investments do not affect the delivery of the sustainable investment objectives of the Sub-Fund as they represent a minor proportion of its assets.

What actions have been taken to attain the sustainable investment objective during the reference period?

The financial product aims to invest at least 75% of net assets in green bonds, social or sustainable bonds.

Over the reference period, the financial product invested in 90% of its net assets in green bonds.

The financial product has achieved its objective by continued active participation in green, social and sustainable bond markets. Notably, the financial product invested in issues issued by issuer(s) in Automobiles & Parts and Banks.

How did this financial product perform compared to the reference sustainable benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

No specific index is designated as a reference sustainable benchmark to meet the sustainable investment objectives.

Candriam Sustainable Defensive Asset Allocation

CANDRIAM 
A NEW YORK LIFE INVESTMENTS COMPANY

5493008P0C6OS6EDT327

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?

YES

NO

It made **sustainable investments with an environmental objective**: 52.92%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: 43.24%

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investment

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The attainment of the sustainable investment objectives was measured through the following sustainability indicator:

- Carbon footprint: the Sub-fund aimed to have a carbon footprint that is at least 25% lower than the carbon footprint of the fund's reference benchmark.

Moreover, the following indicator were monitored either directly for the direct lines investments or indirectly in the underlying UCITS/UCI managed by Candriam :

- to assure that there are no investments in issuers that are in violation with the OECD Guidelines for Multinational Enterprises or the UN Global Compact.

How did the sustainability indicators perform?

The Sub-Fund has been managed in accordance with its sustainability indicators as defined below.

For the selection of sustainable investments, the portfolio manager has taken into account ESG assessments of issuers, produced by Candriam's ESG analyst team.

For companies, these assessments are based on the analysis of the company's interactions with its key stakeholders and the analysis of its business activities and their impact, positive or negative, on key sustainability challenges such as climate change and resource depletion. In addition, Candriam's ESG analysis includes exclusion filters based on compliance with international standards and involvement in controversial activities.

Candriam's ESG research and analysis for sustainable investments also assesses the compliance of investments with the "do no harm" principle to a sustainable investment objective and with good governance practices.

This integration of Candriam's ESG research methodology has enabled the Fund to meet the minimum proportion of sustainable investments defined in the prospectus (minimum 80%). The proportion of sustainable investments in the Fund was therefore above this minimum threshold, as detailed in the section "What was the proportion of sustainability-related investments?"

The Sub-Fund's reference benchmark has not been designated for the purpose of attaining the sustainable investment objective of the Sub-Fund.

'The Sub-Fund's reference benchmark does not qualify as an EU Climate Transition Benchmark or an EU Paris-Aligned Benchmark under Title III, Chapter 3a, of Regulation (EU) 2016/1011.

However, the Sub-Fund aimed to have a carbon footprint that is at least 25% lower than the carbon footprint of the Sub-Fund's reference benchmark.

The Sub-Fund aimed to reduce greenhouse gas emissions versus its benchmark is a first step towards the objectives of the Paris agreement. On a later stage, other steps will be set in order to ensure carbon emissions reduction in view of achieving the Paris Agreement

Sustainability KPI Name	Portfolio	Benchmark	New indicator
Carbon Footprint - Corporate - Scope 1&2 - 25% reduction vs bench	31.49	72.51	

... And Compared to Previous Periods?

The sub-fund has also been managed in line with its sustainability indicators.

Sustainability KPI Name	Year	Portfolio	Benchmark
Carbon Footprint - Corporate - Scope 1&2 - 25% reduction vs bench	2022	27.15	74.50

The asset allocation of the financial product has evolved over the years.

Investment Category	Proportion of Investments	Proportion of Investments
	2023	2022
#1 Sustainable	96.16%	93.61%
#2 Not sustainable	3.84%	5.85%
Environmental	52.92%	49.93%
Social	43.24%	43.68%
Taxonomy-aligned	0.00%	0.00%
Other	52.92%	49.93%

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

Candriam ensured that its sustainable investments did not cause significant harm to any environmental and/or social sustainable investment objective by means of its ESG research and analysis of corporate and sovereign issuers. Based on its proprietary ESG Ratings and Scorings, Candriam's ESG methodology set clear requirements and minimum thresholds to identify those issuers that qualify as 'sustainable investment' and, in particular, do not cause significant harm to any environmental and/or social sustainable investment objective.

The 'Do not significant harm' principle, in particular, was assessed for corporates through:

- the consideration of "principal adverse impacts"
- the alignment with the OECD Guidelines for Multinational Enterprises and the UN Global Compact to ensure minimum environmental & social safeguards.

How were the indicators for adverse impacts on sustainability factors taken into account?

The consideration of adverse impacts is central to Candriam's sustainable investment approach. Principal adverse impacts were taken into account throughout the entire ESG research and analysis process and through a wide range of methods:

For the analysis of corporate issuers, these methods include:

1. ESG rating of corporates: the ESG research and screening methodology considers and assesses the principal adverse impact on sustainability from two distinct, but interlinked, angles:

- the company's issuers' business activities and how they impact, either positively or negatively, key sustainable challenges such as climate change and resource depletion;
- company's interactions with key stakeholders.

2. Negative screening of companies, which includes a norms-based exclusion and an exclusion of companies involved in controversial activities.

3. Engagement activities with companies, through dialogue and voting activities, which contribute to avoiding or reducing the extent of the adverse impacts. The ESG analysis framework and its results feed our engagement process, and vice versa.

For the analysis of sovereign issuers, these methods include:

1. Country ESG Scores: the ESG research and screening methodology considers and assesses key negative sustainability impacts around four sustainability dimensions: Natural capital, Human capital, Social capital, and Economic capital.

2. Negative Country Screening, which includes the following:

- Candriam's list of highly oppressive regimes -States with serious human rights violations;
- Freedom House's World Freedom Index - states considered "not free".

The integration of the principal adverse impacts on sustainability factors has been based on the materiality or likely materiality of each indicator for each specific industry / sector/ to which the company belongs and for each country to ensure that a country's score adequately reflects the short, medium and long-term problems, challenges and/or opportunities that matter for that country's future development. This materiality depends on several elements, such as the type of information, quality and extent of data, applicability, relevance and geographical coverage.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-fund's investments were subject to a norms-based controversy analysis that considered the compliance with the international social, human, environmental and anti-corruption standards, as defined by the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises. The International Labour Organisation and International Bill of Human Rights are part of the many international references integrated into our norms-based analysis and ESG model.

This analysis aimed to exclude companies that have significantly and repeatedly breached any of these principles.

How did this financial product consider principal adverse impacts on sustainability factors?

At Financial Product level, the principal adverse impacts (PAI) on sustainability factors were considered through one or several means: voting, dialogue, exclusions and/or monitoring (cfr. Candriam's PAI statement: <https://www.candriam.com/en/private/sfdr/>)

ENGAGEMENT

As the current financial product is only investing in funds, for any information on related engagement, we invite you to refer to the annual reports of the invested funds. Candriam engagement policy is available on Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>]. Our engagement policy is available on Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

EXCLUSIONS

PAI3

In addition to companies involved in the thermal coal, oil and gas activities (PAI 4), electricity-generating companies with a carbon intensity greater than 354 gCO₂/kWh (PAI 3), are considered risky for inclusion in sustainable investments, even if they are not universally controversial. Given that emissions vary according to electricity generation sources, it is important to assess the carbon footprint per kilowatt-hour (kWh) to determine how closely companies are aligned with the 2 degrees Celsius trajectory.

This is why Candriam includes the carbon intensity of energy producers in our sustainability assessment. Where carbon intensity data is not available, Candriam's ESG analysts use other indicators to assess alignment with the Paris Agreement, such as progress in the energy transition in line with Paris Agreement targets and integration of a 1.5D limit scenario, taking into account investment plans and the credibility of carbon neutrality targets. These indicators are forward-looking and evolve over time to reflect the progress made by companies in their transition.

The carbon intensity (PAI 3) threshold for the product in 2023 was established at 354 gCO₂/kWh. Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding this threshold, in addition to those previously excluded.

PAI4

Exposure to fossil fuels (PAI 4) undergoes stringent exclusions across all Candriam sustainable funds. Thermal coal, recognized for its detrimental impact and serious financial and sustainability implications, poses systemic and reputational risks that financial benefits cannot outweigh.

Companies deriving more than 5% of their sales from coal mining, coal-fired power generation, and coal-related operations such as exploration, processing, transport, and distribution are automatically excluded.

Additionally, companies exceeding a 5% threshold of revenue from conventional oil and gas activities, including exploration, extraction, refining, and transportation, are ineligible for investment. Similarly, entities with over 5% exposure to unconventional oil and gas activities are also excluded.

Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding the 5% threshold of exposure to thermal coal activities, supplementing the previously excluded entities.

Furthermore, no additional issuer(s) lost their eligibility due to surpassing the 5% threshold of exposure to conventional oil and gas activities, while no additional issuer(s) lost their eligibility for exceeding the 5% threshold of exposure to unconventional oil and gas activities.

PAI10

In accordance with PAI10 Candriam's normative analysis determines whether a company complies with the 10 principles of the United Nations Global Compact for each of the main categories: Human Rights (HR), Labor Rights (LR), Environment (ENV) and Anti-Corruption (AC). Our norms based analysis incorporates various international references, including the United Nations Declaration of Human Rights, ILO Fundamental Conventions, and OECD Guidelines for Multinational Enterprises, ensuring comprehensive coverage of human rights, labor standards, corruption, and discrimination.

In Candriam's "Level 3" SRI exclusion policy, companies with severe to very severe violations of the UN Global Compact principles are excluded. This list focuses on a strict interpretation of violations of the UN Global Compact, as assessed by Candriam's ESG analysts.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, for significant and repeated breaches of international social, human, environmental and anti-corruption standards, as defined by the UN Global Compact and the OECD Guidelines for Multinational Enterprises.

PAI14

Candriam is firmly committed to excluding from all its investments companies directly involved in the development, production, testing, maintenance and sale of controversial weapons (anti-personnel landmines, cluster bombs, depleted uranium weapons and armor, chemical weapons, biological weapons and white phosphorus weapons). We consider these damaging activities to present systemic and reputational risks.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, due to their involvement in these activities.

PAI16

Our list of repressive regimes is made up of countries in which human rights are regularly violated, fundamental freedoms are systematically denied and personal safety is not guaranteed due to government failure and systematic ethical violations. We are also extremely vigilant with regard to totalitarian states or countries whose governments are involved in a war against their own people. To compile the list of repressive regimes, we rely on data provided by external sources, such as Freedom House's Index of Freedom in the World, the World Bank's Governance Indicators and the Economist Intelligence Unit's Democracy Index, which guide our qualitative examination of non-democratic countries.

For this list of countries, Candriam's analysts have developed processes that apply to both sovereign and corporate investments, including exclusion, mitigation and engagement processes based on our risk assessment. Candriam considers debt issued by sovereign or quasi-sovereign entities on the list of repressive regimes to be ineligible for investment.

Over the reference period, no additional sovereign issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded.

MONITORING: calculation and evaluation of the principal adverse impact indicators

Some of these indicators may have explicit targets and can be used to measure the attainment of the sustainable investment objective of the Financial Product. See below the results of the indicators of this Financial Product

PAI indicators	Value	Coverage (% rated / total assets)	Eligible assets (% eligible assets / total assets)
Scope 1 GHG Emissions	2,073.20	51.19%	52.40%
Scope 2 GHG Emissions	929.26	51.19%	52.40%
Total GHG Emissions	3,002.46	51.19%	52.29%
2 - Carbon Footprint	31.49	51.19%	52.29%
3 - GHG intensity of investee companies	85.29	51.17%	52.29%
4 - Exposure to companies active in fossil fuel sector	1.23%	50.95%	52.29%
10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.00%	63.34%	63.38%
13 - Board gender diversity	37.92%	54.39%	63.41%
14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0.00%	63.32%	63.38%
15 - GHG intensity	231.81	21.56%	22.42%
16 - Investee countries subject to social violations	0.00%	25.07%	25.22%

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
01/01/2023 - 31/12/2023.

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the "Investment portfolio" section of the annual report.

What was the proportion of sustainability-related investments?

Asset allocation
describes the share
of investments in
specific assets.

What was the asset allocation?

● ***In which economic sectors were the investments made?***

Top sector	% of Assets
Banks and other financial institutions	97.94%
Real estate	0.79%
Bonds of States, Provinces and municipalities	0.53%
Insurance	0.42%
Road vehicles	0.33%

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the “Investment portfolio” section of the annual report.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy? ¹

Yes

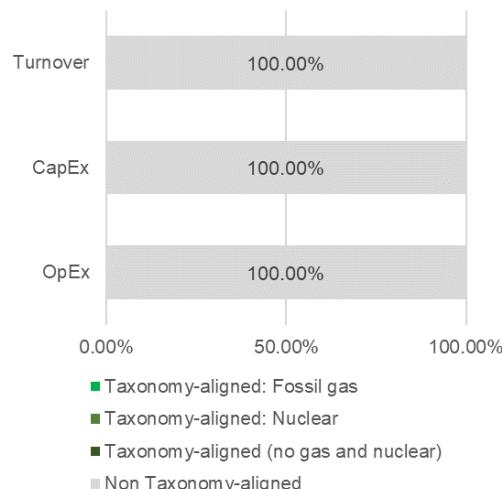

In fossil gas

In nuclear energy

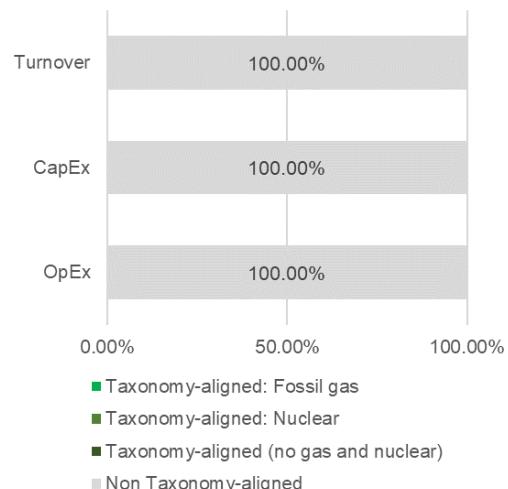

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100.00% of the total investments.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

● **What was the share of investments made in transitional and enabling activities?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, nor on the transitional and enabling activities, as very few companies at global level provide the data necessary for a rigorous assessment their alignment with the Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Year	% EU Taxonomy Aligned
2023	0.00%
2022	0.00%

● **What is the breakdown of the proportion of the investments per each of the EU Taxonomy to which those investments contributed?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, as very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

Therefore, this percentage is considered as nul.

 **What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?**

The Sub-Fund had a share of 52.92% in sustainable investments with an environmental objective not aligned with the EU taxonomy.

Indeed to date, only two of the six objectives have entered into force in 2023 and very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

What was the share of socially sustainable investments?

The Sub-Fund had a share of investments with a social objective of 43.24%

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The investments included under "Not sustainable" are present in the Sub-fund for 3.84% of the total net assets.

These investments include one or more of the following assets:

- Cash: Cash at sight, cash deposit, reverse repo needed to manage the liquidity of the Sub-fund following subscriptions/redemptions and/or being the result of the market exposure decision of the Sub-fund.
- Investments with issuers considered as sustainable investments at the moment of the investment and that are not fully aligned anymore with the Candriam sustainable investment criteria. These investments have been sold during the period.
- Non single name derivatives used for exposition and hedging purposes.

These investments do not affect the delivery of the sustainable investment objectives of the Sub-Fund as they represent a minor proportion of its assets.

What actions have been taken to attain the sustainable investment objective during the reference period?

The financial product aims to achieve a carbon footprint that is at least 25% lower than the carbon footprint of the Benchmark.

Over the reference period, the financial product emitted 31.49 Tons CO2eq per million € invested, 56.57% lower than the benchmark.

The financial product has achieved its objective by favouring issuers with lower carbon footprint.

How did this financial product perform compared to the reference sustainable benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

No specific index is designated as a reference sustainable benchmark to meet the sustainable investment objectives.

Sustainable investment objective

Did this financial product have a sustainable investment objective?	
● <input checked="" type="checkbox"/> YES	● ● <input type="checkbox"/> NO
<p><input checked="" type="checkbox"/> It made sustainable investments with an environmental objective: 18.76%</p> <p><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p><input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p><input checked="" type="checkbox"/> It made sustainable investments with a social objective: 77.68%</p>	
<p><input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____ % of sustainable investment</p> <p><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> with a social objective</p> <p><input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments</p>	

To what extent was the sustainable investment objective of this financial product met?

The attainment of the sustainable objectives was measured through the following sustainability indicators:

- Investment in a portfolio of companies where at least 50% of the weighted average revenues are linked to business activities that contribute to provide essential services (clean water, sanitation, healthcare, nutrition, etc.) and/or to provide products/services that contribute to children's development (education, financial inclusion, sports/leisure, etc.);
- ESG score: the Sub-fund aims to have a weighted average ESG score that is higher than the weighted average ESG score of the Sub-Fund's reference benchmark. The ESG Score is computed employing Candriam's proprietary ESG analysis methodology.

Moreover, the following indicators were monitored:

- to assure that there are no investments in companies that are in violation with the OECD Guidelines for Multinational Enterprises or the UN Global Compact.
- to assure that there are no investments in companies that are on the Candriam's SRI Level 3 exclusion list as a result of the application of Candriam's Exclusion Policy.
- Number of holdings for which Candriam voted.
- to assure that eligible companies have individual revenue / capex / orderbook exposure to the activities contributing to children's essentials and/or development of at least 10%.

How did the sustainability indicators perform?

The Sub-Fund has been managed in accordance with its sustainability indicators as defined below.

For the selection of sustainable investments, the portfolio manager has taken into account ESG assessments of issuers, produced by Candriam's ESG analyst team.

For companies, these assessments are based on the analysis of the company's interactions with its key stakeholders and the analysis of its business activities and their impact, positive or negative, on key sustainability challenges such as climate change

and resource depletion. In addition, Candriam's ESG analysis includes exclusion filters based on compliance with international standards and involvement in controversial activities.

Candriam's ESG research and analysis for sustainable investments also assesses the compliance of investments with the "do no harm" principle to a sustainable investment objective and with good governance practices.

This integration of Candriam's ESG research methodology has enabled the Fund to meet the minimum proportion of sustainable investments defined in the prospectus (minimum 80%). The proportion of sustainable investments in the Fund was therefore above this minimum threshold, as detailed in the section "What was the proportion of sustainability-related investments?"

The Sub-Fund has a specific social objective. It has not the objective of reducing carbon emissions.

The Sub-Fund's reference benchmark has not been designated for the purpose of attaining the sustainable investment objective of the Sub-Fund.

'The Sub-Fund's reference benchmark does not qualify as an EU Climate Transition Benchmark or an EU Paris-Aligned Benchmark under Title III, Chapter 3a, of Regulation (EU) 2016/1011.

Sustainability KPI Name	Portfolio	Benchmark	New indicator
Children - Exposure - Corporate (fund level) - Minimum 50% exposure linked to business activities aligned with theme	49.62%		X
ESG Score - Corporate - Higher than bench	55.46	50.98	X

... And Compared to Previous Periods?

The sub-fund has also been managed in line with its sustainability indicators.

Sustainability KPI Name	Year	Portfolio	Benchmark
ESG Score - Corporate - Higher than bench	2022	54.85	50.36

The asset allocation of the financial product has evolved over the years.

Investment Category	Proportion of Investments	Proportion of Investments
	2023	2022
#1 Sustainable	96.44%	95.78%
#2 Not sustainable	3.56%	4.22%
Environmental	18.76%	20.47%
Social	77.68%	75.32%
Taxonomy-aligned	0.00%	0.00%
Other	18.76%	20.47%

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

Candriam ensured that its sustainable investments did not cause significant harm to any environmental and/or social sustainable investment objective by means of its ESG research and analysis of corporate and sovereign issuers. Based on its proprietary ESG Ratings and Scorings, Candriam's ESG methodology set clear requirements and minimum thresholds to identify those issuers that qualify as 'sustainable investment' and, in particular, do not cause significant harm to any environmental and/or social sustainable investment objective.

The 'Do not significant harm' principle, in particular, was assessed for corporates through:

- the consideration of "principal adverse impacts"
- the alignment with the OECD Guidelines for Multinational Enterprises and the UN Global Compact to ensure minimum environmental & social safeguards.

For more details, refer to the section below on the consideration of principal adverse impacts on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

The consideration of adverse impacts is central to Candriam's sustainable investment approach. Principal adverse impacts were taken into account throughout the entire ESG research and analysis process and through a wide range of methods:

1. ESG rating of corporates: the ESG research and screening methodology considers and assesses the principal adverse impact on sustainability from two distinct, but interlinked, angles:

- the company's issuers' business activities and how they impact, either positively or negatively, key sustainable challenges such as climate change and resource depletion;
- company's interactions with key stakeholders.

2. Negative screening of companies, which includes a norms-based exclusion and an exclusion of companies involved in controversial activities.

3. Engagement activities with companies , through dialogue and voting activities, which contribute to avoiding or reducing the extent of the adverse impacts. The ESG analysis framework and its results feed our engagement process, and vice versa.

The integration of the principal adverse impacts on sustainability factors has been based on the materiality or likely materiality of each indicator for each specific industry / sector to which the company belongs. The materiality is dependent on several factors, such as: type of information, data quality and breadth, applicability, relevance, and geographical coverage.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-fund's investments were subject to a norms-based controversy analysis that considered the compliance with the international social, human, environmental and anti-corruption standards, as defined by the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises. The International Labour Organisation and International Bill of Human Rights are part of the many international references integrated into our norms-based analysis and ESG model.

This analysis aimed to exclude companies that have significantly and repeatedly breached any of these principles.

How did this financial product consider principal adverse impacts on sustainability factors?

At Financial Product level, the principal adverse impacts (PAI) on sustainability factors were considered through one or several means: voting, dialogue, exclusions and/or monitoring (cfr. Candriam's PAI statement: <https://www.candriam.com/en/private/sfdr/>)

ENGAGEMENT

Our engagement and voting policies are available on Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

VOTING

The Candriam's approach to Corporate Governance relies on internationally-recognized standards.

Candriam has exercised voting rights when available on positions of the portfolio. Shareholders' rights, equality of shareholders, board accountability, transparency and integrity of financial statements are core pillars of our voting policy. When exercising our votes we pay a particular attention to the respect of pay-for-performance principle and to the board's independence level, diversity (PAI13) and expertise level.

In the context of Candriam's voting policy, specific guidelines are applied for a range of environmental- (e.g. climate (PAI1 to PAI6), biodiversity (PAI7)), social- (e.g. diversity, gender pay gap (PAI12), human rights (PAI10 PAI11)) and governance- related management or shareholder resolutions.

Candriam has an active approach to voting, in line with the consideration of the principle adverse impacts. Resolutions and voting opportunities are analysed in detail. Candriam always considers the relevance, consistency and feasibility of measures sponsored by any ESG resolution before casting vote. Thus, Candriam may vote against certain resolutions if they do not correspond to the principles defined in its voting policy or to the requirements relating to principle adverse impacts.

This year, we voted at 59 meetings: for 88.14 % of them we cast at least once against management.

With respect to environmental or social related resolutions, management submitted 10 of which we supported 100 %.

In addition, and for any voted director-election items (451 resolutions), we took into consideration Board Gender diversity aspects (PAI13).

In total 34 resolutions were filed by shareholders and we supported 76.47 % of them.

More specifically 10 were Human Rights, Climate or Diversity & Inclusion related: we supported 100 % of them.

For more detailed information about Candriam Voting policy evolution, votes and associated rationales, please refer to our voting dashboard [<https://vds.issgovernance.com/vds/#/NDA0Nw==/>]

DIALOGUE with corporate issuers

This financial product is invested in corporate issuers. Below statistics refer to engagement activities we have performed with these corporate issuers.

Climate (PAI1 to PAI6) is obviously central in our exchanges with companies. Priorities of Climate-engagement on the corporate side are identified taking into account :

- issuers presenting a weak transition profile (proprietary risk transition model), and/or still highly carbon intensive (Scope 1-2) or with large Scope 3 emissions
- issuers from financial sectors still largely exposed to fossil fuel and with a key role in financing the transition
- relative exposure of managed portfolios to the above issuers.

Candriam has joined in November 2021 the Net Zero Asset Management Initiative [<https://www.netzeroassetmanagers.org/signatories/candriam/>]. Through engagement, our objective is to encourage companies to publicly report on how they align with a 1.5D trajectory and to encourage such an alignment. We expect issuers in particular to explain how their strategy and capital expenditures plan serve their decarbonisation commitment. We usually combine individual and collaborative dialogue.

2 issuers in the financial product are actually part of the priority targets of Candriam Net Zero Engagement campaign.

In addition, we continue to actively support CDP Climate [<https://www.cdp.net/en>], a large transparency survey feeding our investment processes : out of the 43 financial product's issuers targeted, 76.74% have properly filled the last survey. Filled surveys give us access to updated and more accurate Scope 1-2-3 emissions' data.

Candriam also actively participate to several collaborative initiatives such as Climate Action 100+ or IIGCC & ShareAction Climate initiatives on Financials. Such initiatives targeted 1 issuer(s) of the financial product. These initiatives contribute not only to increase the level of transparency on Greenhouse gas emissions and related strategy, but also to gain fundamental leverage for supporting strategic changes. Outcomes of these engagements are detailed in our annual engagement & voting report, available on our public website (Publications | Candriam) [<https://www.candriam.com/en/professional/insight-overview/publications/#sri-publications>].

Given the geopolitical context and observed increase in inequalities, 25 issuer(s) with presence in the financial product have also been contacted in relation to the protection of fundamental human rights at direct or indirect workforce level (supply chain due diligence) (PAI10 PAI11).

Inclusion is not to be outdone, with 13 issuers, of the portfolio having been more specifically engaged on topics related to PAI 12 (Unadjusted gender pay gap) or PAI 13 (Board gender diversity).

While above mentioned PAI are prevalent when considering engagement performed for this financial product in 2023, other PAI such as biodiversity-related ones may also have been addressed in our dialogues with issuers. For more information, please refer to Candriam Engagement Annual review under Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

EXCLUSIONS

PAI3

In addition to companies involved in the thermal coal, oil and gas activities (PAI 4), electricity-generating companies with a carbon intensity greater than 354 gCO2/kWh (PAI 3), are considered risky for inclusion in sustainable investments, even if they are not universally controversial. Given that emissions vary according to electricity generation sources, it is important to assess the carbon footprint per kilowatt-hour (kWh) to determine how closely companies are aligned with the 2 degrees Celsius trajectory.

This is why Candriam includes the carbon intensity of energy producers in our sustainability assessment. Where carbon intensity data is not available, Candriam's ESG analysts use other indicators to assess alignment with the Paris Agreement, such as progress in the energy transition in line with Paris Agreement targets and integration of a 1.5D limit scenario, taking into account investment plans and the credibility of carbon neutrality targets. These indicators are forward-looking and evolve over time to reflect the progress made by companies in their transition.

The carbon intensity (PAI 3) threshold for the product in 2023 was established at 354 gCO2/kWh. Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding this threshold, in addition to those previously excluded.

PAI4

Exposure to fossil fuels (PAI 4) undergoes stringent exclusions across all Candriam sustainable funds. Thermal coal, recognized for its detrimental impact and serious financial and sustainability implications, poses systemic and reputational risks that financial benefits cannot outweigh.

Companies deriving more than 5% of their sales from coal mining, coal-fired power generation, and coal-related operations such as exploration, processing, transport, and distribution are automatically excluded.

Additionally, companies exceeding a 5% threshold of revenue from conventional oil and gas activities, including exploration, extraction, refining, and transportation, are ineligible for investment. Similarly, entities with over 5% exposure to unconventional oil and gas activities are also excluded.

Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding the 5% threshold of exposure to thermal coal activities, supplementing the previously excluded entities.

Furthermore, no additional issuer(s) lost their eligibility due to surpassing the 5% threshold of exposure to conventional oil and gas activities, while no additional issuer(s) lost their eligibility for exceeding the 5% threshold of exposure to unconventional oil and gas activities.

PAI10

In accordance with PAI10 Candriam's normative analysis determines whether a company complies with the 10 principles of the United Nations Global Compact for each of the main categories: Human Rights (HR), Labor Rights (LR), Environment (ENV) and Anti-Corruption (AC). Our norms based analysis incorporates various international references, including the United Nations Declaration of Human Rights, ILO Fundamental Conventions, and OECD Guidelines for Multinational Enterprises, ensuring comprehensive coverage of human rights, labor standards, corruption, and discrimination.

In Candriam's "Level 3" SRI exclusion policy, companies with severe to very severe violations of the UN Global Compact principles are excluded. This list focuses on a strict interpretation of violations of the UN Global Compact, as assessed by Candriam's ESG analysts.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, for significant and repeated breaches of international social, human, environmental and anti-corruption standards, as defined by the UN Global Compact and the OECD Guidelines for Multinational Enterprises.

PAI14

Candriam is firmly committed to excluding from all its investments companies directly involved in the development, production, testing, maintenance and sale of controversial weapons (anti-personnel landmines, cluster bombs, depleted uranium weapons and armor, chemical weapons, biological weapons and white phosphorus weapons). We consider these damaging activities to present systemic and reputational risks.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, due to their involvement in these activities.

MONITORING: calculation and evaluation of the principal adverse impact indicators

Some of these indicators may have explicit targets and can be used to measure the attainment of the sustainable investment objective of the Financial Product. See below the results of the indicators of this Financial Product

PAI indicators	Value	Coverage (% rated / total assets)	Eligible assets (% eligible assets / total assets)
Scope 1 GHG Emissions	1,366.39	96.45%	96.64%
Scope 2 GHG Emissions	702.34	96.45%	96.64%
Total GHG Emissions	2,068.73	96.45%	96.64%
2 - Carbon Footprint	32.18	96.45%	96.64%
3 - GHG intensity of investee companies	71.46	96.45%	96.64%
4 - Exposure to companies active in fossil fuel sector	0.81%	94.81%	96.64%
10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.00%	96.64%	96.64%
13 - Board gender diversity	36.11%	92.66%	96.64%
14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0.00%	96.64%	96.64%

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
01/01/2023 - 31/12/2023.

Foods and non alcoholic drinks	2.86%
Machine and apparatus construction	2.79%
Insurance	2.16%
Textiles and garments	2.07%
Electronics and semiconductors	2.01%

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the "Investment portfolio" section of the annual report.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

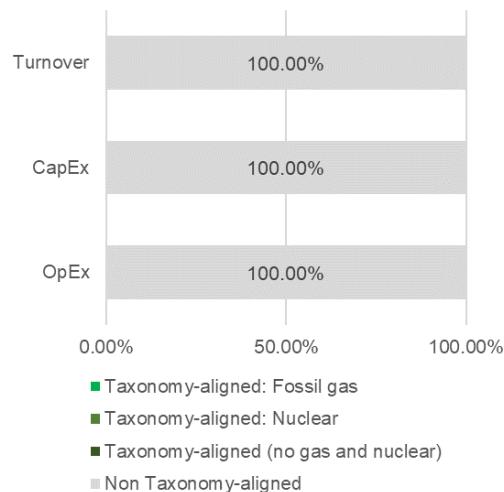

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy? ¹

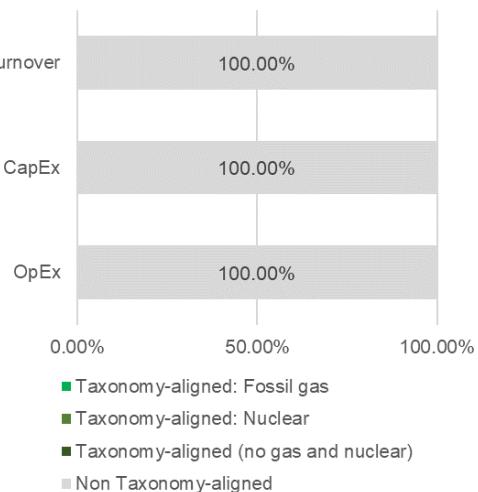

- Yes
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100.00% of the total investments.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 **What was the share of investments made in transitional and enabling activities?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, nor on the transitional and enabling activities, as very few companies at global level provide the data necessary for a rigorous assessment their alignment with the Taxonomy.

 **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Year	% EU Taxonomy Aligned
2023	0.00%
2022	0.00%

 **What is the breakdown of the proportion of the investments per each of the EU Taxonomy to which those investments contributed?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, as very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

Therefore, this percentage is considered as nul.

 **What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?**

The Sub-Fund had a share of 18.76% in sustainable investments with an environmental objective not aligned with the EU taxonomy.

Indeed to date, only two of the six objectives have entered into force in 2023 and very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

 **What was the share of socially sustainable investments?**

The Sub-Fund had a share of investments with a social objective of 77.68%

 **What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?**

The investments included under "Not sustainable" are present in the Sub-fund for 3.56% of the total net assets.

These investments include one or more of the following assets:

- Cash: Cash at sight, cash deposit, reverse repo needed to manage the liquidity of the Sub-fund following subscriptions/redemptions and/or being the result of the market exposure decision of the Sub-fund.
- Investments with issuers considered as sustainable investments at the moment of the investment and that are not fully aligned anymore with the Candriam sustainable investment criteria. These investments have been sold during the period.
- Non single name derivatives used for exposition and hedging purposes.

These investments do not affect the delivery of the sustainable investment objectives of the Sub-Fund as they represent a minor proportion of its assets.

 **What actions have been taken to attain the sustainable investment objective during the reference period?**

The financial product's objective is to attain a minimum exposure of 50% to business activities associated with the strategy's thematic.

Over the reference period, the financial product displayed an exposure of 50% to the theme.

The financial product has achieved its objective by allocating at least a similar exposure of investments in issuers with an exposure to business activities associated to the thematic.

The financial product aims to achieve an ESG score, based on Candriam's proprietary ESG methodology, higher than its benchmark.

Over the reference period, the financial product displayed an ESG score of 55.46, 8.78% higher compared to its benchmark.

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

The financial product has achieved its objective by selectively favouring issuers that display a stronger ESG profile. The financial product invested in 1 issuer(s) in Publishing with improving ESG profiles and divested from 3 issuer(s) in Application Software, Drug Retail and General Merchandise Stores with deteriorating ESG profiles.

How did this financial product perform compared to the reference sustainable benchmark?

No specific index is designated as a reference sustainable benchmark to meet the sustainable investment objectives.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

 YES

- It made **sustainable investments with an environmental objective**: 61.62%
 - in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: 33.70%

 NO

- It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investment
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The attainment of the sustainable investment objectives was measured through the following sustainability indicators:

- an overall portfolio alignment with a temperature scenario equal to or lower than 2.5 degrees. As the availability and reliability of company climate data evolves over time, the Sub-Fund aimed to be aligned with a temperature scenario equal to or lower than 2 degrees by January 1st 2025.
- investment of a higher share of total assets under management in high-stake companies than the Sub-Fund's reference Benchmark. High-stake companies are defined by the EU Climate Benchmark regulation as those belonging to one of the sectors considered to play the biggest role in achieving the Paris Agreement objectives.

Moreover, the following indicators were monitored:

- OECD Guidelines for Multinational Enterprises, UN Global Compact: to ensure that there were no investments in companies that are in violation with the these principles.
- Candriam's Exclusion Policy: to ensure that there were no investments in companies that are on the Candriam's SRI Level 3 exclusion list as a result of the application of Candriam's Exclusion Policy.
- Number of holdings for which Candriam voted.
- to assure that eligible companies have a circularity score of at least 5 (on a scale from 1 to 10).

How did the sustainability indicators perform?

The Sub-Fund has been managed in accordance with its sustainability indicators as defined below.

For the selection of sustainable investments, the portfolio manager has taken into account ESG assessments of issuers, produced by Candriam's ESG analyst team.

For companies, these assessments are based on the analysis of the company's interactions with its key stakeholders and the analysis of its business activities and their impact, positive or negative, on key sustainability challenges such as climate change

and resource depletion. In addition, Candriam's ESG analysis includes exclusion filters based on compliance with international standards and involvement in controversial activities.

Candriam's ESG research and analysis for sustainable investments also assesses the compliance of investments with the "do no harm" principle to a sustainable investment objective and with good governance practices.

This integration of Candriam's ESG research methodology has enabled the Fund to meet the minimum proportion of sustainable investments defined in the prospectus (minimum 80%). The proportion of sustainable investments in the Fund was therefore above this minimum threshold, as detailed in the section "What was the proportion of sustainability-related investments?"

The Sub-Fund's reference benchmark has not been designated for the purpose of attaining the sustainable investment objective of the Sub-Fund.

'The Sub-Fund's reference benchmark does not qualify as an EU Climate Transition Benchmark or an EU Paris-Aligned Benchmark under Title III, Chapter 3a, of Regulation (EU) 2016/1011.

As part of Candriam's commitment to the NZAI, the Sub-Fund aimed to contribute to greenhouse gas emission reduction and the objectives of the Paris Agreement. However, at the Sub-Fund level this contribution was quantified through a temperature metric.

Sustainability KPI Name	Portfolio	Benchmark	New indicator
Portfolio Temperature - Corporate - Lower than 2.5°C - Lower than 2°C in 2025	2.38		
Exposure to High Stake Sectors - Corporate - Higher than bench	76.21%	62.09%	

... And Compared to Previous Periods?

The sub-fund has also been managed in line with its sustainability indicators.

Sustainability KPI Name	Year	Portfolio	Benchmark
Portfolio Temperature - Corporate - Lower than 2.5°C - Lower than 2°C in 2025	2022	2.49	
Exposure to High Stake Sectors - Corporate - Higher than bench	2022	80.90%	62.39%

The asset allocation of the financial product has evolved over the years.

Investment Category	Proportion of Investments	Proportion of Investments
	2023	2022
#1 Sustainable	95.32%	92.84%
#2 Not sustainable	4.68%	7.16%
Environmental	61.62%	61.56%
Social	33.70%	31.28%
Taxonomy-aligned	0.00%	0.00%
Other	61.62%	61.56%

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

Candriam ensured that its sustainable investments did not cause significant harm to any environmental and/or social sustainable investment objective by means of its ESG research and analysis of corporate and sovereign issuers. Based on its proprietary ESG Ratings and Scorings, Candriam's ESG methodology set clear requirements and minimum thresholds to identify those issuers that qualify as 'sustainable investment' and, in particular, do not cause significant harm to any environmental and/or social sustainable investment objective.

The 'Do not significant harm' principle, in particular, was assessed for corporates through:

- the consideration of "principal adverse impacts"
- the alignment with the OECD Guidelines for Multinational Enterprises and the UN Global Compact to ensure minimum environmental & social safeguards.

For more details, refer to the section below on the consideration of principal adverse impacts on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

The consideration of adverse impacts is central to Candriam's sustainable investment approach. Principal adverse impacts were taken into account throughout the entire ESG research and analysis process and through a wide range of methods:

1. ESG rating of corporates: the ESG research and screening methodology considers and assesses the principal adverse impact on sustainability from two distinct, but interlinked, angles:

- the company's issuers' business activities and how they impact, either positively or negatively, key sustainable challenges such as climate change and resource depletion;
- company's interactions with key stakeholders.

2. Negative screening of companies, which includes a norms-based exclusion and an exclusion of companies involved in controversial activities.

3. Engagement activities with companies , through dialogue and voting activities, which contribute to avoiding or reducing the extent of the adverse impacts. The ESG analysis framework and its results feed our engagement process, and vice versa.

The integration of the principal adverse impacts on sustainability factors has been based on the materiality or likely materiality of each indicator for each specific industry / sector to which the company belongs. The materiality is dependent on several factors, such as: type of information, data quality and breadth, applicability, relevance, and geographical coverage.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-fund's investments were subject to a norms-based controversy analysis that considered the compliance with the international social, human, environmental and anti-corruption standards, as defined by the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises. The International Labour Organisation and International Bill of Human Rights are part of the many international references integrated into our norms-based analysis and ESG model.

This analysis aimed to exclude companies that have significantly and repeatedly breached any of these principles.

How did this financial product consider principal adverse impacts on sustainability factors?

At Financial Product level, the principal adverse impacts (PAI) on sustainability factors were considered through one or several means: voting, dialogue, exclusions and/or monitoring (cfr. Candriam's PAI statement: <https://www.candriam.com/en/private/sfdr/>)

ENGAGEMENT

Our engagement and voting policies are available on Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

VOTING

The Candriam's approach to Corporate Governance relies on internationally-recognized standards.

Candriam has exercised voting rights when available on positions of the portfolio. Shareholders' rights, equality of shareholders, board accountability, transparency and integrity of financial statements are core pillars of our voting policy. When exercising our votes we pay a particular attention to the respect of pay-for-performance principle and to the board's independence level, diversity (PAI13) and expertise level.

In the context of Candriam's voting policy, specific guidelines are applied for a range of environmental- (e.g. climate (PAI1 to PAI6), biodiversity (PAI7)), social- (e.g. diversity, gender pay gap (PAI12), human rights (PAI10 PAI11)) and governance- related management or shareholder resolutions.

Candriam has an active approach to voting, in line with the consideration of the principle adverse impacts. Resolutions and voting opportunities are analysed in detail. Candriam always considers the relevance, consistence and feasibility of measures sponsored by any ESG resolution before casting vote. Thus, Candriam may vote against certain resolutions if they do not correspond to the principles defined in its voting policy or to the requirements relating to principle adverse impacts.

This year, we voted at 63 meetings: for 85.71 % of them we cast at least once against management.

With respect to environmental or social related resolutions, management submitted 2 of which we supported 100 %.

In addition, and for any voted director-election items (388 resolutions), we took into consideration Board Gender diversity aspects (PAI13).

In total 22 resolutions were filed by shareholders and we supported 68.18 % of them.

More specifically 4 were Human Rights, Climate or Diversity & Inclusion related: we supported 75 % of them.

For more detailed information about Candriam Voting policy evolution, votes and associated rationales, please refer to our voting dashboard [<https://vds.issgovernance.com/vds/#/NDA0Nw==/>]

DIALOGUE with corporate issuers

This financial product is invested in corporate issuers. Below statistics refer to engagement activities we have performed with these corporate issuers.

Climate (PAI1 to PAI6) is obviously central in our exchanges with companies. Priorities of Climate-engagement on the corporate side are identified taking into account :

- issuers presenting a weak transition profile (proprietary risk transition model), and/or still highly carbon intensive (Scope 1-2) or with large Scope 3 emissions
- issuers from financial sectors still largely exposed to fossil fuel and with a key role in financing the transition
- relative exposure of managed portfolios to the above issuers.

Candriam has joined in November 2021 the Net Zero Asset Management Initiative [<https://www.netzeroassetmanagers.org/signatories/candriam/>]. Through engagement, our objective is to encourage companies to publicly report on how they align with a 1.5D trajectory and to encourage such an alignment. We expect issuers in particular to explain how their strategy and capital expenditures plan serve their decarbonisation commitment. We usually combine individual and collaborative dialogue.

7 issuers in the financial product are actually part of the priority targets of Candriam Net Zero Engagement campaign.

In addition, we continue to actively support CDP Climate [<https://www.cdp.net/en>], a large transparency survey feeding our investment processes : out of the 46 financial product's issuers targeted, 93.48% have properly filled the last survey. Filled surveys give us access to updated and more accurate Scope 1-2-3 emissions' data.

Candriam also actively participate to several collaborative initiatives such as Climate Action 100+ or IIGCC & ShareAction Climate initiatives on Financials. Such initiatives targeted 3 issuer(s) of the financial product. These initiatives contribute not only to increase the level of transparency on Greenhouse gas emissions and related strategy, but also to gain fundamental leverage for supporting strategic changes. Outcomes of these engagements are detailed in our annual engagement & voting report, available on our public website (Publications | Candriam) [<https://www.candriam.com/en/professional/insight-overview/publications/#sri-publications>].

Given the geopolitical context and observed increase in inequalities, 36 issuer(s) with presence in the financial product have also been contacted in relation to the protection of fundamental human rights at direct or indirect workforce level (supply chain due diligence) (PAI10 PAI11).

Inclusion is not to be outdone, with 28 issuers, of the portfolio having been more specifically engaged on topics related to PAI 12 (Unadjusted gender pay gap) or PAI 13 (Board gender diversity).

While above mentioned PAI are prevalent when considering engagement performed for this financial product in 2023, other PAI such as biodiversity-related ones may also have been addressed in our dialogues with issuers. For more information, please refer to Candriam Engagement Annual review under Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

EXCLUSIONS

PAI3

In addition to companies involved in the thermal coal, oil and gas activities (PAI 4), electricity-generating companies with a carbon intensity greater than 354 gCO2/kWh (PAI 3), are considered risky for inclusion in sustainable investments, even if they are not universally controversial. Given that emissions vary according to electricity generation sources, it is important to assess the carbon footprint per kilowatt-hour (kWh) to determine how closely companies are aligned with the 2 degrees Celsius trajectory.

This is why Candriam includes the carbon intensity of energy producers in our sustainability assessment. Where carbon intensity data is not available, Candriam's ESG analysts use other indicators to assess alignment with the Paris Agreement, such as progress in the energy transition in line with Paris Agreement targets and integration of a 1.5D limit scenario, taking into account investment plans and the credibility of carbon neutrality targets. These indicators are forward-looking and evolve over time to reflect the progress made by companies in their transition.

The carbon intensity (PAI 3) threshold for the product in 2023 was established at 354 gCO2/kWh. Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding this threshold, in addition to those previously excluded.

PAI4

Exposure to fossil fuels (PAI 4) undergoes stringent exclusions across all Candriam sustainable funds. Thermal coal, recognized for its detrimental impact and serious financial and sustainability implications, poses systemic and reputational risks that financial benefits cannot outweigh.

Companies deriving more than 5% of their sales from coal mining, coal-fired power generation, and coal-related operations such as exploration, processing, transport, and distribution are automatically excluded.

Additionally, companies exceeding a 5% threshold of revenue from conventional oil and gas activities, including exploration, extraction, refining, and transportation, are ineligible for investment. Similarly, entities with over 5% exposure to unconventional oil and gas activities are also excluded.

Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding the 5% threshold of exposure to thermal coal activities, supplementing the previously excluded entities.

Furthermore, no additional issuer(s) lost their eligibility due to surpassing the 5% threshold of exposure to conventional oil and gas activities, while no additional issuer(s) lost their eligibility for exceeding the 5% threshold of exposure to unconventional oil and gas activities.

PAI10

In accordance with PAI10 Candriam's normative analysis determines whether a company complies with the 10 principles of the United Nations Global Compact for each of the main categories: Human Rights (HR), Labor Rights (LR), Environment (ENV) and Anti-Corruption (AC). Our norms based analysis incorporates various international references, including the United Nations Declaration of Human Rights, ILO Fundamental Conventions, and OECD Guidelines for Multinational Enterprises, ensuring comprehensive coverage of human rights, labor standards, corruption, and discrimination.

In Candriam's "Level 3" SRI exclusion policy, companies with severe to very severe violations of the UN Global Compact principles are excluded. This list focuses on a strict interpretation of violations of the UN Global Compact, as assessed by Candriam's ESG analysts.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, for significant and repeated breaches of international social, human, environmental and anti-corruption standards, as defined by the UN Global Compact and the OECD Guidelines for Multinational Enterprises.

PAI14

Candriam is firmly committed to excluding from all its investments companies directly involved in the development, production, testing, maintenance and sale of controversial weapons (anti-personnel landmines, cluster bombs, depleted uranium weapons and armor, chemical weapons, biological weapons and white phosphorus weapons). We consider these damaging activities to present systemic and reputational risks.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, due to their involvement in these activities.

MONITORING: calculation and evaluation of the principal adverse impact indicators

Some of these indicators may have explicit targets and can be used to measure the attainment of the sustainable investment objective of the Financial Product. See below the results of the indicators of this Financial Product

PAI indicators	Value	Coverage (% rated / total assets)	Eligible assets (% eligible assets / total assets)
Scope 1 GHG Emissions	21,752.22	93.23%	95.64%
Scope 2 GHG Emissions	8,197.60	93.23%	95.64%
Total GHG Emissions	29,949.82	93.23%	95.64%
2 - Carbon Footprint	76.56	93.23%	95.64%
3 - GHG intensity of investee companies	200.57	93.23%	95.64%
4 - Exposure to companies active in fossil fuel sector	4.62%	93.90%	95.62%
10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.00%	95.63%	95.63%
13 - Board gender diversity	36.20%	93.96%	95.63%
14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0.00%	95.55%	95.63%

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
01/01/2023 - 31/12/2023.

Largest investments	Sector	% of Assets	Country
WASTE MANAGEMENT	Environmental services and recycling	4.24%	USA
AMERICAN WATER WORKS CO INC	Utilities	3.25%	USA
GRAPHIC PACKAGING	Paper and forest products	3.01%	USA
ECOLAB INC	Chemicals	3.01%	USA
MICROSOFT CORP	Internet and internet services	2.97%	USA
NESTLE SA PREFERENTIAL SHARE	Foods and non alcoholic drinks	2.92%	CHE
UNILEVER	Foods and non alcoholic drinks	2.69%	GBR
TETRA TECH INC	Environmental services and recycling	2.69%	USA
ADOBE INC	Internet and internet services	2.69%	USA
PROCTER & GAMBLE CO	Miscellaneous consumer goods	2.59%	USA
DARLING INGREDIENT INC	Utilities	2.55%	USA
CROWN HOLDINGS INC	Packaging industries	2.47%	USA
CISCO SYSTEMS INC	Office supplies and computing	2.36%	USA
LKQ CORP	Road vehicles	2.32%	USA
PTC INC	Internet and internet services	2.14%	USA

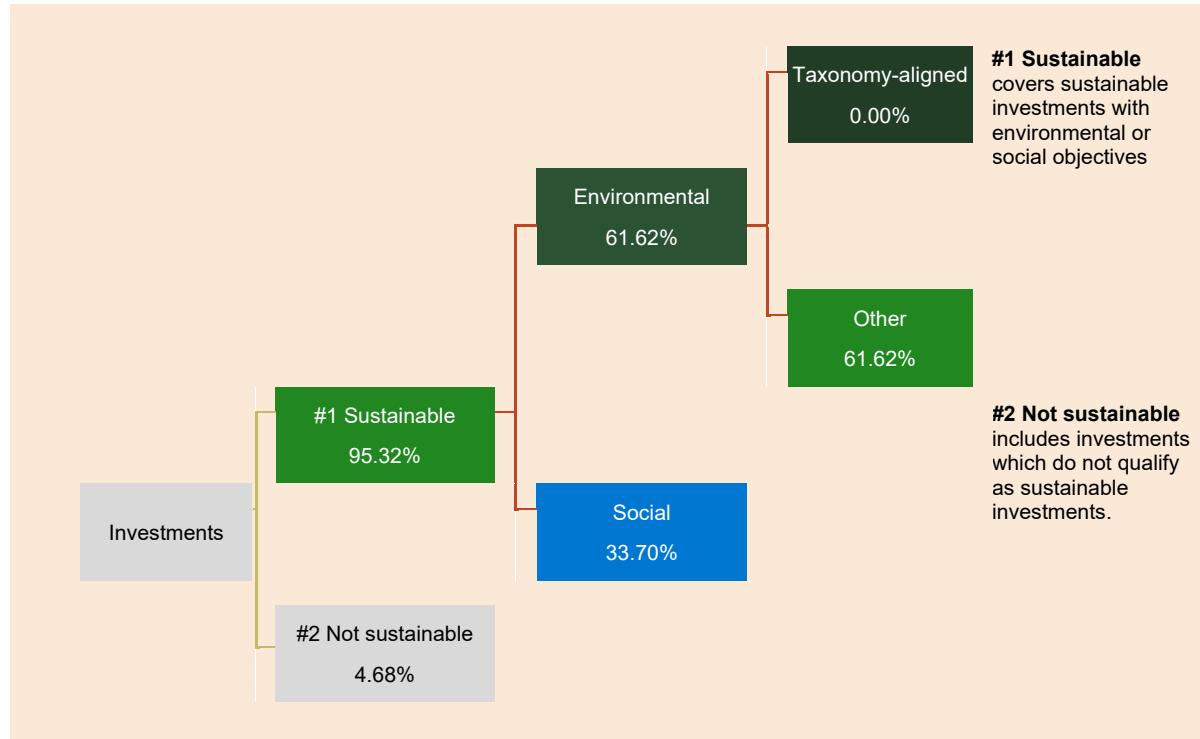

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the "Investment portfolio" section of the annual report.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

● ***In which economic sectors were the investments made?***

Top sector	% of Assets
Environmental services and recycling	13.98%
Internet and internet services	12.99%
Banks and other financial institutions	10.74%
Utilities	10.19%
Electronics and semiconductors	6.20%
Foods and non alcoholic drinks	5.91%
Chemicals	5.50%
Machine and apparatus construction	4.73%
Packaging industries	4.45%
Paper and forest products	4.31%
Miscellaneous consumer goods	3.54%
Retail trade and department stores	2.87%
Pharmaceuticals	2.87%
Office supplies and computing	2.36%
Road vehicles	2.32%

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the “Investment portfolio” section of the annual report.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

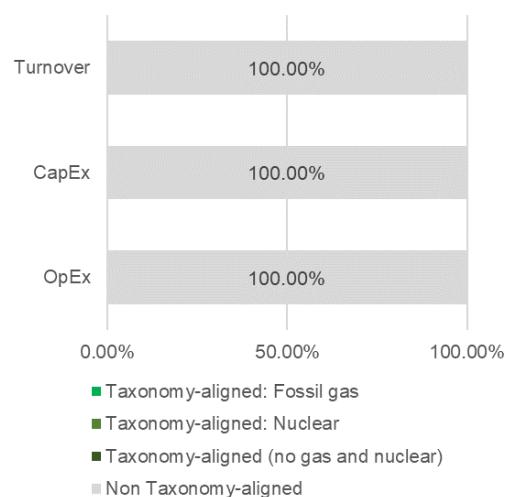

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy? ¹

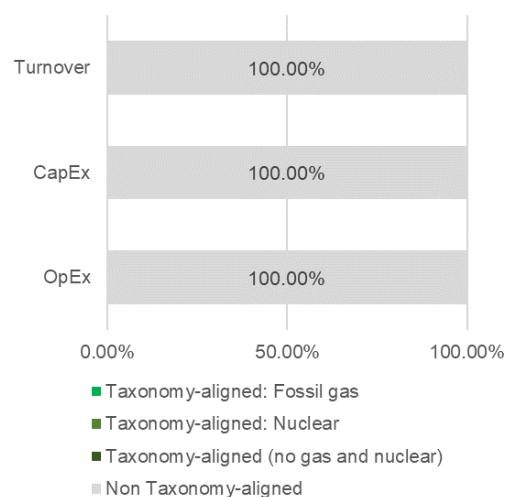

- Yes
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100.00% of the total investments.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

● **What was the share of investments made in transitional and enabling activities?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, nor on the transitional and enabling activities, as very few companies at global level provide the data necessary for a rigorous assessment their alignment with the Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Year	% EU Taxonomy Aligned
2023	0.00%
2022	0.00%

● **What is the breakdown of the proportion of the investments per each of the EU Taxonomy to which those investments contributed?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, as very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

Therefore, this percentage is considered as nul.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

The Sub-Fund had a share of 61.62% in sustainable investments with an environmental objective not aligned with the EU taxonomy.

Indeed to date, only two of the six objectives have entered into force in 2023 and very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

What was the share of socially sustainable investments?

The Sub-Fund had a share of investments with a social objective of 33.7%

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The investments included under "Not sustainable" are present in the Sub-fund for 4.68% of the total net assets.

These investments include one or more of the following assets:

- Cash: Cash at sight, cash deposit, reverse repo needed to manage the liquidity of the Sub-fund following subscriptions/redemptions and/or being the result of the market exposure decision of the Sub-fund.
- Investments with issuers considered as sustainable investments at the moment of the investment and that are not fully aligned anymore with the Candriam sustainable investment criteria. These investments have been sold during the period.
- Non single name derivatives used for exposition and hedging purposes.

These investments do not affect the delivery of the sustainable investment objectives of the Sub-Fund as they represent a minor proportion of its assets.

What actions have been taken to attain the sustainable investment objective during the reference period?

The financial product aims to invest primarily in issuers that demonstrate a positive contribution to the objectives of the Paris Agreement and therefore intends to propose a temperature figure of 2.5 degrees or less.

Over the period, the financial product displayed a temperature of 2.38°C.

In comparison to the previous year, the financial product temperature is lower.

The financial product has achieved its objective by allocating a higher proportion of investments in issuers that demonstrate a positive contribution to the objectives of the Paris Agreement.

The financial product aims to invest a higher proportion of total assets under management in high stake issuers than the benchmark.

Over the reference period, the financial product invested in 76.21% of its net assets in high stake issuers, 22.74% higher compared to its benchmark.

The financial product has achieved its objective by allocating a higher proportion of investments in high stake issuers as compare to its benchmark.

How did this financial product perform compared to the reference sustainable benchmark?

No specific index is designated as a reference sustainable benchmark to meet the sustainable investment objectives.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

 YES

- It made **sustainable investments with an environmental objective**: 66.61%
 - in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: 29.69%

 NO

- It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___ % of sustainable investment
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The attainment of the sustainable investment objectives was measured through the following sustainability indicators:

- an overall portfolio alignment with a temperature scenario equal to or lower than 2.5 degrees. As the availability and reliability of company climate data evolves over time, the Sub-Fund aimed to be aligned with a temperature scenario equal to or lower than 2 degrees by January 1st 2025.
- investment of a higher share of total assets under management in high-stake companies than the Sub-Fund's reference Benchmark. High-stake companies are defined by the EU Climate Benchmark regulation as those belonging to one of the sectors considered to play the biggest role in achieving the Paris Agreement objectives;

Moreover, the following indicators were monitored:

- OECD Guidelines for Multinational Enterprises, UN Global Compact: to ensure that there were no investments in companies that are in violation with these principles.
- Candriam's Exclusion Policy: to ensure that there were no investments in companies that are on the Candriam's SRI Level 3 exclusion list as a result of the application of Candriam's Exclusion Policy.
- Number of holdings for which Candriam voted.
- to assure that eligible companies have individual revenue / capex / orderbook exposure to the activities contributing positively to reducing greenhouse gases of at least 10%.

The sub-fund partially contributed to :

- Climate change mitigation

How did the sustainability indicators perform?

The Sub-Fund has been managed in accordance with its sustainability indicators as defined below.

For the selection of sustainable investments, the portfolio manager has taken into account ESG assessments of issuers, produced by Candriam's ESG analyst team.

For companies, these assessments are based on the analysis of the company's interactions with its key stakeholders and the analysis of its business activities and their impact, positive or negative, on key sustainability challenges such as climate change and resource depletion. In addition, Candriam's ESG analysis includes exclusion filters based on compliance with international standards and involvement in controversial activities.

Candriam's ESG research and analysis for sustainable investments also assesses the compliance of investments with the "do no harm" principle to a sustainable investment objective and with good governance practices.

This integration of Candriam's ESG research methodology has enabled the Fund to meet the minimum proportion of sustainable investments defined in the prospectus (minimum 80%). The proportion of sustainable investments in the Fund was therefore above this minimum threshold, as detailed in the section "What was the proportion of sustainability-related investments?"

The Sub-Fund's reference benchmark has not been designated for the purpose of attaining the sustainable investment objective of the Sub-Fund.

'The Sub-Fund's reference benchmark does not qualify as an EU Climate Transition Benchmark or an EU Paris-Aligned Benchmark under Title III, Chapter 3a, of Regulation (EU) 2016/1011.

As part of Candriam's commitment to the NZAI, the Sub-Fund aimed to contribute to greenhouse gas emission reduction and the objectives of the Paris Agreement. However, at the Sub-Fund level this contribution was quantified through a temperature metric.

Sustainability KPI Name	Portfolio	Benchmark	New indicator
Portfolio Temperature - Corporate - Lower than 2.5°C - Lower than 2°C in 2025	2.16		
Exposure to High Stake Sectors - Corporate - Higher than bench	78.58%	62.09%	

... And Compared to Previous Periods?

The sub-fund has also been managed in line with its sustainability indicators.

Sustainability KPI Name	Year	Portfolio	Benchmark
Portfolio Temperature - Corporate - Lower than 2.5°C - Lower than 2°C in 2025	2022	2.39	
Exposure to High Stake Sectors - Corporate - Higher than bench	2022	80.19%	62.39%

The asset allocation of the financial product has evolved over the years.

Investment Category	Proportion of Investments	Proportion of Investments
	2023	2022
#1 Sustainable	96.30%	96.38%
#2 Not sustainable	3.70%	3.62%
Environmental	66.61%	69.77%
Social	29.69%	26.61%
Taxonomy-aligned	13.10%	13.40%
Other	53.52%	56.37%

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

Candriam ensured that its sustainable investments did not cause significant harm to any environmental and/or social sustainable investment objective by means of its ESG research and analysis of corporate and sovereign issuers. Based on its proprietary ESG Ratings and Scorings, Candriam's ESG methodology set clear requirements and minimum thresholds to identify those issuers that qualify as 'sustainable investment' and, in particular, do not cause significant harm to any environmental and/or social sustainable investment objective.

The 'Do not significant harm' principle, in particular, was assessed for corporates through:

- the consideration of "principal adverse impacts"
- the alignment with the OECD Guidelines for Multinational Enterprises and the UN Global Compact to ensure minimum environmental & social safeguards.

For more details, refer to the section below on the consideration of principal adverse impacts on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

The consideration of adverse impacts is central to Candriam's sustainable investment approach. Principal adverse impacts were taken into account throughout the entire ESG research and analysis process and through a wide range of methods:

1. ESG rating of corporates: the ESG research and screening methodology considers and assesses the principal adverse impact on sustainability from two distinct, but interlinked, angles:

- the company's issuers' business activities and how they impact, either positively or negatively, key sustainable challenges such as climate change and resource depletion;
- company's interactions with key stakeholders.

2. Negative screening of companies, which includes a norms-based exclusion and an exclusion of companies involved in controversial activities.

3. Engagement activities with companies, through dialogue and voting activities, which contribute to avoiding or reducing the extent of the adverse impacts. The ESG analysis framework and its results feed our engagement process, and vice versa.

The integration of the principal adverse impacts on sustainability factors has been based on the materiality or likely materiality of each indicator for each specific industry / sector to which the company belongs. The materiality is dependent on several factors, such as: type of information, data quality and breadth, applicability, relevance, and geographical coverage.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-fund's investments were subject to a norms-based controversy analysis that considered the compliance with the international social, human, environmental and anti-corruption standards, as defined by the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises. The International Labour Organisation and International Bill of Human Rights are part of the many international references integrated into our norms-based analysis and ESG model.

This analysis aimed to exclude companies that have significantly and repeatedly breached any of these principles.

How did this financial product consider principal adverse impacts on sustainability factors?

At Financial Product level, the principal adverse impacts (PAI) on sustainability factors were considered through one or several means: voting, dialogue, exclusions and/or monitoring (cfr. Candriam's PAI statement: <https://www.candriam.com/en/private/sfdr/>)

ENGAGEMENT

Our engagement and voting policies are available on Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

VOTING

The Candriam's approach to Corporate Governance relies on internationally-recognized standards.

Candriam has exercised voting rights when available on positions of the portfolio. Shareholders' rights, equality of shareholders, board accountability, transparency and integrity of financial statements are core pillars of our voting policy. When exercising our votes we pay a particular attention to the respect of pay-for-performance principle and to the board's independence level, diversity (PAI13) and expertise level.

In the context of Candriam's voting policy, specific guidelines are applied for a range of environmental- (e.g. climate (PAI1 to PAI6), biodiversity (PAI7)), social- (e.g. diversity, gender pay gap (PAI12), human rights (PAI10 PAI11)) and governance- related management or shareholder resolutions.

Candriam has an active approach to voting, in line with the consideration of the principle adverse impacts. Resolutions and voting opportunities are analysed in detail. Candriam always considers the relevance, consistency and feasibility of measures sponsored by any ESG resolution before casting vote. Thus, Candriam may vote against certain resolutions if they do not correspond to the principles defined in its voting policy or to the requirements relating to principle adverse impacts.

This year, we voted at 73 meetings: for 89.04 % of them we cast at least once against management.

With respect to environmental or social related resolutions, management submitted 5 of which we supported 100 %.

More specifically, 1 proposals were related to climate (100 % support).

In addition, and for any voted director-election items (404 resolutions), we took into consideration Board Gender diversity aspects (PAI13).

In total 20 resolutions were filed by shareholders and we supported 65 % of them.

More specifically 4 were Human Rights, Climate or Diversity & Inclusion related: we supported 100 % of them.

For more detailed information about Candriam Voting policy evolution, votes and associated rationales, please refer to our voting dashboard [<https://vds.issgovernance.com/vds/#/NDA0Nw==/>]

DIALOGUE with corporate issuers

This financial product is invested in corporate issuers. Below statistics refer to engagement activities we have performed with these corporate issuers.

Climate (PAI1 to PAI6) is obviously central in our exchanges with companies. Priorities of Climate-engagement on the corporate side are identified taking into account :

- issuers presenting a weak transition profile (proprietary risk transition model), and/or still highly carbon intensive (Scope 1-2) or with large Scope 3 emissions
- issuers from financial sectors still largely exposed to fossil fuel and with a key role in financing the transition
- relative exposure of managed portfolios to the above issuers.

Candriam has joined in November 2021 the Net Zero Asset Management Initiative [<https://www.netzeroassetmanagers.org/signatories/candriam/>]. Through engagement, our objective is to encourage companies to publicly report on how they align with a 1.5D trajectory and to encourage such an alignment. We expect issuers in particular to explain how their strategy and capital expenditures plan serve their decarbonisation commitment. We usually combine individual and collaborative dialogue.

12 issuers in the financial product are actually part of the priority targets of Candriam Net Zero Engagement campaign.

In addition, we continue to actively support CDP Climate [<https://www.cdp.net/en>], a large transparency survey feeding our investment processes : out of the 55 financial product's issuers targeted, 85.45% have properly filled the last survey. Filled surveys give us access to updated and more accurate Scope 1-2-3 emissions' data.

Candriam also actively participate to several collaborative initiatives such as Climate Action 100+ or IIGCC & ShareAction Climate initiatives on Financials. Such initiatives targeted 6 issuer(s) of the financial product. These initiatives contribute not only to increase the level of transparency on Greenhouse gas emissions and related strategy, but also to gain fundamental leverage for supporting strategic changes. Outcomes of these engagements are detailed in our annual engagement & voting report, available on our public website (Publications | Candriam) [<https://www.candriam.com/en/professional/insight-overview/publications/#sri-publications>].

Given the geopolitical context and observed increase in inequalities, 42 issuer(s) with presence in the financial product have also been contacted in relation to the protection of fundamental human rights at direct or indirect workforce level (supply chain due diligence) (PAI10 PAI11).

Inclusion is not to be outdone, with 26 issuers, of the portfolio having been more specifically engaged on topics related to PAI 12 (Unadjusted gender pay gap) or PAI 13 (Board gender diversity).

While above mentioned PAI are prevalent when considering engagement performed for this financial product in 2023, other PAI such as biodiversity-related ones may also have been addressed in our dialogues with issuers. For more information, please refer to Candriam Engagement Annual review under Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

EXCLUSIONS

PAI3

In addition to companies involved in the thermal coal, oil and gas activities (PAI 4), electricity-generating companies with a carbon intensity greater than 354 gCO2/kWh (PAI 3), are considered risky for inclusion in sustainable investments, even if they are not universally controversial. Given that emissions vary according to electricity generation sources, it is important to assess the carbon footprint per kilowatt-hour (kWh) to determine how closely companies are aligned with the 2 degrees Celsius trajectory.

This is why Candriam includes the carbon intensity of energy producers in our sustainability assessment. Where carbon intensity data is not available, Candriam's ESG analysts use other indicators to assess alignment with the Paris Agreement, such as progress in the energy transition in line with Paris Agreement targets and integration of a 1.5D limit scenario, taking into account investment plans and the credibility of carbon neutrality targets. These indicators are forward-looking and evolve over time to reflect the progress made by companies in their transition.

The carbon intensity (PAI 3) threshold for the product in 2023 was established at 354 gCO2/kWh. Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding this threshold, in addition to those previously excluded.

PAI4

Exposure to fossil fuels (PAI 4) undergoes stringent exclusions across all Candriam sustainable funds. Thermal coal, recognized for its detrimental impact and serious financial and sustainability implications, poses systemic and reputational risks that financial benefits cannot outweigh.

Companies deriving more than 5% of their sales from coal mining, coal-fired power generation, and coal-related operations such as exploration, processing, transport, and distribution are automatically excluded.

Additionally, companies exceeding a 5% threshold of revenue from conventional oil and gas activities, including exploration, extraction, refining, and transportation, are ineligible for investment. Similarly, entities with over 5% exposure to unconventional oil and gas activities are also excluded.

Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding the 5% threshold of exposure to thermal coal activities, supplementing the previously excluded entities.

Furthermore, no additional issuer(s) lost their eligibility due to surpassing the 5% threshold of exposure to conventional oil and gas activities, while no additional issuer(s) lost their eligibility for exceeding the 5% threshold of exposure to unconventional oil and gas activities.

PAI10

In accordance with PAI10 Candriam's normative analysis determines whether a company complies with the 10 principles of the United Nations Global Compact for each of the main categories: Human Rights (HR), Labor Rights (LR), Environment (ENV) and Anti-Corruption (AC). Our norms based analysis incorporates various international references, including the United Nations Declaration of Human Rights, ILO Fundamental Conventions, and OECD Guidelines for Multinational Enterprises, ensuring comprehensive coverage of human rights, labor standards, corruption, and discrimination.

In Candriam's "Level 3" SRI exclusion policy, companies with severe to very severe violations of the UN Global Compact principles are excluded. This list focuses on a strict interpretation of violations of the UN Global Compact, as assessed by Candriam's ESG analysts.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, for significant and repeated breaches of international social, human, environmental and anti-corruption standards, as defined by the UN Global Compact and the OECD Guidelines for Multinational Enterprises.

PAI14

Candriam is firmly committed to excluding from all its investments companies directly involved in the development, production, testing, maintenance and sale of controversial weapons (anti-personnel landmines, cluster bombs, depleted uranium weapons and armor, chemical weapons, biological weapons and white phosphorus weapons). We consider these damaging activities to present systemic and reputational risks.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, due to their involvement in these activities.

MONITORING: calculation and evaluation of the principal adverse impact indicators

Some of these indicators may have explicit targets and can be used to measure the attainment of the sustainable investment objective of the Financial Product. See below the results of the indicators of this Financial Product

PAI indicators	Value	Coverage (% rated / total assets)	Eligible assets (% eligible assets / total assets)
Scope 1 GHG Emissions	39,055.29	95.59%	96.30%
Scope 2 GHG Emissions	18,413.23	95.59%	96.30%
Total GHG Emissions	57,468.52	95.59%	96.30%
2 - Carbon Footprint	56.68	95.59%	96.30%
3 - GHG intensity of investee companies	302.19	95.59%	96.30%
4 - Exposure to companies active in fossil fuel sector	9.29%*	94.91%	96.31%
10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.00%	96.30%	96.30%
13 - Board gender diversity	34.76%	94.97%	96.30%
14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0.00%	96.30%	96.30%

*This PAI does not reflect the % of income invested in the portfolio but the % of issuers who have part, even if marginal, of their income exposed to Fossil fuel. In order to accommodate the integration of renewable energy and handle their intermittency, even the greenest Electrical Utilities need to maintain some gas-based capacity as storage based solutions are still in their infancy.

As example, Orsted is the global leader in Offshore wind. The Danish developer started as a O&G company and went through a successful transition to exit its fossil fuel assets and focus solely on renewables. Due to its core position in the Danish energy system and the 50% ownership by the Danish government, Orsted still owns thermal generation assets in Denmark.

As of end 2022, Orsted's green share of energy generation was 91%. As example, Iberdrola, as of end 2022, total installed capacity was made of 69% renewables, gas represented 26% and the remaining is Nuclear. In its 2030 generation mix, the company plans to have 85% of Renewable energy, meeting the IEA's expectation of 60% share of renewables by 2030.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
01/01/2023 - 31/12/2023.

Largest investments	Sector	% of Assets	Country
WASTE CONNECTIONS INC	Environmental services and recycling	4.32%	CAN
MICROSOFT CORP	Internet and internet services	4.31%	USA
AIR PRODUCTS & CHEMICALS INC	Chemicals	3.07%	USA
AIR LIQUIDE SA	Chemicals	2.84%	FRA
SYNOPSYS	Internet and internet services	2.63%	USA
TRIMBLE	Electronics and semiconductors	2.61%	USA
THERMO FISHER SCIENT SHS	Electronics and semiconductors	2.58%	USA
BALL CORP	Packaging industries	2.53%	USA
AMERICAN WATER WORKS CO INC	Utilities	2.48%	USA
DARLING INGREDIENT INC	Utilities	2.47%	USA
APTIV PLC	Road vehicles	2.45%	JEY
MASTEC INC	Electrical engineering	2.41%	USA
SCHNEIDER ELECTRIC SE	Electrical engineering	2.29%	FRA
TETRA TECH INC	Environmental services and recycling	2.26%	USA
CONTEMPORARY AMPEREX TECHN-A	Machine and apparatus construction	2.22%	CHN

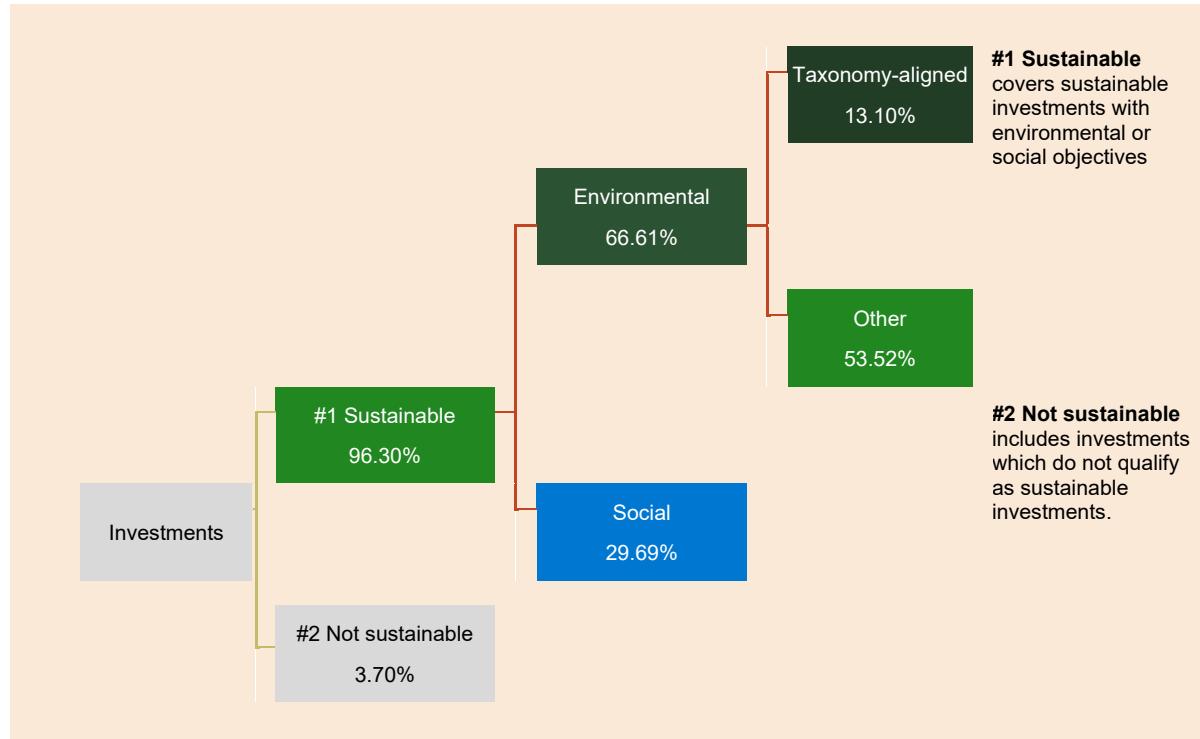

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the "Investment portfolio" section of the annual report.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

● ***In which economic sectors were the investments made?***

Top sector	% of Assets
Utilities	16.40%
Internet and internet services	13.53%
Electronics and semiconductors	12.18%
Environmental services and recycling	10.42%
Machine and apparatus construction	9.93%
Chemicals	9.50%
Electrical engineering	8.65%
Banks and other financial institutions	5.65%
Building materials	3.12%
Real estate	2.95%
Packaging industries	2.53%
Road vehicles	2.45%
Petroleum	1.88%
Foods and non alcoholic drinks	0.38%
Biotechnology	0.30%

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the "Investment portfolio" section of the annual report.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy? ¹

Yes

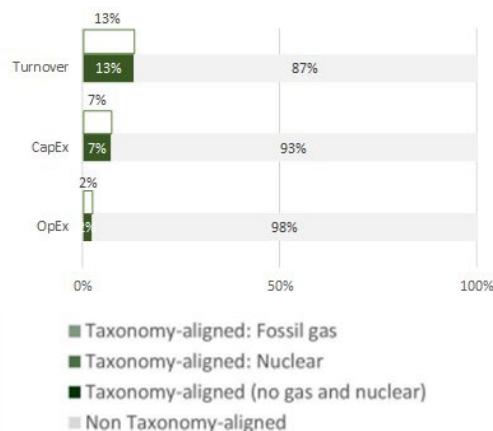

In fossil gas

In nuclear energy

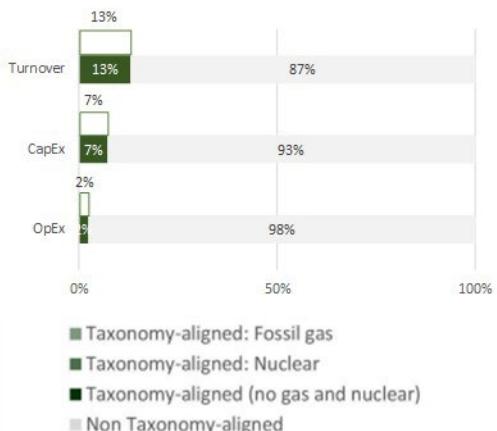

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100.00% of the total investments.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

● **What was the share of investments made in transitional and enabling activities?**

The Sub-Fund had a minimum share of 0% in transitional activities and of 7.89% in enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Year	% EU Taxonomy Aligned
2023	13.10%
2022	13.40%

● **What is the breakdown of the proportion of the investments per each of the EU Taxonomy to which those investments contributed?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, as very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

Therefore, this percentage is considered as null.

Climate change adaptation	0.03%
Climate change mitigation	13.07%

What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

The Sub-Fund had a share of 53.52% in sustainable investments with an environmental objective not aligned with the EU taxonomy.

Indeed to date, only two of the six objectives have entered into force in 2023 and very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

What was the share of socially sustainable investments?

The Sub-Fund had a share of investments with a social objective of 29.69%

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The investments included under "Not sustainable" are present in the Sub-fund for 3.7% of the total net assets.

These investments include one or more of the following assets:

- Cash: Cash at sight, cash deposit, reverse repo needed to manage the liquidity of the Sub-fund following subscriptions/redemptions and/or being the result of the market exposure decision of the Sub-fund.
- Investments with issuers considered as sustainable investments at the moment of the investment and that are not fully aligned anymore with the Candriam sustainable investment criteria. These investments have been sold during the period.
- Non single name derivatives used for exposition and hedging purposes.

These investments do not affect the delivery of the sustainable investment objectives of the Sub-Fund as they represent a minor proportion of its assets.

What actions have been taken to attain the sustainable investment objective during the reference period?

The financial product aims to invest primarily in issuers that demonstrate a positive contribution to the objectives of the Paris Agreement and therefore intends to propose a temperature figure of 2.5 degrees or less.

Over the period, the financial product displayed a temperature of 2.16°C.

In comparison to the previous year, the financial product temperature is lower.

The financial product has achieved its objective by allocating a higher proportion of investments in issuers that demonstrate a positive contribution to the objectives of the Paris Agreement.

The financial product aims to invest a higher proportion of total assets under management in high stake issuers than the benchmark.

Over the reference period, the financial product invested in 78.58% of its net assets in high stake issuers, 26.56% higher compared to its benchmark.

The financial product has achieved its objective by allocating a higher proportion of investments in high stake issuers as compare to its benchmark.

How did this financial product perform compared to the reference sustainable benchmark?

No specific index is designated as a reference sustainable benchmark to meet the sustainable investment objectives.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

● YES

- It made **sustainable investments with an environmental objective**: 33.33%
 - in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: 61.39%

● NO

- It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investment
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The attainment of the sustainable investment objectives was measured through the following sustainability indicators:

- carbon footprint: the Sub-Fund had a carbon footprint that is at least 30% lower than the carbon footprint of the Sub-Fund's reference Benchmark.
- ESG score: the Sub-Fund had a weighted average ESG score that is higher than the weighted average ESG score of the Sub-Fund's reference benchmark. The ESG Score is computed employing Candriam's proprietary ESG analysis methodology.

Moreover, the following indicators were monitored:

- OECD Guidelines for Multinational Enterprises, UN Global Compact: to ensure that there were no investments in companies that are in violation with the these principles.
- Candriam's Exclusion Policy: to ensure that there were no investments in companies that are on the Candriam's SRI Level 3 exclusion list as a result of the application of Candriam's Exclusion Policy.
- Number of holdings for which Candriam voted.

● **How did the sustainability indicators perform?**

The Sub-Fund has been managed in accordance with its sustainability indicators as defined below.

For the selection of sustainable investments, the portfolio manager has taken into account ESG assessments of issuers, produced by Candriam's ESG analyst team.

For companies, these assessments are based on the analysis of the company's interactions with its key stakeholders and the analysis of its business activities and their impact, positive or negative, on key sustainability challenges such as climate change and resource depletion. In addition, Candriam's ESG analysis includes exclusion filters based on compliance with international standards and involvement in controversial activities.

Candriam's ESG research and analysis for sustainable investments also assesses the compliance of investments with the "do no harm" principle to a sustainable investment objective and with good governance practices.

This integration of Candriam's ESG research methodology has enabled the Fund to meet the minimum proportion of sustainable investments defined in the prospectus (minimum 80%). The proportion of sustainable investments in the Fund was therefore above this minimum threshold, as detailed in the section "What was the proportion of sustainability-related investments?"

The Sub-Fund's reference benchmark has not been designated for the purpose of attaining the sustainable investment objective of the Sub-Fund.

'The Sub-Fund's reference benchmark does not qualify as an EU Climate Transition Benchmark or an EU Paris-Aligned Benchmark under Title III, Chapter 3a, of Regulation (EU) 2016/1011.

However, the Sub-Fund aimed to have a carbon footprint that is at least 30% lower than the carbon footprint of the Sub-Fund's reference benchmark.

Moreover, Candriam being part of the Net Zero Asset Management initiative, the Sub-Fund aimed to reduce greenhouse gas emissions.

Sustainability KPI Name	Portfolio	Benchmark	New indicator
Carbon Footprint - Corporate - Scope 1&2 - 30% reduction vs bench	24.86	168.60	
ESG Score - Corporate - Higher than bench	50.70	45.84	

... And Compared to Previous Periods?

The sub-fund has also been managed in line with its sustainability indicators.

Sustainability KPI Name	Year	Portfolio	Benchmark
Carbon Footprint - Corporate - Scope 1&2 - 30% reduction vs bench	2022	22.10	167.82
ESG Score - Corporate - Higher than bench	2022	50.56	44.87

The asset allocation of the financial product has evolved over the years.

Investment Category	Proportion of Investments	Proportion of Investments
	2023	2022
#1 Sustainable	94.72%	96.46%
#2 Not sustainable	5.28%	3.63%
Environmental	33.33%	34.72%
Social	61.39%	61.74%
Taxonomy-aligned	0.00%	0.00%
Other	33.33%	34.72%

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

Candriam ensured that its sustainable investments did not cause significant harm to any environmental and/or social sustainable investment objective by means of its ESG research and analysis of corporate and sovereign issuers. Based on its proprietary ESG Ratings and Scorings, Candriam's ESG methodology set clear requirements and minimum thresholds to identify those issuers that qualify as 'sustainable investment' and, in particular, do not cause significant harm to any environmental and/or social sustainable investment objective.

The 'Do not significant harm' principle, in particular, was assessed for corporates through:

- the consideration of "principal adverse impacts"
- the alignment with the OECD Guidelines for Multinational Enterprises and the UN Global Compact to ensure minimum environmental & social safeguards.

For more details, refer to the section below on the consideration of principal adverse impacts on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

The consideration of adverse impacts is central to Candriam's sustainable investment approach. Principal adverse impacts were taken into account throughout the entire ESG research and analysis process and through a wide range of methods:

1. ESG rating of corporates: the ESG research and screening methodology considers and assesses the principal adverse impact on sustainability from two distinct, but interlinked, angles:

- the company's issuers' business activities and how they impact, either positively or negatively, key sustainable challenges such as climate change and resource depletion;
- company's interactions with key stakeholders.

2. Negative screening of companies, which includes a norms-based exclusion and an exclusion of companies involved in controversial activities.

3. Engagement activities with companies , through dialogue and voting activities, which contribute to avoiding or reducing the extent of the adverse impacts. The ESG analysis framework and its results feed our engagement process, and vice versa.

The integration of the principal adverse impacts on sustainability factors has been based on the materiality or likely materiality of each indicator for each specific industry / sector to which the company belongs. The materiality is dependent on several factors, such as: type of information, data quality and breadth, applicability, relevance, and geographical coverage.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-fund's investments were subject to a norms-based controversy analysis that considered the compliance with the international social, human, environmental and anti-corruption standards, as defined by the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises. The International Labour Organisation and International Bill of Human Rights are part of the many international references integrated into our norms-based analysis and ESG model.

This analysis aimed to exclude companies that have significantly and repeatedly breached any of these principles.

How did this financial product consider principal adverse impacts on sustainability factors?

At Financial Product level, the principal adverse impacts (PAI) on sustainability factors were considered through one or several means: voting, dialogue, exclusions and/or monitoring (cfr. Candriam's PAI statement: <https://www.candriam.com/en/private/sfdr/>)

ENGAGEMENT

Our engagement and voting policies are available on Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

VOTING

The Candriam's approach to Corporate Governance relies on internationally-recognized standards.

Candriam has exercised voting rights when available on positions of the portfolio. Shareholders' rights, equality of shareholders, board accountability, transparency and integrity of financial statements are core pillars of our voting policy. When exercising our votes we pay a particular attention to the respect of pay-for-performance principle and to the board's independence level, diversity (PAI13) and expertise level.

In the context of Candriam's voting policy, specific guidelines are applied for a range of environmental- (e.g. climate (PAI1 to PAI6), biodiversity (PAI7)), social- (e.g. diversity, gender pay gap (PAI12), human rights (PAI10 PAI11)) and governance- related management or shareholder resolutions.

Candriam has an active approach to voting, in line with the consideration of the principle adverse impacts. Resolutions and voting opportunities are analysed in detail. Candriam always considers the relevance, consistency and feasibility of measures sponsored by any ESG resolution before casting vote. Thus, Candriam may vote against certain resolutions if they do not correspond to the principles defined in its voting policy or to the requirements relating to principle adverse impacts.

This year, we voted at 136 meetings: for 57.35 % of them we cast at least once against management.

With respect to environmental or social related resolutions, management submitted 2 of which we supported 0 %.

In addition, and for any voted director-election items (357 resolutions), we took into consideration Board Gender diversity aspects (PAI13).

In total 14 resolutions were filed by shareholders and we supported 64.29 % of them.

For more detailed information about Candriam Voting policy evolution, votes and associated rationales, please refer to our voting dashboard [<https://vds.issgovernance.com/vds/#/NDA0Nw==/>]

DIALOGUE with corporate issuers

This financial product is invested in corporate issuers. Below statistics refer to engagement activities we have performed with these corporate issuers.

Climate (PAI1 to PAI6) is obviously central in our exchanges with companies. Priorities of Climate-engagement on the corporate side are identified taking into account :

- issuers presenting a weak transition profile (proprietary risk transition model), and/or still highly carbon intensive (Scope 1-2) or with large Scope 3 emissions
- issuers from financial sectors still largely exposed to fossil fuel and with a key role in financing the transition
- relative exposure of managed portfolios to the above issuers.

Candriam has joined in November 2021 the Net Zero Asset Management Initiative [<https://www.netzeroassetmanagers.org/signatories/candriam>]. Through engagement, our objective is to encourage companies to publicly report on how they align with a 1.5D trajectory and to encourage such an alignment. We expect issuers in particular to explain how their strategy and capital expenditures plan serve their decarbonisation commitment. We usually combine individual and collaborative dialogue.

1 issuers in the financial product are actually part of the priority targets of Candriam Net Zero Engagement campaign.

In addition, we continue to actively support CDP Climate [<https://www.cdp.net/en>], a large transparency survey feeding our investment processes : out of the 70 financial product's issuers targeted, 65.71% have properly filled the last survey. Filled surveys give us access to updated and more accurate Scope 1-2-3 emissions' data.

Candriam also actively participate to several collaborative initiatives such as Climate Action 100+ or IIGCC & ShareAction Climate initiatives on Financials. Such initiatives targeted 1 issuer(s) of the financial product. These initiatives contribute not only to increase the level of transparency on Greenhouse gas emissions and related strategy, but also to gain fundamental leverage for supporting strategic changes. Outcomes of these engagements are detailed in our annual engagement & voting report, available on our public website (Publications | Candriam) [<https://www.candriam.com/en/professional/insight-overview/publications/#sri-publications>].

Given the geopolitical context and observed increase in inequalities, 44 issuer(s) with presence in the financial product have also been contacted in relation to the protection of fundamental human rights at direct or indirect workforce level (supply chain due diligence) (PAI10 PAI11).

Inclusion is not to be outdone, with 29 issuers, of the portfolio having been more specifically engaged on topics related to PAI 12 (Unadjusted gender pay gap) or PAI 13 (Board gender diversity).

While above mentioned PAI are prevalent when considering engagement performed for this financial product in 2023, other PAI such as biodiversity-related ones may also have been addressed in our dialogues with issuers. For more information, please refer to Candriam Engagement Annual review under Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

EXCLUSIONS

PAI3

In addition to companies involved in the thermal coal, oil and gas activities (PAI 4), electricity-generating companies with a carbon intensity greater than 354 gCO2/kWh (PAI 3), are considered risky for inclusion in sustainable investments, even if they are not universally controversial. Given that emissions vary according to electricity generation sources, it is important to assess the carbon footprint per kilowatt-hour (kWh) to determine how closely companies are aligned with the 2 degrees Celsius trajectory.

This is why Candriam includes the carbon intensity of energy producers in our sustainability assessment. Where carbon intensity data is not available, Candriam's ESG analysts use other indicators to assess alignment with the Paris Agreement, such as progress in the energy transition in line with Paris Agreement targets and integration of a 1.5D limit scenario, taking into account investment plans and the credibility of carbon neutrality targets. These indicators are forward-looking and evolve over time to reflect the progress made by companies in their transition.

The carbon intensity (PAI 3) threshold for the product in 2023 was established at 354 gCO2/kWh. Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding this threshold, in addition to those previously excluded.

PAI4

Exposure to fossil fuels (PAI 4) undergoes stringent exclusions across all Candriam sustainable funds. Thermal coal, recognized for its detrimental impact and serious financial and sustainability implications, poses systemic and reputational risks that financial benefits cannot outweigh.

Companies deriving more than 5% of their sales from coal mining, coal-fired power generation, and coal-related operations such as exploration, processing, transport, and distribution are automatically excluded.

Additionally, companies exceeding a 5% threshold of revenue from conventional oil and gas activities, including exploration, extraction, refining, and transportation, are ineligible for investment. Similarly, entities with over 5% exposure to unconventional oil and gas activities are also excluded.

Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding the 5% threshold of exposure to thermal coal activities, supplementing the previously excluded entities.

Furthermore, no additional issuer(s) lost their eligibility due to surpassing the 5% threshold of exposure to conventional oil and gas activities, while no additional issuer(s) lost their eligibility for exceeding the 5% threshold of exposure to unconventional oil and gas activities.

PAI10

In accordance with PAI10 Candriam's normative analysis determines whether a company complies with the 10 principles of the United Nations Global Compact for each of the main categories: Human Rights (HR), Labor Rights (LR), Environment (ENV) and Anti-Corruption (AC). Our norms based analysis incorporates various international references, including the United Nations Declaration of Human Rights, ILO Fundamental Conventions, and OECD Guidelines for Multinational Enterprises, ensuring comprehensive coverage of human rights, labor standards, corruption, and discrimination.

In Candriam's "Level 3" SRI exclusion policy, companies with severe to very severe violations of the UN Global Compact principles are excluded. This list focuses on a strict interpretation of violations of the UN Global Compact, as assessed by Candriam's ESG analysts.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, for significant and repeated breaches of international social, human, environmental and anti-corruption standards, as defined by the UN Global Compact and the OECD Guidelines for Multinational Enterprises.

PAI14

Candriam is firmly committed to excluding from all its investments companies directly involved in the development, production, testing, maintenance and sale of controversial weapons (anti-personnel landmines, cluster bombs, depleted uranium weapons and armor, chemical weapons, biological weapons and white phosphorus weapons). We consider these damaging activities to present systemic and reputational risks.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, due to their involvement in these activities.

MONITORING: calculation and evaluation of the principal adverse impact indicators

Some of these indicators may have explicit targets and can be used to measure the attainment of the sustainable investment objective of the Financial Product. See below the results of the indicators of this Financial Product

PAI indicators	Value	Coverage (% rated / total assets)	Eligible assets (% eligible assets / total assets)
Scope 1 GHG Emissions	25,769.03	95.18%	95.82%
Scope 2 GHG Emissions	34,102.80	95.18%	95.82%
Total GHG Emissions	59,871.83	95.18%	95.82%
2 - Carbon Footprint	24.86	95.18%	95.82%
3 - GHG intensity of investee companies	91.60	95.18%	95.82%
4 - Exposure to companies active in fossil fuel sector	1.34%	95.20%	95.82%
10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.00%	95.82%	95.82%
13 - Board gender diversity	21.67%	51.99%	95.82%
14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0.00%	95.82%	95.82%

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is:
01/01/2023 - 31/12/2023.

Largest investments	Sector	% of Assets	Country
TAIWAN SEMICONDUCTOR CO	Electronics and semiconductors	8.69%	TWN
ALIBABA GROUP	Internet and internet services	3.92%	CYM
SK HYNIX INC	Electronics and semiconductors	2.65%	KOR
NETEASE INC	Internet and internet services	2.18%	CYM
BANCO DO BRASIL SA	Banks and other financial institutions	2.01%	BRA
AXIS BANK	Banks and other financial institutions	1.97%	IND
PING AN INS (GRP) CO -H-	Insurance	1.85%	CHN
AMERICA MOVIL SAB DE CV	Communication	1.71%	MEX
BANK CENTRAL ASIA DEP	Banks and other financial institutions	1.64%	IDN
E.SUN FINANCIAL HOLDING	Banks and other financial institutions	1.63%	TWN
MEITUAN - SHS 114A/REG S	Internet and internet services	1.62%	CYM
DELTA ELECTRONIC INCS	Electrical engineering	1.61%	TWN
SIEMENS DEMATERIALISED	Electrical engineering	1.52%	IND
ACCTON TECHNOLOGY CORPORATION	Office supplies and computing	1.50%	TWN
BYD COMPANY LTD -H-	Electronics and semiconductors	1.43%	CHN

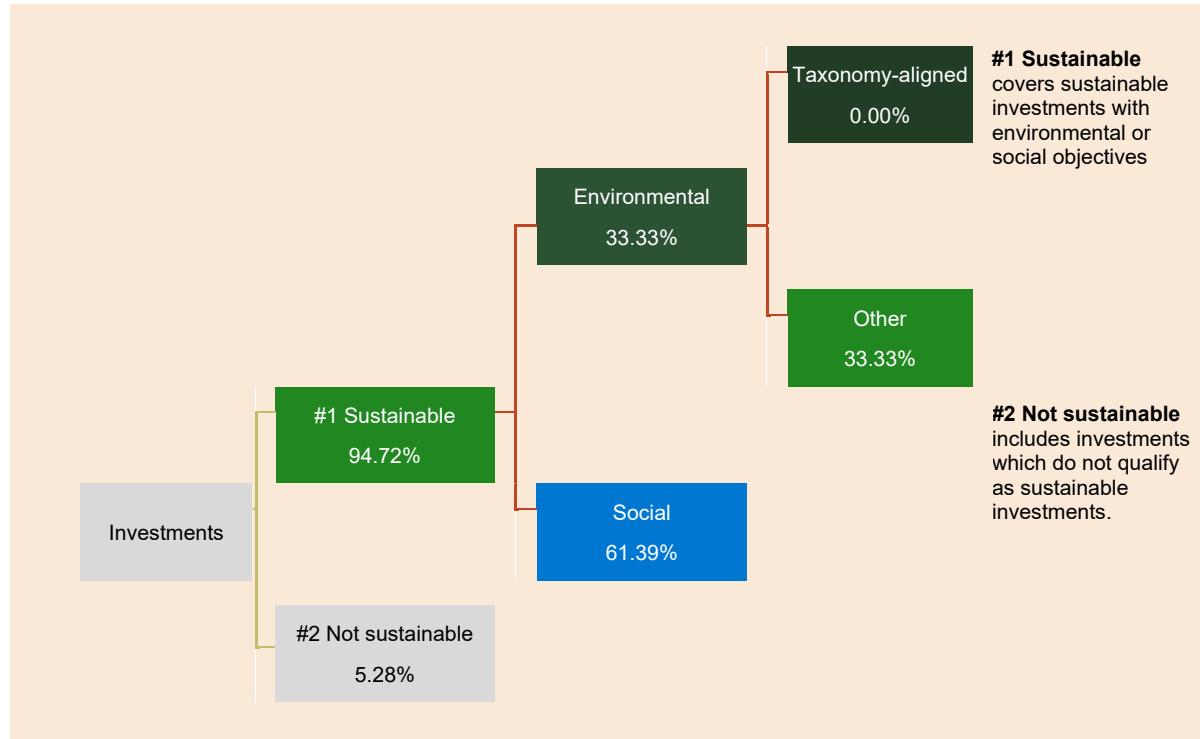

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the "Investment portfolio" section of the annual report.

What was the proportion of sustainability-related investments?

Asset allocation
describes the share
of investments in
specific assets.

What was the asset allocation?

● ***In which economic sectors were the investments made?***

Top sector	% of Assets
Banks and other financial institutions	24.96%
Electronics and semiconductors	14.96%
Internet and internet services	13.35%
Pharmaceuticals	4.97%
Electrical engineering	4.80%
Foods and non alcoholic drinks	4.65%
Communication	4.62%
Machine and apparatus construction	4.61%
Insurance	4.38%
Office supplies and computing	3.40%
Road vehicles	3.31%
Retail trade and department stores	3.13%
Utilities	1.74%
Tobacco and alcoholic drinks	1.34%
Biotechnology	1.31%

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the "Investment portfolio" section of the annual report.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

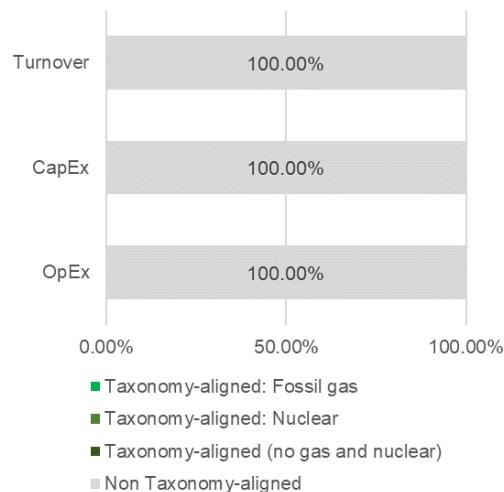

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy? ¹

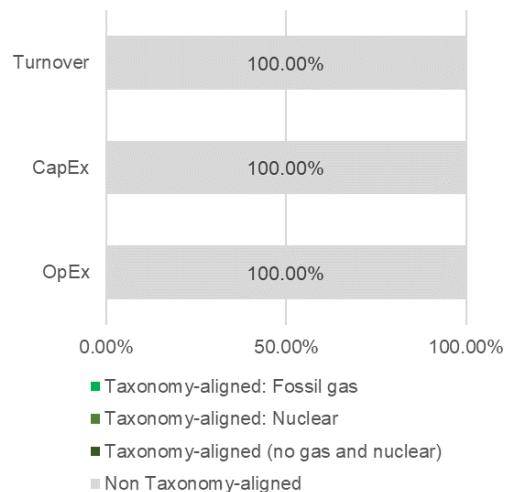

- Yes
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

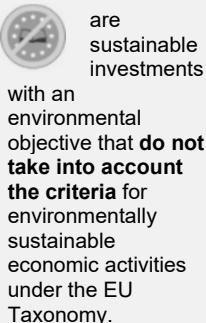

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100.00% of the total investments.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, nor on the transitional and enabling activities, as very few companies at global level provide the data necessary for a rigorous assessment their alignment with the Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Year	% EU Taxonomy Aligned
2023	0.00%
2022	0.00%

● **What is the breakdown of the proportion of the investments per each of the EU Taxonomy to which those investments contributed?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, as very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

Therefore, this percentage is considered as nul.

● **What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?**

The Sub-Fund had a share of 33.33% in sustainable investments with an environmental objective not aligned with the EU taxonomy.

Indeed to date, only two of the six objectives have entered into force in 2023 and very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

● **What was the share of socially sustainable investments?**

The Sub-Fund had a share of investments with a social objective of 61.39%

● **What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?**

The investments included under "Not sustainable" are present in the Sub-fund for 5.28% of the total net assets.

These investments include one or more of the following assets:

- Cash: Cash at sight, cash deposit, reverse repo needed to manage the liquidity of the Sub-fund following subscriptions/redemptions and/or being the result of the market exposure decision of the Sub-fund.
- Investments with issuers considered as sustainable investments at the moment of the investment and that are not fully aligned anymore with the Candriam sustainable investment criteria. These investments have been sold during the period.
- Non single name derivatives used for exposition and hedging purposes.

These investments do not affect the delivery of the sustainable investment objectives of the Sub-Fund as they represent a minor proportion of its assets.

● **What actions have been taken to attain the sustainable investment objective during the reference period?**

The financial product aims to achieve a carbon footprint that is at least 30% lower than the carbon footprint of the Benchmark.

Over the reference period, the financial product emitted 24.86 Tons CO2eq per million € invested, 85.25% lower than the benchmark.

The financial product has achieved its objective by favouring issuers with lower carbon footprint.

The financial product aims to achieve an ESG score, based on Candriam's proprietary ESG methodology, higher than its benchmark.

Over the reference period, the financial product displayed an ESG score of 50.7, 10.6% higher compared to its benchmark.

In comparison to the previous year, the financial product overall ESG score is flat.

The financial product has achieved its objective by selectively favouring issuers that display a stronger ESG profile. The financial product invested in 7 issuer(s) in Broadline Retail, Diversified Banks, Drug Retail, Electric Utilities, Packaged Foods & Meats and Personal Care Products with improving ESG profiles and divested from 7 issuer(s) in Copper, Diversified Banks, Electrical Components & Equipment, Electronic Components, Movies & Entertainment, Restaurants and Soft Drinks & Non-alcoholic Beverages with deteriorating ESG profiles.

How did this financial product perform compared to the reference sustainable benchmark?

No specific index is designated as a reference sustainable benchmark to meet the sustainable investment objectives.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

● YES

- It made **sustainable investments with an environmental objective**: 34.70%
 - in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: 59.22%

● NO

- It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investment
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The attainment of the sustainable investment objectives was measured through the following sustainability indicators:

- Carbon footprint: the Sub-Fund had a carbon footprint that is at least 30% lower than the carbon footprint of the Sub-Fund's reference Benchmark.
- ESG score: the Sub-Fund had a weighted average ESG score that is higher than the weighted average ESG score of the Sub-Fund's reference benchmark. The ESG Score is computed employing Candriam's proprietary ESG analysis methodology.

Moreover, the following indicators were monitored:

- OECD Guidelines for Multinational Enterprises, UN Global Compact: to ensure that there were no investments in companies that are in violation with the these principles.
- Candriam's Exclusion Policy: to ensure that there were no investments in companies that are on the Candriam's SRI Level 3 exclusion list as a result of the application of Candriam's Exclusion Policy.
- Number of holdings for which Candriam voted.

● How did the sustainability indicators perform?

The Sub-Fund has been managed in accordance with its sustainability indicators as defined below.

For the selection of sustainable investments, the portfolio manager has taken into account ESG assessments of issuers, produced by Candriam's ESG analyst team.

For companies, these assessments are based on the analysis of the company's interactions with its key stakeholders and the analysis of its business activities and their impact, positive or negative, on key sustainability challenges such as climate change and resource depletion. In addition, Candriam's ESG analysis includes exclusion filters based on compliance with international standards and involvement in controversial activities.

Candriam's ESG research and analysis for sustainable investments also assesses the compliance of investments with the "do no harm" principle to a sustainable investment objective and with good governance practices.

This integration of Candriam's ESG research methodology has enabled the Fund to meet the minimum proportion of sustainable investments defined in the prospectus (minimum 80%). The proportion of sustainable investments in the Fund was therefore above this minimum threshold, as detailed in the section "What was the proportion of sustainability-related investments?"

The Sub-Fund's reference benchmark has not been designated for the purpose of attaining the sustainable investment objective of the Sub-Fund.

The Sub-Fund's reference benchmark does not qualify as an EU Climate Transition Benchmark or an EU Paris-Aligned Benchmark under Title III, Chapter 3a, of Regulation (EU) 2016/1011.

However, the Sub-Fund aimed to have a carbon footprint that is at least 30% lower than the carbon footprint of the Sub-Fund's reference benchmark.

Moreover, Candriam being part of the Net Zero Asset Management initiative, the Sub-Fund aimed to reduce greenhouse gas emissions.

Sustainability KPI Name	Portfolio	Benchmark	New indicator
Carbon Footprint - Corporate - Scope 1&2 - 30% reduction vs bench	25.32	87.43	
ESG Score - Corporate - Higher than bench	57.53	53.23	

... And Compared to Previous Periods?

The sub-fund has also been managed in line with its sustainability indicators.

Sustainability KPI Name	Year	Portfolio	Benchmark
Carbon Footprint - Corporate - Scope 1&2 - 30% reduction vs bench	2022	24.22	94.48
ESG Score - Corporate - Higher than bench	2022	58.84	53.34

The asset allocation of the financial product has evolved over the years.

Investment Category	Proportion of Investments	Proportion of Investments
	2023	2022
#1 Sustainable	93.93%	97.47%
#2 Not sustainable	6.07%	2.53%
Environmental	34.70%	35.89%
Social	59.22%	61.58%
Taxonomy-aligned	0.00%	0.00%
Other	34.70%	35.89%

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

Candriam ensured that its sustainable investments did not cause significant harm to any environmental and/or social sustainable investment objective by means of its ESG research and analysis of corporate and sovereign issuers. Based on its proprietary ESG Ratings and Scorings, Candriam's ESG methodology set clear requirements and minimum thresholds to identify those issuers that qualify as 'sustainable investment' and, in particular, do not cause significant harm to any environmental and/or social sustainable investment objective.

The 'Do not significant harm' principle, in particular, was assessed for corporates through:

- the consideration of "principal adverse impacts"
- the alignment with the OECD Guidelines for Multinational Enterprises and the UN Global Compact to ensure minimum environmental & social safeguards.

For more details, refer to the section below on the consideration of principal adverse impacts on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

The consideration of adverse impacts is central to Candriam's sustainable investment approach. Principal adverse impacts were taken into account throughout the entire ESG research and analysis process and through a wide range of methods:

1. ESG rating of corporates: the ESG research and screening methodology considers and assesses the principal adverse impact on sustainability from two distinct, but interlinked, angles:

- the company's issuers' business activities and how they impact, either positively or negatively, key sustainable challenges such as climate change and resource depletion;
- company's interactions with key stakeholders.

2. Negative screening of companies, which includes a norms-based exclusion and an exclusion of companies involved in controversial activities.

3. Engagement activities with companies , through dialogue and voting activities, which contribute to avoiding or reducing the extent of the adverse impacts. The ESG analysis framework and its results feed our engagement process, and vice versa.

The integration of the principal adverse impacts on sustainability factors has been based on the materiality or likely materiality of each indicator for each specific industry / sector to which the company belongs. The materiality is dependent on several factors, such as: type of information, data quality and breadth, applicability, relevance, and geographical coverage.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-fund's investments were subject to a norms-based controversy analysis that considered the compliance with the international social, human, environmental and anti-corruption standards, as defined by the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises. The International Labour Organisation and International Bill of Human Rights are part of the many international references integrated into our norms-based analysis and ESG model.

This analysis aimed to exclude companies that have significantly and repeatedly breached any of these principles.

How did this financial product consider principal adverse impacts on sustainability factors?

At Financial Product level, the principal adverse impacts (PAI) on sustainability factors were considered through one or several means: voting, dialogue, exclusions and/or monitoring (cfr. Candriam's PAI statement: <https://www.candriam.com/en/private/sfdr/>)

ENGAGEMENT

Our engagement and voting policies are available on Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

VOTING

The Candriam's approach to Corporate Governance relies on internationally-recognized standards.

Candriam has exercised voting rights when available on positions of the portfolio. Shareholders' rights, equality of shareholders, board accountability, transparency and integrity of financial statements are core pillars of our voting policy. When exercising our votes we pay a particular attention to the respect of pay-for-performance principle and to the board's independence level, diversity (PAI13) and expertise level.

In the context of Candriam's voting policy, specific guidelines are applied for a range of environmental- (e.g. climate (PAI1 to PAI6), biodiversity (PAI7)), social- (e.g. diversity, gender pay gap (PAI12), human rights (PAI10 PAI11)) and governance- related management or shareholder resolutions.

Candriam has an active approach to voting, in line with the consideration of the principle adverse impacts. Resolutions and voting opportunities are analysed in detail. Candriam always considers the relevance, consistency and feasibility of measures sponsored by any ESG resolution before casting vote. Thus, Candriam may vote against certain resolutions if they do not correspond to the principles defined in its voting policy or to the requirements relating to principle adverse impacts.

This year, we voted at 52 meetings: for 94.23 % of them we cast at least once against management.

With respect to environmental or social related resolutions, management submitted 6 of which we supported 100 %.

More specifically, 1 proposals were related to climate (100 % support).

In addition, and for any voted director-election items (155 resolutions), we took into consideration Board Gender diversity aspects (PAI13).

In total 8 resolutions were filed by shareholders and we supported 75 % of them.

For more detailed information about Candriam Voting policy evolution, votes and associated rationales, please refer to our voting dashboard [<https://vds.issgovernance.com/vds/#/NDA0Nw==/>]

DIALOGUE with corporate issuers

This financial product is invested in corporate issuers. Below statistics refer to engagement activities we have performed with these corporate issuers.

Climate (PAI1 to PAI6) is obviously central in our exchanges with companies. Priorities of Climate-engagement on the corporate side are identified taking into account :

- issuers presenting a weak transition profile (proprietary risk transition model), and/or still highly carbon intensive (Scope 1-2) or with large Scope 3 emissions
- issuers from financial sectors still largely exposed to fossil fuel and with a key role in financing the transition
- relative exposure of managed portfolios to the above issuers.

Candriam has joined in November 2021 the Net Zero Asset Management Initiative [<https://www.netzeroassetmanagers.org/signatories/candriam/>]. Through engagement, our objective is to encourage companies to publicly report on how they align with a 1.5D trajectory and to encourage such an alignment. We expect issuers in particular to explain how their strategy and capital expenditures plan serve their decarbonisation commitment. We usually combine individual and collaborative dialogue.

13 issuers in the financial product are actually part of the priority targets of Candriam Net Zero Engagement campaign.

In addition, we continue to actively support CDP Climate [<https://www.cdp.net/en>], a large transparency survey feeding our investment processes : out of the 54 financial product's issuers targeted, 98.15% have properly filled the last survey. Filled surveys give us access to updated and more accurate Scope 1-2-3 emissions' data.

Candriam also actively participate to several collaborative initiatives such as Climate Action 100+ or IIGCC & ShareAction Climate initiatives on Financials. Such initiatives targeted 11 issuer(s) of the financial product. These initiatives contribute not only to increase the level of transparency on Greenhouse gas emissions and related strategy, but also to gain fundamental leverage for supporting strategic changes. Outcomes of these engagements are detailed in our annual engagement & voting report, available on our public website (Publications | Candriam) [<https://www.candriam.com/en/professional/insight-overview/publications/#sri-publications>].

Given the geopolitical context and observed increase in inequalities, 38 issuer(s) with presence in the financial product have also been contacted in relation to the protection of fundamental human rights at direct or indirect workforce level (supply chain due diligence) (PAI10 PAI11).

Inclusion is not to be outdone, with 45 issuers, of the portfolio having been more specifically engaged on topics related to PAI 12 (Unadjusted gender pay gap) or PAI 13 (Board gender diversity).

While above mentioned PAI are prevalent when considering engagement performed for this financial product in 2023, other PAI such as biodiversity-related ones may also have been addressed in our dialogues with issuers. For more information, please refer to Candriam Engagement Annual review under Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

EXCLUSIONS

PAI3

In addition to companies involved in the thermal coal, oil and gas activities (PAI 4), electricity-generating companies with a carbon intensity greater than 354 gCO2/kWh (PAI 3), are considered risky for inclusion in sustainable investments, even if they are not universally controversial. Given that emissions vary according to electricity generation sources, it is important to assess the carbon footprint per kilowatt-hour (kWh) to determine how closely companies are aligned with the 2 degrees Celsius trajectory.

This is why Candriam includes the carbon intensity of energy producers in our sustainability assessment. Where carbon intensity data is not available, Candriam's ESG analysts use other indicators to assess alignment with the Paris Agreement, such as progress in the energy transition in line with Paris Agreement targets and integration of a 1.5D limit scenario, taking into account investment plans and the credibility of carbon neutrality targets. These indicators are forward-looking and evolve over time to reflect the progress made by companies in their transition.

The carbon intensity (PAI 3) threshold for the product in 2023 was established at 354 gCO2/kWh. Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding this threshold, in addition to those previously excluded.

PAI4

Exposure to fossil fuels (PAI 4) undergoes stringent exclusions across all Candriam sustainable funds. Thermal coal, recognized for its detrimental impact and serious financial and sustainability implications, poses systemic and reputational risks that financial benefits cannot outweigh.

Companies deriving more than 5% of their sales from coal mining, coal-fired power generation, and coal-related operations such as exploration, processing, transport, and distribution are automatically excluded.

Additionally, companies exceeding a 5% threshold of revenue from conventional oil and gas activities, including exploration, extraction, refining, and transportation, are ineligible for investment. Similarly, entities with over 5% exposure to unconventional oil and gas activities are also excluded.

Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding the 5% threshold of exposure to thermal coal activities, supplementing the previously excluded entities.

Furthermore, no additional issuer(s) lost their eligibility due to surpassing the 5% threshold of exposure to conventional oil and gas activities, while no additional issuer(s) lost their eligibility for exceeding the 5% threshold of exposure to unconventional oil and gas activities.

PAI10

In accordance with PAI10 Candriam's normative analysis determines whether a company complies with the 10 principles of the United Nations Global Compact for each of the main categories: Human Rights (HR), Labor Rights (LR), Environment (ENV) and Anti-Corruption (AC). Our norms based analysis incorporates various international references, including the United Nations Declaration of Human Rights, ILO Fundamental Conventions, and OECD Guidelines for Multinational Enterprises, ensuring comprehensive coverage of human rights, labor standards, corruption, and discrimination.

In Candriam's "Level 3" SRI exclusion policy, companies with severe to very severe violations of the UN Global Compact principles are excluded. This list focuses on a strict interpretation of violations of the UN Global Compact, as assessed by Candriam's ESG analysts.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, for significant and repeated breaches of international social, human, environmental and anti-corruption standards, as defined by the UN Global Compact and the OECD Guidelines for Multinational Enterprises.

PAI14

Candriam is firmly committed to excluding from all its investments companies directly involved in the development, production, testing, maintenance and sale of controversial weapons (anti-personnel landmines, cluster bombs, depleted uranium weapons and armor, chemical weapons, biological weapons and white phosphorus weapons). We consider these damaging activities to present systemic and reputational risks.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, due to their involvement in these activities.

MONITORING: calculation and evaluation of the principal adverse impact indicators

Some of these indicators may have explicit targets and can be used to measure the attainment of the sustainable investment objective of the Financial Product. See below the results of the indicators of this Financial Product

PAI indicators	Value	Coverage (% rated / total assets)	Eligible assets (% eligible assets / total assets)
Scope 1 GHG Emissions	6,926.26	93.93%	93.93%
Scope 2 GHG Emissions	3,597.05	93.93%	93.93%
Total GHG Emissions	10,523.31	93.93%	93.93%
2 - Carbon Footprint	25.32	93.93%	93.93%
3 - GHG intensity of investee companies	68.95	93.93%	93.93%
4 - Exposure to companies active in fossil fuel sector	1.90%	92.75%	93.94%
10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.00%	93.93%	93.93%
13 - Board gender diversity	41.60%	92.82%	93.92%
14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0.00%	93.93%	93.93%

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is:
01/01/2023 - 31/12/2023.

Largest investments	Sector	% of Assets	Country
ASML HOLDING NV	Electronics and semiconductors	5.09%	NLD

Retail trade and department stores	2.28%
Utilities	2.12%
Graphic art and publishing	1.64%

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the "Investment portfolio" section of the annual report.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy? ¹

Yes

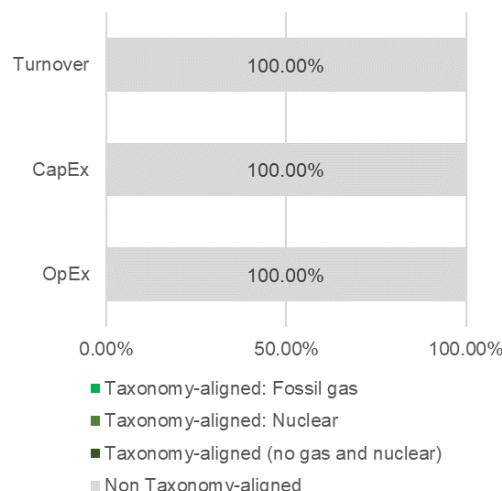

In fossil gas

In nuclear energy

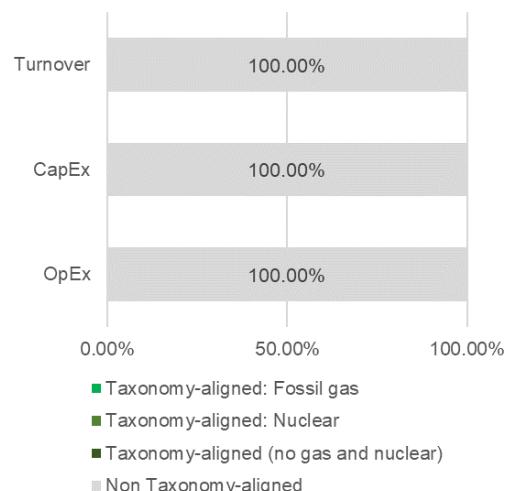

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

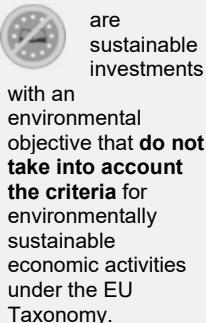

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100.00% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, nor on the transitional and enabling activities, as very few companies at global level provide the data necessary for a rigorous assessment their alignment with the Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Year	% EU Taxonomy Aligned
2023	0.00%
2022	0.00%

● **What is the breakdown of the proportion of the investments per each of the EU Taxonomy to which those investments contributed?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, as very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

Therefore, this percentage is considered as nul.

● **What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?**

The Sub-Fund had a share of 34.7% in sustainable investments with an environmental objective not aligned with the EU taxonomy.

Indeed to date, only two of the six objectives have entered into force in 2023 and very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

What was the share of socially sustainable investments?

The Sub-Fund had a share of investments with a social objective of 59.22%

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The investments included under "Not sustainable" are present in the Sub-fund for 6.07% of the total net assets.

These investments include one or more of the following assets:

- Cash: Cash at sight, cash deposit, reverse repo needed to manage the liquidity of the Sub-fund following subscriptions/redemptions and/or being the result of the market exposure decision of the Sub-fund.
- Investments with issuers considered as sustainable investments at the moment of the investment and that are not fully aligned anymore with the Candriam sustainable investment criteria. These investments have been sold during the period.
- Non single name derivatives used for exposition and hedging purposes.

These investments do not affect the delivery of the sustainable investment objectives of the Sub-Fund as they represent a minor proportion of its assets.

What actions have been taken to attain the sustainable investment objective during the reference period?

The financial product aims to achieve a carbon footprint that is at least 30% lower than the carbon footprint of the Benchmark.

Over the reference period, the financial product emitted 25.32 Tons CO2eq per million € invested, 71.04% lower than the benchmark.

The financial product has achieved its objective by favouring issuers with lower carbon footprint.

The financial product aims to achieve an ESG score, based on Candriam's proprietary ESG methodology, higher than its benchmark.

Over the reference period, the financial product displayed an ESG score of 57.53, 8.07% higher compared to its benchmark.

The financial product has achieved its objective by selectively favouring issuers that display a stronger ESG profile. The financial product invested in 1 issuer(s) in Specialty Chemicals with improving ESG profiles and divested from 1 issuer(s) in Apparel, Accessories & Luxury Goods with deteriorating ESG profiles.

How did this financial product perform compared to the reference sustainable benchmark?

No specific index is designated as a reference sustainable benchmark to meet the sustainable investment objectives.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

● YES

- It made **sustainable investments with an environmental objective**: 34.51%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: 59.18%

● NO

- It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___ % of sustainable investment
- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The attainment of the sustainable investment objectives was measured through the following sustainability indicators:

- Carbon footprint: the Sub-Fund had a carbon footprint that is at least 30% lower than the carbon footprint of the Sub-Fund's reference Benchmark.
- ESG score: the Sub-Fund had a weighted average ESG score that is higher than the weighted average ESG score of the Sub-Fund's reference benchmark. The ESG Score is computed employing Candriam's proprietary ESG analysis methodology.

Moreover, the following indicators were monitored:

- OECD Guidelines for Multinational Enterprises, UN Global Compact: to ensure that there were no investments in companies that are in violation with the these principles.
- Candriam's Exclusion Policy: to ensure that there were no investments in companies that are on the Candriam's SRI Level 3 exclusion list as a result of the application of Candriam's Exclusion Policy.
- Number of holdings for which Candriam voted.

● How did the sustainability indicators perform?

The Sub-Fund has been managed in accordance with its sustainability indicators as defined below.

For the selection of sustainable investments, the portfolio manager has taken into account ESG assessments of issuers, produced by Candriam's ESG analyst team.

For companies, these assessments are based on the analysis of the company's interactions with its key stakeholders and the analysis of its business activities and their impact, positive or negative, on key sustainability challenges such as climate change and resource depletion. In addition, Candriam's ESG analysis includes exclusion filters based on compliance with international standards and involvement in controversial activities.

Candriam's ESG research and analysis for sustainable investments also assesses the compliance of investments with the "do no harm" principle to a sustainable investment objective and with good governance practices.

This integration of Candriam's ESG research methodology has enabled the Fund to meet the minimum proportion of sustainable investments defined in the prospectus (minimum 80%). The proportion of sustainable investments in the Fund was therefore above this minimum threshold, as detailed in the section "What was the proportion of sustainability-related investments?"

The Sub-Fund's reference benchmark has not been designated for the purpose of attaining the sustainable investment objective of the Sub-Fund.

The Sub-Fund's reference benchmark does not qualify as an EU Climate Transition Benchmark or an EU Paris-Aligned Benchmark under Title III, Chapter 3a, of Regulation (EU) 2016/1011.

However, the Sub-Fund aimed to have a carbon footprint that is at least 30% lower than the carbon footprint of the Sub-Fund's reference benchmark.

Moreover, Candriam being part of the Net Zero Asset Management initiative, the Sub-Fund aimed to reduce greenhouse gas emissions.

Sustainability KPI Name	Portfolio	Benchmark	New indicator
Carbon Footprint - Corporate - Scope 1&2 - 30% reduction vs bench	17.64	76.15	
ESG Score - Corporate - Higher than bench	58.36	53.67	

... And Compared to Previous Periods?

The sub-fund has also been managed in line with its sustainability indicators.

Sustainability KPI Name	Year	Portfolio	Benchmark
Carbon Footprint - Corporate - Scope 1&2 - 30% reduction vs bench	2022	17.67	77.43
ESG Score - Corporate - Higher than bench	2022	59.84	53.65

The asset allocation of the financial product has evolved over the years.

Investment Category	Proportion of Investments	Proportion of Investments
	2023	2022
#1 Sustainable	93.69%	98.46%
#2 Not sustainable	6.31%	1.54%
Environmental	34.51%	37.20%
Social	59.18%	61.25%
Taxonomy-aligned	0.00%	0.00%
Other	34.51%	37.20%

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

Candriam ensured that its sustainable investments did not cause significant harm to any environmental and/or social sustainable investment objective by means of its ESG research and analysis of corporate and sovereign issuers. Based on its proprietary ESG Ratings and Scorings, Candriam's ESG methodology set clear requirements and minimum thresholds to identify those issuers that qualify as 'sustainable investment' and, in particular, do not cause significant harm to any environmental and/or social sustainable investment objective.

The 'Do not significant harm' principle, in particular, was assessed for corporates through:

- the consideration of "principal adverse impacts"
- the alignment with the OECD Guidelines for Multinational Enterprises and the UN Global Compact to ensure minimum environmental & social safeguards.

For more details, refer to the section below on the consideration of principal adverse impacts on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

The consideration of adverse impacts is central to Candriam's sustainable investment approach. Principal adverse impacts were taken into account throughout the entire ESG research and analysis process and through a wide range of methods:

1. ESG rating of corporates: the ESG research and screening methodology considers and assesses the principal adverse impact on sustainability from two distinct, but interlinked, angles:

- the company's issuers' business activities and how they impact, either positively or negatively, key sustainable challenges such as climate change and resource depletion;
- company's interactions with key stakeholders.

2. Negative screening of companies, which includes a norms-based exclusion and an exclusion of companies involved in controversial activities.

3. Engagement activities with companies , through dialogue and voting activities, which contribute to avoiding or reducing the extent of the adverse impacts. The ESG analysis framework and its results feed our engagement process, and vice versa.

The integration of the principal adverse impacts on sustainability factors has been based on the materiality or likely materiality of each indicator for each specific industry / sector to which the company belongs. The materiality is dependent on several factors, such as: type of information, data quality and breadth, applicability, relevance, and geographical coverage.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-fund's investments were subject to a norms-based controversy analysis that considered the compliance with the international social, human, environmental and anti-corruption standards, as defined by the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises. The International Labour Organisation and International Bill of Human Rights are part of the many international references integrated into our norms-based analysis and ESG model.

This analysis aimed to exclude companies that have significantly and repeatedly breached any of these principles.

How did this financial product consider principal adverse impacts on sustainability factors?

At Financial Product level, the principal adverse impacts (PAI) on sustainability factors were considered through one or several means: voting, dialogue, exclusions and/or monitoring (cfr. Candriam's PAI statement: <https://www.candriam.com/en/private/sfdr/>)

ENGAGEMENT

Our engagement and voting policies are available on Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

VOTING

The Candriam's approach to Corporate Governance relies on internationally-recognized standards.

Candriam has exercised voting rights when available on positions of the portfolio. Shareholders' rights, equality of shareholders, board accountability, transparency and integrity of financial statements are core pillars of our voting policy. When exercising our votes we pay a particular attention to the respect of pay-for-performance principle and to the board's independence level, diversity (PAI13) and expertise level.

In the context of Candriam's voting policy, specific guidelines are applied for a range of environmental- (e.g. climate (PAI1 to PAI6), biodiversity (PAI7)), social- (e.g. diversity, gender pay gap (PAI12), human rights (PAI10 PAI11)) and governance- related management or shareholder resolutions.

Candriam has an active approach to voting, in line with the consideration of the principle adverse impacts. Resolutions and voting opportunities are analysed in detail. Candriam always considers the relevance, consistency and feasibility of measures sponsored by any ESG resolution before casting vote. Thus, Candriam may vote against certain resolutions if they do not correspond to the principles defined in its voting policy or to the requirements relating to principle adverse impacts.

This year, we voted at 76 meetings: for 96.05 % of them we cast at least once against management.

With respect to environmental or social related resolutions, management submitted 17 of which we supported 100 %.

More specifically, 1 proposals were related to climate (100 % support).

In addition, and for any voted director-election items (384 resolutions), we took into consideration Board Gender diversity aspects (PAI13).

In total 8 resolutions were filed by shareholders and we supported 75 % of them.

For more detailed information about Candriam Voting policy evolution, votes and associated rationales, please refer to our voting dashboard [<https://vds.issgovernance.com/vds/#/NDA0Nw==/>]

DIALOGUE with corporate issuers

This financial product is invested in corporate issuers. Below statistics refer to engagement activities we have performed with these corporate issuers.

Climate (PAI1 to PAI6) is obviously central in our exchanges with companies. Priorities of Climate-engagement on the corporate side are identified taking into account :

- issuers presenting a weak transition profile (proprietary risk transition model), and/or still highly carbon intensive (Scope 1-2) or with large Scope 3 emissions
- issuers from financial sectors still largely exposed to fossil fuel and with a key role in financing the transition
- relative exposure of managed portfolios to the above issuers.

Candriam has joined in November 2021 the Net Zero Asset Management Initiative [<https://www.netzeroassetmanagers.org/signatories/candriam/>]. Through engagement, our objective is to encourage companies to publicly report on how they align with a 1.5D trajectory and to encourage such an alignment. We expect issuers in particular to explain how their strategy and capital expenditures plan serve their decarbonisation commitment. We usually combine individual and collaborative dialogue.

15 issuers in the financial product are actually part of the priority targets of Candriam Net Zero Engagement campaign.

In addition, we continue to actively support CDP Climate [<https://www.cdp.net/en>], a large transparency survey feeding our investment processes : out of the 81 financial product's issuers targeted, 97.53% have properly filled the last survey. Filled surveys give us access to updated and more accurate Scope 1-2-3 emissions' data.

Candriam also actively participate to several collaborative initiatives such as Climate Action 100+ or IIGCC & ShareAction Climate initiatives on Financials. Such initiatives targeted 12 issuer(s) of the financial product. These initiatives contribute not only to increase the level of transparency on Greenhouse gas emissions and related strategy, but also to gain fundamental leverage for supporting strategic changes. Outcomes of these engagements are detailed in our annual engagement & voting report, available on our public website (Publications | Candriam) [<https://www.candriam.com/en/professional/insight-overview/publications/#sri-publications>].

Given the geopolitical context and observed increase in inequalities, 56 issuer(s) with presence in the financial product have also been contacted in relation to the protection of fundamental human rights at direct or indirect workforce level (supply chain due diligence) (PAI10 PAI11).

Inclusion is not to be outdone, with 69 issuers, of the portfolio having been more specifically engaged on topics related to PAI 12 (Unadjusted gender pay gap) or PAI 13 (Board gender diversity).

While above mentioned PAI are prevalent when considering engagement performed for this financial product in 2023, other PAI such as biodiversity-related ones may also have been addressed in our dialogues with issuers. For more information, please refer to Candriam Engagement Annual review under Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

EXCLUSIONS

PAI3

In addition to companies involved in the thermal coal, oil and gas activities (PAI 4), electricity-generating companies with a carbon intensity greater than 354 gCO2/kWh (PAI 3), are considered risky for inclusion in sustainable investments, even if they are not universally controversial. Given that emissions vary according to electricity generation sources, it is important to assess the carbon footprint per kilowatt-hour (kWh) to determine how closely companies are aligned with the 2 degrees Celsius trajectory.

This is why Candriam includes the carbon intensity of energy producers in our sustainability assessment. Where carbon intensity data is not available, Candriam's ESG analysts use other indicators to assess alignment with the Paris Agreement, such as progress in the energy transition in line with Paris Agreement targets and integration of a 1.5D limit scenario, taking into account investment plans and the credibility of carbon neutrality targets. These indicators are forward-looking and evolve over time to reflect the progress made by companies in their transition.

The carbon intensity (PAI 3) threshold for the product in 2023 was established at 354 gCO2/kWh. Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding this threshold, in addition to those previously excluded.

PAI4

Exposure to fossil fuels (PAI 4) undergoes stringent exclusions across all Candriam sustainable funds. Thermal coal, recognized for its detrimental impact and serious financial and sustainability implications, poses systemic and reputational risks that financial benefits cannot outweigh.

Companies deriving more than 5% of their sales from coal mining, coal-fired power generation, and coal-related operations such as exploration, processing, transport, and distribution are automatically excluded.

Additionally, companies exceeding a 5% threshold of revenue from conventional oil and gas activities, including exploration, extraction, refining, and transportation, are ineligible for investment. Similarly, entities with over 5% exposure to unconventional oil and gas activities are also excluded.

Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding the 5% threshold of exposure to thermal coal activities, supplementing the previously excluded entities.

Furthermore, no additional issuer(s) lost their eligibility due to surpassing the 5% threshold of exposure to conventional oil and gas activities, while no additional issuer(s) lost their eligibility for exceeding the 5% threshold of exposure to unconventional oil and gas activities.

PAI10

In accordance with PAI10 Candriam's normative analysis determines whether a company complies with the 10 principles of the United Nations Global Compact for each of the main categories: Human Rights (HR), Labor Rights (LR), Environment (ENV) and Anti-Corruption (AC). Our norms based analysis incorporates various international references, including the United Nations Declaration of Human Rights, ILO Fundamental Conventions, and OECD Guidelines for Multinational Enterprises, ensuring comprehensive coverage of human rights, labor standards, corruption, and discrimination.

In Candriam's "Level 3" SRI exclusion policy, companies with severe to very severe violations of the UN Global Compact principles are excluded. This list focuses on a strict interpretation of violations of the UN Global Compact, as assessed by Candriam's ESG analysts.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, for significant and repeated breaches of international social, human, environmental and anti-corruption standards, as defined by the UN Global Compact and the OECD Guidelines for Multinational Enterprises.

PAI14

Candriam is firmly committed to excluding from all its investments companies directly involved in the development, production, testing, maintenance and sale of controversial weapons (anti-personnel landmines, cluster bombs, depleted uranium weapons and armor, chemical weapons, biological weapons and white phosphorus weapons). We consider these damaging activities to present systemic and reputational risks.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, due to their involvement in these activities.

MONITORING: calculation and evaluation of the principal adverse impact indicators

Some of these indicators may have explicit targets and can be used to measure the attainment of the sustainable investment objective of the Financial Product. See below the results of the indicators of this Financial Product

PAI indicators	Value	Coverage (% rated / total assets)	Eligible assets (% eligible assets / total assets)
Scope 1 GHG Emissions	14,742.02	93.69%	93.69%
Scope 2 GHG Emissions	8,963.06	93.69%	93.69%
Total GHG Emissions	23,705.08	93.69%	93.69%
2 - Carbon Footprint	17.64	93.69%	93.69%
3 - GHG intensity of investee companies	53.87	93.69%	93.69%
4 - Exposure to companies active in fossil fuel sector	1.56%	93.10%	93.69%
10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.00%	93.69%	93.69%
13 - Board gender diversity	40.38%	92.91%	93.69%
14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0.00%	93.69%	93.69%

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
01/01/2023 - 31/12/2023.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

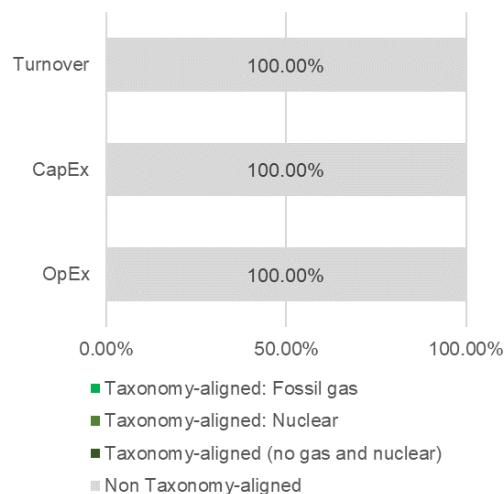

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy? ¹

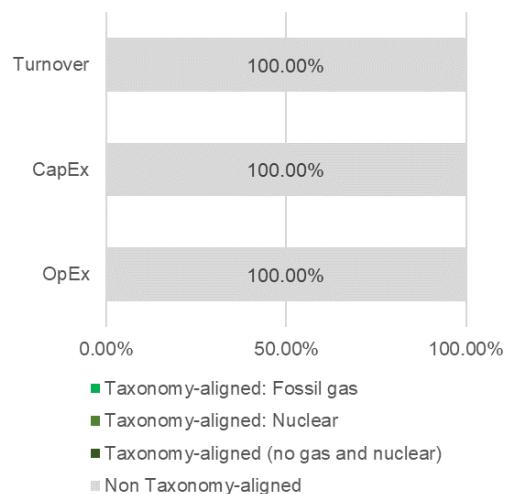

- Yes
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

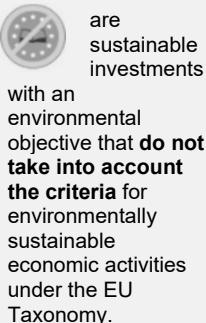

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100.00% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, nor on the transitional and enabling activities, as very few companies at global level provide the data necessary for a rigorous assessment their alignment with the Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Year	% EU Taxonomy Aligned
2023	0.00%
2022	0.00%

● **What is the breakdown of the proportion of the investments per each of the EU Taxonomy to which those investments contributed?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, as very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

Therefore, this percentage is considered as nul.

● **What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?**

The Sub-Fund had a share of 34.51% in sustainable investments with an environmental objective not aligned with the EU taxonomy.

Indeed to date, only two of the six objectives have entered into force in 2023 and very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

● **What was the share of socially sustainable investments?**

The Sub-Fund had a share of investments with a social objective of 59.18%

● **What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?**

The investments included under "Not sustainable" are present in the Sub-fund for 6.31% of the total net assets.

These investments include one or more of the following assets:

- Cash: Cash at sight, cash deposit, reverse repo needed to manage the liquidity of the Sub-fund following subscriptions/redemptions and/or being the result of the market exposure decision of the Sub-fund.
- Investments with issuers considered as sustainable investments at the moment of the investment and that are not fully aligned anymore with the Candriam sustainable investment criteria. These investments have been sold during the period.
- Non single name derivatives used for exposition and hedging purposes.

These investments do not affect the delivery of the sustainable investment objectives of the Sub-Fund as they represent a minor proportion of its assets.

● **What actions have been taken to attain the sustainable investment objective during the reference period?**

The financial product aims to achieve a carbon footprint that is at least 30% lower than the carbon footprint of the Benchmark.

Over the reference period, the financial product emitted 17.64 Tons CO2eq per million € invested, 76.84% lower than the benchmark.

Compared to the previous year, the financial product's carbon footprint has remained stable.

The financial product has achieved its objective by favouring issuers with lower carbon footprint.

The financial product aims to achieve an ESG score, based on Candriam's proprietary ESG methodology, higher than its benchmark.

Over the reference period, the financial product displayed an ESG score of 58.36, 8.75% higher compared to its benchmark.

The financial product has achieved its objective by selectively favouring issuers that display a stronger ESG profile. The financial product invested in 1 issuer(s) in Specialty Chemicals with improving ESG profiles and divested from 1 issuer(s) in Apparel, Accessories & Luxury Goods with deteriorating ESG profiles.

How did this financial product perform compared to the reference sustainable benchmark?

No specific index is designated as a reference sustainable benchmark to meet the sustainable investment objectives.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Candriam Sustainable Equity Europe Small & Mid Caps

54930007EIG5DZ61751

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?

YES

NO

- It made **sustainable investments with an environmental objective**: 28.68%
 - in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: 65.65%

- It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investment
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The attainment of the sustainable investment objectives was measured through the following sustainability indicators:

- Carbon footprint: the Sub-Fund had a carbon footprint that is at least 30% lower than the carbon footprint of the Sub-Fund's reference Benchmark.
- ESG score: the Sub-Fund had a weighted average ESG score that is higher than the weighted average ESG score of the Sub-Fund's reference benchmark. The ESG Score is computed employing Candriam's proprietary ESG analysis methodology.

Moreover, the following indicators were monitored:

- OECD Guidelines for Multinational Enterprises, UN Global Compact: to ensure that there were no investments in companies that are in violation with the these principles.
- Candriam's Exclusion Policy: to ensure that there were no investments in companies that are on the Candriam's SRI Level 3 exclusion list as a result of the application of Candriam's Exclusion Policy.
- Number of holdings for which Candriam voted.

How did the sustainability indicators perform?

The Sub-Fund has been managed in accordance with its sustainability indicators as defined below.

For the selection of sustainable investments, the portfolio manager has taken into account ESG assessments of issuers, produced by Candriam's ESG analyst team.

For companies, these assessments are based on the analysis of the company's interactions with its key stakeholders and the analysis of its business activities and their impact, positive or negative, on key sustainability challenges such as climate change and resource depletion. In addition, Candriam's ESG analysis includes exclusion filters based on compliance with international standards and involvement in controversial activities.

Candriam's ESG research and analysis for sustainable investments also assesses the compliance of investments with the "do no harm" principle to a sustainable investment objective and with good governance practices.

This integration of Candriam's ESG research methodology has enabled the Fund to meet the minimum proportion of sustainable investments defined in the prospectus (minimum 80%). The proportion of sustainable investments in the Fund was therefore above this minimum threshold, as detailed in the section "What was the proportion of sustainability-related investments?"

The Sub-Fund's reference benchmark has not been designated for the purpose of attaining the sustainable investment objective of the Sub-Fund.

The Sub-Fund's reference benchmark does not qualify as an EU Climate Transition Benchmark or an EU Paris-Aligned Benchmark under Title III, Chapter 3a, of Regulation (EU) 2016/1011.

However, the Sub-Fund aimed to have a carbon footprint that is at least 30% lower than the carbon footprint of the Sub-Fund's reference benchmark.

Moreover, Candriam being part of the Net Zero Asset Management initiative, the Sub-Fund aimed to reduce greenhouse gas emissions.

Sustainability KPI Name	Portfolio	Benchmark	New indicator
Carbon Footprint - Corporate - Scope 1&2 - 30% reduction vs bench	9.61	94.56	
ESG Score - Corporate - Higher than bench	60.47	53.29	

... And Compared to Previous Periods?

The sub-fund has also been managed in line with its sustainability indicators.

Sustainability KPI Name	Year	Portfolio	Benchmark
Carbon Footprint - Corporate - Scope 1&2 - 30% reduction vs bench	2022	10.98	108.04
ESG Score - Corporate - Higher than bench	2022	60.84	52.33

The asset allocation of the financial product has evolved over the years.

Investment Category	Proportion of Investments	Proportion of Investments
	2023	2022
#1 Sustainable	94.33%	98.12%
#2 Not sustainable	5.67%	1.88%
Environmental	28.68%	26.77%
Social	65.65%	71.35%
Taxonomy-aligned	0.00%	0.00%
Other	28.68%	26.77%

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

Candriam ensured that its sustainable investments did not cause significant harm to any environmental and/or social sustainable investment objective by means of its ESG research and analysis of corporate and sovereign issuers. Based on its proprietary ESG Ratings and Scorings, Candriam's ESG methodology set clear requirements and minimum thresholds to identify those issuers that qualify as 'sustainable investment' and, in particular, do not cause significant harm to any environmental and/or social sustainable investment objective.

The 'Do not significant harm' principle, in particular, was assessed for corporates through:

- the consideration of "principal adverse impacts"
- the alignment with the OECD Guidelines for Multinational Enterprises and the UN Global Compact to ensure minimum environmental & social safeguards.

For more details, refer to the section below on the consideration of principal adverse impacts on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

The consideration of adverse impacts is central to Candriam's sustainable investment approach. Principal adverse impacts were taken into account throughout the entire ESG research and analysis process and through a wide range of methods:

1. ESG rating of corporates: the ESG research and screening methodology considers and assesses the principal adverse impact on sustainability from two distinct, but interlinked, angles:

- the company's issuers' business activities and how they impact, either positively or negatively, key sustainable challenges such as climate change and resource depletion;
- company's interactions with key stakeholders.

2. Negative screening of companies, which includes a norms-based exclusion and an exclusion of companies involved in controversial activities.

3. Engagement activities with companies , through dialogue and voting activities, which contribute to avoiding or reducing the extent of the adverse impacts. The ESG analysis framework and its results feed our engagement process, and vice versa.

The integration of the principal adverse impacts on sustainability factors has been based on the materiality or likely materiality of each indicator for each specific industry / sector to which the company belongs. The materiality is dependent on several factors, such as: type of information, data quality and breadth, applicability, relevance, and geographical coverage.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-fund's investments were subject to a norms-based controversy analysis that considered the compliance with the international social, human, environmental and anti-corruption standards, as defined by the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises. The International Labour Organisation and International Bill of Human Rights are part of the many international references integrated into our norms-based analysis and ESG model.

This analysis aimed to exclude companies that have significantly and repeatedly breached any of these principles.

How did this financial product consider principal adverse impacts on sustainability factors?

At Financial Product level, the principal adverse impacts (PAI) on sustainability factors were considered through one or several means: voting, dialogue, exclusions and/or monitoring (cfr. Candriam's PAI statement: <https://www.candriam.com/en/private/sfdr/>)

ENGAGEMENT

Our engagement and voting policies are available on Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

VOTING

The Candriam's approach to Corporate Governance relies on internationally-recognized standards.

Candriam has exercised voting rights when available on positions of the portfolio. Shareholders' rights, equality of shareholders, board accountability, transparency and integrity of financial statements are core pillars of our voting policy. When exercising our votes we pay a particular attention to the respect of pay-for-performance principle and to the board's independence level, diversity (PAI13) and expertise level.

In the context of Candriam's voting policy, specific guidelines are applied for a range of environmental- (e.g. climate (PAI1 to PAI6), biodiversity (PAI7)), social- (e.g. diversity, gender pay gap (PAI12), human rights (PAI10 PAI11)) and governance- related management or shareholder resolutions.

Candriam has an active approach to voting, in line with the consideration of the principle adverse impacts. Resolutions and voting opportunities are analysed in detail. Candriam always considers the relevance, consistency and feasibility of measures sponsored by any ESG resolution before casting vote. Thus, Candriam may vote against certain resolutions if they do not correspond to the principles defined in its voting policy or to the requirements relating to principle adverse impacts.

This year, we voted at 66 meetings: for 92.42 % of them we cast at least once against management.

With respect to environmental or social related resolutions, management submitted 12 of which we supported 91.67 %.

In addition, and for any voted director-election items (325 resolutions), we took into consideration Board Gender diversity aspects (PAI13).

In total 8 resolutions were filed by shareholders and we supported 75 % of them.

For more detailed information about Candriam Voting policy evolution, votes and associated rationales, please refer to our voting dashboard [<https://vds.issgovernance.com/vds/#/NDA0Nw==/>]

DIALOGUE with corporate issuers

This financial product is invested in corporate issuers. Below statistics refer to engagement activities we have performed with these corporate issuers.

Climate (PAI1 to PAI6) is obviously central in our exchanges with companies. Priorities of Climate-engagement on the corporate side are identified taking into account :

- issuers presenting a weak transition profile (proprietary risk transition model), and/or still highly carbon intensive (Scope 1-2) or with large Scope 3 emissions
- issuers from financial sectors still largely exposed to fossil fuel and with a key role in financing the transition
- relative exposure of managed portfolios to the above issuers.

Candriam has joined in November 2021 the Net Zero Asset Management Initiative [<https://www.netzeroassetmanagers.org/signatories/candriam/>]. Through engagement, our objective is to encourage companies to publicly report on how they align with a 1.5D trajectory and to encourage such an alignment. We expect issuers in particular to explain how their strategy and capital expenditures plan serve their decarbonisation commitment. We usually combine individual and collaborative dialogue.

2 issuers in the financial product are actually part of the priority targets of Candriam Net Zero Engagement campaign.

In addition, we continue to actively support CDP Climate [<https://www.cdp.net/en>], a large transparency survey feeding our investment processes : out of the 55 financial product's issuers targeted, 81.82% have properly filled the last survey. Filled surveys give us access to updated and more accurate Scope 1-2-3 emissions' data.

Candriam also actively participate to several collaborative initiatives such as Climate Action 100+ or IIGCC & ShareAction Climate initiatives on Financials. These initiatives contribute not only to increase the level of transparency on Greenhouse gas emissions and related strategy, but also to gain fundamental leverage for supporting strategic changes. Outcomes of these engagements are detailed in our annual engagement & voting report, available on our public website (Publications | Candriam) [<https://www.candriam.com/en/professional/insight-overview/publications/#sri-publications>].

Given the geopolitical context and observed increase in inequalities, 25 issuer(s) with presence in the financial product have also been contacted in relation to the protection of fundamental human rights at direct or indirect workforce level (supply chain due diligence) (PAI10 PAI11).

Inclusion is not to be outdone, with 23 issuers, of the portfolio having been more specifically engaged on topics related to PAI 12 (Unadjusted gender pay gap) or PAI 13 (Board gender diversity).

While above mentioned PAI are prevalent when considering engagement performed for this financial product in 2023, other PAI such as biodiversity-related ones may also have been addressed in our dialogues with issuers. For more information, please refer to Candriam Engagement Annual review under Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

EXCLUSIONS

PAI3

In addition to companies involved in the thermal coal, oil and gas activities (PAI 4), electricity-generating companies with a carbon intensity greater than 354 gCO2/kWh (PAI 3), are considered risky for inclusion in sustainable investments, even if they are not universally controversial. Given that emissions vary according to electricity generation sources, it is important to assess the carbon footprint per kilowatt-hour (kWh) to determine how closely companies are aligned with the 2 degrees Celsius trajectory.

This is why Candriam includes the carbon intensity of energy producers in our sustainability assessment. Where carbon intensity data is not available, Candriam's ESG analysts use other indicators to assess alignment with the Paris Agreement, such as progress in the energy transition in line with Paris Agreement targets and integration of a 1.5D limit scenario, taking into account investment plans and the credibility of carbon neutrality targets. These indicators are forward-looking and evolve over time to reflect the progress made by companies in their transition.

The carbon intensity (PAI 3) threshold for the product in 2023 was established at 354 gCO2/kWh. Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding this threshold, in addition to those previously excluded.

PAI4

Exposure to fossil fuels (PAI 4) undergoes stringent exclusions across all Candriam sustainable funds. Thermal coal, recognized for its detrimental impact and serious financial and sustainability implications, poses systemic and reputational risks that financial benefits cannot outweigh.

Companies deriving more than 5% of their sales from coal mining, coal-fired power generation, and coal-related operations such as exploration, processing, transport, and distribution are automatically excluded.

Additionally, companies exceeding a 5% threshold of revenue from conventional oil and gas activities, including exploration, extraction, refining, and transportation, are ineligible for investment. Similarly, entities with over 5% exposure to unconventional oil and gas activities are also excluded.

Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding the 5% threshold of exposure to thermal coal activities, supplementing the previously excluded entities.

Furthermore, no additional issuer(s) lost their eligibility due to surpassing the 5% threshold of exposure to conventional oil and gas activities, while no additional issuer(s) lost their eligibility for exceeding the 5% threshold of exposure to unconventional oil and gas activities.

PAI10

In accordance with PAI10 Candriam's normative analysis determines whether a company complies with the 10 principles of the United Nations Global Compact for each of the main categories: Human Rights (HR), Labor Rights (LR), Environment (ENV) and Anti-Corruption (AC). Our norms based analysis incorporates various international references, including the United Nations Declaration of Human Rights, ILO Fundamental Conventions, and OECD Guidelines for Multinational Enterprises, ensuring comprehensive coverage of human rights, labor standards, corruption, and discrimination.

In Candriam's "Level 3" SRI exclusion policy, companies with severe to very severe violations of the UN Global Compact principles are excluded. This list focuses on a strict interpretation of violations of the UN Global Compact, as assessed by Candriam's ESG analysts.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, for significant and repeated breaches of international social, human, environmental and anti-corruption standards, as defined by the UN Global Compact and the OECD Guidelines for Multinational Enterprises.

PAI14

Candriam is firmly committed to excluding from all its investments companies directly involved in the development, production, testing, maintenance and sale of controversial weapons (anti-personnel landmines, cluster bombs, depleted uranium weapons and armor, chemical weapons, biological weapons and white phosphorus weapons). We consider these damaging activities to present systemic and reputational risks.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, due to their involvement in these activities.

MONITORING: calculation and evaluation of the principal adverse impact indicators

Some of these indicators may have explicit targets and can be used to measure the attainment of the sustainable investment objective of the Financial Product. See below the results of the indicators of this Financial Product

PAI indicators	Value	Coverage (% rated / total assets)	Eligible assets (% eligible assets / total assets)
Scope 1 GHG Emissions	992.16	93.79%	94.34%
Scope 2 GHG Emissions	1,135.89	93.79%	94.34%
Total GHG Emissions	2,128.05	93.79%	94.34%
2 - Carbon Footprint	9.61	93.79%	94.34%
3 - GHG intensity of investee companies	34.12	93.79%	94.34%
4 - Exposure to companies active in fossil fuel sector	0.58%	91.70%	94.34%
10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.00%	94.33%	94.33%
13 - Board gender diversity	40.42%	86.41%	94.34%
14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0.00%	94.33%	94.33%

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is:
01/01/2023 - 31/12/2023.

Largest investments	Sector	% of Assets	Country
HALMA PLC	Electronics and semiconductors	4.03%	GBR
BIOMERIEUX SA	Pharmaceuticals	3.98%	FRA
KBC ANCORA CVA	Banks and other financial institutions	3.82%	BEL
INTERTEK GROUP PLC	Textiles and garments	3.41%	GBR
SPIRAX-SARCO ENGIN	Machine and apparatus construction	3.16%	GBR
FINECOBANK	Banks and other financial institutions	3.16%	ITA
BANKINTER SA - REG SHS	Banks and other financial institutions	3.07%	ESP
SIG GROUP PREFERENTIAL SHARE	Banks and other financial institutions	2.78%	CHE
UNITE GROUP PLC	Real estate	2.68%	GBR
BARCO - REG SHS	Internet and internet services	2.66%	BEL
ADMIRAL GROUP PLC	Insurance	2.64%	GBR
TECAN GROUP NAM.AKT	Pharmaceuticals	2.56%	CHE
BFF BANK S.P.A	Banks and other financial institutions	2.55%	ITA
TOPDANMARK AS	Insurance	2.41%	DNK
KINGSPAN GROUP	Building materials	2.39%	IRL

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the "Investment portfolio" section of the annual report.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

● ***In which economic sectors were the investments made?***

Top sector	% of Assets
Banks and other financial institutions	24.13%
Real estate	11.85%
Pharmaceuticals	9.86%
Machine and apparatus construction	8.06%
Insurance	5.76%
Electronics and semiconductors	5.71%
Textiles and garments	5.58%
Internet and internet services	5.50%
Miscellaneous services	4.62%
Foods and non alcoholic drinks	3.86%
Building materials	3.49%
Miscellaneous consumer goods	3.47%
Precious metals and stones	1.85%
Chemicals	1.61%
Biotechnology	1.60%

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the "Investment portfolio" section of the annual report.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

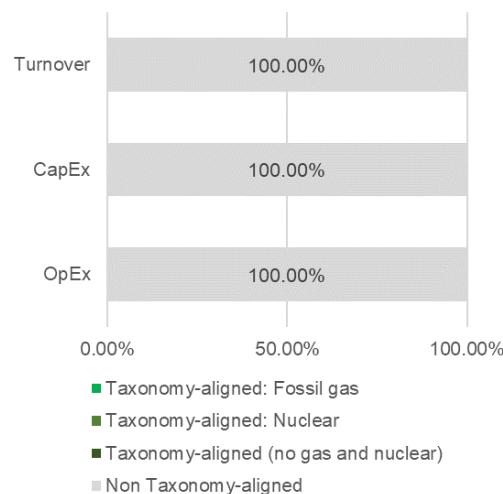

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy? ¹

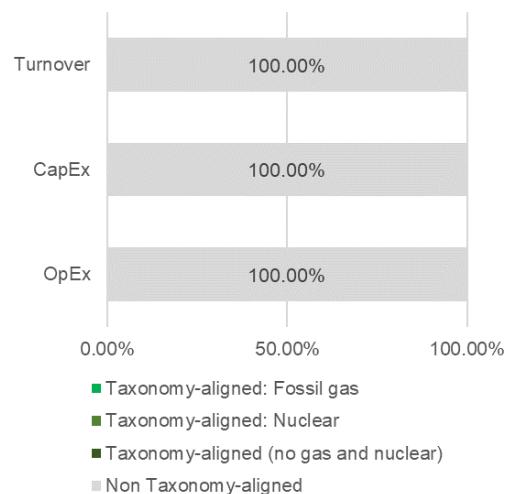

- Yes
 In fossil gas In nuclear energy
 No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

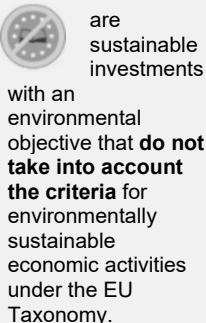

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100.00% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, nor on the transitional and enabling activities, as very few companies at global level provide the data necessary for a rigorous assessment their alignment with the Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Year	% EU Taxonomy Aligned
2023	0.00%
2022	0.00%

● **What is the breakdown of the proportion of the investments per each of the EU Taxonomy to which those investments contributed?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, as very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

Therefore, this percentage is considered as nul.

● **What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?**

The Sub-Fund had a share of 28.68% in sustainable investments with an environmental objective not aligned with the EU taxonomy.

Indeed to date, only two of the six objectives have entered into force in 2023 and very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

What was the share of socially sustainable investments?

The Sub-Fund had a share of investments with a social objective of 65.65%

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The investments included under "Not sustainable" are present in the Sub-fund for 5.67% of the total net assets.

These investments include one or more of the following assets:

- Cash: Cash at sight, cash deposit, reverse repo needed to manage the liquidity of the Sub-fund following subscriptions/redemptions and/or being the result of the market exposure decision of the Sub-fund.
- Investments with issuers considered as sustainable investments at the moment of the investment and that are not fully aligned anymore with the Candriam sustainable investment criteria. These investments have been sold during the period.
- Non single name derivatives used for exposition and hedging purposes.

These investments do not affect the delivery of the sustainable investment objectives of the Sub-Fund as they represent a minor proportion of its assets.

What actions have been taken to attain the sustainable investment objective during the reference period?

The financial product aims to achieve a carbon footprint that is at least 30% lower than the carbon footprint of the Benchmark.

Over the reference period, the financial product emitted 9.61 Tons CO2eq per million € invested, 89.84% lower than the benchmark.

Compared to the previous year, the financial product's carbon footprint has decreased by 12.46%.

The financial product has achieved its objective by favouring issuers with lower carbon footprint.

The financial product aims to achieve an ESG score, based on Candriam's proprietary ESG methodology, higher than its benchmark.

Over the reference period, the financial product displayed an ESG score of 60.47, 13.48% higher compared to its benchmark.

The financial product has achieved its objective by selectively favouring issuers that display a stronger ESG profile. The financial product invested in 1 issuer(s) in Industrial Machinery & Supplies & Components with improving ESG profiles.

How did this financial product perform compared to the reference sustainable benchmark?

No specific index is designated as a reference sustainable benchmark to meet the sustainable investment objectives.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Candriam Sustainable Equity Future Mobility

549300VQWPQT0RBQBV49

CANDRIAM 
A NEW YORK LIFE INVESTMENTS COMPANY

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

 YES

 NO

- It made **sustainable investments with an environmental objective**: 52.72%
 - in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: 41.11%

- It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ____ % of sustainable investment
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The attainment of the sustainable investment objectives was measured through the following sustainability indicators:

- an overall portfolio alignment with a temperature scenario equal to or lower than 2.5 degrees. As the availability and reliability of company climate data evolves over time, the Sub-Fund aimed to be aligned with a temperature scenario equal to or lower than 2 degrees by January 1st 2025.
- investment of a higher share of total assets under management in high-stake companies than the Sub-Fund's reference Benchmark. High-stake companies are defined by the EU Climate Benchmark regulation as those belonging to one of the sectors considered to play the biggest role in achieving the Paris Agreement objectives;

Moreover, the following indicators were monitored:

- OECD Guidelines for Multinational Enterprises, UN Global Compact: to ensure that there were no investments in companies that are in violation with the these principles.
- Candriam's Exclusion Policy: to ensure that there were no investments in companies that are on the Candriam's SRI Level 3 exclusion list as a result of the application of Candriam's Exclusion Policy.
- Number of holdings for which Candriam voted.
- to assure that eligible companies have individual revenue / capex / orderbook exposure to the activities contributing to a cleaner, safer or smarter mobility of at least 10%.

How did the sustainability indicators perform?

The Sub-Fund has been managed in accordance with its sustainability indicators as defined below.

For the selection of sustainable investments, the portfolio manager has taken into account ESG assessments of issuers, produced by Candriam's ESG analyst team.

For companies, these assessments are based on the analysis of the company's interactions with its key stakeholders and the analysis of its business activities and their impact, positive or negative, on key sustainability challenges such as climate change

and resource depletion. In addition, Candriam's ESG analysis includes exclusion filters based on compliance with international standards and involvement in controversial activities.

Candriam's ESG research and analysis for sustainable investments also assesses the compliance of investments with the "do no harm" principle to a sustainable investment objective and with good governance practices.

This integration of Candriam's ESG research methodology has enabled the Fund to meet the minimum proportion of sustainable investments defined in the prospectus (minimum 80%). The proportion of sustainable investments in the Fund was therefore above this minimum threshold, as detailed in the section "What was the proportion of sustainability-related investments?"

The Sub-Fund's reference benchmark has not been designated for the purpose of attaining the sustainable investment objective of the Sub-Fund.

'The Sub-Fund's reference benchmark does not qualify as an EU Climate Transition Benchmark or an EU Paris-Aligned Benchmark under Title III, Chapter 3a, of Regulation (EU) 2016/1011.

As part of Candriam's commitment to the NZAI, the Sub-Fund aimed to contribute to greenhouse gas emission reduction and the objectives of the Paris Agreement. However, at the Sub-Fund level this contribution was quantified through a temperature metric.

Sustainability KPI Name	Portfolio	Benchmark	New indicator
Portfolio Temperature - Corporate - Lower than 2.5°C - Lower than 2°C in 2025	2.46		
Exposure to High Stake Sectors - Corporate - Higher than bench	69.32%	62.09%	

... And Compared to Previous Periods?

The sub-fund has also been managed in line with its sustainability indicators.

Sustainability KPI Name	Year	Portfolio	Benchmark
Portfolio Temperature - Corporate - Lower than 2.5°C - Lower than 2°C in 2025	2022	2.39	
Exposure to High Stake Sectors - Corporate - Higher than bench	2022	76.48%	62.39%

The asset allocation of the financial product has evolved over the years.

Investment Category	Proportion of Investments	Proportion of Investments
	2023	2022
#1 Sustainable	93.83%	93.45%
#2 Not sustainable	6.17%	6.55%
Environmental	52.72%	53.17%
Social	41.11%	40.28%
Taxonomy-aligned	0.00%	0.00%
Other	52.72%	53.17%

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

Candriam ensured that its sustainable investments did not cause significant harm to any environmental and/or social sustainable investment objective by means of its ESG research and analysis of corporate and sovereign issuers. Based on its proprietary ESG Ratings and Scorings, Candriam's ESG methodology set clear requirements and minimum thresholds to identify those issuers that qualify as 'sustainable investment' and, in particular, do not cause significant harm to any environmental and/or social sustainable investment objective.

The 'Do not significant harm' principle, in particular, was assessed for corporates through:

- the consideration of "principal adverse impacts"
- the alignment with the OECD Guidelines for Multinational Enterprises and the UN Global Compact to ensure minimum environmental & social safeguards.

For more details, refer to the section below on the consideration of principal adverse impacts on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

The consideration of adverse impacts is central to Candriam's sustainable investment approach. Principal adverse impacts were taken into account throughout the entire ESG research and analysis process and through a wide range of methods:

1. ESG rating of corporates: the ESG research and screening methodology considers and assesses the principal adverse impact on sustainability from two distinct, but interlinked, angles:

- the company's issuers' business activities and how they impact, either positively or negatively, key sustainable challenges such as climate change and resource depletion;
- company's interactions with key stakeholders.

2. Negative screening of companies, which includes a norms-based exclusion and an exclusion of companies involved in controversial activities.

3. Engagement activities with companies , through dialogue and voting activities, which contribute to avoiding or reducing the extent of the adverse impacts. The ESG analysis framework and its results feed our engagement process, and vice versa.

The integration of the principal adverse impacts on sustainability factors has been based on the materiality or likely materiality of each indicator for each specific industry / sector to which the company belongs. The materiality is dependent on several factors, such as: type of information, data quality and breadth, applicability, relevance, and geographical coverage.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-fund's investments were subject to a norms-based controversy analysis that considered the compliance with the international social, human, environmental and anti-corruption standards, as defined by the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises. The International Labour Organisation and International Bill of Human Rights are part of the many international references integrated into our norms-based analysis and ESG model.

This analysis aimed to exclude companies that have significantly and repeatedly breached any of these principles.

How did this financial product consider principal adverse impacts on sustainability factors?

At Financial Product level, the principal adverse impacts (PAI) on sustainability factors were considered through one or several means: voting, dialogue, exclusions and/or monitoring (cfr. Candriam's PAI statement: <https://www.candriam.com/en/private/sfdr/>)

ENGAGEMENT

Our engagement and voting policies are available on Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

VOTING

The Candriam's approach to Corporate Governance relies on internationally-recognized standards.

Candriam has exercised voting rights when available on positions of the portfolio. Shareholders' rights, equality of shareholders, board accountability, transparency and integrity of financial statements are core pillars of our voting policy. When exercising our votes we pay a particular attention to the respect of pay-for-performance principle and to the board's independence level, diversity (PAI13) and expertise level.

In the context of Candriam's voting policy, specific guidelines are applied for a range of environmental- (e.g. climate (PAI1 to PAI6), biodiversity (PAI7)), social- (e.g. diversity, gender pay gap (PAI12), human rights (PAI10 PAI11)) and governance- related management or shareholder resolutions.

Candriam has an active approach to voting, in line with the consideration of the principle adverse impacts. Resolutions and voting opportunities are analysed in detail. Candriam always considers the relevance, consistence and feasibility of measures sponsored by any ESG resolution before casting vote. Thus, Candriam may vote against certain resolutions if they do not correspond to the principles defined in its voting policy or to the requirements relating to principle adverse impacts.

This year, we voted at 47 meetings: for 80.85 % of them we cast at least once against management.

With respect to environmental or social related resolutions, management submitted 2 of which we supported 100 %.

More specifically, 1 proposals were related to climate (100 % support).

In addition, and for any voted director-election items (282 resolutions), we took into consideration Board Gender diversity aspects (PAI13).

In total 30 resolutions were filed by shareholders and we supported 70 % of them.

More specifically 6 were Human Rights, Climate or Diversity & Inclusion related: we supported 100 % of them.

For more detailed information about Candriam Voting policy evolution, votes and associated rationales, please refer to our voting dashboard [<https://vds.issgovernance.com/vds/#/NDA0Nw==>].

DIALOGUE with corporate issuers

This financial product is invested in corporate issuers. Below statistics refer to engagement activities we have performed with these corporate issuers.

Climate (PAI1 to PAI6) is obviously central in our exchanges with companies. Priorities of Climate-engagement on the corporate side are identified taking into account :

- issuers presenting a weak transition profile (proprietary risk transition model), and/or still highly carbon intensive (Scope 1-2) or with large Scope 3 emissions
- issuers from financial sectors still largely exposed to fossil fuel and with a key role in financing the transition
- relative exposure of managed portfolios to the above issuers.

Candriam has joined in November 2021 the Net Zero Asset Management Initiative [<https://www.netzeroassetmanagers.org/signatories/candriam>]. Through engagement, our objective is to encourage companies to publicly report on how they align with a 1.5D trajectory and to encourage such an alignment. We expect issuers in particular to explain how their strategy and capital expenditures plan serve their decarbonisation commitment. We usually combine individual and collaborative dialogue.

3 issuers in the financial product are actually part of the priority targets of Candriam Net Zero Engagement campaign.

In addition, we continue to actively support CDP Climate [<https://www.cdp.net/en>], a large transparency survey feeding our investment processes : out of the 39 financial product's issuers targeted, 94.87% have properly filled the last survey. Filled surveys give us access to updated and more accurate Scope 1-2-3 emissions' data.

Candriam also actively participate to several collaborative initiatives such as Climate Action 100+ or IIGCC & ShareAction Climate initiatives on Financials. Such initiatives targeted 2 issuer(s) of the financial product. These initiatives contribute not only to increase the level of transparency on Greenhouse gas emissions and related strategy, but also to gain fundamental leverage for supporting strategic changes. Outcomes of these engagements are detailed in our annual engagement & voting report, available on our public website (Publications | Candriam) [<https://www.candriam.com/en/professional/insight-overview/publications/#sri-publications>].

Given the geopolitical context and observed increase in inequalities, 33 issuer(s) with presence in the financial product have also been contacted in relation to the protection of fundamental human rights at direct or indirect workforce level (supply chain due diligence) (PAI10 PAI11).

Inclusion is not to be outdone, with 23 issuers, of the portfolio having been more specifically engaged on topics related to PAI 12 (Unadjusted gender pay gap) or PAI 13 (Board gender diversity).

While above mentioned PAI are prevalent when considering engagement performed for this financial product in 2023, other PAI such as biodiversity-related ones may also have been addressed in our dialogues with issuers. For more information, please refer to Candriam Engagement Annual review under Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

EXCLUSIONS

PAI3

In addition to companies involved in the thermal coal, oil and gas activities (PAI 4), electricity-generating companies with a carbon intensity greater than 354 gCO2/kWh (PAI 3), are considered risky for inclusion in sustainable investments, even if they are not universally controversial. Given that emissions vary according to electricity generation sources, it is important to assess the carbon footprint per kilowatt-hour (kWh) to determine how closely companies are aligned with the 2 degrees Celsius trajectory.

This is why Candriam includes the carbon intensity of energy producers in our sustainability assessment. Where carbon intensity data is not available, Candriam's ESG analysts use other indicators to assess alignment with the Paris Agreement, such as progress in the energy transition in line with Paris Agreement targets and integration of a 1.5D limit scenario, taking into account investment plans and the credibility of carbon neutrality targets. These indicators are forward-looking and evolve over time to reflect the progress made by companies in their transition.

The carbon intensity (PAI 3) threshold for the product in 2023 was established at 354 gCO2/kWh. Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding this threshold, in addition to those previously excluded.

PAI4

Exposure to fossil fuels (PAI 4) undergoes stringent exclusions across all Candriam sustainable funds. Thermal coal, recognized for its detrimental impact and serious financial and sustainability implications, poses systemic and reputational risks that financial benefits cannot outweigh.

Companies deriving more than 5% of their sales from coal mining, coal-fired power generation, and coal-related operations such as exploration, processing, transport, and distribution are automatically excluded.

Additionally, companies exceeding a 5% threshold of revenue from conventional oil and gas activities, including exploration, extraction, refining, and transportation, are ineligible for investment. Similarly, entities with over 5% exposure to unconventional oil and gas activities are also excluded.

Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding the 5% threshold of exposure to thermal coal activities, supplementing the previously excluded entities.

Furthermore, no additional issuer(s) lost their eligibility due to surpassing the 5% threshold of exposure to conventional oil and gas activities, while no additional issuer(s) lost their eligibility for exceeding the 5% threshold of exposure to unconventional oil and gas activities.

PAI10

In accordance with PAI10 Candriam's normative analysis determines whether a company complies with the 10 principles of the United Nations Global Compact for each of the main categories: Human Rights (HR), Labor Rights (LR), Environment (ENV) and Anti-Corruption (AC). Our norms based analysis incorporates various international references, including the United Nations Declaration of Human Rights, ILO Fundamental Conventions, and OECD Guidelines for Multinational Enterprises, ensuring comprehensive coverage of human rights, labor standards, corruption, and discrimination.

In Candriam's "Level 3" SRI exclusion policy, companies with severe to very severe violations of the UN Global Compact principles are excluded. This list focuses on a strict interpretation of violations of the UN Global Compact, as assessed by Candriam's ESG analysts.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, for significant and repeated breaches of international social, human, environmental and anti-corruption standards, as defined by the UN Global Compact and the OECD Guidelines for Multinational Enterprises.

PAI14

Candriam is firmly committed to excluding from all its investments companies directly involved in the development, production, testing, maintenance and sale of controversial weapons (anti-personnel landmines, cluster bombs, depleted uranium weapons and armor, chemical weapons, biological weapons and white phosphorus weapons). We consider these damaging activities to present systemic and reputational risks.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, due to their involvement in these activities.

MONITORING: calculation and evaluation of the principal adverse impact indicators

Some of these indicators may have explicit targets and can be used to measure the attainment of the sustainable investment objective of the Financial Product. See below the results of the indicators of this Financial Product

PAI indicators	Value	Coverage (% rated / total assets)	Eligible assets (% eligible assets / total assets)
Scope 1 GHG Emissions	2,002.82	93.83%	93.83%
Scope 2 GHG Emissions	3,687.22	93.83%	93.83%
Total GHG Emissions	5,690.04	93.83%	93.83%
2 - Carbon Footprint	21.62	93.83%	93.83%
3 - GHG intensity of investee companies	66.98	93.83%	93.83%
4 - Exposure to companies active in fossil fuel sector	0.25%	93.05%	93.82%
10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.00%	93.83%	93.83%
13 - Board gender diversity	33.05%	91.04%	93.84%
14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0.00%	93.83%	93.83%

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
01/01/2023 - 31/12/2023.

Largest investments	Sector	% of Assets	Country
TE CONNECTIVITY LTD - REG SHS	Banks and other financial institutions	4.57%	CHE
CISCO SYSTEMS INC	Office supplies and computing	4.45%	USA
MICROSOFT CORP	Internet and internet services	4.25%	USA
APTIV PLC	Road vehicles	4.21%	JEP
SCHNEIDER ELECTRIC SE	Electrical engineering	4.16%	FRA
WABTEC CORP	Machine and apparatus construction	4.12%	USA
PALO ALTO NETWORKS	Internet and internet services	4.04%	USA
PTC INC	Internet and internet services	3.58%	USA
SERVICENOW INC	Internet and internet services	3.55%	USA
SIEMENS AG PREFERENTIAL SHARE	Electrical engineering	3.31%	DEU
ON SEMICONDUCTOR CORP	Electronics and semiconductors	3.24%	USA
NXP SEMICONDUCTORS	Electronics and semiconductors	2.80%	NLD
TAIWAN SEMICONDUCTOR CO ADR (REPR 5 SHS)	Electronics and semiconductors	2.79%	USA
TOYOTA MOTOR CORP	Road vehicles	2.79%	JPN
ITT INC	Miscellaneous services	2.66%	LUX

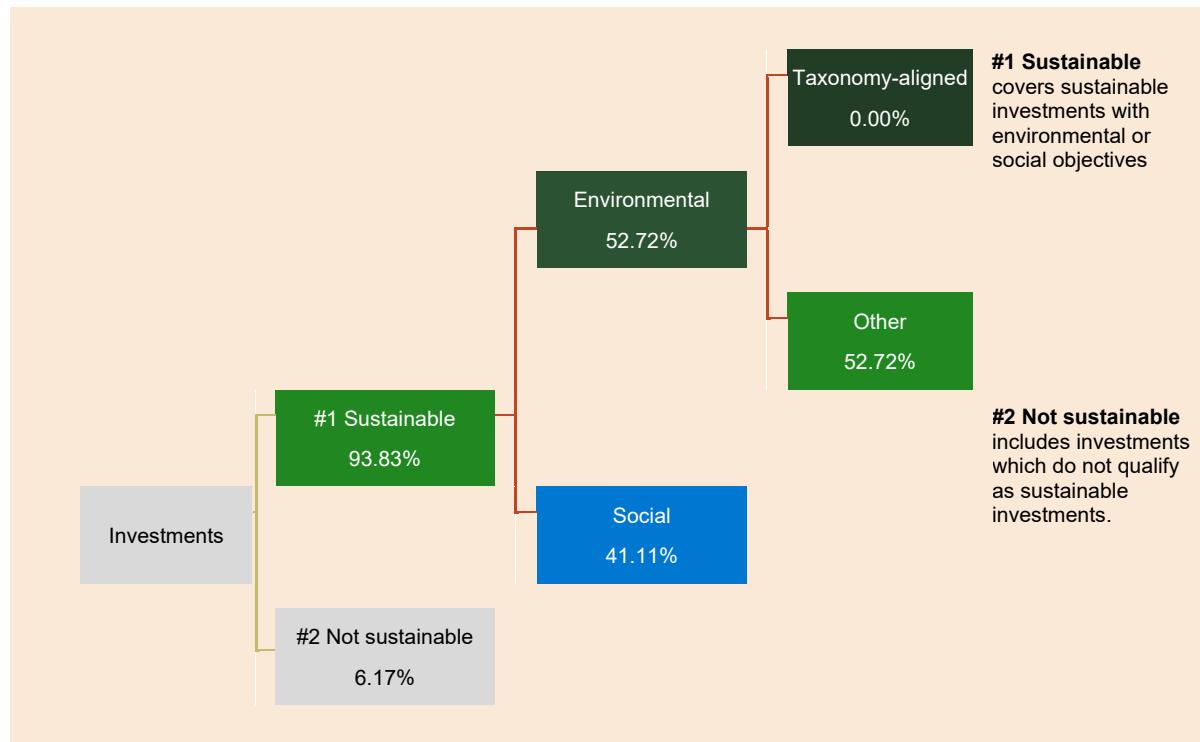

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the "Investment portfolio" section of the annual report.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

● ***In which economic sectors were the investments made?***

Top sector	% of Assets
Electronics and semiconductors	26.00%
Internet and internet services	19.25%
Electrical engineering	13.74%
Road vehicles	12.46%
Banks and other financial institutions	10.64%
Machine and apparatus construction	6.42%
Office supplies and computing	4.45%
Miscellaneous services	2.65%
Tires and rubber	2.52%
Precious metals and stones	1.18%
Biotechnology	0.65%
Healthcare	0.02%

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the “Investment portfolio” section of the annual report.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy? ¹

Yes

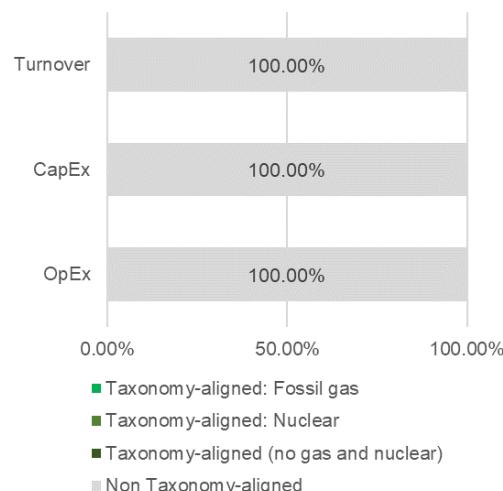

In fossil gas

In nuclear energy

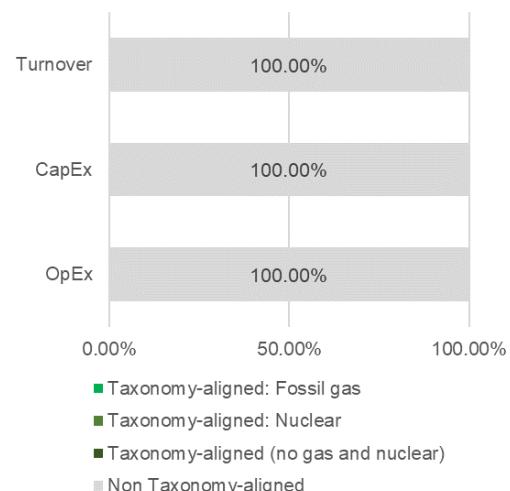

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

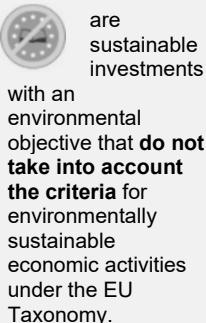

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100.00% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, nor on the transitional and enabling activities, as very few companies at global level provide the data necessary for a rigorous assessment their alignment with the Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Year	% EU Taxonomy Aligned
2023	0.00%
2022	0.00%

● **What is the breakdown of the proportion of the investments per each of the EU Taxonomy to which those investments contributed?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, as very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

Therefore, this percentage is considered as nul.

● **What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?**

The Sub-Fund had a share of 52.72% in sustainable investments with an environmental objective not aligned with the EU taxonomy.

Indeed to date, only two of the six objectives have entered into force in 2023 and very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

● **What was the share of socially sustainable investments?**

The Sub-Fund had a share of investments with a social objective of 41.11%

● **What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?**

The investments included under "Not sustainable" are present in the Sub-fund for 6.17% of the total net assets.

These investments include one or more of the following assets:

- Cash: Cash at sight, cash deposit, reverse repo needed to manage the liquidity of the Sub-fund following subscriptions/redemptions and/or being the result of the market exposure decision of the Sub-fund.
- Investments with issuers considered as sustainable investments at the moment of the investment and that are not fully aligned anymore with the Candriam sustainable investment criteria. These investments have been sold during the period.
- Non single name derivatives used for exposition and hedging purposes.

These investments do not affect the delivery of the sustainable investment objectives of the Sub-Fund as they represent a minor proportion of its assets.

● **What actions have been taken to attain the sustainable investment objective during the reference period?**

The financial product aims to invest primarily in issuers that demonstrate a positive contribution to the objectives of the Paris Agreement and therefore intends to propose a temperature figure of 2.5 degrees or less.

Over the period, the financial product displayed a temperature of 2.46°C.

The financial product has achieved its objective by allocating a higher proportion of investments in issuers that demonstrate a positive contribution to the objectives of the Paris Agreement.

The financial product aims to invest a higher proportion of total assets under management in high stake issuers than the benchmark.

Over the reference period, the financial product invested in 69.32% of its net assets in high stake issuers, 11.64% higher compared to its benchmark.

The financial product has achieved its objective by allocating a higher proportion of investments in high stake issuers as compare to its benchmark.

How did this financial product perform compared to the reference sustainable benchmark?

No specific index is designated as a reference sustainable benchmark to meet the sustainable investment objectives.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

 YES

- It made **sustainable investments with an environmental objective**: 37.75%
 - in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: 61.40%

 NO

- It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___ % of sustainable investment
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The attainment of the sustainable investment objectives was measured through the following sustainability indicators:

- Carbon footprint: the Sub-Fund had a carbon footprint that is at least 30% lower than the carbon footprint of the Sub-Fund's reference Benchmark.
- ESG score: the Sub-Fund had a weighted average ESG score that is higher than the weighted average ESG score of the Sub-Fund's reference benchmark. The ESG Score is computed employing Candriam's proprietary ESG analysis methodology.

Moreover, the following indicators were monitored:

- OECD Guidelines for Multinational Enterprises, UN Global Compact: to ensure that there were no investments in companies that are in violation with the these principles.
- Candriam's Exclusion Policy: to ensure that there were no investments in companies that are on the Candriam's SRI Level 3 exclusion list as a result of the application of Candriam's Exclusion Policy.
- Number of holdings for which Candriam voted.

How did the sustainability indicators perform?

The Sub-Fund has been managed in accordance with its sustainability indicators as defined below.

For the selection of sustainable investments, the portfolio manager has taken into account ESG assessments of issuers, produced by Candriam's ESG analyst team.

For companies, these assessments are based on the analysis of the company's interactions with its key stakeholders and the analysis of its business activities and their impact, positive or negative, on key sustainability challenges such as climate change and resource depletion. In addition, Candriam's ESG analysis includes exclusion filters based on compliance with international standards and involvement in controversial activities.

Candriam's ESG research and analysis for sustainable investments also assesses the compliance of investments with the "do no harm" principle to a sustainable investment objective and with good governance practices.

This integration of Candriam's ESG research methodology has enabled the Fund to meet the minimum proportion of sustainable investments defined in the prospectus (minimum 80%). The proportion of sustainable investments in the Fund was therefore above this minimum threshold, as detailed in the section "What was the proportion of sustainability-related investments?"

The Sub-Fund's reference benchmark has not been designated for the purpose of attaining the sustainable investment objective of the Sub-Fund.

The Sub-Fund's reference benchmark does not qualify as an EU Climate Transition Benchmark or an EU Paris-Aligned Benchmark under Title III, Chapter 3a, of Regulation (EU) 2016/1011.

However, the Sub-Fund aimed to have a carbon footprint that is at least 30% lower than the carbon footprint of the Sub-Fund's reference benchmark.

Moreover, Candriam being part of the Net Zero Asset Management initiative, the Sub-Fund aimed to reduce greenhouse gas emissions.

Sustainability KPI Name	Portfolio	Benchmark	New indicator
Carbon Footprint - Corporate - Scope 1&2 - 30% reduction vs bench	30.45	64.24	
ESG Score - Corporate - Higher than bench	53.69	50.56	

... And Compared to Previous Periods?

The sub-fund has also been managed in line with its sustainability indicators.

Sustainability KPI Name	Year	Portfolio	Benchmark
Carbon Footprint - Corporate - Scope 1&2 - 30% reduction vs bench	2022	35.33	69.62
ESG Score - Corporate - Higher than bench	2022	53.22	49.34

The asset allocation of the financial product has evolved over the years.

Investment Category	Proportion of Investments	Proportion of Investments
	2023	2022
#1 Sustainable	99.15%	99.49%
#2 Not sustainable	0.85%	0.75%
Environmental	37.75%	37.88%
Social	61.40%	61.61%
Taxonomy-aligned	0.00%	0.00%
Other	37.75%	37.88%

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

Candriam ensured that its sustainable investments did not cause significant harm to any environmental and/or social sustainable investment objective by means of its ESG research and analysis of corporate and sovereign issuers. Based on its proprietary ESG Ratings and Scorings, Candriam's ESG methodology set clear requirements and minimum thresholds to identify those issuers that qualify as 'sustainable investment' and, in particular, do not cause significant harm to any environmental and/or social sustainable investment objective.

The 'Do not significant harm' principle, in particular, was assessed for corporates through:

- the consideration of "principal adverse impacts"
- the alignment with the OECD Guidelines for Multinational Enterprises and the UN Global Compact to ensure minimum environmental & social safeguards.

For more details, refer to the section below on the consideration of principal adverse impacts on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

The consideration of adverse impacts is central to Candriam's sustainable investment approach. Principal adverse impacts were taken into account throughout the entire ESG research and analysis process and through a wide range of methods:

1. ESG rating of corporates: the ESG research and screening methodology considers and assesses the principal adverse impact on sustainability from two distinct, but interlinked, angles:

- the company's issuers' business activities and how they impact, either positively or negatively, key sustainable challenges such as climate change and resource depletion;
- company's interactions with key stakeholders.

2. Negative screening of companies, which includes a norms-based exclusion and an exclusion of companies involved in controversial activities.

3. Engagement activities with companies , through dialogue and voting activities, which contribute to avoiding or reducing the extent of the adverse impacts. The ESG analysis framework and its results feed our engagement process, and vice versa.

The integration of the principal adverse impacts on sustainability factors has been based on the materiality or likely materiality of each indicator for each specific industry / sector to which the company belongs. The materiality is dependent on several factors, such as: type of information, data quality and breadth, applicability, relevance, and geographical coverage.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-fund's investments were subject to a norms-based controversy analysis that considered the compliance with the international social, human, environmental and anti-corruption standards, as defined by the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises. The International Labour Organisation and International Bill of Human Rights are part of the many international references integrated into our norms-based analysis and ESG model.

This analysis aimed to exclude companies that have significantly and repeatedly breached any of these principles.

How did this financial product consider principal adverse impacts on sustainability factors?

At Financial Product level, the principal adverse impacts (PAI) on sustainability factors were considered through one or several means: voting, dialogue, exclusions and/or monitoring (cfr. Candriam's PAI statement: <https://www.candriam.com/en/private/sfdr/>)

ENGAGEMENT

Our engagement and voting policies are available on Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

VOTING

The Candriam's approach to Corporate Governance relies on internationally-recognized standards.

Candriam has exercised voting rights when available on positions of the portfolio. Shareholders' rights, equality of shareholders, board accountability, transparency and integrity of financial statements are core pillars of our voting policy. When exercising our votes we pay a particular attention to the respect of pay-for-performance principle and to the board's independence level, diversity (PAI13) and expertise level.

In the context of Candriam's voting policy, specific guidelines are applied for a range of environmental- (e.g. climate (PAI1 to PAI6), biodiversity (PAI7)), social- (e.g. diversity, gender pay gap (PAI12), human rights (PAI10 PAI11)) and governance- related management or shareholder resolutions.

Candriam has an active approach to voting, in line with the consideration of the principle adverse impacts. Resolutions and voting opportunities are analysed in detail. Candriam always considers the relevance, consistency and feasibility of measures sponsored by any ESG resolution before casting vote. Thus, Candriam may vote against certain resolutions if they do not correspond to the principles defined in its voting policy or to the requirements relating to principle adverse impacts.

This year, we voted at 88 meetings: for 39.77 % of them we cast at least once against management.

In addition, and for any voted director-election items (849 resolutions), we took into consideration Board Gender diversity aspects (PAI13).

In total 9 resolutions were filed by shareholders and we supported 55.56 % of them.

More specifically 3 were Human Rights, Climate or Diversity & Inclusion related: we supported 100 % of them.

For more detailed information about Candriam Voting policy evolution, votes and associated rationales, please refer to our voting dashboard [<https://vds.issgovernance.com/vds/#/NDA0Nw==/>]

DIALOGUE with corporate issuers

This financial product is invested in corporate issuers. Below statistics refer to engagement activities we have performed with these corporate issuers.

Climate (PAI1 to PAI6) is obviously central in our exchanges with companies. Priorities of Climate-engagement on the corporate side are identified taking into account :

- issuers presenting a weak transition profile (proprietary risk transition model), and/or still highly carbon intensive (Scope 1-2) or with large Scope 3 emissions
- issuers from financial sectors still largely exposed to fossil fuel and with a key role in financing the transition
- relative exposure of managed portfolios to the above issuers.

Candriam has joined in November 2021 the Net Zero Asset Management Initiative [<https://www.netzeroassetmanagers.org/signatories/candriam/>]. Through engagement, our objective is to encourage companies to publicly report on how they align with a 1.5D trajectory and to encourage such an alignment. We expect issuers in particular to explain how their strategy and capital expenditures plan serve their decarbonisation commitment. We usually combine individual and collaborative dialogue.

In addition, we continue to actively support CDP Climate [<https://www.cdp.net/en>], a large transparency survey feeding our investment processes : out of the 86 financial product's issuers targeted, 97.67% have properly filled the last survey. Filled surveys give us access to updated and more accurate Scope 1-2-3 emissions' data.

Candriam also actively participate to several collaborative initiatives such as Climate Action 100+ or IIGCC & ShareAction Climate initiatives on Financials. Such initiatives targeted 4 issuer(s) of the financial product. These initiatives contribute not only to increase the level of transparency on Greenhouse gas emissions and related strategy, but also to gain fundamental leverage for supporting strategic changes. Outcomes of these engagements are detailed in our annual engagement & voting report, available on our public website (Publications | Candriam) [<https://www.candriam.com/en/professional/insight-overview/publications/#sri-publications>].

Given the geopolitical context and observed increase in inequalities, 64 issuer(s) with presence in the financial product have also been contacted in relation to the protection of fundamental human rights at direct or indirect workforce level (supply chain due diligence) (PAI10 PAI11).

Inclusion is not to be outdone, with 19 issuers, of the portfolio having been more specifically engaged on topics related to PAI 12 (Unadjusted gender pay gap) or PAI 13 (Board gender diversity).

While above mentioned PAI are prevalent when considering engagement performed for this financial product in 2023, other PAI such as biodiversity-related ones may also have been addressed in our dialogues with issuers. For more information, please refer to Candriam Engagement Annual review under Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

EXCLUSIONS

PAI3

In addition to companies involved in the thermal coal, oil and gas activities (PAI 4), electricity-generating companies with a carbon intensity greater than 354 gCO2/kWh (PAI 3), are considered risky for inclusion in sustainable investments, even if they are not universally controversial. Given that emissions vary according to electricity generation sources, it is important to assess the carbon footprint per kilowatt-hour (kWh) to determine how closely companies are aligned with the 2 degrees Celsius trajectory.

This is why Candriam includes the carbon intensity of energy producers in our sustainability assessment. Where carbon intensity data is not available, Candriam's ESG analysts use other indicators to assess alignment with the Paris Agreement, such as progress in the energy transition in line with Paris Agreement targets and integration of a 1.5D limit scenario, taking into account investment plans and the credibility of carbon neutrality targets. These indicators are forward-looking and evolve over time to reflect the progress made by companies in their transition.

The carbon intensity (PAI 3) threshold for the product in 2023 was established at 354 gCO2/kWh. Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding this threshold, in addition to those previously excluded.

PAI4

Exposure to fossil fuels (PAI 4) undergoes stringent exclusions across all Candriam sustainable funds. Thermal coal, recognized for its detrimental impact and serious financial and sustainability implications, poses systemic and reputational risks that financial benefits cannot outweigh.

Companies deriving more than 5% of their sales from coal mining, coal-fired power generation, and coal-related operations such as exploration, processing, transport, and distribution are automatically excluded.

Additionally, companies exceeding a 5% threshold of revenue from conventional oil and gas activities, including exploration, extraction, refining, and transportation, are ineligible for investment. Similarly, entities with over 5% exposure to unconventional oil and gas activities are also excluded.

Over the reference period, 1 issuer(s) became ineligible for the financial product due to exceeding the 5% threshold of exposure to thermal coal activities, supplementing the previously excluded entities.

Furthermore, no additional issuer(s) lost their eligibility due to surpassing the 5% threshold of exposure to conventional oil and gas activities, while no additional issuer(s) lost their eligibility for exceeding the 5% threshold of exposure to unconventional oil and gas activities.

PAI10

In accordance with PAI10 Candriam's normative analysis determines whether a company complies with the 10 principles of the United Nations Global Compact for each of the main categories: Human Rights (HR), Labor Rights (LR), Environment (ENV) and Anti-Corruption (AC). Our norms based analysis incorporates various international references, including the United Nations Declaration of Human Rights, ILO Fundamental Conventions, and OECD Guidelines for Multinational Enterprises, ensuring comprehensive coverage of human rights, labor standards, corruption, and discrimination.

In Candriam's "Level 3" SRI exclusion policy, companies with severe to very severe violations of the UN Global Compact principles are excluded. This list focuses on a strict interpretation of violations of the UN Global Compact, as assessed by Candriam's ESG analysts.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, for significant and repeated breaches of international social, human, environmental and anti-corruption standards, as defined by the UN Global Compact and the OECD Guidelines for Multinational Enterprises.

PAI14

Candriam is firmly committed to excluding from all its investments companies directly involved in the development, production, testing, maintenance and sale of controversial weapons (anti-personnel landmines, cluster bombs, depleted uranium weapons and armor, chemical weapons, biological weapons and white phosphorus weapons). We consider these damaging activities to present systemic and reputational risks.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, due to their involvement in these activities.

MONITORING: calculation and evaluation of the principal adverse impact indicators

Some of these indicators may have explicit targets and can be used to measure the attainment of the sustainable investment objective of the Financial Product. See below the results of the indicators of this Financial Product

PAI indicators	Value	Coverage (% rated / total assets)	Eligible assets (% eligible assets / total assets)
Scope 1 GHG Emissions	5,599.93	99.07%	99.15%
Scope 2 GHG Emissions	8,415.37	99.07%	99.15%
Total GHG Emissions	14,015.30	99.07%	99.15%
2 - Carbon Footprint	30.45	99.07%	99.15%
3 - GHG intensity of investee companies	53.78	99.07%	99.15%
4 - Exposure to companies active in fossil fuel sector	0.03%	97.75%	99.15%
10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.00%	99.15%	99.15%
13 - Board gender diversity	18.88%	97.06%	99.15%
14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0.00%	99.15%	99.15%

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
01/01/2023 - 31/12/2023.

Largest investments	Sector	% of Assets	Country
TOYOTA MOTOR CORP	Road vehicles	5.16%	JPN
SONY CORP	Electronics and semiconductors	3.40%	JPN
SUMITOMO MITSUI FINANCIAL GROUP INC	Banks and other financial institutions	3.02%	JPN
HITACHI LTD	Electronics and semiconductors	2.79%	JPN

SEKISUI HOUSE LTD	Building materials	1.89%	JPN
DAIWA HOUSE INDUSTRY CO LTD	Building materials	1.88%	JPN

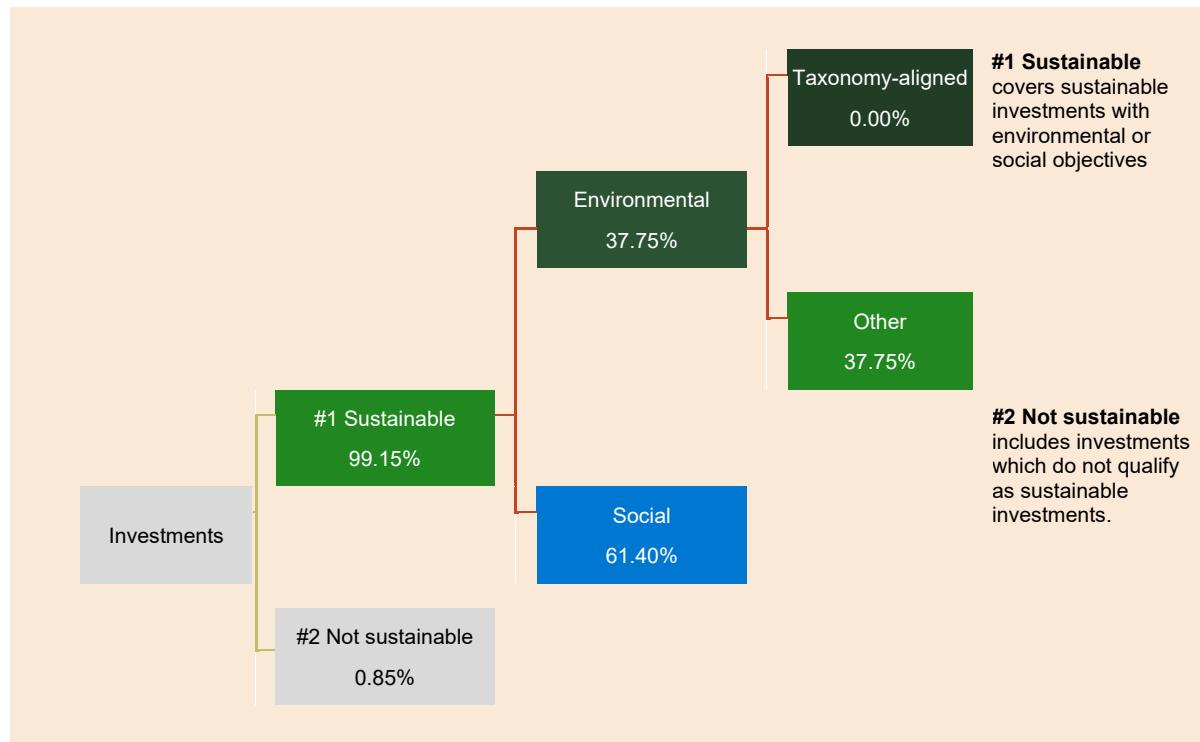

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the "Investment portfolio" section of the annual report.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

● ***In which economic sectors were the investments made?***

Top sector	% of Assets
Electronics and semiconductors	21.98%
Banks and other financial institutions	16.59%
Pharmaceuticals	8.58%
Road vehicles	6.50%
Machine and apparatus construction	6.20%
Building materials	5.04%
Transportation	4.63%
Graphic art and publishing	3.56%
Foods and non alcoholic drinks	3.47%
Communication	3.46%
Retail trade and department stores	2.93%
Internet and internet services	2.82%
Office supplies and computing	2.80%
Chemicals	2.78%
Real estate	2.54%

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the "Investment portfolio" section of the annual report.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

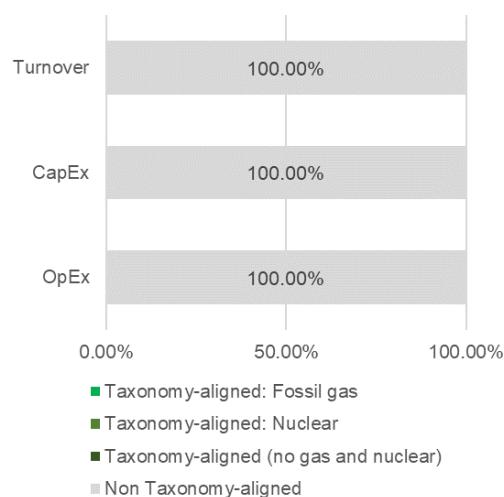

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy? ¹

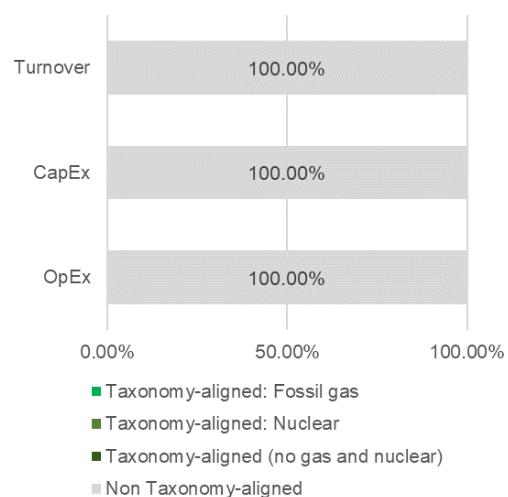

- Yes
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

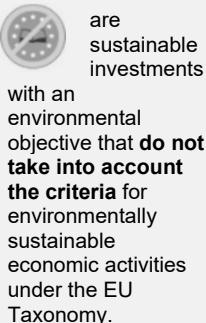

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100.00% of the total investments.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, nor on the transitional and enabling activities, as very few companies at global level provide the data necessary for a rigorous assessment their alignment with the Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Year	% EU Taxonomy Aligned
2023	0.00%
2022	0.00%

● **What is the breakdown of the proportion of the investments per each of the EU Taxonomy to which those investments contributed?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, as very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

Therefore, this percentage is considered as nul.

● **What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?**

The Sub-Fund had a share of 37.75% in sustainable investments with an environmental objective not aligned with the EU taxonomy.

Indeed to date, only two of the six objectives have entered into force in 2023 and very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

● **What was the share of socially sustainable investments?**

The Sub-Fund had a share of investments with a social objective of 61.4%

● **What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?**

The investments included under "Not sustainable" are present in the Sub-fund for 0.85% of the total net assets.

These investments include one or more of the following assets:

- Cash: Cash at sight, cash deposit, reverse repo needed to manage the liquidity of the Sub-fund following subscriptions/redemptions and/or being the result of the market exposure decision of the Sub-fund.
- Investments with issuers considered as sustainable investments at the moment of the investment and that are not fully aligned anymore with the Candriam sustainable investment criteria. These investments have been sold during the period.
- Non single name derivatives used for exposition and hedging purposes.

These investments do not affect the delivery of the sustainable investment objectives of the Sub-Fund as they represent a minor proportion of its assets.

● **What actions have been taken to attain the sustainable investment objective during the reference period?**

The financial product aims to achieve a carbon footprint that is at least 30% lower than the carbon footprint of the Benchmark.

Over the reference period, the financial product emitted 30.45 Tons CO2eq per million € invested, 52.59% lower than the benchmark.

Compared to the previous year, the financial product's carbon footprint has decreased by 13.81%.

The financial product has achieved its objective by favouring issuers with lower carbon footprint. More precisely, the financial product divested from 1 issuer(s) in Trading Companies & Distributors with deteriorating carbon footprint.

The financial product aims to achieve an ESG score, based on Candriam's proprietary ESG methodology, higher than its benchmark.

Over the reference period, the financial product displayed an ESG score of 53.69, 6.2% higher compared to its benchmark.

In comparison to the previous year, the financial product overall ESG score is flat.

The financial product has achieved its objective by selectively favouring issuers that display a stronger ESG profile. The financial product invested in 9 issuer(s) in Advertising, Broadline Retail, Diversified Banks, Diversified Real Estate Activities, Industrial Machinery & Supplies & Components, Steel and Trading Companies & Distributors with improving ESG profiles and divested from 6 issuer(s) in Building Products, Construction & Engineering, Diversified Banks, Homebuilding, Marine Transportation and Specialized Finance with deteriorating ESG profiles.

How did this financial product perform compared to the reference sustainable benchmark?

No specific index is designated as a reference sustainable benchmark to meet the sustainable investment objectives.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

• YES

- It made **sustainable investments with an environmental objective**: 32.49%
 - in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: 67.36%

• NO

- It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investment
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The attainment of the sustainable investment objectives was measured through the following sustainability indicators:

- Carbon footprint: the Sub-Fund had a carbon footprint that is at least 30% lower than the carbon footprint of the Sub-Fund's reference Benchmark.
- ESG score: the Sub-Fund had a weighted average ESG score that is higher than the weighted average ESG score of the Sub-Fund's reference benchmark. The ESG Score is computed employing Candriam's proprietary ESG analysis methodology.

Moreover, the following indicators were monitored:

- OECD Guidelines for Multinational Enterprises, UN Global Compact: to ensure that there were no investments in companies that are in violation with the these principles.
- Candriam's Exclusion Policy: to ensure that there were no investments in companies that are on the Candriam's SRI Level 3 exclusion list as a result of the application of Candriam's Exclusion Policy.
- Number of holdings for which Candriam voted.

● How did the sustainability indicators perform?

The Sub-Fund has been managed in accordance with its sustainability indicators as defined below.

For the selection of sustainable investments, the portfolio manager has taken into account ESG assessments of issuers, produced by Candriam's ESG analyst team.

For companies, these assessments are based on the analysis of the company's interactions with its key stakeholders and the analysis of its business activities and their impact, positive or negative, on key sustainability challenges such as climate change and resource depletion. In addition, Candriam's ESG analysis includes exclusion filters based on compliance with international standards and involvement in controversial activities.

Candriam's ESG research and analysis for sustainable investments also assesses the compliance of investments with the "do no harm" principle to a sustainable investment objective and with good governance practices.

This integration of Candriam's ESG research methodology has enabled the Fund to meet the minimum proportion of sustainable investments defined in the prospectus (minimum 80%). The proportion of sustainable investments in the Fund was therefore above this minimum threshold, as detailed in the section "What was the proportion of sustainability-related investments?"

The Sub-Fund's reference benchmark has not been designated for the purpose of attaining the sustainable investment objective of the Sub-Fund.

The Sub-Fund's reference benchmark does not qualify as an EU Climate Transition Benchmark or an EU Paris-Aligned Benchmark under Title III, Chapter 3a, of Regulation (EU) 2016/1011.

However, the Sub-Fund aimed to have a carbon footprint that is at least 30% lower than the carbon footprint of the Sub-Fund's reference benchmark.

Moreover, Candriam being part of the Net Zero Asset Management initiative, the Sub-Fund aimed to reduce greenhouse gas emissions.

Sustainability KPI Name	Portfolio	Benchmark	New indicator
Carbon Footprint - Corporate - Scope 1&2 - 30% reduction vs bench	40.46	76.15	
ESG Score - Corporate - Higher than bench	56.61	53.67	

... And Compared to Previous Periods?

The sub-fund has also been managed in line with its sustainability indicators.

Sustainability KPI Name	Year	Portfolio	Benchmark
Carbon Footprint - Corporate - Scope 1&2 - 30% reduction vs bench	2022	39.84	77.43
ESG Score - Corporate - Higher than bench	2022	57.05	53.65

The asset allocation of the financial product has evolved over the years.

Investment Category	Proportion of Investments	Proportion of Investments
	2023	2022
#1 Sustainable	99.85%	99.05%
#2 Not sustainable	0.15%	0.95%
Environmental	32.49%	32.60%
Social	67.36%	66.45%
Taxonomy-aligned	0.00%	0.00%
Other	32.49%	32.60%

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

Candriam ensured that its sustainable investments did not cause significant harm to any environmental and/or social sustainable investment objective by means of its ESG research and analysis of corporate and sovereign issuers. Based on its proprietary ESG Ratings and Scorings, Candriam's ESG methodology set clear requirements and minimum thresholds to identify those issuers that qualify as 'sustainable investment' and, in particular, do not cause significant harm to any environmental and/or social sustainable investment objective.

The 'Do not significant harm' principle, in particular, was assessed for corporates through:

- the consideration of "principal adverse impacts"
- the alignment with the OECD Guidelines for Multinational Enterprises and the UN Global Compact to ensure minimum environmental & social safeguards.

For more details, refer to the section below on the consideration of principal adverse impacts on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

The consideration of adverse impacts is central to Candriam's sustainable investment approach. Principal adverse impacts were taken into account throughout the entire ESG research and analysis process and through a wide range of methods:

1. ESG rating of corporates: the ESG research and screening methodology considers and assesses the principal adverse impact on sustainability from two distinct, but interlinked, angles:

- the company's issuers' business activities and how they impact, either positively or negatively, key sustainable challenges such as climate change and resource depletion;
- company's interactions with key stakeholders.

2. Negative screening of companies, which includes a norms-based exclusion and an exclusion of companies involved in controversial activities.

3. Engagement activities with companies , through dialogue and voting activities, which contribute to avoiding or reducing the extent of the adverse impacts. The ESG analysis framework and its results feed our engagement process, and vice versa.

The integration of the principal adverse impacts on sustainability factors has been based on the materiality or likely materiality of each indicator for each specific industry / sector to which the company belongs. The materiality is dependent on several factors, such as: type of information, data quality and breadth, applicability, relevance, and geographical coverage.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-fund's investments were subject to a norms-based controversy analysis that considered the compliance with the international social, human, environmental and anti-corruption standards, as defined by the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises. The International Labour Organisation and International Bill of Human Rights are part of the many international references integrated into our norms-based analysis and ESG model.

This analysis aimed to exclude companies that have significantly and repeatedly breached any of these principles.

How did this financial product consider principal adverse impacts on sustainability factors?

At Financial Product level, the principal adverse impacts (PAI) on sustainability factors were considered through one or several means: voting, dialogue, exclusions and/or monitoring (cfr. Candriam's PAI statement: <https://www.candriam.com/en/private/sfdr/>)

ENGAGEMENT

Our engagement and voting policies are available on Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

VOTING

The Candriam's approach to Corporate Governance relies on internationally-recognized standards.

Candriam has exercised voting rights when available on positions of the portfolio. Shareholders' rights, equality of shareholders, board accountability, transparency and integrity of financial statements are core pillars of our voting policy. When exercising our votes we pay a particular attention to the respect of pay-for-performance principle and to the board's independence level, diversity (PAI13) and expertise level.

In the context of Candriam's voting policy, specific guidelines are applied for a range of environmental- (e.g. climate (PAI1 to PAI6), biodiversity (PAI7)), social- (e.g. diversity, gender pay gap (PAI12), human rights (PAI10 PAI11)) and governance- related management or shareholder resolutions.

Candriam has an active approach to voting, in line with the consideration of the principle adverse impacts. Resolutions and voting opportunities are analysed in detail. Candriam always considers the relevance, consistency and feasibility of measures sponsored by any ESG resolution before casting vote. Thus, Candriam may vote against certain resolutions if they do not correspond to the principles defined in its voting policy or to the requirements relating to principle adverse impacts.

This year, we voted at 143 meetings: for 94.41 % of them we cast at least once against management.

With respect to environmental or social related resolutions, management submitted 36 of which we supported 100 %.

More specifically, 3 proposals were related to climate (100 % support).

In addition, and for any voted director-election items (780 resolutions), we took into consideration Board Gender diversity aspects (PAI13).

In total 20 resolutions were filed by shareholders and we supported 30 % of them.

More specifically 4 were Human Rights, Climate or Diversity & Inclusion related: we supported 25 % of them.

For more detailed information about Candriam Voting policy evolution, votes and associated rationales, please refer to our voting dashboard [<https://vds.issgovernance.com/vds/#/NDA0Nw==/>]

DIALOGUE with corporate issuers

This financial product is invested in corporate issuers. Below statistics refer to engagement activities we have performed with these corporate issuers.

Climate (PAI1 to PAI6) is obviously central in our exchanges with companies. Priorities of Climate-engagement on the corporate side are identified taking into account :

- issuers presenting a weak transition profile (proprietary risk transition model), and/or still highly carbon intensive (Scope 1-2) or with large Scope 3 emissions
- issuers from financial sectors still largely exposed to fossil fuel and with a key role in financing the transition
- relative exposure of managed portfolios to the above issuers.

Candriam has joined in November 2021 the Net Zero Asset Management Initiative [<https://www.netzeroassetmanagers.org/signatories/candriam/>]. Through engagement, our objective is to encourage companies to publicly report on how they align with a 1.5D trajectory and to encourage such an alignment. We expect issuers in particular to explain how their strategy and capital expenditures plan serve their decarbonisation commitment. We usually combine individual and collaborative dialogue.

14 issuers in the financial product are actually part of the priority targets of Candriam Net Zero Engagement campaign.

In addition, we continue to actively support CDP Climate [<https://www.cdp.net/en>], a large transparency survey feeding our investment processes : out of the 137 financial product's issuers targeted, 96.35% have properly filled the last survey. Filled surveys give us access to updated and more accurate Scope 1-2-3 emissions' data.

Candriam also actively participate to several collaborative initiatives such as Climate Action 100+ or IIGCC & ShareAction Climate initiatives on Financials. Such initiatives targeted 21 issuer(s) of the financial product. These initiatives contribute not only to increase the level of transparency on Greenhouse gas emissions and related strategy, but also to gain fundamental leverage for supporting strategic changes. Outcomes of these engagements are detailed in our annual engagement & voting report, available on our public website (Publications | Candriam) [<https://www.candriam.com/en/professional/insight-overview/publications/#sri-publications>].

Given the geopolitical context and observed increase in inequalities, 90 issuer(s) with presence in the financial product have also been contacted in relation to the protection of fundamental human rights at direct or indirect workforce level (supply chain due diligence) (PAI10 PAI11).

Inclusion is not to be outdone, with 105 issuers, of the portfolio having been more specifically engaged on topics related to PAI 12 (Unadjusted gender pay gap) or PAI 13 (Board gender diversity).

While above mentioned PAI are prevalent when considering engagement performed for this financial product in 2023, other PAI such as biodiversity-related ones may also have been addressed in our dialogues with issuers. For more information, please refer to Candriam Engagement Annual review under Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

EXCLUSIONS

PAI3

In addition to companies involved in the thermal coal, oil and gas activities (PAI 4), electricity-generating companies with a carbon intensity greater than 354 gCO2/kWh (PAI 3), are considered risky for inclusion in sustainable investments, even if they are not universally controversial. Given that emissions vary according to electricity generation sources, it is important to assess the carbon footprint per kilowatt-hour (kWh) to determine how closely companies are aligned with the 2 degrees Celsius trajectory.

This is why Candriam includes the carbon intensity of energy producers in our sustainability assessment. Where carbon intensity data is not available, Candriam's ESG analysts use other indicators to assess alignment with the Paris Agreement, such as progress in the energy transition in line with Paris Agreement targets and integration of a 1.5D limit scenario, taking into account investment plans and the credibility of carbon neutrality targets. These indicators are forward-looking and evolve over time to reflect the progress made by companies in their transition.

The carbon intensity (PAI 3) threshold for the product in 2023 was established at 354 gCO2/kWh. Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding this threshold, in addition to those previously excluded.

PAI4

Exposure to fossil fuels (PAI 4) undergoes stringent exclusions across all Candriam sustainable funds. Thermal coal, recognized for its detrimental impact and serious financial and sustainability implications, poses systemic and reputational risks that financial benefits cannot outweigh.

Companies deriving more than 5% of their sales from coal mining, coal-fired power generation, and coal-related operations such as exploration, processing, transport, and distribution are automatically excluded.

Additionally, companies exceeding a 5% threshold of revenue from conventional oil and gas activities, including exploration, extraction, refining, and transportation, are ineligible for investment. Similarly, entities with over 5% exposure to unconventional oil and gas activities are also excluded.

Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding the 5% threshold of exposure to thermal coal activities, supplementing the previously excluded entities.

Furthermore, no additional issuer(s) lost their eligibility due to surpassing the 5% threshold of exposure to conventional oil and gas activities, while no additional issuer(s) lost their eligibility for exceeding the 5% threshold of exposure to unconventional oil and gas activities.

PAI10

In accordance with PAI10 Candriam's normative analysis determines whether a company complies with the 10 principles of the United Nations Global Compact for each of the main categories: Human Rights (HR), Labor Rights (LR), Environment (ENV) and Anti-Corruption (AC). Our norms based analysis incorporates various international references, including the United Nations Declaration of Human Rights, ILO Fundamental Conventions, and OECD Guidelines for Multinational Enterprises, ensuring comprehensive coverage of human rights, labor standards, corruption, and discrimination.

In Candriam's "Level 3" SRI exclusion policy, companies with severe to very severe violations of the UN Global Compact principles are excluded. This list focuses on a strict interpretation of violations of the UN Global Compact, as assessed by Candriam's ESG analysts.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, for significant and repeated breaches of international social, human, environmental and anti-corruption standards, as defined by the UN Global Compact and the OECD Guidelines for Multinational Enterprises.

PAI14

Candriam is firmly committed to excluding from all its investments companies directly involved in the development, production, testing, maintenance and sale of controversial weapons (anti-personnel landmines, cluster bombs, depleted uranium weapons and armor, chemical weapons, biological weapons and white phosphorus weapons). We consider these damaging activities to present systemic and reputational risks.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, due to their involvement in these activities.

MONITORING: calculation and evaluation of the principal adverse impact indicators

Some of these indicators may have explicit targets and can be used to measure the attainment of the sustainable investment objective of the Financial Product. See below the results of the indicators of this Financial Product

PAI indicators	Value	Coverage (% rated / total assets)	Eligible assets (% eligible assets / total assets)
Scope 1 GHG Emissions	15,299.64	99.54%	99.96%
Scope 2 GHG Emissions	5,307.41	99.54%	99.96%
Total GHG Emissions	20,607.04	99.54%	99.96%
2 - Carbon Footprint	40.46	99.54%	99.96%
3 - GHG intensity of investee companies	85.33	99.54%	99.96%
4 - Exposure to companies active in fossil fuel sector	4.09%	98.55%	99.97%
10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.00%	99.96%	99.96%
13 - Board gender diversity	40.57%	98.82%	99.95%
14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0.00%	99.96%	99.96%

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
01/01/2023 - 31/12/2023.

Foods and non alcoholic drinks	3.73%
Building materials	3.71%
Machine and apparatus construction	3.44%
Graphic art and publishing	3.39%

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the "Investment portfolio" section of the annual report.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

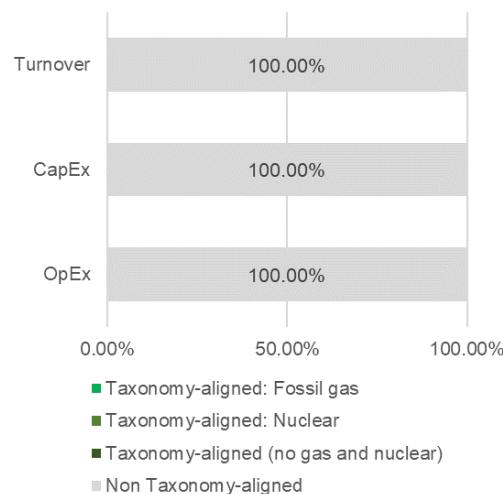

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy? ¹

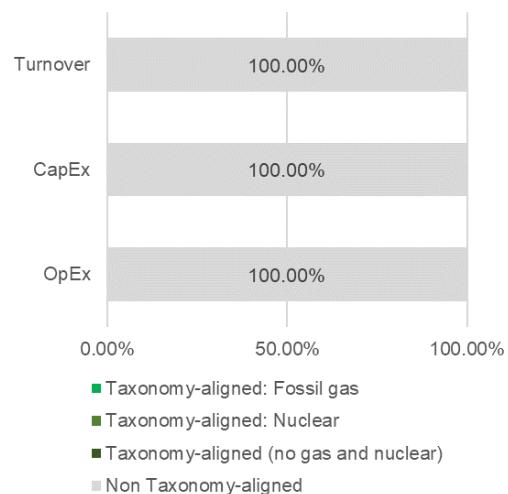

- Yes
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100.00% of the total investments.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

● **What was the share of investments made in transitional and enabling activities?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, nor on the transitional and enabling activities, as very few companies at global level provide the data necessary for a rigorous assessment their alignment with the Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Year	% EU Taxonomy Aligned
2023	0.00%
2022	0.00%

● **What is the breakdown of the proportion of the investments per each of the EU Taxonomy to which those investments contributed?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, as very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

Therefore, this percentage is considered as nul.

● **What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?**

The Sub-Fund had a share of 32.49% in sustainable investments with an environmental objective not aligned with the EU taxonomy.

Indeed to date, only two of the six objectives have entered into force in 2023 and very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

● **What was the share of socially sustainable investments?**

The Sub-Fund had a share of investments with a social objective of 67.36%

● **What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?**

The investments included under "Not sustainable" are present in the Sub-fund for 0.15% of the total net assets.

These investments include one or more of the following assets:

- Cash: Cash at sight, cash deposit, reverse repo needed to manage the liquidity of the Sub-fund following subscriptions/redemptions and/or being the result of the market exposure decision of the Sub-fund.
- Investments with issuers considered as sustainable investments at the moment of the investment and that are not fully aligned anymore with the Candriam sustainable investment criteria. These investments have been sold during the period.
- Non single name derivatives used for exposition and hedging purposes.

These investments do not affect the delivery of the sustainable investment objectives of the Sub-Fund as they represent a minor proportion of its assets.

● **What actions have been taken to attain the sustainable investment objective during the reference period?**

The financial product aims to achieve a carbon footprint that is at least 30% lower than the carbon footprint of the Benchmark.

Over the reference period, the financial product emitted 40.46 Tons CO2eq per million € invested, 46.86% lower than the benchmark.

The financial product has achieved its objective by favouring issuers with lower carbon footprint.

The financial product aims to achieve an ESG score, based on Candriam's proprietary ESG methodology, higher than its benchmark.

Over the reference period, the financial product displayed an ESG score of 56.61, 5.49% higher compared to its benchmark.

The financial product has achieved its objective by selectively favouring issuers that display a stronger ESG profile. The financial product invested in 5 issuer(s) in Broadline Retail, Construction & Engineering, Construction Machinery & Heavy Transportation Equipment and IT Consulting & Other Services with improving ESG profiles and divested from 9 issuer(s) in Apparel,

How did this financial product perform compared to the reference sustainable benchmark?

No specific index is designated as a reference sustainable benchmark to meet the sustainable investment objectives.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

 YES

- It made **sustainable investments with an environmental objective**: 30.07%
 - in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: 69.39%

 NO

- It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investment
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The attainment of the sustainable investment objectives was measured through the following sustainability indicators:

- Carbon footprint: the Sub-Fund had a carbon footprint that is at least 30% lower than the carbon footprint of the Sub-Fund's reference Benchmark.
- ESG score: the Sub-Fund had a weighted average ESG score that is higher than the weighted average ESG score of the Sub-Fund's reference benchmark. The ESG Score is computed employing Candriam's proprietary ESG analysis methodology.

Moreover, the following indicators were monitored:

- OECD Guidelines for Multinational Enterprises, UN Global Compact: to ensure that there were no investments in companies that are in violation with the these principles.
- Candriam's Exclusion Policy: to ensure that there were no investments in companies that are on the Candriam's SRI Level 3 exclusion list as a result of the application of Candriam's Exclusion Policy.
- Number of holdings for which Candriam voted.

How did the sustainability indicators perform?

The Sub-Fund has been managed in accordance with its sustainability indicators as defined below.

For the selection of sustainable investments, the portfolio manager has taken into account ESG assessments of issuers, produced by Candriam's ESG analyst team.

For companies, these assessments are based on the analysis of the company's interactions with its key stakeholders and the analysis of its business activities and their impact, positive or negative, on key sustainability challenges such as climate change and resource depletion. In addition, Candriam's ESG analysis includes exclusion filters based on compliance with international standards and involvement in controversial activities.

Candriam's ESG research and analysis for sustainable investments also assesses the compliance of investments with the "do no harm" principle to a sustainable investment objective and with good governance practices.

This integration of Candriam's ESG research methodology has enabled the Fund to meet the minimum proportion of sustainable investments defined in the prospectus (minimum 80%). The proportion of sustainable investments in the Fund was therefore above this minimum threshold, as detailed in the section "What was the proportion of sustainability-related investments?"

The Sub-Fund's reference benchmark has not been designated for the purpose of attaining the sustainable investment objective of the Sub-Fund.

The Sub-Fund's reference benchmark does not qualify as an EU Climate Transition Benchmark or an EU Paris-Aligned Benchmark under Title III, Chapter 3a, of Regulation (EU) 2016/1011.

However, the Sub-Fund aimed to have a carbon footprint that is at least 30% lower than the carbon footprint of the Sub-Fund's reference benchmark.

Moreover, Candriam being part of the Net Zero Asset Management initiative, the Sub-Fund aimed to reduce greenhouse gas emissions.

Sustainability KPI Name	Portfolio	Benchmark	New indicator
Carbon Footprint - Corporate - Scope 1&2 - 30% reduction vs bench	19.02	35.22	
ESG Score - Corporate - Higher than bench	55.12	51.08	

... And Compared to Previous Periods?

The sub-fund has also been managed in line with its sustainability indicators.

Sustainability KPI Name	Year	Portfolio	Benchmark
Carbon Footprint - Corporate - Scope 1&2 - 30% reduction vs bench	2022	19.98	40.24
ESG Score - Corporate - Higher than bench	2022	54.34	50.51

The asset allocation of the financial product has evolved over the years.

Investment Category	Proportion of Investments	Proportion of Investments
	2023	2022
#1 Sustainable	99.46%	99.28%
#2 Not sustainable	0.54%	0.71%
Environmental	30.07%	35.11%
Social	69.39%	64.17%
Taxonomy-aligned	0.00%	0.00%
Other	30.07%	35.11%

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

Candriam ensured that its sustainable investments did not cause significant harm to any environmental and/or social sustainable investment objective by means of its ESG research and analysis of corporate and sovereign issuers. Based on its proprietary ESG Ratings and Scorings, Candriam's ESG methodology set clear requirements and minimum thresholds to identify those issuers that qualify as 'sustainable investment' and, in particular, do not cause significant harm to any environmental and/or social sustainable investment objective.

The 'Do not significant harm' principle, in particular, was assessed for corporates through:

- the consideration of "principal adverse impacts"
- the alignment with the OECD Guidelines for Multinational Enterprises and the UN Global Compact to ensure minimum environmental & social safeguards.

For more details, refer to the section below on the consideration of principal adverse impacts on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

The consideration of adverse impacts is central to Candriam's sustainable investment approach. Principal adverse impacts were taken into account throughout the entire ESG research and analysis process and through a wide range of methods:

1. ESG rating of corporates: the ESG research and screening methodology considers and assesses the principal adverse impact on sustainability from two distinct, but interlinked, angles:

- the company's issuers' business activities and how they impact, either positively or negatively, key sustainable challenges such as climate change and resource depletion;
- company's interactions with key stakeholders.

2. Negative screening of companies, which includes a norms-based exclusion and an exclusion of companies involved in controversial activities.

3. Engagement activities with companies , through dialogue and voting activities, which contribute to avoiding or reducing the extent of the adverse impacts. The ESG analysis framework and its results feed our engagement process, and vice versa.

The integration of the principal adverse impacts on sustainability factors has been based on the materiality or likely materiality of each indicator for each specific industry / sector to which the company belongs. The materiality is dependent on several factors, such as: type of information, data quality and breadth, applicability, relevance, and geographical coverage.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-fund's investments were subject to a norms-based controversy analysis that considered the compliance with the international social, human, environmental and anti-corruption standards, as defined by the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises. The International Labour Organisation and International Bill of Human Rights are part of the many international references integrated into our norms-based analysis and ESG model.

This analysis aimed to exclude companies that have significantly and repeatedly breached any of these principles.

How did this financial product consider principal adverse impacts on sustainability factors?

At Financial Product level, the principal adverse impacts (PAI) on sustainability factors were considered through one or several means: voting, dialogue, exclusions and/or monitoring (cfr. Candriam's PAI statement: <https://www.candriam.com/en/private/sfdr/>)

ENGAGEMENT

Our engagement and voting policies are available on Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

VOTING

The Candriam's approach to Corporate Governance relies on internationally-recognized standards.

Candriam has exercised voting rights when available on positions of the portfolio. Shareholders' rights, equality of shareholders, board accountability, transparency and integrity of financial statements are core pillars of our voting policy. When exercising our votes we pay a particular attention to the respect of pay-for-performance principle and to the board's independence level, diversity (PAI13) and expertise level.

In the context of Candriam's voting policy, specific guidelines are applied for a range of environmental- (e.g. climate (PAI1 to PAI6), biodiversity (PAI7)), social- (e.g. diversity, gender pay gap (PAI12), human rights (PAI10 PAI11)) and governance- related management or shareholder resolutions.

Candriam has an active approach to voting, in line with the consideration of the principle adverse impacts. Resolutions and voting opportunities are analysed in detail. Candriam always considers the relevance, consistency and feasibility of measures sponsored by any ESG resolution before casting vote. Thus, Candriam may vote against certain resolutions if they do not correspond to the principles defined in its voting policy or to the requirements relating to principle adverse impacts.

This year, we voted at 123 meetings: for 96.75 % of them we cast at least once against management.

In addition, and for any voted director-election items (1146 resolutions), we took into consideration Board Gender diversity aspects (PAI13).

In total 149 resolutions were filed by shareholders and we supported 71.81 % of them.

More specifically 39 were Human Rights, Climate or Diversity & Inclusion related: we supported 92.31 % of them.

For more detailed information about Candriam Voting policy evolution, votes and associated rationales, please refer to our voting dashboard [<https://vds.issgovernance.com/vds/#/NDA0Nw==/>]

DIALOGUE with corporate issuers

This financial product is invested in corporate issuers. Below statistics refer to engagement activities we have performed with these corporate issuers.

Climate (PAI1 to PAI6) is obviously central in our exchanges with companies. Priorities of Climate-engagement on the corporate side are identified taking into account :

- issuers presenting a weak transition profile (proprietary risk transition model), and/or still highly carbon intensive (Scope 1-2) or with large Scope 3 emissions
- issuers from financial sectors still largely exposed to fossil fuel and with a key role in financing the transition
- relative exposure of managed portfolios to the above issuers.

Candriam has joined in November 2021 the Net Zero Asset Management Initiative [<https://www.netzeroassetmanagers.org/signatories/candriam>]. Through engagement, our objective is to encourage companies to publicly report on how they align with a 1.5D trajectory and to encourage such an alignment. We expect issuers in particular to explain how their strategy and capital expenditures plan serve their decarbonisation commitment. We usually combine individual and collaborative dialogue.

4 issuers in the financial product are actually part of the priority targets of Candriam Net Zero Engagement campaign.

In addition, we continue to actively support CDP Climate [<https://www.cdp.net/en>], a large transparency survey feeding our investment processes : out of the 113 financial product's issuers targeted, 87.61% have properly filled the last survey. Filled surveys give us access to updated and more accurate Scope 1-2-3 emissions' data.

Candriam also actively participate to several collaborative initiatives such as Climate Action 100+ or IIGCC & ShareAction Climate initiatives on Financials. Such initiatives targeted 6 issuer(s) of the financial product. These initiatives contribute not only to increase the level of transparency on Greenhouse gas emissions and related strategy, but also to gain fundamental leverage for supporting strategic changes. Outcomes of these engagements are detailed in our annual engagement & voting report, available on our public website (Publications | Candriam) [<https://www.candriam.com/en/professional/insight-overview/publications/#sri-publications>].

Given the geopolitical context and observed increase in inequalities, 74 issuer(s) with presence in the financial product have also been contacted in relation to the protection of fundamental human rights at direct or indirect workforce level (supply chain due diligence) (PAI10 PAI11).

Inclusion is not to be outdone, with 53 issuers, of the portfolio having been more specifically engaged on topics related to PAI 12 (Unadjusted gender pay gap) or PAI 13 (Board gender diversity).

While above mentioned PAI are prevalent when considering engagement performed for this financial product in 2023, other PAI such as biodiversity-related ones may also have been addressed in our dialogues with issuers. For more information, please refer to Candriam Engagement Annual review under Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

EXCLUSIONS

PAI3

In addition to companies involved in the thermal coal, oil and gas activities (PAI 4), electricity-generating companies with a carbon intensity greater than 354 gCO2/kWh (PAI 3), are considered risky for inclusion in sustainable investments, even if they are not universally controversial. Given that emissions vary according to electricity generation sources, it is important to assess the carbon footprint per kilowatt-hour (kWh) to determine how closely companies are aligned with the 2 degrees Celsius trajectory.

This is why Candriam includes the carbon intensity of energy producers in our sustainability assessment. Where carbon intensity data is not available, Candriam's ESG analysts use other indicators to assess alignment with the Paris Agreement, such as progress in the energy transition in line with Paris Agreement targets and integration of a 1.5D limit scenario, taking into account investment plans and the credibility of carbon neutrality targets. These indicators are forward-looking and evolve over time to reflect the progress made by companies in their transition.

The carbon intensity (PAI 3) threshold for the product in 2023 was established at 354 gCO2/kWh. Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding this threshold, in addition to those previously excluded.

PAI4

Exposure to fossil fuels (PAI 4) undergoes stringent exclusions across all Candriam sustainable funds. Thermal coal, recognized for its detrimental impact and serious financial and sustainability implications, poses systemic and reputational risks that financial benefits cannot outweigh.

Companies deriving more than 5% of their sales from coal mining, coal-fired power generation, and coal-related operations such as exploration, processing, transport, and distribution are automatically excluded.

Additionally, companies exceeding a 5% threshold of revenue from conventional oil and gas activities, including exploration, extraction, refining, and transportation, are ineligible for investment. Similarly, entities with over 5% exposure to unconventional oil and gas activities are also excluded.

Over the reference period, 2 issuer(s) became ineligible for the financial product due to exceeding the 5% threshold of exposure to thermal coal activities, supplementing the previously excluded entities.

Furthermore, no additional issuer(s) lost their eligibility due to surpassing the 5% threshold of exposure to conventional oil and gas activities, while no additional issuer(s) lost their eligibility for exceeding the 5% threshold of exposure to unconventional oil and gas activities.

PAI10

In accordance with PAI10 Candriam's normative analysis determines whether a company complies with the 10 principles of the United Nations Global Compact for each of the main categories: Human Rights (HR), Labor Rights (LR), Environment (ENV) and Anti-Corruption (AC). Our norms based analysis incorporates various international references, including the United Nations Declaration of Human Rights, ILO Fundamental Conventions, and OECD Guidelines for Multinational Enterprises, ensuring comprehensive coverage of human rights, labor standards, corruption, and discrimination.

In Candriam's "Level 3" SRI exclusion policy, companies with severe to very severe violations of the UN Global Compact principles are excluded. This list focuses on a strict interpretation of violations of the UN Global Compact, as assessed by Candriam's ESG analysts.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, for significant and repeated breaches of international social, human, environmental and anti-corruption standards, as defined by the UN Global Compact and the OECD Guidelines for Multinational Enterprises.

PAI14

Candriam is firmly committed to excluding from all its investments companies directly involved in the development, production, testing, maintenance and sale of controversial weapons (anti-personnel landmines, cluster bombs, depleted uranium weapons and armor, chemical weapons, biological weapons and white phosphorus weapons). We consider these damaging activities to present systemic and reputational risks.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, due to their involvement in these activities.

MONITORING: calculation and evaluation of the principal adverse impact indicators

Some of these indicators may have explicit targets and can be used to measure the attainment of the sustainable investment objective of the Financial Product. See below the results of the indicators of this Financial Product

PAI indicators	Value	Coverage (% rated / total assets)	Eligible assets (% eligible assets / total assets)
Scope 1 GHG Emissions	16,164.49	99.19%	99.78%
Scope 2 GHG Emissions	13,076.00	99.19%	99.78%
Total GHG Emissions	29,240.49	99.19%	99.78%
2 - Carbon Footprint	19.02	99.19%	99.78%
3 - GHG intensity of investee companies	109.91	99.19%	99.78%
4 - Exposure to companies active in fossil fuel sector	2.58%	98.72%	99.78%
10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.00%	99.73%	99.78%
13 - Board gender diversity	33.97%	98.31%	99.78%
14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0.00%	99.73%	99.78%

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
01/01/2023 - 31/12/2023.

Largest investments	Sector	% of Assets	Country
APPLE INC	Office supplies and computing	7.80%	USA
MICROSOFT CORP	Internet and internet services	7.51%	USA
NVIDIA CORP	Electronics and semiconductors	2.83%	USA

CISCO SYSTEMS INC	Office supplies and computing	1.39%	USA

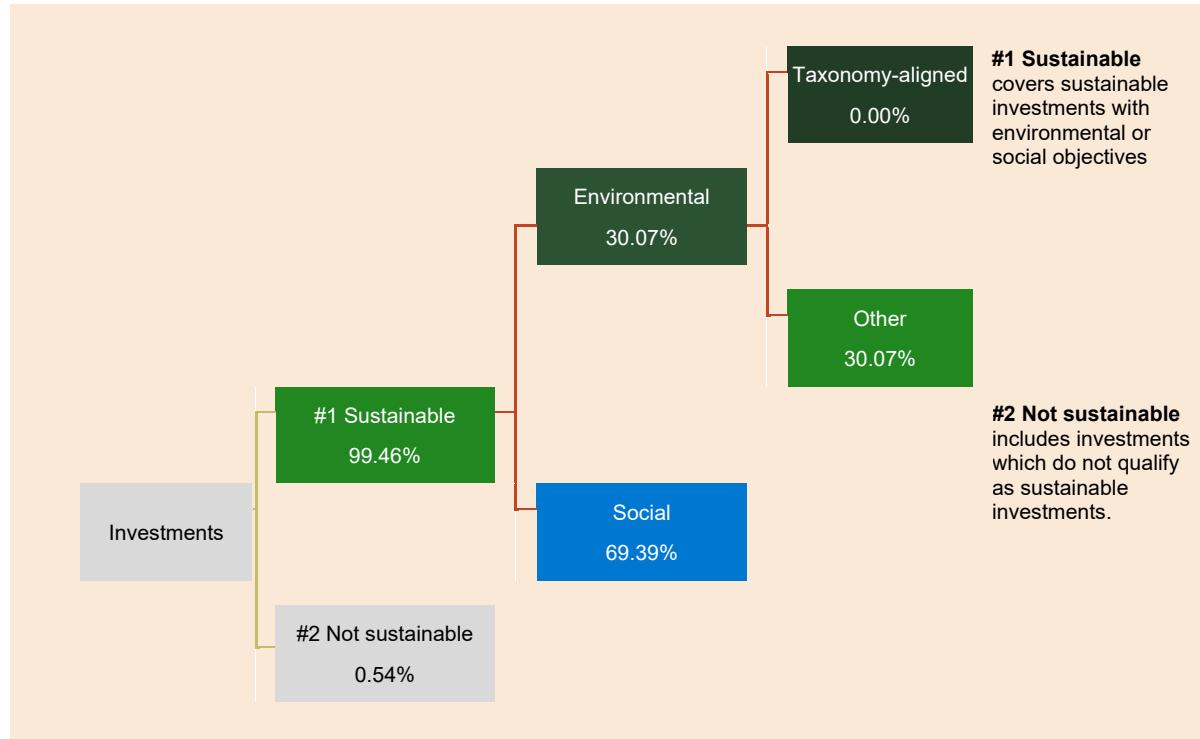

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the "Investment portfolio" section of the annual report.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

● ***In which economic sectors were the investments made?***

Top sector	% of Assets
Internet and internet services	22.11%
Office supplies and computing	9.52%
Banks and other financial institutions	8.91%
Pharmaceuticals	7.71%
Electronics and semiconductors	7.42%
Retail trade and department stores	5.21%
Real estate	4.52%
Healthcare	4.43%
Biotechnology	3.18%
Chemicals	3.07%
Miscellaneous consumer goods	2.86%
Textiles and garments	2.82%
Utilities	2.25%
Road vehicles	2.03%
Electrical engineering	1.92%

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the “Investment portfolio” section of the annual report.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy? ¹

Yes

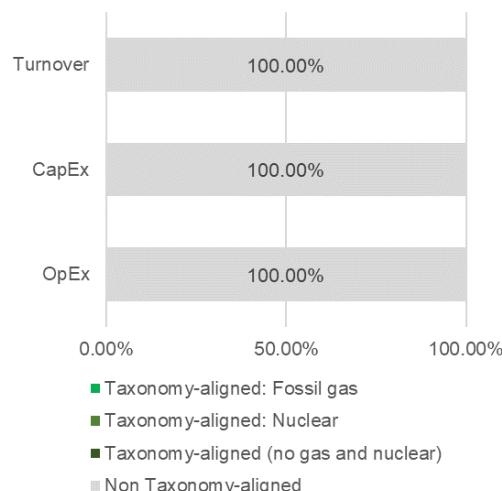

In fossil gas

In nuclear energy

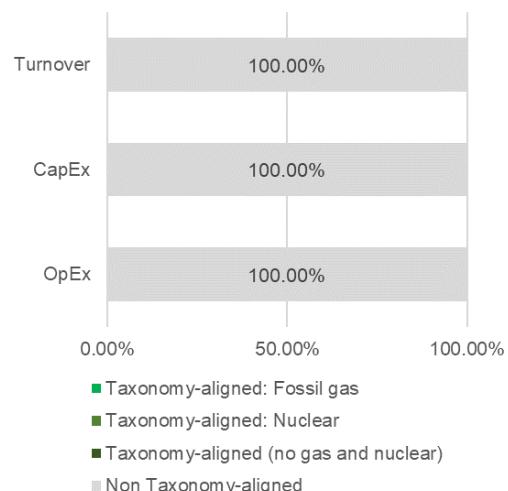

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100.00% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

● **What was the share of investments made in transitional and enabling activities?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, nor on the transitional and enabling activities, as very few companies at global level provide the data necessary for a rigorous assessment their alignment with the Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Year	% EU Taxonomy Aligned
2023	0.00%
2022	0.00%

● **What is the breakdown of the proportion of the investments per each of the EU Taxonomy to which those investments contributed?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, as very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

Therefore, this percentage is considered as nul.

 **What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?**

The Sub-Fund had a share of 30.07% in sustainable investments with an environmental objective not aligned with the EU taxonomy.

Indeed to date, only two of the six objectives have entered into force in 2023 and very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

What was the share of socially sustainable investments?

The Sub-Fund had a share of investments with a social objective of 69.39%

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The investments included under "Not sustainable" are present in the Sub-fund for 0.54% of the total net assets.

These investments include one or more of the following assets:

- Cash: Cash at sight, cash deposit, reverse repo needed to manage the liquidity of the Sub-fund following subscriptions/redemptions and/or being the result of the market exposure decision of the Sub-fund.
- Investments with issuers considered as sustainable investments at the moment of the investment and that are not fully aligned anymore with the Candriam sustainable investment criteria. These investments have been sold during the period.
- Non single name derivatives used for exposition and hedging purposes.

These investments do not affect the delivery of the sustainable investment objectives of the Sub-Fund as they represent a minor proportion of its assets.

What actions have been taken to attain the sustainable investment objective during the reference period?

The financial product aims to achieve a carbon footprint that is at least 30% lower than the carbon footprint of the Benchmark.

Over the reference period, the financial product emitted 19.02 Tons CO2eq per million € invested, 45.99% lower than the benchmark.

Compared to the previous year, the financial product's carbon footprint has decreased by 4.8%.

The financial product has achieved its objective by favouring issuers with lower carbon footprint. More precisely, the financial product divested from 2 issuer(s) in Rail Transportation with deteriorating carbon footprint.

The financial product aims to achieve an ESG score, based on Candriam's proprietary ESG methodology, higher than its benchmark.

Over the reference period, the financial product displayed an ESG score of 55.12, 7.91% higher compared to its benchmark.

In comparison to the previous year, the financial product overall ESG score is higher by 1.44%.

The financial product has achieved its objective by selectively favouring issuers that display a stronger ESG profile. The financial product invested in 17 issuer(s) in Apparel Retail, Asset Management & Custody Banks, Cable & Satellite, Construction Machinery & Heavy Transportation Equipment, Data Processing & Outsourced Services, Diversified Banks, Electronic Manufacturing Services, Financial Exchanges & Data, Footwear, Health Care Equipment, Hotel & Resort REITs, Industrial Gases, Industrial REITs, Movies & Entertainment, Packaged Foods & Meats, Real Estate Services and Regional Banks with improving ESG profiles and divested from 12 issuer(s) in Department Stores, Diversified Banks, Industrial Conglomerates, Investment Banking & Brokerage, Movies & Entertainment, Packaged Foods & Meats, Regional Banks, Semiconductors and Specialty Chemicals with deteriorating ESG profiles.

How did this financial product perform compared to the reference sustainable benchmark?

No specific index is designated as a reference sustainable benchmark to meet the sustainable investment objectives.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

• YES

- It made **sustainable investments with an environmental objective**: 29.27%
 - in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: 70.11%

• NO

- It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investment
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The attainment of the sustainable investment objectives was measured through the following sustainability indicators:

- Carbon footprint: the Sub-Fund had a carbon footprint that is at least 30% lower than the carbon footprint of the Sub-Fund's reference Benchmark.
- ESG score: the Sub-Fund had a weighted average ESG score that is higher than the weighted average ESG score of the Sub-Fund's reference benchmark. The ESG Score is computed employing Candriam's proprietary ESG analysis methodology.

Moreover, the following indicators were monitored:

- OECD Guidelines for Multinational Enterprises, UN Global Compact: to ensure that there were no investments in companies that are in violation with the these principles.
- Candriam's Exclusion Policy: to ensure that there were no investments in companies that are on the Candriam's SRI Level 3 exclusion list as a result of the application of Candriam's Exclusion Policy.
- Number of holdings for which Candriam voted.

● How did the sustainability indicators perform?

The Sub-Fund has been managed in accordance with its sustainability indicators as defined below.

For the selection of sustainable investments, the portfolio manager has taken into account ESG assessments of issuers, produced by Candriam's ESG analyst team.

For companies, these assessments are based on the analysis of the company's interactions with its key stakeholders and the analysis of its business activities and their impact, positive or negative, on key sustainability challenges such as climate change and resource depletion. In addition, Candriam's ESG analysis includes exclusion filters based on compliance with international standards and involvement in controversial activities.

Candriam's ESG research and analysis for sustainable investments also assesses the compliance of investments with the "do no harm" principle to a sustainable investment objective and with good governance practices.

This integration of Candriam's ESG research methodology has enabled the Fund to meet the minimum proportion of sustainable investments defined in the prospectus (minimum 80%). The proportion of sustainable investments in the Fund was therefore above this minimum threshold, as detailed in the section "What was the proportion of sustainability-related investments?"

The Sub-Fund's reference benchmark has not been designated for the purpose of attaining the sustainable investment objective of the Sub-Fund.

The Sub-Fund's reference benchmark does not qualify as an EU Climate Transition Benchmark or an EU Paris-Aligned Benchmark under Title III, Chapter 3a, of Regulation (EU) 2016/1011.

However, the Sub-Fund aimed to have a carbon footprint that is at least 30% lower than the carbon footprint of the Sub-Fund's reference benchmark.

Moreover, Candriam being part of the Net Zero Asset Management initiative, the Sub-Fund aimed to reduce greenhouse gas emissions.

Sustainability KPI Name	Portfolio	Benchmark	New indicator
Carbon Footprint - Corporate - Scope 1&2 - 30% reduction vs bench	23.29	47.39	
ESG Score - Corporate - Higher than bench	55.58	51.59	

... And Compared to Previous Periods?

The sub-fund has also been managed in line with its sustainability indicators.

Sustainability KPI Name	Year	Portfolio	Benchmark
Carbon Footprint - Corporate - Scope 1&2 - 30% reduction vs bench	2022	15.15	51.74
ESG Score - Corporate - Higher than bench	2022	55.28	51.03

The asset allocation of the financial product has evolved over the years.

Investment Category	Proportion of Investments	Proportion of Investments
	2023	2022
#1 Sustainable	99.38%	99.33%
#2 Not sustainable	0.62%	0.66%
Environmental	29.27%	32.52%
Social	70.11%	66.81%
Taxonomy-aligned	0.00%	0.00%
Other	29.27%	32.52%

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

Candriam ensured that its sustainable investments did not cause significant harm to any environmental and/or social sustainable investment objective by means of its ESG research and analysis of corporate and sovereign issuers. Based on its proprietary ESG Ratings and Scorings, Candriam's ESG methodology set clear requirements and minimum thresholds to identify those issuers that qualify as 'sustainable investment' and, in particular, do not cause significant harm to any environmental and/or social sustainable investment objective.

The 'Do not significant harm' principle, in particular, was assessed for corporates through:

- the consideration of "principal adverse impacts"
- the alignment with the OECD Guidelines for Multinational Enterprises and the UN Global Compact to ensure minimum environmental & social safeguards.

For more details, refer to the section below on the consideration of principal adverse impacts on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

The consideration of adverse impacts is central to Candriam's sustainable investment approach. Principal adverse impacts were taken into account throughout the entire ESG research and analysis process and through a wide range of methods:

1. ESG rating of corporates: the ESG research and screening methodology considers and assesses the principal adverse impact on sustainability from two distinct, but interlinked, angles:

- the company's issuers' business activities and how they impact, either positively or negatively, key sustainable challenges such as climate change and resource depletion;
- company's interactions with key stakeholders.

2. Negative screening of companies, which includes a norms-based exclusion and an exclusion of companies involved in controversial activities.

3. Engagement activities with companies , through dialogue and voting activities, which contribute to avoiding or reducing the extent of the adverse impacts. The ESG analysis framework and its results feed our engagement process, and vice versa.

The integration of the principal adverse impacts on sustainability factors has been based on the materiality or likely materiality of each indicator for each specific industry / sector to which the company belongs. The materiality is dependent on several factors, such as: type of information, data quality and breadth, applicability, relevance, and geographical coverage.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-fund's investments were subject to a norms-based controversy analysis that considered the compliance with the international social, human, environmental and anti-corruption standards, as defined by the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises. The International Labour Organisation and International Bill of Human Rights are part of the many international references integrated into our norms-based analysis and ESG model.

This analysis aimed to exclude companies that have significantly and repeatedly breached any of these principles.

How did this financial product consider principal adverse impacts on sustainability factors?

At Financial Product level, the principal adverse impacts (PAI) on sustainability factors were considered through one or several means: voting, dialogue, exclusions and/or monitoring (cfr. Candriam's PAI statement: <https://www.candriam.com/en/private/sfdr/>)

ENGAGEMENT

Our engagement and voting policies are available on Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

VOTING

The Candriam's approach to Corporate Governance relies on internationally-recognized standards.

Candriam has exercised voting rights when available on positions of the portfolio. Shareholders' rights, equality of shareholders, board accountability, transparency and integrity of financial statements are core pillars of our voting policy. When exercising our votes we pay a particular attention to the respect of pay-for-performance principle and to the board's independence level, diversity (PAI13) and expertise level.

In the context of Candriam's voting policy, specific guidelines are applied for a range of environmental- (e.g. climate (PAI1 to PAI6), biodiversity (PAI7)), social- (e.g. diversity, gender pay gap (PAI12), human rights (PAI10 PAI11)) and governance- related management or shareholder resolutions.

Candriam has an active approach to voting, in line with the consideration of the principle adverse impacts. Resolutions and voting opportunities are analysed in detail. Candriam always considers the relevance, consistency and feasibility of measures sponsored by any ESG resolution before casting vote. Thus, Candriam may vote against certain resolutions if they do not correspond to the principles defined in its voting policy or to the requirements relating to principle adverse impacts.

This year, we voted at 203 meetings: for 91.13 % of them we cast at least once against management.

With respect to environmental or social related resolutions, management submitted 15 of which we supported 100 %.

In addition, and for any voted director-election items (1660 resolutions), we took into consideration Board Gender diversity aspects (PAI13).

In total 121 resolutions were filed by shareholders and we supported 66.94 % of them.

More specifically 33 were Human Rights, Climate or Diversity & Inclusion related: we supported 81.82 % of them.

For more detailed information about Candriam Voting policy evolution, votes and associated rationales, please refer to our voting dashboard [<https://vds.issgovernance.com/vds/#/NDA0Nw==/>]

DIALOGUE with corporate issuers

This financial product is invested in corporate issuers. Below statistics refer to engagement activities we have performed with these corporate issuers.

Climate (PAI1 to PAI6) is obviously central in our exchanges with companies. Priorities of Climate-engagement on the corporate side are identified taking into account :

- issuers presenting a weak transition profile (proprietary risk transition model), and/or still highly carbon intensive (Scope 1-2) or with large Scope 3 emissions
- issuers from financial sectors still largely exposed to fossil fuel and with a key role in financing the transition
- relative exposure of managed portfolios to the above issuers.

Candriam has joined in November 2021 the Net Zero Asset Management Initiative [<https://www.netzeroassetmanagers.org/signatories/candriam/>]. Through engagement, our objective is to encourage companies to publicly report on how they align with a 1.5D trajectory and to encourage such an alignment. We expect issuers in particular to explain how their strategy and capital expenditures plan serve their decarbonisation commitment. We usually combine individual and collaborative dialogue.

9 issuers in the financial product are actually part of the priority targets of Candriam Net Zero Engagement campaign.

In addition, we continue to actively support CDP Climate [<https://www.cdp.net/en>], a large transparency survey feeding our investment processes : out of the 175 financial product's issuers targeted, 84% have properly filled the last survey. Filled surveys give us access to updated and more accurate Scope 1-2-3 emissions' data.

Candriam also actively participate to several collaborative initiatives such as Climate Action 100+ or IIGCC & ShareAction Climate initiatives on Financials. Such initiatives targeted 19 issuer(s) of the financial product. These initiatives contribute not only to increase the level of transparency on Greenhouse gas emissions and related strategy, but also to gain fundamental leverage for supporting strategic changes. Outcomes of these engagements are detailed in our annual engagement & voting report, available on our public website (Publications | Candriam) [<https://www.candriam.com/en/professional/insight-overview/publications/#sri-publications>].

Given the geopolitical context and observed increase in inequalities, 109 issuer(s) with presence in the financial product have also been contacted in relation to the protection of fundamental human rights at direct or indirect workforce level (supply chain due diligence) (PAI10 PAI11).

Inclusion is not to be outdone, with 92 issuers, of the portfolio having been more specifically engaged on topics related to PAI 12 (Unadjusted gender pay gap) or PAI 13 (Board gender diversity).

While above mentioned PAI are prevalent when considering engagement performed for this financial product in 2023, other PAI such as biodiversity-related ones may also have been addressed in our dialogues with issuers. For more information, please refer to Candriam Engagement Annual review under Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

EXCLUSIONS

PAI3

In addition to companies involved in the thermal coal, oil and gas activities (PAI 4), electricity-generating companies with a carbon intensity greater than 354 gCO2/kWh (PAI 3), are considered risky for inclusion in sustainable investments, even if they are not universally controversial. Given that emissions vary according to electricity generation sources, it is important to assess the carbon footprint per kilowatt-hour (kWh) to determine how closely companies are aligned with the 2 degrees Celsius trajectory.

This is why Candriam includes the carbon intensity of energy producers in our sustainability assessment. Where carbon intensity data is not available, Candriam's ESG analysts use other indicators to assess alignment with the Paris Agreement, such as progress in the energy transition in line with Paris Agreement targets and integration of a 1.5D limit scenario, taking into account investment plans and the credibility of carbon neutrality targets. These indicators are forward-looking and evolve over time to reflect the progress made by companies in their transition.

The carbon intensity (PAI 3) threshold for the product in 2023 was established at 354 gCO2/kWh. Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding this threshold, in addition to those previously excluded.

PAI4

Exposure to fossil fuels (PAI 4) undergoes stringent exclusions across all Candriam sustainable funds. Thermal coal, recognized for its detrimental impact and serious financial and sustainability implications, poses systemic and reputational risks that financial benefits cannot outweigh.

Companies deriving more than 5% of their sales from coal mining, coal-fired power generation, and coal-related operations such as exploration, processing, transport, and distribution are automatically excluded.

Additionally, companies exceeding a 5% threshold of revenue from conventional oil and gas activities, including exploration, extraction, refining, and transportation, are ineligible for investment. Similarly, entities with over 5% exposure to unconventional oil and gas activities are also excluded.

Over the reference period, 2 issuer(s) became ineligible for the financial product due to exceeding the 5% threshold of exposure to thermal coal activities, supplementing the previously excluded entities.

Furthermore, no additional issuer(s) lost their eligibility due to surpassing the 5% threshold of exposure to conventional oil and gas activities, while no additional issuer(s) lost their eligibility for exceeding the 5% threshold of exposure to unconventional oil and gas activities.

PAI10

In accordance with PAI10 Candriam's normative analysis determines whether a company complies with the 10 principles of the United Nations Global Compact for each of the main categories: Human Rights (HR), Labor Rights (LR), Environment (ENV) and Anti-Corruption (AC). Our norms based analysis incorporates various international references, including the United Nations Declaration of Human Rights, ILO Fundamental Conventions, and OECD Guidelines for Multinational Enterprises, ensuring comprehensive coverage of human rights, labor standards, corruption, and discrimination.

In Candriam's "Level 3" SRI exclusion policy, companies with severe to very severe violations of the UN Global Compact principles are excluded. This list focuses on a strict interpretation of violations of the UN Global Compact, as assessed by Candriam's ESG analysts.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, for significant and repeated breaches of international social, human, environmental and anti-corruption standards, as defined by the UN Global Compact and the OECD Guidelines for Multinational Enterprises.

PAI14

Candriam is firmly committed to excluding from all its investments companies directly involved in the development, production, testing, maintenance and sale of controversial weapons (anti-personnel landmines, cluster bombs, depleted uranium weapons and armor, chemical weapons, biological weapons and white phosphorus weapons). We consider these damaging activities to present systemic and reputational risks.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, due to their involvement in these activities.

MONITORING: calculation and evaluation of the principal adverse impact indicators

Some of these indicators may have explicit targets and can be used to measure the attainment of the sustainable investment objective of the Financial Product. See below the results of the indicators of this Financial Product

PAI indicators	Value	Coverage (% rated / total assets)	Eligible assets (% eligible assets / total assets)
Scope 1 GHG Emissions	19,342.60	98.81%	99.39%
Scope 2 GHG Emissions	13,224.98	98.81%	99.39%
Total GHG Emissions	32,567.58	98.81%	99.39%
2 - Carbon Footprint	23.29	98.81%	99.39%
3 - GHG intensity of investee companies	81.67	98.81%	99.39%
4 - Exposure to companies active in fossil fuel sector	2.28%	98.43%	99.39%
10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.00%	99.38%	99.39%
13 - Board gender diversity	34.84%	97.69%	99.39%
14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0.00%	99.38%	99.39%

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is:
01/01/2023 - 31/12/2023.

Largest investments	Sector	% of Assets	Country
APPLE INC	Office supplies and computing	5.80%	USA
MICROSOFT CORP	Internet and internet services	5.06%	USA
ALPHABET INC -A-	Internet and internet services	1.95%	USA
ALPHABET INC -C-	Internet and internet services	1.83%	USA
NVIDIA CORP	Electronics and semiconductors	1.77%	USA
VISA INC -A-	Internet and internet services	1.63%	USA
PROCTER & GAMBLE CO	Miscellaneous consumer goods	1.43%	USA
MASTERCARD INC -A-	Banks and other financial institutions	1.38%	USA
LINDE PLC	Chemicals	1.36%	IRL
NOVARTIS AG PREFERENTIAL SHARE	Pharmaceuticals	1.23%	CHE
UNITEDHEALTH GROUP INC	Healthcare	1.23%	USA
ELI LILLY & CO	Biotechnology	1.19%	USA
LOWE'S CO INC	Retail trade and department stores	1.02%	USA
THERMO FISHER SCIENT SHS	Electronics and semiconductors	0.93%	USA
TESLA MOTORS INC	Road vehicles	0.93%	USA

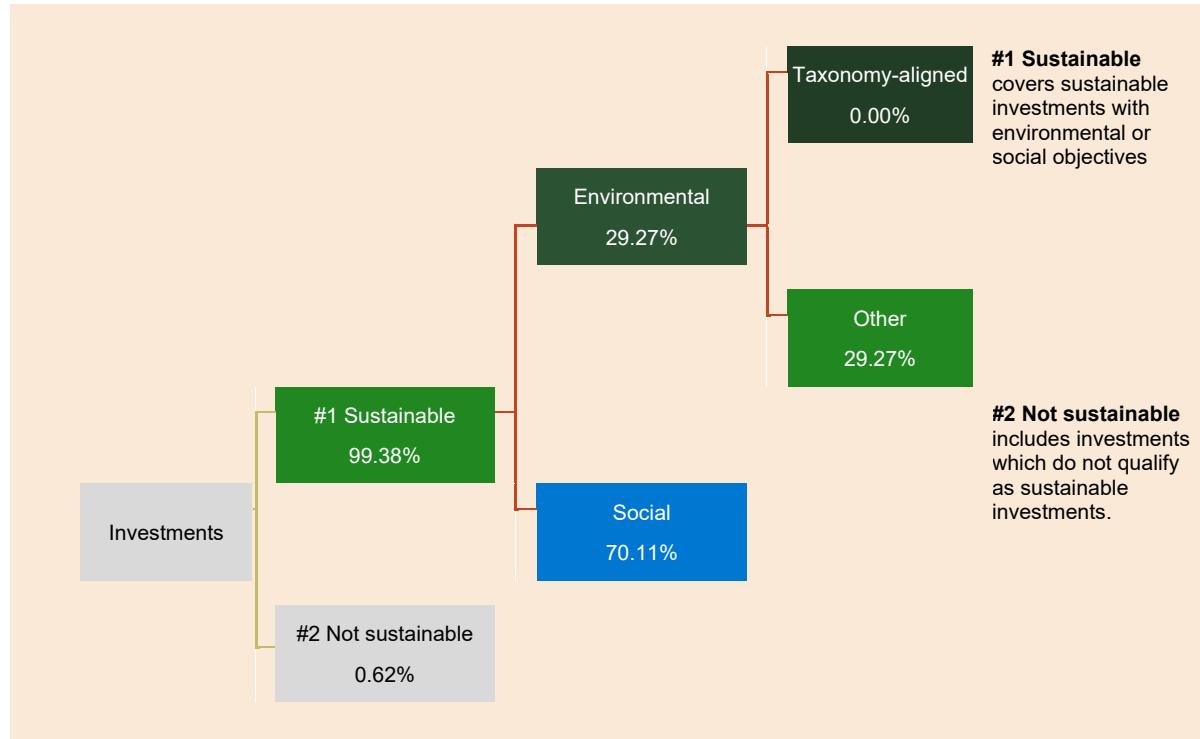

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the "Investment portfolio" section of the annual report.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

● ***In which economic sectors were the investments made?***

Top sector	% of Assets
Internet and internet services	18.81%
Banks and other financial institutions	13.78%
Pharmaceuticals	8.21%
Office supplies and computing	6.56%
Electronics and semiconductors	5.69%
Retail trade and department stores	5.20%
Real estate	3.71%
Graphic art and publishing	2.99%
Biotechnology	2.98%
Textiles and garments	2.95%
Insurance	2.77%
Chemicals	2.44%
Miscellaneous consumer goods	2.38%
Healthcare	2.32%
Transportation	2.24%

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the “Investment portfolio” section of the annual report.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

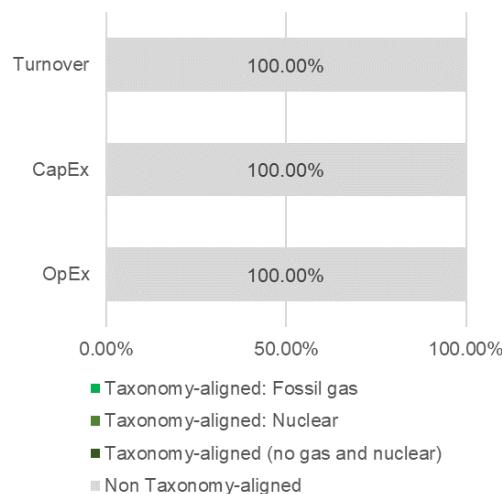

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy? ¹

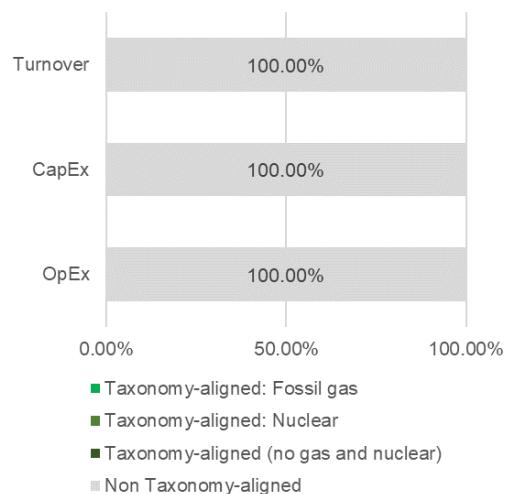

- Yes
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

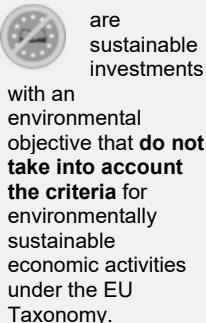

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100.00% of the total investments.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, nor on the transitional and enabling activities, as very few companies at global level provide the data necessary for a rigorous assessment their alignment with the Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Year	% EU Taxonomy Aligned
2023	0.00%
2022	0.00%

● **What is the breakdown of the proportion of the investments per each of the EU Taxonomy to which those investments contributed?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, as very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

Therefore, this percentage is considered as nul.

● **What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?**

The Sub-Fund had a share of 29.27% in sustainable investments with an environmental objective not aligned with the EU taxonomy.

Indeed to date, only two of the six objectives have entered into force in 2023 and very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

● **What was the share of socially sustainable investments?**

The Sub-Fund had a share of investments with a social objective of 70.11%

● **What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?**

The investments included under "Not sustainable" are present in the Sub-fund for 0.62% of the total net assets.

These investments include one or more of the following assets:

- Cash: Cash at sight, cash deposit, reverse repo needed to manage the liquidity of the Sub-fund following subscriptions/redemptions and/or being the result of the market exposure decision of the Sub-fund.
- Investments with issuers considered as sustainable investments at the moment of the investment and that are not fully aligned anymore with the Candriam sustainable investment criteria. These investments have been sold during the period.
- Non single name derivatives used for exposition and hedging purposes.

These investments do not affect the delivery of the sustainable investment objectives of the Sub-Fund as they represent a minor proportion of its assets.

● **What actions have been taken to attain the sustainable investment objective during the reference period?**

The financial product aims to achieve a carbon footprint that is at least 30% lower than the carbon footprint of the Benchmark.

Over the reference period, the financial product emitted 23.29 Tons CO2eq per million € invested, 50.86% lower than the benchmark.

The financial product has achieved its objective by favouring issuers with lower carbon footprint. More precisely, the financial product divested from 2 issuer(s) in Rail Transportation and Trading Companies & Distributors with deteriorating carbon footprint.

The financial product aims to achieve an ESG score, based on Candriam's proprietary ESG methodology, higher than its benchmark.

Over the reference period, the financial product displayed an ESG score of 55.58, 7.74% higher compared to its benchmark.

In comparison to the previous year, the financial product overall ESG score is flat.

The financial product has achieved its objective by selectively favouring issuers that display a stronger ESG profile. The financial product invested in 15 issuer(s) in Apparel Retail, Asset Management & Custody Banks, Cable & Satellite, Construction Machinery & Heavy Transportation Equipment, Electronic Manufacturing Services, Financial Exchanges & Data, Footwear, Hotel & Resort REITs, Human Resource & Employment Services, Industrial Gases, Internet Services & Infrastructure, Packaged Foods & Meats and Real Estate Services with improving ESG profiles and divested from 11 issuer(s) in Apparel, Accessories & Luxury Goods, Broadline Retail, Construction & Engineering, Diversified Banks, General Merchandise Stores, Investment Banking & Brokerage, Multi-Sector Holdings and Regional Banks with deteriorating ESG profiles.

How did this financial product perform compared to the reference sustainable benchmark?

No specific index is designated as a reference sustainable benchmark to meet the sustainable investment objectives.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Candriam Sustainable Money Market Euro

549300DPCLF5A7FXKC93

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

● YES

- It made **sustainable investments with an environmental objective**: 45.03%
 - in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: 45.07%

● NO

- It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ____ % of sustainable investment
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The attainment of the sustainable investment objectives was measured through the following sustainability indicators:

- Carbon footprint : the Sub-fund aimed to have a carbon footprint below a determined absolute threshold. This threshold has been set at around 30% lower than the investment universe.
- ESG score : the Sub-fund aimed to have a weighted average ESG score , including corporate and sovereign issuers, which results from Candriam's proprietary ESG analysis , that is higher than 55 (on a scale from 0 to 100).

Moreover, the following indicators were monitored:

- to assure that there are no investments in issuers that are in violation with the OECD Guidelines for Multinational Enterprises or the UN Global Compact.
- to assure that there are no investments in issuers that are on the Candriam's SRI Level 3 exclusion list as a result of the application of the Candriam's Exclusion Policy.
- to assure that there are no sovereign investments in countries that are on Candriam's Oppressive regime list
- to assure that there are no sovereign investments in countries considered "Not free" by Freedom House.

How did the sustainability indicators perform?

The Sub-Fund has been managed in accordance with its sustainability indicators as defined below.

For the selection of sustainable investments, the portfolio manager has taken into account ESG assessments of issuers, produced by Candriam's ESG analyst team.

For companies, these assessments are based on the analysis of the company's interactions with its key stakeholders and the analysis of its business activities and their impact, positive or negative, on key sustainability challenges such as climate change and resource depletion. In addition, Candriam's ESG analysis includes exclusion filters based on compliance with international standards and involvement in controversial activities.

For sovereign issuers, these assessments are based on the analysis of the countries' management of their natural, human, social and economic capital. In addition, exclusion filters are used to screen out issuers that do not meet democratic and governance standards.

Candriam's ESG research and analysis for sustainable investments also assesses the compliance of investments with the "do no harm" principle to a sustainable investment objective and with good governance practices for the corporates.

This integration of Candriam's ESG research methodology has enabled the Fund to meet the minimum proportion of sustainable investments defined in the prospectus (minimum 80%). The proportion of sustainable investments in the Fund was therefore above this minimum threshold, as detailed in the section "What was the proportion of sustainability-related investments?"

The Sub-Fund's reference benchmark has not been designated for the purpose of attaining the sustainable investment objective of the Sub-Fund.

'The Sub-Fund's reference benchmark does not qualify as an EU Climate Transition Benchmark or an EU Paris-Aligned Benchmark under Title III, Chapter 3a, of Regulation (EU) 2016/1011.

However, the Sub-Fund aimed to have a carbon footprint below a determined absolute threshold. This threshold has been set at around 30% lower than the investment universe.

The Sub-Fund aimed to reduce greenhouse gas emissions versus its benchmark is a first step towards the objectives of the Paris agreement. On a later stage, other steps will be set in order to ensure carbon emissions reduction.

Sustainability KPI Name	Portfolio	Benchmark	New indicator
Carbon Footprint - Corporate - Scope 1&2 - Lower than absolute threshold (currently 100)	51.82		
ESG Score - Country and Corporate - Higher than 50	57.45		

... And Compared to Previous Periods?

The sub-fund has also been managed in line with its sustainability indicators.

Sustainability KPI Name	Year	Portfolio	Benchmark
Carbon Footprint - Corporate - Scope 1&2 - Lower than absolute threshold (currently 100)	2022	40.41	
ESG Score - Country and Corporate - Higher than 55	2022	56.09	

The asset allocation of the financial product has evolved over the years.

Investment Category	Proportion of Investments	Proportion of Investments
	2023	2022
#1 Sustainable	90.10%	91.39%
#2 Not sustainable	9.90%	8.61%
Environmental	45.03%	52.43%
Social	45.07%	38.96%
Taxonomy-aligned	0.00%	0.00%
Other	45.03%	52.43%

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

Candriam ensured that its sustainable investments do not cause significant harm to any environmental and/or social sustainable investment objective by means of its ESG research and analysis of corporate and sovereign issuers. Based on its proprietary ESG Ratings and Scorings, Candriam's ESG methodology sets clear requirements and minimum thresholds to identify those issuers - companies and sovereigns - that qualify as 'sustainable investment' and, in particular, do not cause significant harm to any environmental and/or social sustainable investment objective.

The 'Do not significant harm' principle, in particular, was assessed for corporates through:

- the consideration of "principal adverse impacts"
- the alignment with the OECD Guidelines for Multinational Enterprises and the UN Global Compact to ensure minimum environmental & social safeguards.

For more details, refer to the section below on the consideration of principal adverse impacts on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

The consideration of adverse impacts is central to Candriam's sustainable investment approach. Principal adverse impacts were taken into account throughout the entire ESG research and analysis process and through a wide range of methods:

For the analysis of corporate issuers, these methods include:

1. ESG rating of corporates: the ESG research and screening methodology considers and assesses the principal adverse impact on sustainability from two distinct, but interlinked, angles:

- the company's issuers' business activities and how they impact, either positively or negatively, key sustainable challenges such as climate change and resource depletion;
- company's interactions with key stakeholders.

2. Negative screening of companies, which includes a norms-based exclusion and an exclusion of companies involved in controversial activities.

3. Engagement activities with companies , through dialogue and voting activities, which contribute to avoiding or reducing the extent of the adverse impacts. The ESG analysis framework and its results feed our engagement process, and vice versa.

For the analysis of sovereign issuers, these methods include:

1. Country ESG Scores: the ESG research and screening methodology considers and assesses key negative sustainability impacts around four sustainability dimensions: Natural capital, Human capital, Social capital, and Economic capital.

2. Negative Country Screening, which includes the following:

- Candriam's list of highly oppressive regimes -States with serious human rights violations;
- Freedom House's World Freedom Index - states considered "not free".

The integration of the principal adverse impacts on sustainability factors has been based on the materiality or likely materiality of each indicator for each specific industry / sector/ to which the company belongs and for each country to ensure that a country's score adequately reflects the short, medium and long-term problems, challenges and/or opportunities that matter for that country's future development. This materiality depends on several elements, such as the type of information, quality and extent of data, applicability, relevance and geographical coverage.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-fund's investments were subject to a norms-based controversy analysis that considered the compliance with the international social, human, environmental and anti-corruption standards, as defined by the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises. The International Labour Organisation and International Bill of Human Rights are part of the many international references integrated into our norms-based analysis and ESG model.

This analysis aimed to exclude companies that have significantly and repeatedly breached any of these principles.

How did this financial product consider principal adverse impacts on sustainability factors?

At Financial Product level, the principal adverse impacts (PAI) on sustainability factors were considered through one or several means: voting, dialogue, exclusions and/or monitoring (cfr. Candriam's PAI statement: <https://www.candriam.com/en/private/sfdr/>)

ENGAGEMENT

Our engagement policy is available on Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

DIALOGUE with corporate issuers

This financial product is invested in corporate issuers. Below statistics refer to engagement activities we have performed with these corporate issuers.

Climate (PAI1 to PAI6) is obviously central in our exchanges with companies. Priorities of Climate-engagement on the corporate side are identified taking into account :

- issuers presenting a weak transition profile (proprietary risk transition model), and/or still highly carbon intensive (Scope 1-2) or with large Scope 3 emissions
- issuers from financial sectors still largely exposed to fossil fuel and with a key role in financing the transition
- relative exposure of managed portfolios to the above issuers.

Candriam has joined in November 2021 the Net Zero Asset Management Initiative [<https://www.netzeroassetmanagers.org/signatories/candriam/>]. Through engagement, our objective is to encourage companies to publicly report on how they align with a 1.5D trajectory and to encourage such an alignment. We expect issuers in particular to explain how their strategy and capital expenditures plan serve their decarbonisation commitment. We usually combine individual and collaborative dialogue.

2 issuers in the financial product are actually part of the priority targets of Candriam Net Zero Engagement campaign.

In addition, we continue to actively support CDP Climate [<https://www.cdp.net/en>], a large transparency survey feeding our investment processes : out of the 17 financial product's issuers targeted, 94.12% have properly filled the last survey. Filled surveys give us access to updated and more accurate Scope 1-2-3 emissions' data.

Candriam also actively participate to several collaborative initiatives such as Climate Action 100+ or IIGCC & ShareAction Climate initiatives on Financials. Such initiatives targeted 6 issuer(s) of the financial product. These initiatives contribute not only to increase the level of transparency on Greenhouse gas emissions and related strategy, but also to gain fundamental leverage for supporting strategic changes. Outcomes of these engagements are detailed in our annual engagement & voting report, available on our public website (Publications | Candriam) [<https://www.candriam.com/en/professional/insight-overview/publications/#sri-publications>].

Given the geopolitical context and observed increase in inequalities, 9 issuer(s) with presence in the financial product have also been contacted in relation to the protection of fundamental human rights at direct or indirect workforce level (supply chain due diligence) (PAI10 PAI11).

Inclusion is not to be outdone, with 16 issuers, of the portfolio having been more specifically engaged on topics related to PAI 12 (Unadjusted gender pay gap) or PAI 13 (Board gender diversity).

While above mentioned PAI are prevalent when considering engagement performed for this financial product in 2023, other PAI such as biodiversity-related ones may also have been addressed in our dialogues with issuers. For more information, please refer to Candriam Engagement Annual review under Candriam website [<https://www.candriam.com/en/professional/investment-solutions/sustainability-documents/#engagement-activities>].

EXCLUSIONS

PAI3

In addition to companies involved in the thermal coal, oil and gas activities (PAI 4), electricity-generating companies with a carbon intensity greater than 354 gCO2/kWh (PAI 3), are considered risky for inclusion in sustainable investments, even if they are not universally controversial. Given that emissions vary according to electricity generation sources, it is important to assess the carbon footprint per kilowatt-hour (kWh) to determine how closely companies are aligned with the 2 degrees Celsius trajectory.

This is why Candriam includes the carbon intensity of energy producers in our sustainability assessment. Where carbon intensity data is not available, Candriam's ESG analysts use other indicators to assess alignment with the Paris Agreement, such as progress in the energy transition in line with Paris Agreement targets and integration of a 1.5D limit scenario, taking into account investment plans and the credibility of carbon neutrality targets. These indicators are forward-looking and evolve over time to reflect the progress made by companies in their transition.

The carbon intensity (PAI 3) threshold for the product in 2023 was established at 354 gCO2/kWh. Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding this threshold, in addition to those previously excluded.

PAI4

Exposure to fossil fuels (PAI 4) undergoes stringent exclusions across all Candriam sustainable funds. Thermal coal, recognized for its detrimental impact and serious financial and sustainability implications, poses systemic and reputational risks that financial benefits cannot outweigh.

Companies deriving more than 5% of their sales from coal mining, coal-fired power generation, and coal-related operations such as exploration, processing, transport, and distribution are automatically excluded.

Additionally, companies exceeding a 5% threshold of revenue from conventional oil and gas activities, including exploration, extraction, refining, and transportation, are ineligible for investment. Similarly, entities with over 5% exposure to unconventional oil and gas activities are also excluded.

Over the reference period, no additional issuer(s) became ineligible for the financial product due to exceeding the 5% threshold of exposure to thermal coal activities, supplementing the previously excluded entities.

Furthermore, no additional issuer(s) lost their eligibility due to surpassing the 5% threshold of exposure to conventional oil and gas activities, while no additional issuer(s) lost their eligibility for exceeding the 5% threshold of exposure to unconventional oil and gas activities.

PAI10

In accordance with PAI10 Candriam's normative analysis determines whether a company complies with the 10 principles of the United Nations Global Compact for each of the main categories: Human Rights (HR), Labor Rights (LR), Environment (ENV) and Anti-Corruption (AC). Our norms based analysis incorporates various international references, including the United Nations Declaration of Human Rights, ILO Fundamental Conventions, and OECD Guidelines for Multinational Enterprises, ensuring comprehensive coverage of human rights, labor standards, corruption, and discrimination.

In Candriam's "Level 3" SRI exclusion policy, companies with severe to very severe violations of the UN Global Compact principles are excluded. This list focuses on a strict interpretation of violations of the UN Global Compact, as assessed by Candriam's ESG analysts.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, for significant and repeated breaches of international social, human, environmental and anti-corruption standards, as defined by the UN Global Compact and the OECD Guidelines for Multinational Enterprises.

PAI14

Candriam is firmly committed to excluding from all its investments companies directly involved in the development, production, testing, maintenance and sale of controversial weapons (anti-personnel landmines, cluster bombs, depleted uranium weapons and armor, chemical weapons, biological weapons and white phosphorus weapons). We consider these damaging activities to present systemic and reputational risks.

Over the reference period, no additional issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded, due to their involvement in these activities.

PAI16

Our list of repressive regimes is made up of countries in which human rights are regularly violated, fundamental freedoms are systematically denied and personal safety is not guaranteed due to government failure and systematic ethical violations. We are also extremely vigilant with regard to totalitarian states or countries whose governments are involved in a war against their own people. To compile the list of repressive regimes, we rely on data provided by external sources, such as Freedom House's Index of Freedom in the World, the World Bank's Governance Indicators and the Economist Intelligence Unit's Democracy Index, which guide our qualitative examination of non-democratic countries.

For this list of countries, Candriam's analysts have developed processes that apply to both sovereign and corporate investments, including exclusion, mitigation and engagement processes based on our risk assessment. Candriam considers debt issued by sovereign or quasi-sovereign entities on the list of repressive regimes to be ineligible for investment.

Over the reference period, no additional sovereign issuer(s) directly covered became ineligible for the financial product, in addition to those previously excluded.

MONITORING: calculation and evaluation of the principal adverse impact indicators

Some of these indicators may have explicit targets and can be used to measure the attainment of the sustainable investment objective of the Financial Product. See below the results of the indicators of this Financial Product

PAI indicators	Value	Coverage (% rated / total assets)	Eligible assets (% eligible assets / total assets)
Scope 1 GHG Emissions	25,657.33	75.30%	79.43%
Scope 2 GHG Emissions	6,102.35	75.30%	79.43%
Total GHG Emissions	31,759.68	75.30%	79.15%
2 - Carbon Footprint	51.82	75.30%	79.15%
3 - GHG intensity of investee companies	92.86	76.03%	79.13%
4 - Exposure to companies active in fossil fuel sector	3.78%	74.39%	79.02%
10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.00%	78.59%	79.06%
13 - Board gender diversity	40.62%	65.99%	79.38%
14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0.00%	78.59%	79.06%
15 - GHG intensity	215.09	5.21%	9.19%
16 - Investee countries subject to social violations	0.00%	9.19%	9.19%

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is:
01/01/2023 - 31/12/2023.

Largest investments	Sector	% of Assets	Country
THERMO FISCHER FL.R 21-23 18/11Q	Banks and other financial institutions	2.13%	NLD
ABN AMRO BK FL.R 23-25 10/01Q	Banks and other financial institutions	2.08%	NLD
CANDRIAM MONEY MARKET USD SUST Z USD C	Non Classifiable Institutions	1.97%	LUX
ROYAL BANK OF CANADA FL.R 23-25 17/01Q	Banks and other financial institutions	1.89%	CAN
TORONTO DOMINION BK FL.R 23-25 20/01Q	Banks and other financial institutions	1.84%	CAN
REPU OF FINL SUOM ZCP 13-02-24	Bonds of States, Provinces and municipalities	1.74%	FIN

THE TO OISEST+0.41% 14-11-23	Banks and other financial institutions	0.90%	GBR

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the "Investment portfolio" section of the annual report.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

● ***In which economic sectors were the investments made?***

Top sector	% of Assets
Banks and other financial institutions	57.46%
Bonds of States, Provinces and municipalities	8.64%
Investments funds	6.62%
Real estate	4.48%
Internet and internet services	3.38%
Utilities	2.85%
Non Classifiable Institutions	2.66%
Building materials	1.81%
Electrical engineering	1.77%
Chemicals	1.46%
Machine and apparatus construction	1.33%
Pharmaceuticals	1.06%
Retail trade and department stores	0.93%
Road vehicles	0.83%
Foods and non alcoholic drinks	0.83%

Data based on the main investments held on average during the reference period. This data is not comparable with those presented in the "Investment portfolio" section of the annual report.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

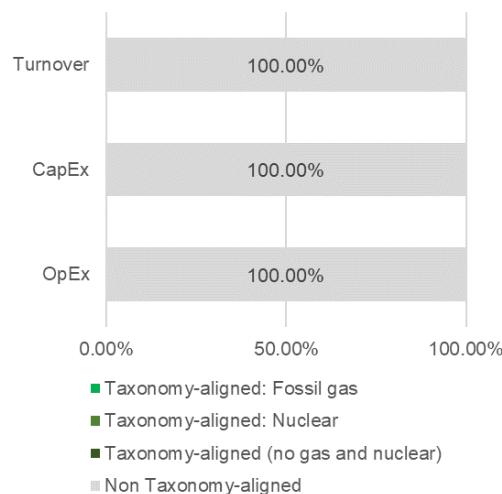

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy? ¹

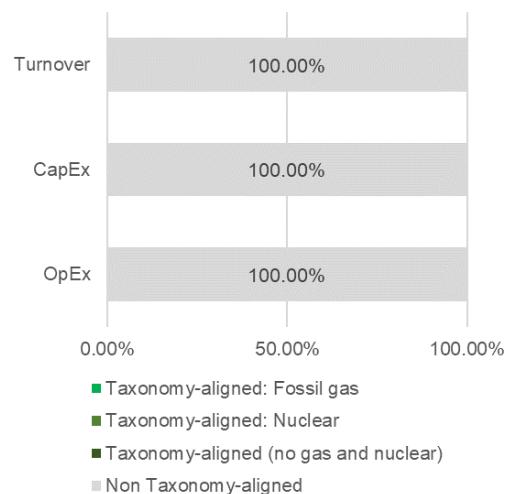

- Yes
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100.00% of the total investments.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

● **What was the share of investments made in transitional and enabling activities?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, nor on the transitional and enabling activities, as very few companies at global level provide the data necessary for a rigorous assessment their alignment with the Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Year	% EU Taxonomy Aligned
2023	0.00%
2022	0.00%

● **What is the breakdown of the proportion of the investments per each of the EU Taxonomy to which those investments contributed?**

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, as very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

Therefore, this percentage is considered as nul.

● **What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?**

The Sub-Fund had a share of 45.03% in sustainable investments with an environmental objective not aligned with the EU taxonomy.

Indeed to date, only two of the six objectives have entered into force in 2023 and very few companies at global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

What was the share of socially sustainable investments?

The Sub-Fund had a share of investments with a social objective of 45.07%

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The investments included under "Not sustainable" are present in the Sub-fund for 9.9% of the total net assets.

These investments include one or more of the following assets:

- Cash: Cash at sight, cash deposit, reverse repo needed to manage the liquidity of the Sub-fund following subscriptions/redemptions and/or being the result of the market exposure decision of the Sub-fund.
- Investments with issuers considered as sustainable investments at the moment of the investment and that are not fully aligned anymore with the Candriam sustainable investment criteria. These investments have been sold during the period.
- Non single name derivatives used for exposition and hedging purposes.

These investments do not affect the delivery of the sustainable investment objectives of the Sub-Fund as they represent a minor proportion of its assets.

What actions have been taken to attain the sustainable investment objective during the reference period?

The financial product aims to achieve a carbon footprint that is lower than 100 Tons CO2eq per million € invested.

Over the reference period, the financial product emitted 51.82 Tons CO2eq per million € invested.

The financial product has achieved its objective by favouring issuers with lower carbon footprint.

The financial product aims to achieve an ESG score, based on Candriam's proprietary ESG methodology, higher than an absolute threshold, currently set at 50.

Over the reference period, the financial product displayed an ESG score of 57.45.

In comparison to the previous year, the financial product overall ESG score is higher by 2.42%.

The financial product has achieved its objective by selectively favouring issuers that display a stronger ESG profile. More precisely, the financial product divested from 5 issuer(s) in Apparel, Accessories & Luxury Goods and Banks with deteriorating ESG score.

How did this financial product perform compared to the reference sustainable benchmark?

No specific index is designated as a reference sustainable benchmark to meet the sustainable investment objectives.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.
